III. The Syzygy: Anima and Animus

What, then, is this projection-making factor? The East calls it the "Spinning Woman" Maya, who creates illusion by her dancing. Had we not long since known it from the symbolism of dreams, this hint from the Orient would put us on the right track: the enveloping, embracing, and devouring element points unmistakably to the mother, that is, to the son's relation to the real mother, to her imago, and to the woman who is to become a mother for him.

His Eros is passive like a child's; he hopes to be caught, sucked in, enveloped, and devoured.

He seeks, as it were, the protecting, nourishing, charmed circle of the mother, the condition of the infant released from every care, in which the outside world bends over him and even forces happiness upon him. No wonder the real world vanishes from sight!

If this situation is dramatized, as the unconscious usually dramatizes it, then there appears before you on the psychological stage a man living regressively, seeking his childhood and his mother, fleeing from a cold cruel world which denies him understanding.

Often a mother appears beside him who apparently shows not the slightest concern that her little son should become a man, but who, with tireless and self-immolating effort, neglects nothing that might hinder him from growing up and marrying.

You behold the secret conspiracy between mother and son, and how each helps the other to betray life.

Where does the guilt lie? With the mother, or with the son? Probably with both.

The unsatisfied longing of the son for life and the world ought to be taken seriously.

There is in him a desire to touch reality, to embrace the earth and fructify the field of the world. But he makes no more than a series of fitful starts, for his initiative as well as his staying power are crippled by the secret memory that the world and happiness may be had as a gift from the mother.

The fragment of world which he, like every man, must encounter again and again is never quite the right one, since it does not fall into his lap, does not meet him half way, but remains resistant, has to be conquered, and submits only to force.

It makes demands on the masculinity of a man, on his ardour, above all on his courage and resolution when it comes to throwing his whole being into the scales.

For this he would need a faithless Eros, one capable of forgetting his mother and undergoing the pain of relinquishing the first love of his life.

The mother, foreseeing this danger, has carefully inculcated into him the virtues of faithfulness, devotion, loyalty, so as to protect him from the moral disruption which is the risk of every life adventure.

He has learnt these lessons only too well, and remains true to his mother. This naturally causes her the deepest anxiety (when, to her greater glory, he turns out to be a homosexual, for example) and at the same time affords her an unconscious satisfaction that is positively mythological.

For, in the relationship now reigning between them, there is consummated the immemorial and most sacred archetype of the marriage of mother and son.

What, after all, has commonplace reality to offer, with its registry offices, pay envelopes, and monthly rent, that could outweigh the mystic awe of the hieros games?

Or the star-crowned woman whom the dragon pursues, or the pious obscurities veiling the marriage of the Lamb?

This myth, better than any other, illustrates the nature of the collective unconscious.

At this level the mother is both old and young, Demeter and Persephone, and the son is spouse and sleeping suckling rolled into one.

The imperfections of real life, with its laborious adaptations and manifold disappointments, naturally cannot compete with such a state of indescribable fulfilment.

In the case of the son, the projection-making factor is identical with the mother-imago, and this is consequently taken to be the real mother.

The projection can only be dissolved when the son sees that in the realm of his psyche there is an image not only of the mother but of the daughter, the sister, the beloved, the heavenly goddess, and the chthonic Baubo.

Every mother and every beloved is forced to become the carrier and embodiment of this omnipresent and ageless image, which corresponds to the deepest reality in a man.

It belongs to him, this perilous image of Woman; she stands for the loyalty which in the interests of life he must sometimes forgo; she is the much needed compensation for the risks, struggles, sacrifices that all end in disappointment; she is the solace for all the bitterness of life.

And, at the same time, she is the great illusionist, the seductress, who draws him into life with her Maya and not only into life’s reasonable and useful aspects, but into its frightful paradoxes and ambivalences where good and evil, success and ruin, hope and despair, counterbalance one another.

Because she is his greatest danger she demands from a man his greatest, and if he has it in him she will receive it.

This image is "My Lady Soul," as Spitteler called her.

I have suggested instead the term "anima," as indicating something specific, for which the expression "soul" is too general and too vague.

The empirical reality summed up under the concept of the anima forms an extremely dramatic content of the unconscious.

It is possible to describe this content in rational, scientific language, but in this way one entirely fails to express its living character.

Therefore, in describing the living processes of the psyche, I deliberately and consciously give preference to a dramatic, mythological way of thinking and speaking, because this is not only more expressive but also more exact than an abstract scientific terminology, which is wont to

toy with the notion that its theoretic formulations may one fine day be resolved into algebraic equations.

The projection-making factor is the anima, or rather the unconscious as represented by the anima.

Whenever she appears, in dreams, visions, and fantasies, she takes on personified form, thus demonstrating that the factor she embodies possesses all the outstanding characteristics of a feminine being.

She is not an invention of the conscious, but a spontaneous product of the unconscious. Nor is she a substitute figure for the mother.

On the contrary, there is every likelihood that the numinous qualities which make the mother-imago so dangerously powerful derive from the collective archetype of the anima, which is incarnated anew in every male child.

Since the anima is an archetype that is found in men, it is reasonable to suppose that an equivalent archetype must be present in women; for just as the man is compensated by a feminine element, so woman is compensated by a masculine one.

I do not, however, wish this argument to give the impression that these compensatory relationships were arrived at by deduction.

On the contrary, long and varied experience was needed in order to grasp the nature of anima and animus empirically.

Whatever we have to say about these archetypes, therefore, is either directly verifiable or at least rendered probable by the facts.

At the same time, I am fully aware that we are discussing pioneer work which by its very nature can only be provisional.

Just as the mother seems to be the first carrier of the projection-making factor for the son, so is the father for the daughter.

Practical experience of these relationships is made up of many individual cases presenting all kinds of variations on the same basic theme.

A concise description of them can, therefore, be no more than schematic.

Woman is compensated by a masculine element and therefore her unconscious has, so to speak, a masculine imprint.

This results in a considerable psychological difference between men and women, and accordingly I have called the projection-making factor in women the animus, which means mind or spirit.

The animus corresponds to the paternal Logos just as the anima corresponds to the maternal Eros.

But I do not wish or intend to give these two intuitive concepts too specific a definition.

I use Eros and Logos merely as conceptual aids to describe the fact that woman’s consciousness is characterized more by the connective quality of Eros than by the discrimination and cognition associated with Logos. In men, Eros, the function of relationship, is usually less developed than Logos. In women, on the other hand, Eros is an expression of their true nature, while their Logos is often only a regrettable accident.

It gives rise to misunderstandings and annoying interpretations in the family circle and among friends.

This is because it consists of opinions instead of reflections, and by opinions I mean a priori assumptions that lay claim to absolute truth.

Such assumptions, as everyone knows, can be extremely irritating.

As the animus is partial to argument, he can best be seen at work in disputes where both parties know they are tight.

Men can argue in a very womanish way, too, when they are anima-possessed and have thus been transformed into the animus of their own anima.

With them the question becomes one of personal vanity and touchiness (as if they were females); with women it is a question of power, whether of truth or justice or some other "ism" for the dressmaker and hairdresser have already taken care of their vanity.

The "Father" (i.e., the sum of conventional opinions) always plays a great role in female argumentation.

No matter how friendly and obliging a woman’s Eros may be, no logic on earth can shake her if she is ridden by the animus.

Often the man has the feelingand he is not altogether wrong that only seduction or a beating or rape would have the necessary power of persuasion.

He is unaware that this highly dramatic situation would instantly come to a banal and unexciting end if he were to quit the field and let a second woman carry on the battle (his wife, for instance, if she herself is not the fiery war horse).

This sound idea seldom or never occurs to him, because no man can converse with an animus for five minutes without becoming the victim of his own anima.

Anyone who still had enough sense of humour to listen objectively to the ensuing dialogue would be staggered by the vast number of commonplaces, misapplied truisms, cliches from newspapers and novels, shop-soiled platitudes of every description interspersed with vulgar abuse and brain-splitting lack of logic.

It is a dialogue which, irrespective of its participants, is repeated millions and millions of

times in all the languages of the world and always remains essentially the same.

This singular fact is due to the following circumstance: when animus and anima meet, the animus draws his sword of power and the anima ejects her poison of illusion and seduction.

The outcome need not always be negative, since the two are equally likely to fall in love (a special instance of love at first sight).

The language of love is of astonishing uniformity, using the well-worn formulas with the utmost devotion and fidelity, so that once again the two partners find themselves in a banal collective situation.

Yet they live in the illusion that they are related to one another in a most individual way.

In both its positive and its negative aspects the anirna /animus relationship is always full of "animosity/' i.e., it is emotional, and hence collective.

Affects lower the level of the relationship and bring it closer to the common instinctual basis, which no longer has anything individual about it.

Very often the relationship runs its course heedless of its human performers, who afterwards do not know what happened to them.

Whereas the cloud of "animosity" surrounding the man is composed chiefly of sentimentality and resentment, in woman it expresses itself in the form of opinionated views, interpretations, insinuations, and misconstructions, which all have the purpose (sometimes attained) of severing the relation between two human beings.

The woman, like the man, becomes wrapped in a veil of illusions by her demon-familiar, and, as the daughter who alone understands her father (that is, is eternally right in everything), she is translated to the land of sheep, where she is put to graze by the shepherd of her soul, the animus.

Like the anima, the animus too has a positive aspect.

Through the figure of the father he expresses not only conventional opinion butequally what we call "spirit," philosophical or religious ideas in particular, or rather the attitude resulting from them.

Thus the animus is a psychopomp, a mediator between the conscious and the unconscious and a personification of the latter.

Just as the anima becomes, through integration, the Eros of consciousness, so the animus becomes a Logos; and in the same way that the anima gives relationship and relatedness to a man’s consciousness, the animus gives to woman’s consciousness a capacity for reflection, deliberation, and self-knowledge.

The effect of anima and animus on the ego is in principle the same.

This effect is extremely difficult to eliminate because, in the first place, it is uncommonly strong and immediately fills the ego-personality with an unshakable feeling o lightness and righteousness. In the second place, the cause of the effect is projected and appears to lie in objects and objective situations.

Both these characteristics can, I believe, be traced back to the peculiarities of the archetype.

For the archetype, of course, exists a priori. This may possibly explain the often totally irrational yet undisputed and indisputable existence of certain moods and opinions.

Perhaps these are so notoriously difficult to influence because of the powerfully suggestive effect emanating from the archetype. Consciousness is fascinated by it, held captive, as if hypnotized.

Very often the ego experiences a vague feeling of moral defeat and then behaves all the more defensively, defiantly, and self-righteously, thus setting up a vicious circle which only increases its feeling of inferiority.

The bottom is then knocked out of the human relationship, for, like megalomania, a feeling of inferiority makes mutual recognition impossible, and without this there is no relationship.

As I said, it is easier to gain insight into the shadow than into the anima or animus.

With the shadow, we have the advantage of being prepared in some sort by our education, which has always endeavoured to convince people that they are not one-hundred-per-cent pure gold.

So everyone immediately understands what is meant by "shadow," "inferior personality," etc.

And if he has forgotten, his memory can easily be refreshed by a Sunday sermon, his wife, or the tax collector. With the anima and animus, however, things are by no means so simple.

Firstly, there is no moral education in this respect, and secondly, most people are content to be self-righteous and prefer mutual vilification (if nothing worse!) to the recognition of their projections. Indeed, it seems a very natural state of affairs for men to have irrational moods and women irrational opinions.

Presumably this situation is grounded on instinct and must remain as it is to ensure that the Empedoclean game of the hate and love of the elements shall continue for all eternity.

Nature is conservative and does not easily allow her courses to be altered; she defends in the most stubborn way the inviolability of the preserves where anima and animus roam.

Hence it is much more difficult to become conscious of one’s anima/animus projections than to acknowledge one’s shadow side.

One has, of course, to overcome certain moral obstacles, such as vanity, ambition, conceit, resentment, etc., but in the case of projections all sorts of purely intellectual difficulties are added, quite apart from the contents of the projection, which one simply doesn't know how to cope with.

And on top of all this there arises a profound doubt as to whether one is not meddling too much with nature's business by prodding into consciousness things which it would have been better to leave asleep.

Although there are, in my experience, a fair number of people who can understand without special intellectual or moral difficulties what is meant by anima and animus, one finds very many more who have the greatest trouble in visualizing these empirical concepts as anything concrete.

This shows that they fall a little outside the usual range of experience. They are unpopular precisely because they seem unfamiliar.

The consequence is that they mobilize prejudice and become taboo like everything else that is unexpected.

So if we set it up as a kind of requirement that projections should be dissolved, because it is wholesomer that way and in every respect more advantageous, we are entering upon new ground. Up till now everybody has been convinced that the idea "my father," "my mother," etc., is nothing but a faithful reflection of the real parent, corresponding in every detail to the original, so that when someone says "my father" he means no more and no less than what his father is in reality.

This is actually what he supposes he does mean, but a supposition of identity by no means brings that identity about. This is where the fallacy of the enkekalymmenos ('the veiled one') comes in.

If one includes in the psychological equation X's picture of his father, which he takes for the real father, the equation will not work out, because the unknown quantity he has introduced does not tally with reality.

X has overlooked the fact that his idea of a person consists, in the first place, of the possibly very incomplete picture he has received of the real person and, in the second place, of the subjective modifications he has imposed upon this picture.

X's idea of his father is a complex quantity for which the real father is only in part responsible, an indefinitely large share falling to the son.

So true is this that every time he criticizes or praises his father he is unconsciously hitting back at himself, thereby bringing about those psychic consequences that overtake people who habitually disparage or overpraise themselves. If, however, X carefully compares his reactions with reality, he stands a chance of noticing that he has miscalculated The fallacy, which stems from Eubulidcs the Megarian, runs: "Can you recognize your father?" Yes. "Can you recognize this veiled one?"

No, "This veiled one is your father. Hence you can recognize your father and not recog-

nize him," somewhere by not realizing long ago from his father's behaviour that the picture he has of him is a false one.

But as a rule X is convinced that he is right, and if anybody is wrong it must be the other fellow.

Should X have a poorly developed Eros, he will be either indifferent to the inadequate relationship he has with his father or else annoyed by the inconsistency and general Incomprehensibility of a father whose behaviour never really corresponds to the picture X has of him.

Therefore X thinks he has every right to feel hurt, misunderstood, and even betrayed.

One can imagine how desirable it would be in such cases to dissolve the projection.

And there are always optimists who believe that the golden age can be ushered in simply by telling people the right way to go.

But just let them try to explain to these people that they are acting like a dog chasing its own tail.

To make a person see the shortcomings of his attitude considerably more than mere "telling" is needed, for more is involved than ordinary common sense can allow.

What one is up against here is the kind of fateful misunderstanding which, under ordinary conditions, remains forever inaccessible to insight.

It is rather like expecting the average respectable citizen to recognize himself as a criminal.

I mention all this just to illustrate the order of magnitude to which the anima/animus projections belong, and the moral and intellectual exertions that are needed to dissolve them.

Not all the contents of the anima and animus are projected, however.

Many of them appear spontaneously in dreams and so on, and many more can be made conscious through active imagination.

In this way we find that thoughts, feelings, and affects are alive in us which we would never have believed possible.

Naturally, possibilities of this sort seem utterly fantastic to anyone who has not experienced them himself, for a normal person "knows what he thinks."

Such a childish attitude on the part of the "normal person" is simply the rule, so that no one without experience in this field can be expected to understand the real nature of anima and animus.

With these reflections one gets into an entirely new world of psychological experience, provided of course that one succeeds in realizing them in practice.

Those who do succeed can hardly fail to be impressed by all that the ego does not know and never has known.

This increase in self-knowledge is still very rare nowadays and is usually paid for in advance with a neurosis, if not with something worse.

The autonomy of the collective unconscious expresses itself in the figures of anima and animus.

They personify those of its contents which, when withdrawn from projection, can be integrated into consciousness.

To this extent, both figures represent -functions which filter the contents of the collective unconscious through to the conscious mind.

They appear or behave as such, however, only so long as the tendencies of the conscious and unconscious do not diverge too greatly.

Should any tension arise, these functions, harmless till then, confront the conscious mind in personified form and behave rather like systems split off from the personality, or like part souls.

This comparison is inadequate in so far as nothing previously belonging to the ego personality has split off from it; on the contrary, the two figures represent a disturbing accretion.

The reason for their behaving in this way is that though the contents of anima and animus can be integrated they themselves cannot, since they are archetypes.

As such they are the foundation stones of the psychic structure, which in its totality exceeds the limits of consciousness and therefore can never become the object of direct cognition.

Though the effects of anima and animus can be made conscious, they themselves are factors transcending consciousness and beyond the reach of perception and volition.

Hence they remain autonomous despite the integration of their contents, and for this reason they should be borne constantly in mind.

This is extremely important from the therapeutic standpoint, because constant observation pays the unconscious a tribute that more or less guarantees its co-operation.

The unconscious as we know can never be "done with" once and for all. It is, in fact, one of the most important tasks of psychic hygiene to pay continual attention to the symptomatology of unconscious contents and processes, for the good reason that the conscious mind is always in danger of becoming one-sided, of keeping to well-worn paths and getting stuck in blind alleys.

The complementary and compensating function of the unconscious ensures that these clangers, which are especially great in neurosis, can in some measure be avoided.

It is only under ideal conditions, when life is still simple and unconscious enough to fol-

low the serpentine path of instinct without hesitation or misgiving, that the compensation works with entire success.

The more civilized, the more unconscious and complicated a man is, the less he is able to follow his instincts.

His complicated living conditions and the influence of his environment are so strong that they drown the quiet voice of nature.

Opinions, beliefs, theories, and collective tendencies appear in its stead and back up all the aberrations of the conscious mind. Deliberate attention should then be given to the unconscious so that the compensation can set to work.

Hence it is especially important to picture the archetypes of the unconscious not as a rushing phantasmagoria of fugitive images but as constant, autonomous factors, which indeed they are.

Both these archetypes, as practical experience shows, possess a fatality that can on occasion produce tragic results.

They are quite literally the father and mother of all the disastrous entanglements of fate and have long been recognized as such by the whole world.

Together they form a divine pair, one of whom, in accordance with his Logos nature, is characterized by pneuma and nous, rather like Hermes with his ever-shifting hues, while the other, in accordance with her Eros nature, wears the features of Aphrodite, Helen (Selene), Persephone, and Hecate.

Both of them are unconscious powers, "gods" in fact, as the ancient world quite rightly conceived them to be.

To call them by this name is to give them that central position in the scale of psychological values which has always been theirs whether consciously acknowledged or not; for their power grows in proportion to the degree that they remain unconscious.

Those who do not see them are in their hands, just as a typhus epidemic flourishes best when its source is undiscovered.

Even in Christianity the divine syzygy has not become obsolete, but occupies the highest place as Christ and his bride the Church.

Parallels like these prove extremely helpful in our attempts to find the right criterion for gauging the significance of these two archetypes. What we can discover about them from the conscious side is so slight as to be almost imperceptible.

It is only when we throw light into the dark depths of the psyche and explore the strange and tortuous paths of human fate that it gradually becomes clear to us how immense is the influence wielded by these two factors that complement our conscious life.

Recapitulating, I should like to emphasize that the integration of the shadow, or the real-

ization of the personal unconscious, marks the first stage in the analytic process, and that without it a recognition of anima and animus is impossible.

The shadow can be realized only through a relation to a partner, and anima and animus only through a relation to the opposite sex, because only in such a relation do their projections become operative.

The recognition of anima or animus gives rise, in a man, to a triad, one third of which is transcendent: the masculine subject, the opposing feminine subject, and the transcendent anima. With a woman the situation is reversed.

The missing fourth element that would make the triad a quaternity is, in a man, the archetype of the Wise Old Man, which I have not discussed here, and in a woman the Chthonic Mother.

These four constitute a half immanent and half transcendent quaternity, an archetype which I have called the 'marriage quaternio.

The marriage quaternio provides a schema not only for the self but also for the structure of primitive society with its cross-cousin marriage, marriage classes, and division of settlements into quarters.

The self, on the other hand, is a God image, or at least cannot be distinguished from one. Of this the early Christian spirit was not ignorant, otherwise Clement of Alexandria could never have said that he who knows himself knows God. Carl Jung, Aion

Carl Gustav Jung: Defender of Freud and the Jews. **(2022-09-01 03:29)**

[paypal _donation _button border="5"]

[1] Evidence of his [Jung] admiration for the inspired concern of the Jews for all things of the spirit is to be found in the fact that of the three literary trustees appointed by him, two are Jews; the other one, his beloved daughter Marianne Niehus-Jung, alas, is dead.
~Lauren Van Der Post, Jung and the Story of our Time, Page 197

[2]Carl Gustav Jung– defender of Freud and the Jews: A chapter of European psychiatric history under the Nazi yoke

Carl Gustav Jung: Defender of Freud and the Jews.

A Chapter of European Psychiatric History Under the Nazi Yoke by Ernest Harms

During recent months a wave of misinformation concerning certain periods in the early development of modern analytical psychiatry and psychology has swept through professional periodicals and popular informative literature.

Since these publications have received a great deal of attention in professional circles, it seems important to correct the information which they conveyed.

This present article is intended to be a historical report based upon published material available in the libraries of the United States, with the exception of some quotations from personal letters by Carl Gustav Jung.

The authors of the misstatements this paper aims to refute will not be mentioned here, although their assertions will be included in this presentation.

This report concerns mainly the Swiss psychiatrist, Carl Gustav.

Jung, whose role in the development of modern psychiatry is generally recognized as highly important-even if one notes that dogmatic and fanatical representatives of other schools have repeatedly attempted to minimize his importance.

Academic recognition does not always constitute the perfect criterion for scientific achievement, but it may be emphasized that Jung has received more honor in this country than any other non-American psychiatrist, including Sigmund Freud.

Although most of the attacks upon Jung's name have come from fanatic followers of Freud, a correct evaluation of Jung's role in the development of psychoanalysis is of greater importance for an objective understanding of the history of the "psychoanalytic movement" than that of any other person.

This is particularly true if the historic perspective is continued beyond the point where Freud closed his own chronicle, that is up to the years when psychotherapy was threatened in Europe by the outbreak of the Nazi movement, or until about 1935.

It seems important to emphasize, (as part of the introduction to this report), that its author is not a member of the association of the pupils of C. G. Jung, nor has Dr. Jung himself been consulted in regard to the presentation of the historic fact attempted here.

The author has undertaken this writing on his personal initiative,

because he believes that it is important for American psychotherapists to have objective information concerning certain momentous developments in their science.

CARL GUSTAV JUNG AND SIGMUND FREUD

It has been repeatedly asserted that Jung started out as a disciple

of Sigmund Freud and subsequently became a traitor to his master.

Freud himself-in his brief "History of the Psychoanalytic

Movement" which he wrote shortly after the separation between himself and the Zurich psychiatrists,

Bleuler and ,Jung, and which he doubtless undertook as a justification to his more faithful pupils and himself of the break with the Swiss-wrote a significant objective report of the beginning of their relationship. i.e. learn that Jung belonged to the Zurich school of psychiatry and that the first contact with Freud had been made by the head of the school, Eugen Bleuler, during 1907; that it was Jung's invitation which brought together Zurich and Vienna to the first Psychoanalytic Congress in Salzsburg (1908); and that Freud and Bleuler joined as editors; (Heraiisgeber) of the "Jahrbucher fur Psychoanalytische und Psychopathologische Forschungen, for which Jung took over the task of managing editor (Schriftleiter) in 1909.

Freud also emphasizes the importance of the work Jung had already done before he came in

touch with him.

Very correctly, he points out that it was the problem of the ” complex theory" which offered Jung the point of contact with him.

Their break and the controversy in which Freud presents a highly subjective personal opinion in reference to the early history of his movement will be discussed later.

Jung’s own writings mirror authentically and unambiguously

how he stood and how he developed in regard to Freud.

His first larger publication is a monograph of 122 pages, "Zur Psychologie und Pathologie sogenannter occulter Phaenornene," which he used as required publication for his qualification as "Privatdozent" (free lecturer) at the University of Zurich.

Here we see him struggle with the same problem which every sincere research worker at that time tried to solve; the problem of hysteria.

We see him, together with Freud and his contemporaries of that period, as a student of the French school of psychiatry of Binet, Janet, and Charcot.

He tried to reach understanding of such abnormal psychological factors as the so-called occult experiences through their parallel to similar experiences expressed by the mentally ill.

We find him twice in one sentence mentioning Freud, whose "Studien Uber Hysterie" (published together with Breuer) and" Die Trairrndeutung" seemed to have attracted him considerably. This was in 1902.

We have already learned from Freud himself that Jung belonged

to a certain school of abnormal psychology known widely as the

Zurich School. Eugen Bleuler, known for his famous textbook of psychiatry and his research in the field of schizophrenia, was the head of this school.

Jung was a senior member of the group. Together

with another member, Riklin, he was occupied in an intensive research into associations, which under the title of "Diagnostische Associations Studien” appeared in the "Journal fur Psychologie und Neurologie" in successive volumes from No. 3 to No. 9.

Later, this became the basis for the entire school of associative criminological testing, and Jung must be considered the founder of this method.

Before the first of these diagnostic studies appeared, Bleuler wrote an introduction in which he emphasized that this work continued the tradition of the research of Wundt, Kraepelin, and Aschaffenburg.

A search was in progress for the unveiling of "non-conscious" elements, pointing in the

same direction in which Freud was advancing, but using other means, that of the association experiment.

The meeting of the Zurich and Freudian groups was the meeting of searchers for the same goal who hoped

to use techniques in common, since they had a common aim. However, as they became acquainted with each other, they not only discovered that their views on techniques did not coincide, but that their aims did not either.

Therefore, after a short union, they resumed divergent paths. This was the nature of the relationship between Freud and Jung as the present writer believes it appears to the objective observer.

In the many years during which Jung worked on the diagnostic association studies, he was deeply interested in Freud; and this is impressively stated in practically every study.

It was always one subject which interested Jung in connection with Freud.

He hoped that Freud's method would solve this problem into which he felt the associative diagnosis did not lead deeply enough: the problem of hysteria and of the complexes.

We find this stated in the section of the diagnostic association studies devoted to dream and hysteric symptoms (J. f. Psychologie un Neurologie, Vol. 8, 1906) in the following passage: "If one desires information about the more intimate experience, e. g., the complex, in a case of hysteria one is forced to reach it by a detour.

Freud has converted this detour into a method: This is psychoanalysis."

Surely one of the simplest and at the same time most impressive descriptions of the essential contents of psychoanalysis. However, when Jung in the same year presented a review of Freud's theory of hysteria before a professional congress (reprinted in Monatsschr. f. Psychiatrie u. Neur., Vol. 23, 1908) he expressed the fact very clearly that he was not a completely uncritical adherent of Freud's views.

"Freud has never developed a complete theory of hysteria," he says, "but has merely attempted from time to time to formulate the theoretical results of his experience.

However, what Freud has formulated theoretically must be acknowledged as a working hypothesis which adapts itself everywhere to experience.

Therefore we cannot speak of a comprehensive theory of hysteria by Freud at the present moment, but of a variety of experiences which show certain common traits."

The year before, Jung had published his; important book, "The Psychology of Dementia Praecox," which was, again, chiefly a contribution in the field of research of his own Zurich School, and which, he emphasized, was based upon his diagnostic association studies.

In its introduction, we find a very clear statement of his attitude toward Freud.

We read, "My readings brought Freud to my attention. It so happened that I first read the 'Interpretation of Dreams' but I have also studied the rest of his writings. I can assure everyone that at first I naturally made to myself all the objections which have been made against Freud in the literature. However, I said to myself, that only those could refute Freud who have applied the psychoanalytical method extensively and who have searched as Freud searches.

"Justice toward Freud does not imply, as many fear, an unconditioned surrender to a dogmatic concept; one can very well preserve an independent judgment.

If, for instance, I agree to Freud's theory of the complex mechanism, of the dream, and of hysteria, this by no means implies that I acknowledge the exclusive role which Freud evidently attributes to the juvenile sexual trauma; just as I do not place sexuality in general so predominantly in the foreground, or even ascribe to it the psychological universality which Freud seems to postulate for it, impressed by the powerful role which sexuality evidently plays in the psyche.

As regards Freud's therapy, it is at best one amongst other possible procedures and probably does not always fulfill the theoretical expectations."

Here then, we see, a definite line was drawn, before the actual cooperation began, between acknowledgment and rejection of Freud's major concepts.

Wherever we investigate Jung's later writings, we shall find no change in his standpoint toward Freud as just outlined.

Since many attempts have been made to use an alleged negative attitude of Jung toward Freud as an argument, let us quote a few sentences from Jung's address before the meeting of the International Association of Psychotherapists at Bad Nauheim in 1934, a meeting which will interest us still more later on, for, at this time, German Nazism raged against the Jews and, among them particularly against Freud.

Before a German assembly in a German town, Jung said, "'Without the existence of the complexes the unconscious would be-as it was for Wundt-nothing but the residue of obscure representations. Through his investigations of these dark areas Freud became the discoverer of the psychological unconscious. . . . As a logical outcome, the first medical theory of the unconscious was the theory of repression postulated by Freud, which was based upon purely empirical presuppositions, without taking into account the philosophical works concerning the unconscious by Leibniz, Kant, Schelling and Carus, up to Eduard von Hartmann."

After this period of over 25 years, Jung therefore gave to Freud the same acknowledgment as he had done on the eve of his cooperation with " the psychoanalytic master from Vienna."

In 1929, Jung wrote a short article which is reprinted in his American book, " Modern Man in Search of a Soul," on " The Freud-Jung Contrast."

At the end he says: "The contrast between Freud and myself goes back to essential differences in our basic assumptions."

And these basic assumptions as they are enumerated in this article are exactly the same as those expressed in the excerpt already quoted from the introduction to his ” Psychology of Dementia Praecox,” written in 1906.

Let us now follow the history of scientific and personal relationships.

In his ” Psychology of Dementia Praecox," Jung, in 1907, had offered a very positive contribution to the concept of schizophrenia which was one of the scientific concerns of the Zurich group, especially of its leader, Bleuler.

It was Jung himself who, at the Salzburg meeting in 1908, had suggested the cooperation of his group with the group of Freud. In 1909, Jung took up the task of acting as managing editor of the Jahrbilcher fur Psychoanalytische und Psychopathologische Forschungen) for which Bleuler and Freud signed as editors, thus confirming the definite union of their two groups.

In the first volume, one finds Freud publishing his famous treatise on infantile sexuality.

To this, Jung adds" Die Bedeutung des Vaters fur das Schicksal des Einzelnen" which was followed in the next volume by his paper "Uber Konflikte der kindlichen Seele."

If we compare the relationship between Jung’s schizophrenia study and Bleuler’s work on this problem on the one hand, with the relationship, on the other hand, between Freud’s writings on juvenile problems and these two contributions by Jung on the same subject, we discover the two attitudes are diametrically opposed.

The relationship with Bleuler is characterized by an affirmative elaboration and an addition; whereas, in regard to Freud, Jung introduces a differing and critical viewpoint.

Nobody could consider these first real contributions to the joint work 0f the two groups as the work of a follower and pupil of Freud.

We also know that in other ways the cooperation between the groups was not too smooth.

Bleuler had been severely attacked academic circles for his association with a man like Freud who was considered a scientific outlaw.

Bleuler responded with several articles, reaffirming his acknowledgment of Freud and of psychoanalysis.

The most impressive of these appeared in the second volume of the "Jahrbucher fur Psychoanalytische und Psychopathologische Forschungen." -whoever reads this paper today will feel that Bleuler never had arrived at a deeper or comprehensive inner relationship to Freud’s conceptions; conversely, his own ideas on autism which occupied him at that time and of which the most important appeared in the same periodical, never had any acknowledgment in the more intimate circle around Freud.

The discrepancy between Jung and the entire Zurich conceptions on the one side and Freud on the other appears even more markedly in the largest literary contribution which

Jung made during the cooperation of the two groups-in the subsequent two volumes of the "Jahrbucher.

This contribution contained his ideas on the libido concept of Freud, and was later published (1912) in one volume under the title "Wandlungen itnd Symbole der Libido."

We are told that Freud seriously opposed the publication of these studies as a separate monograph of the ” Jahrbucher.

As is well known, the concept of the libido, to which he had given a very clear and precisely formulated description in his" Drei Abhandlungen," was for Freud a most fundamental one. Jung has reprinted in his American book "Psychology of the Unconscious (1937), the most essential part of his "Psychologie der Dementia Praecox."

From this, we learn how he attempted to transform the Freudian concept according to his own thinking and that of the Zurich School.

We read on page 144 of "Psychology of the Unconscious:" "For a long time the theory of libido seemed to me inapplicable for dementia praecox.

With increasing experience in analyti0al work, however, I became aware of a gradual change in my conception of libido.

In place of the descriptive definition of the ’Three Contributions’

(Freud’s Drei .Abhandlimgen) there gradually grew up a genetic definition of the libido, which rendered it possible for me to replace the expression ’psychic energy’ by the term ’libido.’ ”

And in continuation of this different concept Jung developed a theory of the libido which is completely at variance with that of Freud.

In view of this fact, it is not surprising that on the first excuse, a break occurred in their personal relations.

In 1909, Freud and Jung, together with a number of international authorities in psychology, psychiatry and education, had been invited by Stanley Hall to celebrate the twentieth anniversary of Clark University by a series of lectures and by receiving honorary degrees.

We are told that during the long sea voyage, when Freud and Jung had ample time to discuss and to work out problems of psychoanalysis in personal discussion, the differences of scientific opinion and of basic philosophical concepts became glaringly evident; and a break almost occurred at the time.

In the "History of the Psychoanalytic Movement," Freud relates, however, that it took three more years before the final break at a meeting in Munich in the fall of 1913.

According to Freud’s account, Jung presided in an "unamiable and incorrect fashion" and ”accepted the presidency of the International Psychoanalytic Association again, although two-fifths of the members present refused him support.”

And Freud adds, ”We took leave of one another without feeling the need to meet again.”

To the present writer, it would seem that Jung’s consent to continue as the president of the international association expressed his desire to uphold and save the relationship and the collaboration; while Freud, angry and disappointed that events did not develop according to his wishes, pushed toward the break.

Consequently, we witness in the same year-after the publication of five volumes-the resignation of Bleuler and Jung from the editorship and managing editorship of the" Jahrbucher."

From the fact that his note of resignation motivates it with ”personal reasons,” one can infer that it was Freud’s personal attitude which forced the resignation, and that both sides would have been willing to continue if objective reason had been the main consideration.

With the next volume, the "Jahrbucher" ceased to appear, thus ending the literary expression of this short collaboration of the Vienna and the Zurich groups.

Freud spoke harsh words about Jung in his "History of the Psychoanalytic Movement,” from which we quote here: ”Jung, by his modification of psychoanalysis, has furnished us a counterpart of Lichtenberg’s famous knife.

He has changed the hilt and has inserted a new blade into it, and because the same trademark is engraved upon it, we are required to regard the instrument as the former one.”

We find similar expressions wherever Freud comes to speak about Jung, often indeed in an unjust manner.

He had expected a pupil who completely accepted his theories. Jung, on his side, never desired, or committed himself to, such a complex allegiance, and he maintained a more objective and unbroken acknowledgment to Freud.

He has never spoken of Freud in such impassioned negative terms as the latter did about Jung.

In the controversy over the psychoanalysis of Freud and his own-which he termed "analytical psychology"-he always tried to keep the debate on the level of a scientific discussion or of an explanatory description.

He always acknowledged Freud’s basic importance and historic role.

No one could express this more valiantly than did Jung in his speech on Freud on the occasion of the aforementioned Nauheim meeting after the Nazi purge.

This speech is indeed, the present writer thinks, the expression of one of the most knightly and courageous attitudes in the records of present-day science.

Major Trends Major Trends in Development and Organizations of Continental Psychotherapy During the First 30 Years of This Century.

During the twentieth century psychiatry and psychotherapy have just begun to outgrow their children’s shoes. Previously, no definite line or pattern had been discernible in the development of ”scientific help to the sick soul.”

During the last two decades of the past century, the most advanced and intensive work of this kind had been done in France, and no one who was interested in the advances in the field could fail to study the results obtained by the "doctors of the mind" of Nancy and Paris.

This work earned for itself a certain international reputation, but no national or international organization was connected with it. There were intelligent and successful workers elsewhere, too, who even created scientific schools for themselves such as Lombroso in Italy, Bleuler in Zurich, or Kraepelin in Munich. With the start of the new century a fundamental change occurred.

A strong demand arose for organization in psychotherapy.

We must emphasize that it was around Freud and his psychoanalytical teaching that the first real international organization grew.

Soon after the International Psychoanalytical Association had been started, the students around Alfred Adler-who like Jung, had, for a short while, attempted an association with Freud-organized themselves into a similar group which after some changes became the international "individual psychological" association.

Not long after Jung had left the post of an alienist in the Zurich Psychiatric State Hospital, the "Burgholzli," students from all over the globe congregated around him and founded a similar international organization.

This was rather a new pattern in psychotherapeutic work.

Of course the old academic neurological and psychiatric medical associations existed; but they had no specific aims to differentiate them from any other academic association, whether made up of philosophers or entomologists.

Naturally, these psychotherapeutic international groupings, each around its own teacher, comprised only a small proportion of the entire professional group of psychiatrists, which has been rapidly growing since the end of the past century.

Among the latter, a good many were interested in one or the other of these three organized schools without feeling inclined to commit themselves to any one of them.

There were also several rather distinguished teachers in psychotherapy who had their own theories and concepts and were unwilling to associate themselves with any group with a one-man leadership.

There were Dubois and Forel, for instance, in Switzerland; Steckel in Vienna; Van der Horst and Bowman in Holland; Joergensen, Bjerre, Gadelius and Voght in Scandinavia; and there were a number of Germans like IL Schulz, Ernst Kretschmer, Arthur Kronfeld, and, especially, Robert Sommer. In the wider circle of academic workers in abnormal psychology, Sommer had a role similar to that of Adolf

Meyer here in America.

Although he had never written a large textbook defining his own basic psychiatric or psychotherapeutic concepts, he wrote a great number of shorter papers and booklets which contained communications which aroused the greatest attention and discussion.

He had a great many independent pupils and a still greater number of friends.

No professional worker, including Freud himself, exercised a greater influence in middle European psychiatric circles than did Robert Sommer.

Perhaps as a result of the organization of the pupils of the three individualistic leaders, perhaps because it was the trend of the time, an impulse arose in the middle of the 1920 ’s to organize the independent workers in an association on an international level.

During 1926 and 1927, discussions were held which centered around Robert Sommer, and, in 1928, an "Allgenieine Arztliche Gesellschaft fur Psychotherapie" was founded with Robert Sommer as president.

This society created as its organ an "Allgerneine Artliche Zeitschrift fur Psychotherapie imd Psychische Hygienen of which Sommer was the editor (Heraiisgeber), while Wladimir Eliasberg and Rudolf Allers were nominated managing editors.

After a further year and a half, that is, at the beginning of the third year of the new organization, the title of the publication was changed and Dr. Eliasberg’s connection as managing editor ended.

Sommer was then joined by Ernst Kretschmer as editor.

Arthur Kronfeld and J. H. Schulz were appointed managing editors, together with Allers, who was taken over as review editor.

The new journal, under the title of" Zentralblatt fur Psychotherapie," grew rapidly until it became the most widely read and most progressive psychotherapeutic periodical in Europe.

Hand in hand with the growth of the journal, the society rapidly became an acknowledged group which drew membership from all the countries of middle and northern Europe.

A number of the more independent members of Freud’s and Adler’s societies also joined the Allgerneine Arztliche Gesellschaft.

Freud and Adler themselves appear never to have belonged to it. Jung must have been a member, since he is reported to have been vice president (Vorsitzender) in 1933. Considerable interest in Jung evidently existed among the members of the society, since, in 1932, one of Jung’s pupils reported on one of the series of seminar lectures which Jung gave for the members of his own organization.

Jung had come to hold a central position in mid-European psychotherapy when in 1933, the Nazi purge destroyed much of the collaboration which in manifold ways had been built up

during the previous 20 years.

The first effect was the elimination, as a result of Nazi anti-Semitism, of the work done by Jewish scientists.

The organizations of Freud’s, as well as Adlers, pupils were dissolved, and their members were expelled from the German national sphere.

At the same time all Jewish members of the staff of the "Zentralblatt" had to resign.

One should note here that it had been due mainly to Arthur Kronfeld’s effort that the "Zentralblatt" had grown to a periodical of such extensive influence.

At the same time, Rudolf Allers, who belonged to an extremely religious Roman Catholic group, also resigned from the editorial board.

All Jewish members of the .Allgerneine Arztliche Gessellschaft fur Psychotherapie were dismissed from the organization.

Many inaccurate and untruthful statements have been made about the events of these fateful months.

They convey a distorted and misleading picture.

I am basing this report strictly upon the information provided by the "Zentralblatt," of which the complete set of issues is available in the Library of the New York Academy of Medicine.

As mentioned before, the Allgerneine Arztliche Gesselschaft existed as an international organization in which psychotherapists from all countries, from Czechoslovakia to Holland and Belgium, and from Norway to Hungary, were united.

Nazism never would permit such an organization to continue, since all international relations were ordered to be severed.

The only possibility of organization under the Nazi rule was to found in every country a national "Arztliche Gesellschaft;" and permission was obtained for these individual national societies to cooperate-not in an ” international "-but, according to a newly created German term, in an "’uber-nationale Gesellschaft" which can best be translated as "super-national" society.

This actually meant an association of the various societies.

If this was to survive, then any trouble with the Nazi authorities had to be avoided.

Ernst Kretschmer, who had been the last president of the former international society for the year 1932-1933, resigned.

Those who were blinded and embittered by their hatred of the National Socialist excesses, in

reviewing the events have deeply resented the fact that at this point the aged director of a mental hospital of the Ruhr district, Dr. U. H. Goering, should have been elected president of the German psychotherapeutic society.

He had never played any significant role in this field but had derived his prestige only from being a relative of Hermann Goering.

It is evident from the report on the events as given in No. 3 (December, 1933) of Vol. 6 of the" Zentralblatt tralblatt," page 142, that it was a matter of expediency to make Dr. Goering the "Fuhrer" of German psychotherapy as a person capable of maintaining contact with the Nazi government.

Carl Gustav Jung never has been a member of the German "Nazified" Allgerneine)frztliche Gesellschaft fur Psychotherapie .

Under the new set-up, he had become a member of the Swiss Allgerneine)frztliche Gesellschaft, which was organized as a national group like the Dutch and the Scandinavian psychotherapists.

However as we read on the same page of the ” Zentralblatt” from which we quoted before, Dr. Jung who had been the vice-president of the former international society from 1932-33, was asked to become the president of the association of national societies-the trberstaatliche)frztliche Gesellschaft fur Psychotherapie, which had taken the place of the international society.

The report, which was written by the secretary of the German Society, says: ” On account of his acceptance of the presidency on June 21st, 1933, we owe to Dr. C. G. Jung the survival of our scientific society and of the ’Zentralblatt.”’

Because of the great decrease in membership it would have been impossible for the relatively small German group to support the "Zentralblatt," of which Jung at the same time assumed the editorship.

Again, it must be emphasized that the choice of a non-German, a member of the Swiss people, who at that time were already extremely anti-Nazi, was motivated by the desire to prevent the whole psychotherapeutic society from falling under the influence of National Socialism.

Here again, all subsequent reports regarding the attempts to Nazify psychotherapeutic work in Europe are completely false and misleading.

At the first meeting of the new association of national therapeutic societies which occurred in May, 1934, the report of which can be found in No. 3 (1934) Vol. 7 of the" Zentralblatt," page 130, Jung himself told of the difficulties which arose in Switzerland when, upon request of the "German society" he agreed to take over the presidency of the "trberstaatlichen" society.

He had accepted it at a personal sacrifice which he had been willing to make.

But before we continue the report of the history of this period, we consider it necessary to insert some more general statements concerning Jung’s fundamental opinions and con-

cepts, which should contribute toward a better understanding of his actions and of the origins of certain misstatements which have been circulated in regard to those actions.

JUNG, NAZIISM AND ANTI-SEMITISM

The most severe and at the same time the most unjust accusation ever levelled at Jung is that he had a share in the horrors of anti-Semitism which have swept across the civilized world.

This accusation originates in a sentence which Freud wrote in the already mentioned "History of the Psychoanalytic Movement" from which we have already quoted.

"He [Jung] also seemed prepared to enter into friendly relations with me, and to give up, for my sake, certain race prejudices which he had so far permitted himself to indulge."

I have read through all of Jung's writings prior to the date of Freud's statement and instead of discovering any statement which might be interpreted as anti-Semitic, I have found no allusions to any Jewish factors and no derogatory remarks regarding other" racial" groups.

In this statement, Freud has revealed the Achilles heel of his character-structure, a vulnerable spot of a dangerous nature.

Jung always had and still has today a considerable number of Jewish pupils.

Not long before the anti-Semitic wave in Europe rose to its National Socialist height, he said in a lecture to the Swiss Protestant clergymen (reprinted in the American volume " Modern Man in Search of a Soul," page 264 ff.):

"I have treated many hundreds of patients, the larger number being Protestants, a smaller number Jews, and not more than five or six believing Catholics."

No convinced anti-Semite would write such a sentence.

In his attitude regarding racial and collective problems, Jung has been tragically misinterpreted, because bis basic concepts, governing his motivations, have been misunderstood.

No one who has accused Jung of Fascist tendencies and of anti-Semitism has grasped what he said and meant.

These persons have not confronted themselves with the same demand Jung made of himself when he encountered Freud, " to search as Freud searched."

Only he who fully understands Jung would have the right to contradict him.

‚Jung's psychology is a differential, comparative psychology, a "verstehende Psychologie" in German, an expression which is difficult to translate.

Jung is interested in the differentiation of structural and functional manifestations of the psyche and their causation.

This has made him the exponent of psychotypology, which has won him his fame.

However, his differential viewpoint does not stop at character and personality differentiation but does go on to typological expressions as they appear in a social, cultural and, finally, anthropological, psychological aspect.

Jung is striving to find clear and understandable descriptions of the differences of national groups, of religious groups and of cultural groups.

He considers these differences to be the expressions of the various human families on this earth.

He is not a believer in the exclusively physical differentiation of man, or the purely biological reality of man; humanity's religions and all cultural expressions are as real for him as are our eyes or any part of our physical anatomies.

He, therefore, asks himself about the how and why of each specific form and content of these cultural realities.

Jung believes that the collective powers which make up our social and cultural life are much stronger than many of the attitudes which express the individual configuration.

He sees these collective patterns survive, even though the individual may perish, and he sees these super-individual patterns inherited as psychological traits, just as we observe in ourselves inherited similarities from the physiognomies of our parents or grandparents.

Jung has acquired a deep knowledge of the various types of this collective language, which assumes its own shape in symbolic and formal expressions.

He has set for himself as the major therapeutic task that of assisting the individual to achieve a positive relationship with these collective forces, which, he holds, have a basic tendency to overpower the individual existence.

Many of these conflicts exist on a subconscious level or in the realm of our irrational and emotional lives.

The one effective means for their control is to lift them to the level of conscious experience.

This does not mean rationalization, but rather awareness of their existence and of their symbolic manifestations.

To raise to a conscious level all discussions which are kindled by collective and individual emotional tensions such as, for instance, hate between racial or other human groups, would form the only basis for overcoming them or for paving the way toward a positive mutual understanding.

Finally, there is still another postulate: The competent worker in the field of psychotherapy does not regard any life situation with either dogma or hypothesis but accepts it as it presents itself when help is desired or administered, making the best use of the prevailing circumstances and preventing their deterioration.

The foregoing brief summary of some concepts of Jung is intended to assist in understanding the events which are to be described in the chronicle of 1933 and 1934, especially 1934.

Let us first consider these events by using the material which has formed the basis of the accusations concerning Jung's alleged Fascistic and antisemitic attitude.

These quotations deserve a thorough discussion and need to be put in the right light.

Finally, excerpts from a letter written by Jung to a Jewish friend in the spring of 1934 will be presented to demonstrate, clearly his personal interpretation of the occurrences of those tragic months.

One recalls that the Allgemeine Arztliche Gesellschaft and the

"Zentralblatt" were founded because a large number of psychotherapists did not wish to be members of any of the psychiatric groups headed by one leader, but preferred a general organization.

When, in 1933, Jung was asked to help save this international group and its journal by becoming president of the international association of national psychotherapeutic societies, the request came at a moment when it would have been senseless to launch an intensive attack upon anti-Semitism.

During the preceding period, psychotherapy had become largely identified by the lay public with Freudianism which was now being denounced by the Nazi propagandists as a prototype of Jewish psychology.

In the true interest of the Jews, it would have been unwise to make a frontal attack against the German psyche, which was seething with hatred.

To achieve any positive result, it was imperative to approach the question rationally and carefully.

How did Jung attempt to solve this obviously explosive problem?

When taking over the editorship of the "Zentralblatt" he wrote a one-page announcement in which he said:

"Although psychotherapy as a science has nothing to do with politics, fate has ordained that I take over the editorship of the· Zentralblatt' at a moment which is characterized by a confusion of theories and standpoints in psychotherapy not unlike that which has hitherto prevailed in politics. One-sided viewpoints, which cannot be brought to agreement, have gained too great an influence not only on specific medical concepts but also on the psychological

opinions of many educated laymen.

The ensuing contradictions were still further increased when my completely different conceptions became known; and this, to such a degree, that the phrase ’confusion of the minds,’ seems to be the only applicable one.

It will therefore be the most distinguished task of the’ Zentralblatt’ to create a general attitude which will do justice to the basic facts of the human psyche to a higher degree than has hitherto prevailed, by means of an impartial appreciation of all objective contributions.

The factually existing differences between the Germanic and Jewish psychologies should no longer remain blurred-to present them clearly is an aim from which science can but derive benefit.

There exists in psychology, more than in any other science, a kind of ’personal denominator,’ the disregard of which falsifies the results of practice and theory.

I wish to state emphatically that this does not imply a depreciation of the Semitic psychology, just as a discussion of the distinctive psychology of the Far Eastern peoples does not imply a depreciation of the Chinese.”

By attempting to raise the emotions underlying anti-Semitism to a higher level, Jung tried to give to the psychotherapeutic groups the basis of an existence despite the fanaticism of the Nazis.

We know that he succeeded at least in the first rounds of the fight.

His demand for an acknowledgment of all factual contributions to psychotherapy, in which he himself, as has already been mentioned, undertook the defense of Freud, subsequently aroused considerable antagonism on the part of National Socialism; and this finally forced Jung to give up his efforts.

Unfortunately Jung’s first attempts were as violently misunderstood by the Jewish side as they were by his personal enemies who used his statements against him.

A Jewish periodical in Switzerland accused him of identifying the Jews with Mongolian hordes.

The intolerance expressed in such a distortion is the equivalent of the intolerance of the anti-Semitic standpoint.

Neither of these hostile viewpoints recognizes the higher objectivity which characterizes Jung’s own viewpoints and action.

Jung has been a great admirer of Chinese religion and culture as proved by his editorship of, and commentaries on, the" Tibetan Book of the Dead" and the "Secret of the Golden Flower."

But a second step remained to be taken.

This step was to make the psychotherapist aware of the subconscious and collective-psychological background of National Socialism and to try to understand the role of anti-Semitism as a powerful weapon in its hands.

Jung has not explicitly stated the following maxim; but it speaks through each of his lines:

If you want to render help under such threatening conditions, you must first understand their cause.

In the next issue of the u Zentralblatt" (Vol. 7, Nos. 1 and 2), he wrote a long paper entitled: (Zur gegenwaertigen Lage der Psychotherapie" (on the present situation of psychotherapy) from which we quote here in careful translation the pages which have been widely circulated in misleading abbreviations and translations, and from which extracts have been pieced together in a fashion which distorts their meaning.

In the first seven pages Jung discusses mainly Freud's and Adler's concepts of psychotherapy, maintaining that they have developed therapeutic techniques which could be used in a routine manner, but not a therapeutic concept which would take care of the sick person as a total personality, and, at the same time emphasize the responsibility of the therapist, whose own attitude and background—in short, whose own personality-represent integral elements in his task of helping.

Jung says:

"All these reflections lead us back to the attitude of the physician and to the need of a critique of the subjective promises. A 'Weltanschauimg' must not be uncritically applied to the concept of the neuroses, as happens for instance in the case of the Freudian concept of the unconscious or its materialistic prejudice in regard to the religious function of the soul. The psychotherapist should no longer indulge in the delusion that the treatment of the neuroses demands nothing more than the knowledge of a technique; he needs to understand very clearly that the psychological treatment of a patient constitutes a relationship which involves the physician as much as the patient. True psychological treatment can only be individual, therefore, even the best technique possesses only relative value. Greater significance accrues to the physician's own general attitude, of which he himself must be sufficiently aware not to destroy the particular values-whatever they may consist of-in the patient entrusted to his care. If Alfred Adler should request an analytic treatment from his old teacher Freud, Freud would have to accommodate himself to seeing Adler's special psychology and even acknowledge its collective right of existence. For there are countless persons who have the psychology of the frustrated son. If, on the other hand, I were to analyze Freud, I would be doing him a great and irreparable wrong if I did not take fully into account the historic reality of the nursery, the importance of the emotional entanglements within the family chronicle, the bitterness and seriousness of early acquired resentments and their compensatory concomitants of (unfortunately) unfulfillable wish fantasies, and if I did not accept their existence as an accomplished fact.

Freud would certainly not be satisfied if I were to tell him that resentments are nothing but a 'substitute' (Ersatz) for neglecting to love one's neighbor, or something of the sort.

True as this statement may be in other cases, it would be inaccurate here, even if I should

succeed in convincing Freud of the truth of my idea. Doubtless, Freud means what he says, therefore he must be accepted as the person who says such things.

Only then is his individual case accepted, and, with him, are recognized those others whose psychology is similarly constituted.

Now, insofar as one can hardly assume that Freud and Adler are universally valid representatives of European humanity, there exists for myself the immediate hope that I, too, possess a specific psychology and with me all those who similarly cannot subscribe to the primacy of infantile-perverse wish-fantasies or to that of the urge to power.

It is self-evident that this must not be a matter of naive self-deception, but rather an opportunity for critical self-observation in the light of these negative psychologies which no psychotherapist should forego.

Freud and Adler have seen very clearly the shadow which accompanies everyone.

The Jews have this peculiarity in common with women: Being physically the weaker they have to aim at the chinks in their opponent's armor, and since this technique has been enforced upon them during a history of many centuries, the Jews themselves are best covered at the spots where others are most vulnerable.

In consequence of their more than twice as ancient culture they are vastly more conscious of human weaknesses and inferiorities and therefore much less vulnerable in this respect than we are ourselves.

They also owe to the experience of ancient culture the ability to live consciously in benevolent, friendly and tolerant neighborhood with their own defects (Untugenden), while we are still too young to have no illusions about ourselves. Moreover we have been called upon by fate still to create culture (for we are in need of it) to which end so-called illusions in the shape of one-sided ideals, convictions, plans, etc., are essential. The Jew as a member of a race whose culture is about 3,000 years old, like the educated Chinese, is psychologically conscious in wider areas than we are.

Consequently it is less dangerous, generally speaking, for the Jew to devaluate his unconscious.

The Aryan unconscious, on the other hand, contains tensions and creative germs of an as yet unfulfilled future which one may not devaluate as nursery romanticism without endangering the soul.

The still young Germanic peoples are entirely able to produce new forms of culture, and this future still lies in the darkness of the unconscious of each individual, as a germ laden with energy, capable of a mighty blaze.

The Jew, as relatively a nomad, never has produced and presumably never will produce a culture of his own, since all his instincts and gifts require a more or less civilized host-people for their development.

Therefore the Jewish race as a whole has, according to my experience, an unconscious

which can only conditionally be compared to the Aryan.

Aside from certain creative individuals, the average Jew is already much too conscious and differentiated to be pregnant with the tensions of the unborn future.

The Aryan unconscious has a higher potential than the Jewish; that is the advantage and the disadvantage of a youthfulness not yet fully estranged from barbarism.

In my opinion, it has been a great mistake of all previous medical psychology to apply Jewish categories, which are not even binding for all Jews, indiscriminately to Christian Germans or Slavs.

In so doing, medical psychology has declared the most precious secret of the Germanic peoples-the creatively prophetic, depths of soul-to be childishly banal morass, while for decades my warning voice has been suspected of anti-Semitism.

The source of this suspicion is Freud.

He did not know the Germanic soul any more than did all his Germanic imitators.

Has the mighty apparition of National Socialism, which the whole world watches with astonished eyes, taught them something better.

Where was the unheard of tension and energy when there was as yet no National Socialism?

It lay hidden in the Germanic soul, in that profound depth which is everything else except the garbage bin of unreliable childish wishes and unresolved family resentments.

A movement which seizes a whole people has ripened in every individual, too.

It is for this reason that I say that the Germanic unconscious contains tensions and possibilities which medical psychology must consider in its evaluation of the unconscious.

It does not deal with neuroses but with human beings, and it is truly the fortunate privilege of a medical psychology that not only is it permitted to treat the whole person; it even needs to do so.

Therefore its framework must be widened to reveal to the eye of the physician not only the diseased aberrations of a disturbed psychological development, but also the constructive and creatively active forces of the soul, not only an obscure section but the significant whole.

”Neurosis, namely, is by no means something merely negative, it is also positive.

Only a soulless rationalism could overlook, and has overlooked, this fact, supported by the narrowness of a merely material ’Weltanschauung.’

In reality, the neurosis contains the patient’s soul, or at least an essential part of it and if, according to rationalistic intention, the neurosis could be extracted like a diseased tooth, the patient would have gained nothing but would have lost something very essential, namely,

as much as a thinker who has lost doubt about his conclusions, or a moral man who has lost his temptations, or a brave man who has lost his fear.

To lose a neurosis means to become unsubstantial, indeed life loses its point and so its meaning.

It would be no cure but an amputation; and it is a deceptive consolation if thereupon ’psychoanalysis’ assures us that nothing has been lost except the infantile paradise with its (perverse) wish-chimeras.

One has lost much more, for in reality there is· embedded in the neurosis a piece of still undeveloped personality, without which the human being is condemned to resignation, bitterness and other antagonisms to life.

The psychology of neuroses which sees only the negative, empties out the baby with the bath, in that it neglects the meaning and value of the ’infantile,’ i. e., the creative fantasy. Often the efforts of this psychology consist essentially in an attempt to find out how one could explain anything at all-downward, and actually there is nothing incapable of an obscene caricature.

This possibility never proves, however, that the symptom or symbol explained in this way actually has this meaning, it only proves the dirty adolescent fantasy of the interpreter.

"I cannot avoid mentioning how often it ’happens that otherwise serious physicians, in complete disregard of all the fundamental tenets of scientific conscience explain psychological material by means of subjective conjectures-conjectures of which one can really make nothing, except that they are attempts to find that particular obscene witticism through which the material under investigation could be in some way related to an anal, urethral or other sexual abnormality.

The poison of a devaluating interpretation has infiltrated the very marrow of these peo-ple, so that they can no longer think at all except in the infantile perverse jargon of certain cases of neuroses which are characterized by the special features of Freudian psychology.

It is really too grotesque that the physician himself falls into that way of thinking which he rightly objects to as infantile in others, and therefore would like to cure.

It is certainly much easier to make conjectures over the heads of other people, than to discover what the patient’s empirical material means in itself.

After all, one must assume that the patient comes to the doctor to free himself of his pathological modes of thought and of approach and, therefore, one might well assume-as is. moreover the case in all modern medicine-that in the syndrome itself are also contained the healing tendencies of the diseased system. But if the physician’s thoughts overtly or silently are as negative and devaluating as the patient’s, and are equally desirous of pulling everything and anything into the infantile-perverse morass of an obscene wit-psychology, one must not be surprised if the latter’s soul becomes a barren waste and he compensates for this barrenness by an incurable intellectualism.”

No one with any objectivity can maintain that we are here confronted with a document

of anti-Semitic character or one which registers consent to, or admiration of National Socialism. In the accusations made against Jung the following expression in particular lar has been used as a weapon of attack: ” . . . the mighty apparition of national socialism which the whole world watches with astonished eyes. . . , ” or, in the original German: ” . . . die gewaltige Erscheinung des Nationalsozialismus, auf den die ganze Welt niit erstaimten Aiigen blickt .... „ There are two points in this sentence which need to be interpreted in their original meaning.

The first is that the word "gewaltig" has a somewhat different connotation in Swiss usage than it has in German.

Jung has frequently used the word-we would like to refer the reader to a context already presented in these pages, where he speaks of the ’gewaltige’ (powerful) role which sexuality plays in the human psyche.

In the German language, as it is understood by those who have exploited this sentence, one would hardly place sexuality and a political uprising on the same level.

The Swiss dialectic version of German uses, the word in a more dynamic sense and with greater frequency to describe an impressive event.

The second point concerns the expression ”with astonished eyes.”

Those who interpret these words as admiration of Nazism are motivated by the undercurrent of their own negative emotions, the projection of which makes them incapable of evaluating fairly any objective statement, which they can only perceive as an emotionally-loaded one in a positive or a negative sense. Anyone among us today, opening an illustrated magazine of 1934 showing the massing of regiments and their flags on an occasion such as a Nuremberg meeting, must agree that this was an astonishing display, unexpected in its forcefulness, especially to those who spent their lives at a distance of several hundred miles.

One can be astonished by certain phenomena without sympathizing with them; and one can be deeply disturbed by them and yet prefer not to express one’s own negative feelings-in order to preserve one’s own plans for helping others against new outbreaks of violence.

One must remember what position Jung occupied at that time, when he had to write for and to keep alive a publication printed for German doctors in Germany itself.

Fanatics may often look upon cleverness with suspicion, but the question is whether this cleverness achieves the positive help for which it aims.

Not one action can be found which could be interpreted in any way as showing that Jung had any part in National Socialist acts and plans, either in Switzerland or in Germany.

On the other hand, we have positive proof of the opposite, particularly where he opposed the anti-Semitism and the plans for anti-Semitic action made by the Nazis.

There is one point which must still be reported here in detail.

From the days when Jewish psychiatrists in Germany were disqualified, Jung made every attempt to help them, as he fought against anti-Semiticsm in general whenever it was possible

to do so without endangering his own moves to help.

Anyone who, like this present author, has tried to learn from Dr. Jung, must have been struck by the fine"' distinctions expressed through his actions and in the restraint imposed upon the spoken word.

We have already reported Jung's fine and gallant attitude during the first meeting of the international association of the national groups of psychotherapists in Bad Nauheim in central Germany in May, 1934, when he chose as the topic of his address the " Theory of Complexes," in which he paid homage to Freud, who was then the target of Nazi hatred.

I recall how, on the following day, the German Press raged against Jung and carefully registered the number of times on which Jung had pronounced the hated name of Freud.

There would certainly have been no reason to expose one's self in this manner during these weeks of the most fanatical outburst of anti-Semitism if one had wished to ingratiate himself with the National Socialist regime and its leaders.

During those same weeks, Jung undertook something which he would not have been able to do openly without destroying its success.

He had caused a kind of amendment to be added to the rules of the international association of the national groups of psychotherapists.

This amendment was not communicated in an official manner through the "Zentralblatt" but was circulated quietly alongside one issue of the journal.

The communication reads:

"During the last Congress of the Uberstaatliche allgemeine

Arztliche Gesellschaft fiir Psychotherapie it was decided, to constitute the society in the form of national groups. Consequently, national groups have now been founded or are in process of formation in the various countries which were represented at the Congress [Denmark, Germany, Holland, Sweden and Switzerland].

The conditions of membership in these national groups vary according to local by-laws.

On account of the political circumstances in various regions, and because of the lack of national groups in certain countries, making it impossible for individuals to join their respective groups, it has been decided that membership in any national group is on a purely voluntary basis, in other words individual membership can be achieved directly in the Uberstaatliche

allgemeine .A.rztliche Gesellshaft fiir Psychotherapie without the intermediary of a national group.

The Uberstaatliche Gesellschaft is politically and confessionally neutral.

Those wishing to become members in it, are asked to communicate with the office of

the secretary general of the Oberstaatliche Gesellshaft represented by Dr. W. Cimbal in Altona, or with the business manager of the president, Dr. C. A. Meier, Burghoelzli, Zurich. The organ

of the society is the 'Zentralblatt fiir Psychotherapie.' . . . We, therefore politely invite you to join the Uberstaatliche allgemeine .A.rztliche Gesellschaft fiir Psychotherapie.

Zurich-Kusnacht Dr. C. G. Jung.

What Jung had done here was actually to find means of reviving under the nose of the Nazis the old "international society" by making it possible for anyone to become a member of the international association.

At the same time something else was achieved, of which no mention was made, but which I, living at that time in Europe, knew was the main reason for this arrangement.

This is corroborated by Jung's own report in the letter which will be reprinted later in this paper. German Jewish psychotherapists, who were not allowed to join the German or any other national organization, were thus enabled to become members of the supernational association.

One more deduction can be made from this announcement.

The de-nationalized psychotherapists wishing to join the international group could make their application through the business manager of the German "Nazified" group.

If this group was willing to lend its services against the Nazi Order, then the entire psychotherapeutic association, including the German national group, must have been strongly anti-Nazi. This was actually so, as I can assert from personal knowledge of the circumstances.

Jung did not "play along with the Nazis," as has more than once been charged; instead, he fought in a clever way, and the only possible way, against them, adjusting himself to the given conditions so he could extend his help.

Here is another refutation of the charge of anti-Semitism against Jung:

The first book he published after the Nazi rise is his volume" Wirklichkeit der Seele." rr1he book has 409 pages.

Of these, 50 are given over to a long study by a Jewish pupil of Dr. Jung, Hugo Rosenthal, entitled" Der Typengegensatz in der jüdischen Religions-geschichte (The Typological Opposites in the History of the Jewish Religion).

Certainly this also was not an action which could have been intended to win him sympathy and friendship from the Nazis, and it was not meant to do so.

Its meaning will become clear from the letter which will be reprinted.

Of course, persons with hate-inflated emotions may accept the presentation given here

and yet may find the proof inadequate.

However, the presentation here is made for sound and humanly adjusted minds and not for psychopathological personalities.

It now remains to follow the events which led to Dr. Jung's eventual resignation from cooperation with the Uberstaatliche

Gesellschaft and consequently from any contact with the thenexisting German organizations.

To give a reasonable start to the collaboration within the framework of national groups, set up by stipulation of the Nazi government, a first series of issues of the" Zentralblatt" was planned and executed, each issue undertaken by one of the national groups.

The first one was a German issue, followed by Swiss, Dutch and Scandinavian numbers.

Soon, however, regular publications became the rule once more.

Considerable distrust on the part of German officialdom appears to have existed concerning the psychotherapeutic organization, distrust which, however, did not find sufficient grounds for interfering with its existence.

However, a year later, we see Dr. Goering appearing as co-editor with Dr. J\mg, while Dr. Cimbal retired favor of a man who seems to have appeared more trustworthy to the Nazi authorities.

This was in 1936.

A neurologist and psychiatrist about whose political attitudes I have been unable to obtain sure information, Dr. von Weizsaecker, was added to the editorial board.

This arrangement, however, only lasted for two more years. From 1937 onward, Jung's name was retained only more or less pro forma as a co-editor of the "Zentralblatt."

Following, is the letter written by Jung during May of the fateful year, 1934, to a Jewish pupil and friend who at that time still lived on the other side of the Atlantic but who is now a practising medical psychotherapist in this country.

The recipient of this **long letter has kindly agreed to have it reprinted in part.**

All and any passages of a personal nature have been omitted as well as those not essential to the task which this reprinting serves.

THE TRANSLATION

”it appears that amusing rumors are being spread about me.

The only Junq questionable fact which lies behind all this stupid gossip is that having been elected honorary chairman (Ehrenvorsitzender) of the International Society for Psychotherapy I could not desert the society at the moment when Kretschmer resigned.

I have been urgently requested by the German physicians to retain this position and have consequently done what anyone else would have done in my situation, namely, my duty toward the International Society. This consisted in the main in preserving the (Rahmenorganisation) supernational society and in affiliating to it the German society.

This was accomplished at the last Nauheim congress.

We can also register the satisfying fact that at my suggestion a special paragraph has been adopted to the effect that German Jewish physicians can individually join the international organisation.

They have thus become full members with equal rights.

"I need hardly mention the other rumors.

It is a downright lie to quote me as having said that Jews are dishonest in analysis.

Anyone who believes that I could say anything so idiotic must think me extraordinarily stupid.

Neither have I addressed Hitler over the radio or in any other manner, nor have I expressed anything in regard to politics.

In regard to my opinion that the Jews probably do not create their own forms of culture, this opinion rests upon (1) historical facts, (2) the fact that the specific cultural contribution of the Jew achieves its clearest results within the circle of a host-culture, where the Jew frequently becomes the very carrier of this culture, or its promoter.

This task is in itself so specific and so demanding that it is hardly to be conceived that any individual Jewish culture could arise alongside it. Since Palestine

actually presents very peculiar conditions [The recipient of this letter was at that time living in Palestine.]

I have cautiously inserted the word ’probably’ (voraiissichtlich) in my sentence.

I would in no wise deny the possibility that something specific is being created there, but so far I do not know it.

I cannot discover anything anti-Semitic in this opinion. . . .

” . . . The Jewish Christ-complex is a very remarkable affair.

As you know I completely agree with you in this respect.

The existence of this complex makes for a somewhat hystericised general attitude of mind (Geisteshaltung) which has become especia1ly clear to me in the course of the present anti-Christian attacks upon myself.

The mere fact that I speak of a difference between Jewish and Christian psychology suffices to allow anyone to voice the prejudice that I am an anti-Semite.

Or in the opinion of the Swiss Israelite Weekly, my assertion that I am as little an anti-Semite as an anti-Chinese proves my intention to compare the Jews with a Mongolian horde.

This hypersensitivity is simply pathological and makes every discussion almost impossible.

As you know, Freud previously accused me of anti-Semitism because I could not countenance his soulless materialism.

The Jew truly solicits antisemitism with his readiness to scent out anti-Semitism everywhere.

I cannot see why the Jew, like any so-called Christian, is incapable of assuming that he is being personally criticized when one has an opinion about him.

Why must it always be assumed that one wants to condemn the Jewish people.

Surely the individual is not the people?

I regard this. as an inadmissible manner of silencing one’s adversary.

In the great majority of cases, I have got along very well with my Jewish patients and colleagues.

It happens in the cases of other people, too, that I have to criticize the individual; but they do not ascribe it to the fact that they are English, American or French.

However, there does exist one exception worth mentioning in this respect, and that is the German.

It has happened to me more than once that when I criticized a German he immediately concluded that I am a hater of Germans.

It is really too cheap to try to hide one’s own inferiority behind a political prejudice . . .

” . . . You know well enough to what extent I approach the human being as a personality and how I endeavor to lift him out of his collective conditioning and to make him into an individual.

This, as you know, is only possible if he acknowledges his peculiar features (Besonderheit) which have been forced upon him by fate.

No one who is a Jew can become a human being without knowing that he is a Jew, since this is the basis from which he must reach out toward a higher humanity (Menschentiim).

This holds good for all nations and races.

Nationalism is therefore a sine qua non,'-no matter how objectionable it may appear-but the individual must not remain stuck in it.

On the other hand, insofar as he is a particle of the mass of the people he must not elevate him self above it either.

As a human individual I am a European, as an atom of the masses I am a Swiss bourgeois, domiciled at 228, Seestrasse, Kiisnacht near Zurich . . .

"Finally I want to inform you that my new book "Wirklichkeit der Seele,' has appeared.

I have included in it a Jewish author on the " Psychology of the Old Testament' in order to annoy the Nazis and all those Jews who have decried me as an anti-Semite.

The next thing they are now going to invent about me is that I suffer from a complete absence of convictions and that I am neither an anti-Semite nor a Nazi.

We happen to live in a period which overflows with lunacy. 'Quem deus perdere vult prinium dementat.'

"With kindest regards,

"Yours,

"C. G. Jung,

" et semper idem."

Carl Jung Depth Psychology Quotations

Carl Jung: *CW 1 “Psychiatric Studies”

[2]Psychiatric Studies (The Collected Works of C.G. Jung, Vol. 1)

To be adapted is certainly an ideal, but adaptation is not always possible.

Emotion has a decomposing action on the mind, reduces its synthesis and makes it, for the moment, wretched. Emotions, especially depressive ones such as fear, disorganize the mental syntheses; their action, so to speak, is analytic, as opposed to that of the will, of attention, of perception, which is synthetic Carl Jung citing Janet, CW 1, Para 318

One of the marks of emotion is that it is accompanied by a decided lowering of the mental level. It brings about not only the loss of synthesis and the reduction to automatism, which is so noticeable in the hysteric, but proportionately to its strength it gradually suppresses the higher phenomena and lowers tension to the level of the so-called inferior phenomena. Under the influence of emotion, mental synthesis, attention, the acquisition of the new memories, are seen to disappear; with them diminish or disappear all the functions of reality, the feeling of and pleasure in reality, confidence and certitude. In place of these we observe automatic movements Carl Jung citing Janet, CW 1, Para 319

Affects have a particularly deleterious effect on the memory Carl Jung, CW 1, Para 319

But this dissociative power which belongs to emotion is never more clearly displayed than in its effect on the memory. This dissociation can act on memories as they are produced and constitute continuous amnesia; it can also act suddenly on a group of memories already formed. Carl Jung citing Janet, CW 1, Para 319

Carl Jung: *CW 2 “Experimental Researches”:

[3]The Collected Works of C. G. Jung, Vol. 2: Experimental Researches

Distraction by surrounding objects is, as far as we know from our experience in psychopathology, a phenomenon that must be interpreted as the effect of emotion Carl Jung, CW 2, Para 298

In embarrassment or bewilderment, which are caused when the stimulus-word conjures up [in the word association test] emotionally charged ideas that the subject consciously or unconsciously tries to repress, the subject lets herself be completely distracted by externals and verbally reacts by simply naming an object from her surroundings Carl Jung, CW 2, Para 298

For psychoanalysis, the patient's mental condition is important, but still more important is the mental condition of the doctor Carl Jung, CW 2, Para 703

He [the doctor] who approaches a case with anything but absolute conviction is soon lost in the snares and traps laid by the complex of hysterical illness at whatever point he hopes to take hold of it Carl Jung, CW 2, Para 703

One has to know from the very beginning that everything in the hysteric is trying to prevent an exploration of the complex Carl Jung, CW 2, Para 703

After three [analytic] sessions a certain conclusion was reached, in so far as one could not avoid relating the obsessional idea that she had caused the death of her former pupil to the self-reproaches connected with the sexual stories [which she had revealed in earlier sessions] Carl Jung, CW 2, Para 713

The cement that holds the complex together is the feeling-tone common to all the individual ideas, in this case unhappiness Carl Jung, CW 2, Para 733

In our case the complex has the effect that the subject does not react by arbitrary or random connections of words but derives most of his reactions from the complex itself. The influence of the complex on thinking and behavior is called a constellation Carl Jung, CW2, Para 733

In accordance with the intensity of their emotions people's thinking and behavior are constellated by their complexes, and so are their associations Carl Jung, CW2, Para 736

Where the complex temporarily replaces the ego, we see that a strong complex possesses all the characteristics of a separate personality. We are, therefore, justified in regarding a complex as somewhat like a small secondary mind, which deliberately (though unknown to consciousness) drives at certain intentions which are contrary to the conscious intentions of the individual Carl Jung, CW 2, Para 1352

Laughter is diagnostically important: it often indicates in psychoanalysis that a complex has been touched Carl Jung, CW 2, Para 816

It is obvious that no one but the patient demands anything that is too much. Freud says, "Many of my neurotic patients who are under psychoanalytic treatment are in the habit of confirming the fact by a laugh when I have succeeded in giving a faithful picture of their hidden unconscious to their conscious perception; and they laugh even when the content of what is unveiled would by no means justify this. This is subject, of course, to their having arrived close enough to the unconscious material to grasp it after the doctor has detected it and presented it to them" Carl Jung, CW 2, Para 816

The complex acts in a peculiar way upon the psyche; Janet has described it in an excellent manner in his book (Janet, Les Obsessions et la psychasthénie, 1903). The complex robs the ego of light and nourishment, just as a cancer robs the body of its vitality. Carl Jung, CW 2, Para 1067

Experience teaches us the close relation between complex and neurosis. We must assume that the complex is a thought material, which stands under special psychological

conditions, because it can exert a pathogenetic influence Carl Jung, CW 2, Para 1352

This intention [of the subject] is disturbed by the interference of the complex, so that the association, contrary to expectation, is either turned from the sense of the complex or replaced by fragmentary allusions, or is in general so disturbed as to render the subject altogether unable to produce a reaction, although he may be unaware that the complex is independent of his intentions Carl Jung, CW 2, Para 1352

Nature has an apparatus that makes an extract of the complexes and brings them to consciousness in an unrecognizable and therefore harmless form: this is the dream Carl Jung, CW 2, Para 822

We know Freud's principle of the displacement from below upwards. What happens to the mouth (in dreams, in hysteria, in schizophrenia) happens to the genitals. If one eats, one puts something into the mouth Carl Jung, CW 2, Para 839

A patient in the early stage of dementia [schizophrenia] once expressed her wish-delirium by saying that the man she desired as her bridegroom fed her with a spoon, which made her pregnant and she had a child Carl Jung, CW 2, Para 839

The memory consists of a large number of single images; we therefore refer to it as a complex-image Carl Jung, CW 2, Para 891

The complex of these images is held together by a particular emotional tone, that is, by the effect of terror, the vibrations of which can continue gently for weeks or months and keep the image of terror fresh and vivid for that length of time Carl Jung, CW 2, Para 891

During the day work and other interests predominate, but from time to time these complexes make themselves felt through a faint and hardly recognizable unease or through slight feelings of anxiety, which seem to be unaccountable; at night they intrude into our dreams in a form the symbolism of which may be more or less pronounced Carl Jung, CW 2, Para 891

One of the chief characteristics of hysterical patients is the tendency to let themselves be carried away by everything, to fix their passion onto everything, and always promise too much and hence keep only a few of their promises. Patients with this symptom are, in my experience, always rather disagreeable Carl Jung, CW 2, Para 950

Another common peculiarity of hysterical patients that of taking everything personally, of never being able to be objective and of allowing themselves to be carried away by momentary impressions Carl Jung, CW 2, Para 953

The sensitivity (i.e., the excitability) of the emotions is greater in hysterical patients than in normal people. The hysterical patient suffers from an affect that he has been unable to conquer. The recognition of this is of the greatest importance in therapy Carl Jung, CW 2, Para 909

By his desire to supplement [in the word association test], the subject betrays a tendency to give the experimenter more than he wants; he actually labours in his attempts to find further ideas so as eventually to find something entirely satisfactory Carl Jung, CW 2, Para 950

Patients with this symptom are, in my experience, always rather disagreeable; at first

they are enthusiastically enamored of the physician, for a time going so far as blindly to accept everything he says; but they soon fall into an equally blind resistance to him, thus rendering any psychological influence absolutely impossible Carl Jung, CW 2, Para 950

The complex acts in a peculiar way upon the psyche; Janet has described it in an excellent manner in his book (Janet, Les Obsessions et la psychasthénie, 1903). The complex robs the ego of light and nourishment, just as a cancer robs the body of its vitality Carl Jung, CW 2, Para 1067

Rise of morbid hysterical symptoms These results can also manifest themselves in associations, so that in hysterics we find clear manifestations of emotional constellations among the patient's associations Carl Jung, CW 2, Para 1067

The association experiment [word association test] provides the means of studying experimentally the behavior of the complex Carl Jung, CW 2, Para 1352

Experience teaches us the close relation between complex and neurosis. We must assume that the complex is a thought material, which stands under special psychological conditions, because it can exert a pathogenetic influence Carl Jung, CW 2, Para 1352

This intention [of the subject] is disturbed by the interference of the complex, so that the association, contrary to expectation, is either turned from the sense of the complex or replaced by fragmentary allusions, or is in general so disturbed as to render the subject altogether unable to produce a reaction, although he may be unaware that the complex is independent of his intentions Carl Jung, CW 2, Para 1352

Carl Jung: *CW 3 The Psychology of Dementia Praecox"

[4]The Psychology of Dementia Praecox

In general, the patient's degree of intelligence and education is of considerable importance for the prognosis Carl Jung, CW 3, Para 575

In cases of passing, acute intervals, or in the early stages of the disease, an explanatory discussion of the symptoms, especially of the psychotic contents, seems to me of the greatest value Carl Jung, CW 3, Para 575

Since fascination by archetypal contents is particularly dangerous, an explanation of their universal, impersonal meaning seems to me especially helpful, as opposed to the usual discussion of personal complexes Carl Jung, CW 3, Para 575

These complexes are the things that called forth the archaic reactions and compensations in the first place, and can obviously produce the same effects again at any time Carl Jung, CW 3, Para 575

Often, therefore, one must help the patient to detach his interest from these personal sources of excitation, at least temporarily, so as to give him a general orientation and a broader view of his confused situation Carl Jung, CW 3, Para 575

I have therefore made it a rule to give the intelligent patient as much psychological knowledge as he can stand. The more he knows in this respect, the better his whole prognosis will turn out, for if he is equipped with the necessary knowledge he can meet renewed irruptions of the unconscious with understanding and in this way assimilate the strange contents and integrate them into his conscious life. So in cases where the patients remember the content of their psychosis, I discuss it with them in detail and try to get them to understand it as thoroughly as possible Carl Jung, CW 3, Para 575

The introvert adapts to the world by means of a system Carl Jung, CW 3, Para 420

Insomnia is often due to uncontrollable complexes against which the auto-suggestive power of sleep is no longer effective Carl Jung, CW 3, Para 137

Thus the thought-complexes are dependent on a small fraction of clarity, for which reason they can manifest themselves only in vague, symbolic expressions and also get contaminated for lack of differentiation Carl Jung, CW 3, Para 137

We need not assume an actual censorship of dream thoughts in the Freudian sense; the inhibition exerted by sleep-suggestion is a perfectly sufficient explanation Carl Jung, CW 3, Para 137

The autonomous complex can only “think” superficially and unclearly, i.e., symbolically, and the end-results (automatisms, constellations) which filter through into the activity of the ego-complex and into consciousness will be similarly constituted Carl Jung, CW3, Para 135

Even with ordinary therapeutic measures you can get the patient’s mind at a sufficiently safe distance from the unconscious, for instance by inducing him to draw or paint a picture of his psychic situation. (Painting is rather more effective, since by means of the colors his feelings are drawn into the picture too) Carl Jung, CW 3, Para 562

The tremendum is spellbound by it, made harmless and familiar, and whenever the patient is reminded of his original experience by its menacing emotional effects, the picture he has made of it interposes itself between him and the experience and keeps his terror at bay Carl Jung, CW 3, Para 562

I have now, after long practical experience, come to hold the view that the psychogenic causation of the disease is more probable than the toxic causation Carl Jung, CW 3, Para 570

There are a number of mild and ephemeral but manifestly schizophrenic illnesses quite apart from the even more common latent psychoses which begin purely psychogenically, run an equally psychological course (aside from certain presumably toxic nuances) and can be completely cured by a purely psychotherapeutic procedure; I have seen this even in severe cases Carl Jung, CW 3, Para 570

The general picture of an [word] association test of a schizophrenic may be very similar

to that of a neurotic, but closer examination shows that in a schizophrenic patient the connection between the ego and some of the complexes is more or less completely lost Carl Jung, CW 3, Para 506

The split is not relative, it is absolute. An hysterical patient might suffer from a persecution-mania very similar to real paranoia, but the difference is that in the former case one can bring the delusion back under the control of consciousness, whereas it is virtually impossible to do this in paranoia Carl Jung, CW 3, Para 506

A neurosis, it is true, is characterized by the relative autonomy of its complexes, but in schizophrenia the complexes have become disconnected and autonomous fragments, which either do not reintegrate back to the psychic totality, or, in the case of a remission, are unexpectedly joined together again as if nothing had happened Carl Jung, CW 3, Para 506

The unity of personality which, in a case of hysteria, lends a humanly understandable character to its own secondary personalities is definitely shattered into fragments Carl Jung, CW 3, Para 507

In a hysterical multiple personality there is a fairly smooth, even tactful, co-operation between the different persons, who keep to their respective roles and, if possible, do not bother each other Carl Jung, CW 3, Para 507

One feels the presence of an invisible spiritus rector, a central manager who arranges the stage for the different figures in an almost rational way, often in the form of a more or less sentimental drama Carl Jung, CW 3, Para 507

The picture of a personality dissociation in schizophrenia is quite different. The split-off figures assume banal, grotesque, or highly exaggerated names and characters, and are often objectionable in many other ways Carl Jung, CW 3, Para 508

On the contrary, they [the split-off personalities] break in and make a disturbance at any time, they torment the ego in a hundred ways. All are objectionable and shocking, either in their noisy and impertinent behavior or in their grotesque cruelty and obscenity Carl Jung, CW 3, Para 508

The autonomous figures have broken away from the control of the ego so thoroughly that their original participation in the patient's mental make-up has vanished Carl Jung, CW 3, Para 509

An abaissement can be produced by many causes: by fatigue, normal sleep, intoxication, fever, anaemia, intense affects, shocks, organic diseases of the central nervous system; likewise it can be induced by mass-psychology or a primitive mentality, or by religious and political fanaticism, etc. It can also be caused by constitutional and hereditary factors Carl Jung, CW 3, Para 513

Neuroses are specific consequences of an abaissement; as a rule they arise from a habitual or chronic form of it. Where they appear to be the effect of an acute form, a more or less latent psychological disposition always existed prior to the abaissement, so that the latter is no more than a conditional cause Carl Jung, CW 3, Para 515

The symptoms of Janet's abaissement du niveau mental are release of automatisms (thought-deprivation, pathological ideas) and reduction of attention. The consequence of this last is an incapacity for clear ideation. The ideas are indistinct, no proper differentiation takes place, and this leads to numerous confusions, condensations, contaminations, metaphors, etc. The condensations mostly follow the law of similarity of imagery or sound, so that meaningful connections largely disappear Carl Jung, CW 3, Para 300

There is no doubt that an abaissement which leads to a neurosis is produced either by exclusively psychological factors or by these in conjunction with other, perhaps more physical, conditions Carl Jung, CW 3, Para 516

A neurosis is a relative dissociation, a conflict between the ego and a resistant force based upon unconscious contents. These contents have more or less lost their connection with the psychic totality Carl Jung, CW 3, Para 516

They [the unconscious contents] form themselves into fragments, and the loss of them means a depotentiation of the conscious personality Carl Jung, CW 3, Para 516

The intense conflict, on the other hand, expresses an equally intense desire to re-establish the severed connection. There is no co-operation, but at least there is a violent conflict, which functions instead of a positive connection Carl Jung, CW 3, Para 516

Every neurotic fights for the maintenance and supremacy of his ego-consciousness and for the subjugation of the resistant unconscious forces Carl Jung, CW 3, Para 516

But a patient who allows himself to be swayed by the intrusion of strange contents from the unconscious, a patient who does not fight, who even identifies with the morbid elements, immediately exposes himself to the suspicion of schizophrenia Carl Jung, CW 3, Para 516

His [Schizophrenic] abaissement has reached the fatal, extreme degree, when the ego loses all power to resist the onslaught of an apparently more powerful unconscious. Carl Jung, CW 3, Para 516

Schizophrenia has a "psychology," i.e., a psychic causality and finality, just as normal mental life has, though with this important difference: whereas in the healthy person the ego is the subject of his experience, in the schizophrenic the ego is only one of the experiencing subjects. In other words, in schizophrenia the normal subject has split into a plurality of subject, or into plurality of autonomous complexes Carl Jung, CW 3, Para 498

The psychic mechanism that brings about the normal extinction and disintegration of consciousness in sleep is therefore a normal function which almost obeys our will. In schizophrenia it seems as if this function were set in motion in order to bring about that sleep-like condition in which consciousness is reduced to the level of dreams, or, in which dreams are intensified to a degree equalling that of consciousness Carl Jung, CW 3, Para 523

The simplest form of schizophrenia, of the splitting of the personality, is paranoia, the classic persecution-mania of the "persécuteur persécuté." It consists in a simple doubling of the personality, which in milder cases is still held together by the identity of the two egos Carl Jung, CW 3, Para 499

The schizophrenic may be pictured as a dreamer who walks about and acts like a person awake Carl Jung, CW 3, Para 174

The patient strikes us at first as completely normal. He may hold office or be in a lucrative position we suspect nothing. We converse normally with him, and at some point, for example, we let fall the word “Freemason” Carl Jung, CW 3, Para 499

Suddenly the jovial face before us changes, a piercing look full of abysmal mistrust and inhuman fanaticism meets us from his eye. He has become a hunted, dangerous animal, surrounded by invisible enemies: the other ego has risen to the surface Carl Jung, CW 3, Para 499

What has happened? Obviously at some time or other the idea of being a persecuted victim gained the upper hand, became autonomous, and formed a second subject which at times completely replaced the healthy ego Carl Jung, CW 3, Para 500

It is characteristic that neither of the two subjects can fully experience the other, although the two personalities are not separated by a belt of unconsciousness as they are in an hysterical dissociation of the personality Carl Jung, CW 3, Para 500

They know each other intimately, but they have no valid arguments against one another Carl Jung, CW 3, Para 500

The healthy ego cannot counter the affectivity of the other, for at least half its affectivity has gone over into its opposite number. It is, so to speak, paralysed This is the beginning of that schizophrenic “apathy” which can best be observed in paranoid dementia Carl Jung, CW 3, Para 500

Dreams are due to an incomplete extinction of consciousness, or to a somewhat excited state of the unconscious which interferes with sleep Carl Jung, CW 3, Para 524

Sleep is disturbed if too many remnants of consciousness go on stirring, or if there are unconscious contents with too great an energy-charge, for then they rise above the threshold and create a relatively conscious state Carl Jung, CW 3, Para 524

Hence it is better to explain many dreams as the remnants of conscious impressions, while others derive directly from unconscious sources which have never been conscious Carl Jung, CW 3, Para 524

Dreams of the first type [remnants of conscious impressions] have a personal character and conform to the rules of a personalistic psychology Carl Jung, CW 3, Para 524

Dreams of the second type [from unconscious sources] have a collective character, inasmuch as they contain peculiarly mythological, legendary, or generally archaic imagery. One must turn to historical or primitive symbology in order to explain such dreams Carl Jung, CW 3, Para 524

The dissociation in schizophrenia is not only far more serious [than a Neurosis] but very often irreversible The dissociation is no longer fluid and changeable as it is in a neurosis. It is more like a mirror broken up into splinters Carl Jung, CW 3, Para 507

Each figure has a suggestive name and an admissible character, and they are just as nicely hysterical and just as sentimentally biased as the patient's own consciousness Carl Jung, CW 3, Para 507

They [the figures] do not, moreover, co-operate with the patient's consciousness. They are not tactful and they have no respect for sentimental values Carl Jung, CW 3, Para 508

On the contrary, they [the split-off personalities] break in and make a disturbance at any time, they torment the ego in a hundred ways. All are objectionable and shocking, either in their noisy and impertinent behavior or in their grotesque cruelty and obscenity Carl Jung, CW 3, Para 508

There is an apparent chaos of incoherent visions, voices, and characters, all of an overwhelmingly strange and incomprehensible nature Carl Jung, CW 3, Para 508

If there is a drama at all, it is certainly far beyond the patient's understanding. In most cases it transcends even the physician's comprehension, so much so that he is inclined to suspect the mental sanity of anybody who sees more than plain madness in the ravings of a lunatic Carl Jung, CW 3, Para 508

The healthy ego cannot counter the affectivity of the other, for at least half its affectivity has gone over into its opposite number. It is, so to speak, paralysed. This is the beginning of that schizophrenic "apathy" which can best be observed in paranoid dementia Carl Jung, CW 3, Para 500

The patient can assure you with the greatest indifference: "I am the triple owner of the world, the finest Turkey, the Lorelei, Germania and Helvetia of exclusively sweet butter and Naples and I must supply the whole world with macaroni." All this without a blush, and with no flicker of a smile Carl Jung, CW 3, Para 500

Anyone who observes himself, carefully and unsparingly, will know that there is something within him which would gladly hide and cover up all that is difficult and questionable in life, in order to smooth a path for itself Carl Jung, CW 3, Para 385

Insanity gives it a free hand. And once it has gained ascendency, reality is veiled, more quickly or less; it becomes a distant dream, but the dream becomes a reality which holds the patient enchained, wholly or in part, often for the rest of his life Carl Jung, CW 3, Para 385

We healthy people, who stand with both feet in reality, see only the ruin of the patient in this world, but not the richness of that side of the psyche which is turned away from us Carl Jung, CW 3, Para 385

Unfortunately only too often no further knowledge reaches us of the things that are being played out on the dark side of the soul [in the insane], because all the bridges have broken down which connect that side with this Carl Jung, CW 3, Para 385

One of them comprises all those forms of illness which are commonly designated "hysterical"; the other all those forms which the French school calls "psychasthenic" Carl Jung, CW 3, Para 418

Although the line of demarcation is rather uncertain, one can mark off two psychological types which in themselves are quite distinct because their psychology is diametrically opposed. I have called these the introverted and extraverted types Carl Jung, CW 3, Para 418

The hysteric belongs to the extraverted type, the psychasthenic to the introverted type, and so, to the best of our knowledge, does the schizophrenic. The terms introversion and extraversion are dependent on my energic conception of psychic phenomena. Carl Jung, CW 3, Para 418

I postulate a hypothetical, fundamental striving which I call libido Carl Jung, CW 3, Para 418

In accordance with the classical usage of the word, libido does not have an exclusively sexual connotation as it has in medicine Carl Jung, CW 3, Para 418

Libido is intended as an energic expression for psychological values. A psychological value is something that has an effect; hence it can be considered from the energic standpoint without any pretence of exact measurement Carl Jung, CW 3, Para 418

There seems to be a certain intellectual weakness which expresses itself in a tendency to give definitions, though unlike the same tendency in imbeciles it does not strive for generalization but defines the content of the stimulus-words in terms of the complex Carl Jung, CW 3, Para 208

Characteristic is the extraordinary stilted and affected manner of expression, sometimes verging on the incomprehensible Carl Jung, CW 3, Para 208

The clumsy and peculiar-sounding definitions of imbeciles occur at unexpected places which happen to hit the complex Carl Jung, CW 3, Para 208

In normal people and hysterics we find striking or linguistically odd reactions always at the critical places, and especially words from foreign languages. These correspond here to the neologisms, which are nothing but peculiarly forceful and ponderous expressions of thought-complexes Carl Jung, CW 3, Para 208

We can also understand why a patient describes her neologisms as “power-words.” Whenever they appear they hint at the whole system hidden behind them, just as technical terms do in normal speech Carl Jung, CW 3, Para 208

This [the complex] constellates most of the associations and expresses itself above all in the affectation, whose sole purpose is to emphasize the value of the personality. To that extent it is a normal and familiar aid to self-complacency. Here it is exaggerated in accordance with the patient’s morbidly intensified self-esteem Carl Jung, CW 3, Para 211

Hand in hand with the exaggerated affectation go exaggerated ideas of grandeur which, because of their contrast with reality and the affected, barely intelligible way they are expressed have something grotesque about them Carl Jung, CW 3, Para 211

We find this phenomenon in normal people whose self-esteem is at odds with their intelligence and outward situation. In the patient it is primarily a question of exaggeration and

the corresponding strong affect it indicates. What exceeds the normal mechanism is the barely intelligible and unadapted manner of expression, which suggests an impairment of the underlying concepts Carl Jung, CW 3, Para 211

The complex of personal grandeur expresses itself also in the patient's unsuitable demands and wishes Carl Jung, CW 3, Para 211

Neuroses are specific consequences of an abaissement; as a rule they arise from a habitual or chronic form of it. Where they appear to be the effect of an acute form, a more or less latent psychological disposition always existed prior to the abaissement, so that the latter is no more than a conditional cause Carl Jung, CW 3, Para 515

The symptoms of Janet's abaissement du niveau mental are release of automatisms (thought-deprivation, pathological ideas) and reduction of attention. The consequence of this last is an incapacity for clear ideation. The ideas are indistinct, no proper differentiation takes place, and this leads to numerous confusions, condensations, contaminations, metaphors, etc. The condensations mostly follow the law of similarity of imagery or sound, so that meaningful connections largely disappear Carl Jung, CW 3, Para 300

Hypnosis represses the hysterical complex and leads to the reproduction of the ego-complex Carl Jung, CW 3, Para 163

In schizophrenia, when we are not actually dealing with marked excitement accompanied by deep confusion, we often get the impression that the patients are disturbed merely by illusions but that at bottom they are correctly oriented Carl Jung, CW 3, Para 163

Lucidity of consciousness is especially often impaired in the acute stage of the disease, when the patients are in a real dream, i.e., in a "complex-delirium" Carl Jung, CW 3, Para 163

Hallucinations are simply the outward projection of psychic elements. Clinically we know all gradations, from inspirations and pathological ideas to loud auditory hallucinations and vivid visions Carl Jung, CW 3, Para 180

Hallucinations are ubiquitous. Schizophrenia merely sets in motion a preformed mechanism which normally functions in dreams Carl Jung, CW 3, Para 180

The hallucinations of hysteria, like those of dreams, contain symbolically distorted fragments of the complex Carl Jung, CW 3, Para 180

If there is a very strong complex, all progress adapted to the environment ceases and the associations revolve entirely round the complex. By and large this is what happens in hysteria, where we find very strong complexes Carl Jung, CW 3, Para 184

The progress of the personality is retarded, and a large part of the psychic activity is expended in varying the complex in all possible ways (symptomatic actions). Not for nothing does Janet call attention to the general disturbances in "obsessed" persons, of which I mention the following: indolence, irresolution, retardation, fatigue, lack of achievement, aboulia, inhibition Carl Jung, CW 3, Para 184

If a complex succeeds in becoming fixed, monotony results, especially monotony of the

outward symptoms Carl Jung, CW 3, Para 184

Who does not know the stereotyped, exhausting complaints of hysterics and the stubborn, invincible nature of their symptoms? Carl Jung, CW 3, Para 184

Just as a constant pain will always call forth the same monotonous cries of distress, so a fixed complaint will gradually stereotype the individual's whole mode of expression, so that in the end we know that day after day we shall receive with mathematical accuracy the same answer to the same question Carl Jung, CW 3, Para 184

There seems to be a certain intellectual weakness which expresses itself in a tendency to give definitions, though unlike the same tendency in imbeciles it does not strive for generalization but defines the content of the stimulus-words in terms of the complex Carl Jung, CW 3, Para 208

Among the characterological disturbances in schizophrenia [dementia praecox] we might mention affectation (mannerisms, eccentricity, mania for originality, etc.). We frequently meet this symptom in hysteria, especially when patients find themselves out of their social element Carl Jung, CW 3, Para 154

A very common form of this affectation is the pretentious and artificial behavior of women of a lower social position dressmakers, nurses, maids, etc. Who mix with those socially above them, and also of men who are dissatisfied with their social status and try to give themselves at least the appearance of a better education or of a more imposing position Carl Jung, CW 3, Para 154

The affectation, in itself, contains nothing specific of schizophrenia. The disease takes over the mechanism from the normal, or rather from the caricature of the normal, hysteria Carl Jung, CW 3, Para 155

Such patients have a special predilection for neologisms, which they used mostly as learned or otherwise distinguished-sounding technical terms Carl Jung, CW 3, Para 155

One of my women patients called them "power-words," and showed a special liking for the most abstruse expressions, which obviously seemed to her fraught with meaning Carl Jung, CW 3, Para 155

The "power-words" serve among other things to emphasize the personality and to make it as imposing as possible Carl Jung, CW 3, Para 155

The emphasis laid on "power-words" accentuates the value of the personality in the face of doubt and hostility, and for this reason they are frequently used as defensive and exorcistic formulae Carl Jung, CW 3, Para 155

The affectation also expresses itself in gesture and handwriting, the latter being adorned with all kinds of peculiar flourishes Carl Jung, CW 3, Para 156

Normal analogies can be found in young girls who, out of caprice, affect an especially striking or original script Carl Jung, CW 3, Para 156

The same thing can be seen in temperamental hysterics, and it is often easy to show

that the change in writing begins at the place where the complex is touched. Even with normal people one can often see disturbances at such places Carl Jung, CW 3, Para 156

We do not always have this impression in hysteria, though we can see for ourselves that correct orientation does exist by hypnotizing the patient Carl Jung, CW 3, Para 163

As in hysteria the disorientation is due to a pathogenic complex momentarily pushing aside the ego-complex, so in schizophrenia it may easily happen that quite clear answers are followed the next moment by the most extraordinary utterances Carl Jung, CW 3, Para 163

A strong complex, for instance, a nagging worry hinders concentration. We are unable to tear ourselves away from it and direct our activity and interest into other channels Carl Jung, CW 3, Para 109

Or if we try to tear ourselves away in order to “forget our worries,” we succeed perhaps for a short time but we do it only “half-heartedly”. Without our knowing it, the complex prevents us from giving ourselves wholly to the task in hand Carl Jung, CW 3, Para 109

We succumb to all kinds of inhibitions. In the pauses of thought (“thought-deprivation”) fragments of the complex appear and, as in the word association experiment, cause characteristic disturbances in the intellectual performance Carl Jung, CW 3, Para 109

We make slips of the pen in accordance with the rules of Meringer and Mayer, we produce condensations, perseverations, anticipations, etc., and Freudian errors which reveal by their content the determining complex Carl Jung, CW 3, Para 109

Our slips of the tongue occur at the critical places, that is, when we say words that have a significance for the complex Carl Jung, CW 3, Para 109

We make mistakes in reading because we think we see the complex-words in the text where frequently these words appear in the peripheral field of vision (Bleuler) Carl Jung, CW 3, Para 109

In the midst of our “distracting” occupations we catch ourselves singing or whistling a certain melody. The words, which we have great difficulty in remembering, are a complex constellation Carl Jung, CW 3, Para 109

We may be haunted all day by an obsession, by a melody or a word that is always on the tip of our tongue. These too are complex constellations Carl Jung, CW 3, Para 109

Or we make doodles on paper or on the table which are not difficult to interpret in terms of the complex Carl Jung, CW 3, Para 109

Wherever the disturbances caused by the complex express themselves in words we find displacements by clang similarities or by combinations of phrases Carl Jung, CW 3, Para 109

Melodic automatisms show us once again how repressed thoughts are disguised Carl Jung, CW 3, Para 117

We know that singing and whistling often accompany activities which do not require full

“investment of attention” (Freud) Carl Jung, CW 3, Para 117

The residual attention is therefore relating to the complex, but the purposive activity prevents the complex from becoming clear, it can only show itself instinctively, as for instance in the melodic automatisms that contain the thought complex in the usual metaphorical form Carl Jung, CW 3, Para 117

Every affective event becomes a complex. If it [an affective event] does not encounter a related and already existing complex and is only of momentary significance, it gradually sinks with decreasing feeling-tone into the latent mass of memories, where it remains until a related impression reproduces it again Carl Jung, CW 3, Para 140

But if it [the affective event] encounters an already existing complex, it reinforces it and helps it to gain the upper hand for a while Carl Jung, CW 3, Para 140

The clearest examples of this can be seen in hysteria, where apparent trifles may lead to tremendous outbursts of affect. In such cases the impression has impinged, either directly or symbolically, on the insufficiently repressed complex and thereby evoked a veritable storm, which considering the insignificance of the event often seems altogether disproportionate Carl Jung, CW 3, Para 140

We also find that the strongest feelings and impulses are connected with the strongest complexes Carl Jung, CW 3, Para 140

It is therefore not surprising that the majority of complexes are of an erotic-sexual nature, as also are most dreams and most of the hysterias Carl Jung, CW 3, Para 140

Every affective event becomes a complex. If it [an affective event] does not encounter a related and already existing complex and is only of momentary significance, it gradually sinks with decreasing feeling-tone into the latent mass of memories, where it remains until a related impression reproduces it again Carl Jung, CW 3, Para 140

But if it [the affective event] encounters an already existing complex, it reinforces it and helps it to gain the upper hand for a while Carl Jung, CW 3, Para 140

The clearest examples of this can be seen in hysteria, where apparent trifles may lead to tremendous outbursts of affect. In such cases the impression has impinged, either directly or symbolically, on the insufficiently repressed complex and thereby evoked a veritable storm, which considering the insignificance of the event often seems altogether disproportionate Carl Jung, CW 3, Para 140

The affectation, in itself, contains nothing specific of schizophrenia. The disease takes over the mechanism from the normal, or rather from the caricature of the normal, hysteria Carl Jung, CW 3, Para 155

Such patients have a special predilection for neologisms, which they used mostly as learned or otherwise distinguished-sounding technical terms Carl Jung, CW 3, Para 155

A schizophrenic patient under my care, if the doctors refused him anything, used to threaten them with the words: “I, the Grand Duke Mephisto, shall have you treated with blood

vengeance for orangutan representations” Carl Jung, CW 3, Para 155

Schizophrenic patients frequently have a characteristic handwriting: it expresses the contradictory tendencies in their psyche, the script being now sloping and cursive, now upright, now large, now small Carl Jung, CW 3, Para 156

Since, for many people, the sexual complex cannot be acted out in a natural way, it makes use of by-ways Carl Jung, CW 3, Para 105

During puberty it takes the form of more or less abnormal sexual fantasies, frequently alternating with phases of religious enthusiasm (displacements) Carl Jung, CW 3, Para 105

In men, sexuality, if not acted out directly, is frequently converted into a feverish professional activity or a passion for dangerous sports, etc., or into some learned hobby, such as a collecting mania. Women take up some kind of philanthropic work, which is usually determined by the special form of the complex Carl Jung, CW 3, Para 105

They devote themselves to nursing in hospitals where there are young assistant physicians, or they develop strange eccentricities, a prim, affected behavior which is meant to express distinction and proud resignation Carl Jung, CW 3, Para 105

There is, however, one very common displacement, and that is the disguising of a complex by the superimposition of a contrasting mood. We frequently meet this phenomenon in people who have to banish some chronic worry Carl Jung, CW 3, Para 105

Women betray themselves by a shrill, aggressive gaiety, men by sudden alcoholic and other excesses (also fugues) Carl Jung, CW 3, Para 105

These displacements and disguises may, as we know, produce real double personalities, such as have always excited the interest of psychological writers (cf. the recurrent problem in Goethe of “two souls,” and among the moderns Hermann Bahr, Gorky, and others) Carl Jung, CW 3, Para 105

“Double personality” is not just a literary phrase, it is a scientific fact of general interest to psychology and psychiatry, especially when it manifests itself in the form of double consciousness or dissociation of the personality. Carl Jung, CW 3, Para 105

It sometimes happens that the displacement gradually becomes stable and superficially at least replaces the original character Carl Jung, CW 3, Para 106

Everyone knows people who, judged externally, are enormously gay and entertaining. Inwardly, and sometimes even in private life, they are sullen grumblers nursing an old wound Carl Jung, CW 3, Para 106

Often their [the grumbler’s] true nature suddenly bursts through the artificial covering, the assumed blithesomeness vanishes at a stroke, and we are confronted with a different person Carl Jung, CW 3, Para 106

A single word, a gesture, if it touches the sore spot, reveals the complex lurking in the depths of the psyche Carl Jung, CW 3, Para 106

We succumb to all kinds of inhibitions. In the pauses of thought ("thought-deprivation") fragments of the complex appear and, as in the word association experiment, cause characteristic disturbances in the intellectual performance Carl Jung, CW 3, Para 109

Wherever the disturbances caused by the complex express themselves in words we find displacements by clang similarities or by combinations of phrases Carl Jung, CW 3, Para 109

Melodic automatisms show us once again how repressed thoughts are disguised Carl Jung, CW 3, Para 117

The residual attention is therefore relating to the complex, but the purposive activity prevents the complex from becoming clear, it can only show itself instinctively, as for instance in the melodic automatisms that contain the thought complex in the usual metaphorical form Carl Jung, CW 3, Para 117

Besides this special form of sexual complex, which I have chosen as a paradigm for didactic reasons, since it is the commonest and best-known form of obsessional complex, there are naturally many other kinds of sexual complexes which can exert an equally strong influence Carl Jung, CW 3, Para 104

Among women the complexes of unrequited or otherwise hopeless love are very common. Carl Jung, CW 3, Para 104

Here we find an exceedingly strong complex-sensitiveness. The slightest hint from the other sex is assimilated to the complex and elaborated with complete blindness for even the weightiest arguments to the contrary Carl Jung, CW 3, Para 104

An insignificant remark of the adored is construed as a powerful subjective proof of his love. The chance interests of the intended become the starting-point for similar interests on the woman's part symptomatic action which rapidly disappears when the wedding finally takes place or if the object of adoration changes Carl Jung, CW 3, Para 104

The complex-sensitiveness also shows itself in an unusual sensitiveness to sexual stimuli, which appears particularly in the form of prudery Carl Jung, CW 3, Para 104

Those obsessed by the complex ostentatiously avoid in their younger years everything that could remind them of sex the well-known "innocence" of grown-up daughters Carl Jung, CW 3, Para 104

Although they know where everything is and what it means, their whole behavior gives the impression that they never had an inkling of things sexual Carl Jung, CW 3, Para 104

If one has to inquire into these matters for medical reasons, one thinks at first that one is on virgin soil, but one soon finds that all the necessary knowledge is there, except that the patient does not know where she got it from Carl Jung, CW 3, Para 104

In later years the prudery often becomes unbearable, or the patient displays a naïve symptomatic interest in all sorts of natural situations in which one "may now take an interest because one is past the age" and so on Carl Jung, CW 3, Para 104

The objects of this symptomatic interest are brides, pregnancies, births, scandals, and so on Carl Jung, CW 3, Para 104

The fine nose of elderly ladies for these matters is proverbial. They are passed off as “objective, purely human interest” Carl Jung, CW 3, Para 104

In men, sexuality, if not acted out directly, is frequently converted into a feverish professional activity or a passion for dangerous sports, etc., or into some learned hobby, such as a collecting mania Carl Jung, CW 3, Para 105

Women take up some kind of philanthropic work, which is usually determined by the special form of the complex Carl Jung, CW 3, Para 105

The first group is best illustrated by the legend of Ramón Lully, who, as a gallant adventurer, had long courted a lady. Finally the longed-for billet arrived, inviting him to a midnight assignation. Lully, full of expectation, came to the appointed place, and as he approached the lady, who was awaiting him, she suddenly threw open her robe and uncovered her cancer-eaten bosom. This episode made such an impression on Lully that from then on he devoted his life to pious asceticism Carl Jung, CW 3, Para 89

There are impressions which last a lifetime. The lasting effects of strong religious impressions or of shattering experiences, which are well known Carl Jung, CW 3, Para 90

The effects are particularly strong in youth. Indeed, the whole aim of education is to implant lasting complexes in the child Carl Jung, CW 3, Para 90

The durability of a complex is guaranteed by its continually active feeling-tone. If the feeling-tone is extinguished, the complex is extinguished with it Carl Jung, CW 3, Para 90

The persistence of a feeling-tone complex naturally has the same constellating effect on the rest of the psychic activities as an acute affect. Whatever suits the complex is assimilated, everything else is excluded or at least inhibited. The best examples of this can be seen in religious convictions Carl Jung, CW 3, Para 90

There is no argument, no matter how threadbare, that is not advanced if it is pro, while on the other hand the strongest and most plausible arguments contra make no impression; they simply bounce off, because emotional inhibitions are stronger than all logic Carl Jung, CW 3, Para 90

Even in quite intelligent people who have considerable education and experience, one can sometimes observe a real blindness, a true systematic anaesthesia, when one tries to convince them, say of the theory of determinism. And how often does a single unpleasant impression produce in some people an unshakable false judgment, which no logic, no matter how cogent, can dislodge! Carl Jung, CW 3, Para 90

The effects of the complex extend, however, not only to thought but to action, which is continually forced in a quite definite direction Carl Jung, CW 3, Para 91

For instance, many people unthinkingly perform religious rites and all kinds of ground-

less actions despite the fact that intellectually they have long since out grown them Carl Jung, CW 3, Para 91

The second group of chronic effects of the complex, where the feeling-tone is constantly maintained by active stimuli, affords the best examples of complex constellations Carl Jung, CW 3, Para 92

The strongest and most lasting effects are seen above all in sexual complexes, where the feeling-tone is constantly maintained, for instance by unsatisfied sexual desire Carl Jung, CW 3, Para 92

A glance at the legends of the saints, or at Zola's novels Lourdes or The Dream, will provide numerous examples of this. Yet the constellations are not always quite so crude and obvious, often they are more subtle influences, masked by symbolisms, that sway our thoughts and actions Carl Jung, CW 3, Para 92

Complexes are mostly in a state of repression because they are concerned as a rule with the most intimate secrets which are anxiously guarded and which the subject either will not or cannot divulge Carl Jung, CW 3, Para 93

Even under normal conditions the repression may be so strong that the subject has an hysterical amnesia for the complex. That is, he has the feeling that some idea, some significant association, is coming up, but a vague hesitation keeps the reproduction back. He feels he wants to say something, but it slips away again immediately. What has slipped away is the thought-complex Carl Jung, CW 3, Para 93

The most trivial objects are guarded like priceless jewels, so far as they relate to the complex; his whole environment is viewed sub specie amoris Carl Jung, CW 3, Para 102

Anything that does not suit the complex simply glances off, all the other interests sink to nothing, there is a standstill and temporary atrophy of the personality Carl Jung, CW 3, Para 102

Only what suits the complex arouses affects and is assimilated by the psyche. All thoughts and actions tend in the direction of the complex; whatever cannot be constrained in the direction is repudiated, or is performed perfunctorily without emotion and without care Carl Jung, CW 3, Para 102

In attending to indifferent matters the most extraordinary compromise formations are produced; slips of the pen referring to the erotic complex creep into business letters, suspicious slips of the tongue occur in speaking Carl Jung, CW 3, Para 102

The flow of objective thought is constantly interrupted by invasions from the complex, there are long gaps in one's thought which are filled out with erotic episodes Carl Jung, CW 3, Para 102

The foregoing well-known paradigm [paragraph "s" above] shows clearly the effect of a strong complex on a normal psyche. We see how the psychic energy applies itself wholly to the complex at the expense of the other psychic material, which in consequence remains unused. All stimuli that do not suit the complex undergo a partial apperceptive degeneration

with emotional impoverishment Carl Jung, CW 3, Para 103

Even the feeling-tone becomes inappropriate: trifles such as ribbons, pressed flowers, snapshots, billets doux, a lock of hair, etc., are cherished with the greatest care, while vital questions are often dismissed with a smile or with complete indifference Carl Jung, CW 3, Para 103

On the other hand the slightest remark even remotely touching on the complex instantly arouses a violent outburst of anger or pain which may assume pathological proportions Carl Jung, CW 3, Para 103

If we had no means of feeling our way into the psyche of a normal person in love, his behavior would seem to us that of an hysteric or a catatonic Carl Jung, CW 3, Para 103

In hysteria, where the complex-sensitiveness is far greater than normal, we have almost no means of feeling our way, and must laboriously accustom ourselves to intuiting the meaning of the hysterical affects. This is quite impossible in catatonia, perhaps because we still know too little about hysteria Carl Jung, CW 3, Para 103

Every molecule participated in this feeling-tone, so that, whether it appears by itself or in conjunction with others, it always carries this feeling-tone with it, and it does this with the greater distinctness the more distinctly we can see its connection with the complex-situation as a whole Carl Jung, CW 3, Para 80

This behavior may be compared directly to Wagnerian music. The leitmotiv, as a sort of feel-tone, denotes a complex of ideas which is essential to the dramatic structure Carl Jung, CW 3, Para 80

Each time one or the other complex is stimulated by something someone does or says, the relevant leitmotiv is sounded in one of its variants Carl Jung, CW 3, Para 80

It is exactly the same in ordinary psychic life: the leitmotivs are the feeling-tones of our complexes, our actions and moods are modulations of the leitmotivs Carl Jung, CW 3, Para 80

Large complexes are always strongly feeling-toned and, conversely, strong affects always leave behind very large complexes Carl Jung, CW 3, Para 87

This is due simply to the fact that on the one hand complexes include numerous somatic innervations, while on the other hand strong affects constellate a great many associations because of their powerful and persistent stimulation of the body Carl Jung, CW 3, Para 87

Normally, affects can go on working indefinitely (in the form of stomach and heart troubles, insomnia, tremors, etc.) Gradually, however, they subside, the ideas relating to the complex disappear from consciousness, and only in dreams do they occasionally manifest themselves in more or less disguised hints Carl Jung, CW 3, Para 87

But complexes continue to show themselves for years in the characteristic disturbances they produce in a person’s associations Carl Jung, CW 3, Para 87

Their gradual extinction is marked by one general psychological peculiarity: their readi-

ness to reappear in almost full strength as a result of similar though much weaker stimuli Carl Jung, CW 3, Para 87

It is certain that the symptoms of negativism should not be regarded as anything clear and definite Carl Jung, CW 3, Para 27

In our view, negativism always depends ultimately on negative associations. Whether there is also a negativism that is enacted in the spinal cord I do not know Carl Jung, CW 3, Para 27

The broadest view on the question of negativism is the one taken by Bleuler, who shows that "negative suggestibility," or the compulsion to produce contrary associations, is not only a constituent of the normal psyche but a frequent mechanism of pathological symptoms in hysteria, obsessional states, and schizophrenia [dementia praecox] Carl Jung, CW 3, Para 27

The contrary mechanism is a function existing independently of the normal associative activity and is rooted entirely in "affectivity"; hence it is actuated chiefly by strongly feeling-toned ideas, decisions, etc. Carl Jung, CW 3, Para 27

"The mechanism is meant to guard against precipitate action and to force one to weigh the pros and cons." The contrary mechanism acts as a counterbalance to suggestibility Carl Jung, CW 3, Para 27

Suggestibility is the capacity to accept and put into effect strongly feeling-toned ideas. The contrary mechanism does just the opposite. Bleuler's term "negative suggestibility" is therefore fitting Carl Jung, CW 3, Para 27

Pelletier compares the superficial course of association in schizophrenia [dementia praecox] to flight of ideas Carl Jung, CW 3, Para 22

Characteristic of flight of ideas is the "absence of any directing principle" Carl Jung, CW 3, Para 22

The same is true of the course of association in schizophrenia [dementia praecox]: The directing idea is absent and the state of consciousness remains vague without any order in its elements Carl Jung, CW 3, Para 22

The only mode of psychic activity which in the normal state can be compared to mania is the daydream, although daydreaming is more the mode of thinking of the feeble-minded than of the manic (Madeleine Pelletier, pp. 116, 123, 118) Carl Jung, CW 3, Para 22

Pelletier is right in seeing a great resemblance between normal daydreaming and the superficial associations of manics, but that is true only when the associations are written down on paper Carl Jung, CW 3, Para 22

Clinically, however, the manic does not at all resemble a dreamer Carl Jung, CW 3, Para 22

The richness and acceleration of thought in manic flight of ideas can be sharply differentiated from the sluggish, often halting course of association in the dreamy type, and particularly from the poverty of associations in catatonics, with their numerous perseverations

Carl Jung, CW 3, Para 22

The analogy is correct only in so far as the directing idea is absent in all these cases; in manics because all the ideas crowd into consciousness with marked acceleration and great intensity of feeling, which probably accounts for the absence of attention Carl Jung, CW 3, Para 22

In daydreaming there is no attention from the outset, and wherever this is absent the course of association must sink to the level of a dream-state, to a slow progression according to the laws of association and tending mainly towards similarity, contrast, coexistence, and verbal-motor combinations Carl Jung, CW 3, Para 22

Every affective event becomes a complex. C.G. Jung, CW 3, par. 140

Carl Jung: *CW 4 “Freud and Psychoanalysis”

[5]Freud and Psychoanalysis (Collected Works of C.G. Jung, Volume 4)

Error is just as important a condition of life’s progress as truth. Carl Jung, CW 4, Para 451

I may now add that civilization is a process in the service of Eros, whose purpose is to combine single human individuals, and after that families, then races, peoples and nations, into one great unity, the unity of mankind. Sigmund Freud, Civilization and Its Discontents, Page 118

That day saw the death of my connection with therapy by suggestion; the notoriety aroused by this case shamed and depressed me. Carl Jung, CW 4, Para 581

If only one did not have a scientific conscience and that hankering after the truth! Carl Jung, CW 4, Para 582.

I even hold it to be an indispensable prerequisite that the psychoanalyst should first submit himself to the analytical process, as his personality is one of the main factors in the cure. Carl Jung, CW 4, Para 586

To anticipate a possible objection, let me say at once that I did not give up hypnosis because I wanted to avoid dealing with the basic forces of the human psyche, but because I wanted to battle with them directly and openly. Carl Jung, CW 4, Para 601

I strive not to be a fanatic—though there are not a few who accuse me of fanaticism. Carl Jung, CW 4, Para 602

There are cases where psychoanalysis works worse than any other method. But who

has ever claimed that psychoanalysis should be used always and everywhere? Carl Jung, CW 4, Para 604

Do not forget that Kepler once cast horoscopes for money, and that countless artists are condemned to work for a living wage. Carl Jung, CW 4, Para 607

The relativity of "truth" has been known for ages and does not stand in the way of anything, and if it did would merely prevent belief in dogmas and authority. Carl Jung, CW 4, Para 620

So-called chance is the law and order of psychoanalysis. Carl Jung, CW 4, Para 625

With the unintelligent and bigoted ones [patients] you begin quietly with the analysis. In the unconscious of such folk you have a confederate who never lets you down. Carl Jung, CW 4, Para 627

When the conscious material is exhausted you go on to dreams, which give you the subliminal material. Carl Jung, CW 4, Para 628

As to the question of morality and education, let me say that these things belong to a later stage of the analysis, when they find—or should find—their own solution. You cannot make recipes out of psychoanalysis! Carl Jung, CW 4, Para 631

Again, psychoanalysis is not a method of examination in the nature of an intelligence test, though this mistake is common in certain circles. Carl Jung, CW 4, Para 622

Psychoanalysis is a method which makes possible the analytical reduction of psychic contents to their simplest expression, and for discovering the line of least resistance in the development of a harmonious personality. Carl Jung, CW 4, Para 623

My only working rule is to conduct the analysis as a perfectly ordinary, sensible conversation, and to avoid all appearance of medical magic. Carl Jung, CW 4, Para 624

So-called chance is the law and order of psychoanalysis. Carl Jung, CW 4, Para 625

With the unintelligent and bigoted ones you begin quietly with the analysis. In the unconscious of such folk you have a confederate who never lets you down. Carl Jung, CW 4, Para 627

If people have no dreams, as they allege, or forget them, there is usually still some conscious material that ought to be produced and discussed but is kept back owing to resistances. Carl Jung, CW 4, Para 628

If the analyst demands that his patient shall get well out of love for him, the patient may easily reckon on reciprocal services, and will without doubt try to extort them. Carl Jung, CW 4, Para 639

Man as a herd-animal, too, has not by any manner of means to subordinate himself to

laws imposed from without; he carries his social imperatives within himself, a priori, as an inborn necessity. Carl Jung, CW 4, Para 641

Psychoanalysis is only a means for removing the stones from the path of development, and not a method (as hypnotism often claims to be) of putting things into the patient that were not there before. Carl Jung, CW 4, Para 648

The art of analysis lies in following the patient on all his erring ways and so gathering his strayed sheep together. Carl Jung, CW 4, Para 643

Experience has convinced me that patients rapidly begin to make use of ideas picked up from psychoanalysis, as is also apparent in their dreams. Carl Jung, CW 4, Para 645

The analyst must exercise all possible care and self-criticism not to let himself be led astray by his patient's dreams. Carl Jung, CW 4, Para 649

I can only gaze with wonder and awe at the depths and heights of our psychic nature. Carl Jung, CW 4, Para 784

The third phase is the adult period from puberty on and may be called the period of maturity. Carl Jung, CW 4, Para 265

Religions are the great-healing systems for the ills of the soul. Carl Jung, CW 4, Para 751

There are experiences which one must go through and for which reason is no substitute. Such experiences are often of inestimable value to the patient. Carl Jung, CW 4, Para 446

It is a favourite neurotic misunderstanding that the right attitude to the world is found by indulgence in sex. Carl Jung, CW 4, Para 440

It is in very truth the eternally living, creative, germinal layer in each of us, and though it may make use of age-old symbolical images it nevertheless intends them to be understood in a new way. Carl Jung, CW 4, Para 760

Concrete values cannot take the place of the symbol; only new and more effective symbols can be substituted for those that are antiquated and outworn and have lost their efficacy through the progress of intellectual analysis and understanding. Carl Jung, CW 4, Para 680

There are experiences which one must go through and for which reason is no substitute. Such experiences are often of inestimable value to the patient. Carl Jung, CW 4, Para 446.

Naturally a new meaning does not come ready-made out of the unconscious, like Pallas Athene springing fully armed from the head of Zeus; a living effect is achieved only when the products of the unconscious are brought into serious relationship with the conscious mind. Carl Jung, CW 4, Para 760

The psyche does not merely react; it gives its own specific answer to the influences at work upon it. Carl Jung, CW 4; para 667

My consciousness is like an eye that penetrates to the most distant spaces, yet it is the psychic non-ego that fills them with non-spatial images. And these images are not pale shadows, but tremendously powerful psychic factors. Carl Jung, CW 4, Page 331f.

In the past nothing can be altered, and in the present little, but the future is ours and capable of raising life's intensity to the highest pitch. A little span of youth belongs to us, all the rest belongs to our children. Carl Jung, CW 4, Para 668

I visualize the process of abstraction as a withdrawal of libido from the object, as a backflow of value from the object into a subjective, abstract content. For me, therefore, abstraction amounts to an energic devaluation of the object. In other words, abstraction is an introverting movement of libido. Carl Jung; CW 4; par. 679.

The belief, the self-confidence, perhaps also the devotion with which the analyst does his work, are far more important to the patient (imponderabilia though they may be), than the rehearsing of old traumata. Carl Jung; CW 4; par. 584.

We do not work with the "transference to the analyst," but against it and in spite of it. Carl Jung, CW 4, par. 601.

Man brings with him at birth the ground-plan of his nature. Carl Jung; CW 4, Page 728.

There are analysts who believe that they can get along without self-analysis. This is Munchausen psychology, and they will certainly remain stuck. They forget that one of the most important therapeutically effective factors is subjecting you to the objective judgment of another. As regards ourselves we remain blind, despite everything and everybody. Carl Jung, CW 4, Para 449.

Knowledge rests not upon truth alone, but on error also. Carl Jung, CW 4, Para 74

One could almost say that if all the world's traditions were cut off at a single blow, the whole of mythology and the whole history of religion would start all over again with the next generation. Carl Jung, CW 4, Para 30

The first phase embraces the first years of life; I call this period the presexual stage. It corresponds to the caterpillar stage of butterflies and is characterized almost exclusively by the functions of nutrition and growth. Carl Jung, CW 4, Para 263

The second phase embraces the later years of childhood up to puberty and might be called the prepubertal stage. Germination of sexuality takes place at this period. Carl Jung, CW 4, Para 264

Religions are the great-healing systems for the ills of the soul. Carl Jung, CW 4, Paragraph 751

The neurotic is ill not because he has lost his old faith but because he has not yet found a new form for his finest aspirations. Carl Jung, CW 4, Para 669

The unconscious is not just a receptacle for all unclean spirits and other odious legacies

from the dead past—such as, for instance, that deposit of centuries of public opinion which constitutes Freud's "superego." Carl Jung, CW 4, Para 760

The further development of the individual can be brought about only by means of symbols which represent something far in advance of himself and whose intellectual meanings cannot yet be grasped entirely. Carl Jung, CW 4, Para 680

Man "possesses" many things which he has never acquired but has inherited from his ancestors. Carl Jung, CW 4, Para 728

There are experiences which one must go through and for which reason is no substitute. Such experiences are often of inestimable value to the patient. Carl Jung, CW 4, Para 446.

I can only gaze with wonder and awe at the depths and heights of our psychic nature. Its non-spatial universe conceals an untold abundance of images which have accumulated over millions of years of development... The only equivalent of the universe within is the universe without. Carl Jung, CW 4, Para 331.

The psychological trouble in neurosis, and the neurosis itself, can be formulated as an act of adaptation that has failed. Carl Jung; CW 4; par. 574.

We yield too much to the ridiculous fear that we are at bottom quite impossible beings, that if everyone were to appear as he really is a frightful social catastrophe would ensue. Many people today take "man as he really is" to mean merely the eternally discontented, anarchic, rapacious element in human beings, quite forgetting that these same human beings have also erected those firmly established forms of civilization which possess greater strength and stability than all the anarchic undercurrents. The strengthening of his social personality is one of the essential conditions for man's existence. Were it not so, humanity would cease to be. The selfishness and rebelliousness we meet in the neurotic's psychology are not "man as he really is" but an infantile distortion. In reality the normal man is "civicminded and moral"; he created his laws and observes them, not because they are imposed on him from without—that is a childish delusion—but because he loves law and order more than he loves disorder and lawlessness. Carl Jung, CW 4, Para 442

I can only gaze with wonder and awe at the depths and heights of our psychic nature. Its non-spatial universe conceals an untold abundance of images which have accumulated over millions of years of living development and become fixed in the organism. My consciousness is like an eye that penetrates to the most distant spaces, yet it is the psychic non-ego that fills them with non-spatial images. And these images are not pale shadows, but tremendously powerful psychic factors. The most we may be able to do is misunderstand them, but we can never rob them of their power by denying them. Beside this picture I would like to place the spectacle of the starry heavens at night, for the only equivalent of the universe within is the universe without; and just as I reach this world through the medium of the body, so I reach that world through the medium of the psyche. Carl Jung, CW 4, Para 784

Even the so-called highly scientific suggestion therapy employs the wares of the medicine-man and the exorcising shaman. And why not? The public is not much more advanced either and continues to expect miraculous cures from the doctor. And indeed, we must rate those doctors wise worldly-wise in every sense—who know how to surround themselves with the aura of a medicine-man. They have not only the biggest practices but also get the best results. This is

because, apart from the neuroses, countless physical illnesses are tainted and complicated with psychic material to an unsuspected degree. The medical exorcist betrays by his whole demeanour his full appreciation of that psychic component when he gives the patient the opportunity of fixing his faith firmly on the mysterious personality of the doctor. In this way he wins the sick man's mind, which from then on helps him to restore his body to health. The cure works best when the doctor himself believes in his own formulae, otherwise he may be overcome by scientific doubt and so lose the proper convincing tone. Carl Jung, CW 4, Para 578

Medicine in the hand of a fool was ever poison and death. Just as we demand from a surgeon, besides his technical knowledge, a skilled hand, courage, presence of mind, and power of decision, so we must expect from an analyst a very serious and thorough psychoanalytic training of his own personality before we are willing to entrust a patient to him. I would even go so far as to say that the acquisition and practice of the psychoanalytic technique presuppose not only a specific psychological gift but in the very first place a serious concern with the moulding of one's own character. Carl Jung, CW 4, Para 450

There are analysts who believe that they can get along with a self-analysis. This is Munchausen psychology, and they will certainly remain stuck. They forget that one of the most important therapeutically effective factors is subjecting yourself to the objective judgment of another. As regards ourselves we remain blind, despite everything and everybody. Carl Jung, CW 4, Para 449

We would be doing our neurotic patients a grievous wrong if we tried to force them all into the category of the coerced. Among neurotics, there are not a few who do not require any reminders of their social duties and obligations but are born and destined rather to be bearers of new cultural ideals. They are neurotic as long as they bow down before authority and refuse the freedom to which they are destined. As long as we look at life only retrospectively, as is the case in the psychoanalytic writings of the Viennese school, we shall never do justice to these persons and never bring them the longed-for deliverance. For in this way we train them only to be obedient children and thereby strengthen the very forces that made them ill—their conservative backwardness and submission to authority. Carl Jung, CW 4, Para 658

The small world of the child, the family milieu, is the model for the big world. The more intensely the family sets its stamp on the child, the more he will be emotionally inclined, as an adult, to see in the great world his former small world. Of course this must not be taken as a conscious intellectual process. On the contrary, the patient feels and sees the difference between now and then and tries as well as he can to adapt himself. Perhaps he will even believe himself perfectly adapted, since he may be able to grasp the situation intellectually, but that does not prevent his emotions from lagging far behind his intellectual insight. Carl Jung, CW 4, Para 312

Nowadays we have no real sexual morality, only a legalistic attitude to sexuality; just as the Middle Ages had no real morality of money-making but only prejudices and a legalistic point of view. We are not yet far enough advanced to distinguish between moral and immoral behaviour in the realm of free sexual activity. This is clearly expressed in the customary treatment, or rather ill-treatment, of unmarried mothers. All the repulsive hypocrisy, the high tide of prostitution and of venereal diseases, we owe to the barbarous, wholesale legal condemnation of certain kinds of sexual behaviour, and to our inability to develop a finer moral sense for the enormous psychological differences that exist in the domain of free sexual activity. Carl Jung, CW 4, Para 666

We deceive ourselves greatly if we think that many married women are neurotic merely because they are unsatisfied sexually or because they have not found the right man or because they have an infantile sexual fixation. The real reason in many cases is that they cannot recognize the cultural task that is waiting for them. We all have far too much the standpoint of the "nothing but" psychology, that is, we still think that the new future which is pressing in at the door can be squeezed into the framework of what is already known. Carl Jung, CW 4, Para 668

Psychoanalysis cannot be considered a method of education, if by education we mean the topiary art of clipping a tree into a beautiful artificial shape. But those who have a higher conception of education will prize most the method of cultivating a tree so that it fulfils to perfection its own natural conditions of growth. Carl Jung, CW 4, Para 442

The fact that by far the greater part of humanity not only needs guidance but wishes for nothing better than to be guided and held in tutelage, justifies, in a sense, the moral value which the Church sets on confession. The priest, equipped with all the insignia of paternal authority, becomes the responsible leader and shepherd of his flock. He is the father confessor and the members of his parish are his penitent children. Thus priest and Church replace the parents, and to that extent they free the individual from the bonds of the family. In so far as the priest is a morally elevated personality with a natural nobility of soul and a mental culture to match, the institution of confession may be commended as brilliant method of social guidance and education, which did in fact perform a tremendous educative task for more than fifteen hundred years. So long as the medieval Church knew how to be the guardian of art and science—a role in which her success was due, in part, to her wide tolerance of worldly interests—confession was an admirable instrument of education. But it lost its educative value, at least for more highly developed people, as soon as the Church proved incapable of maintaining her leadership in the intellectual sphere—the inevitable consequence of spiritual rigidity. Carl Jung, CW 4, Para 433

The discovery of the value of human personality is reserved for a riper age. For young people the search for personality values is very often a pretext for evading their biological duty. Conversely, the exaggerated longing of an older person for the sexual values of youth is a short-sighted and often cowardly evasion of a duty which demands recognition of the value of personality and submission to the hierarchy of cultural values. The young neurotic shrinks back in terror from the expansion of life’s duties, the old one from the dwindling of the treasures he has attained. Carl Jung, CW 4, Para 664

The psyche does not merely react, it gives its own specific answer to the influences at work upon it, and at least half the resulting formation is entirely due to the psyche and the determinants inherent within it. Culture can never be understood as reaction to environment. That shallow explanation can safely be left to the past century. It is just these determinants that appear as psychological imperatives, and we have daily proof of their compelling power. What I call "biological duty" is identical with these determinants. Carl Jung, CW 4, Para 665

Only those who regard the happenings in this world as a concatenation of errors and accidents, and who therefore believe that the pedagogic hand of the rationalist is constantly needed to guide us, can ever imagine that this path [of psychoanalysis] was an aberration from which we should have been warned off with a signboard. Besides the deeper insight into psychological determination, we owe to this "error" a method of inquiry of incalculable

importance. It is for us to rejoice and be thankful that Freud had the courage to let himself be guided along this path. Not thus is the progress of science hindered, but rather by blind adherence to insights once gained, by the typical conservatism of authority, by the childish vanity of the savant and his fear of making mistakes. This lack of courage is considerably more injurious to the name of science than an honest error. When will there be an end to the incessant squabbling about who is right? One has only to look at the history of science how many have been right, and how few have remained right! Carl Jung, CW 4, Para 302

Dogma and science are incommensurable quantities which damage one another by mutual contamination. Dogma as a factor in religion is of inestimable value precisely because of its absolute standpoint. But when science dispenses with criticism and scepticism it degenerates into a sickly hot-house plant. One of the elements necessary to science is extreme uncertainty. Whenever science inclines towards dogma and shows a tendency to be impatient and fanatical, it is concealing a doubt which in all probability is justified and explaining away an uncertainty which is only too well founded. Carl Jung, CW 4, Para 746

One-sidedness appears over and over again in the history of science. I am not saying this as a reproach on the contrary, we must be glad that there are people who are courageous enough to be immoderate and one-sided. It is to them that we owe our discoveries. What is regrettable is that each should defend his one-sidedness so passionately. Scientific theories are merely suggestions as to how things might be observed. Carl Jung, CW 4, Para 241

In this overpoweringly humdrum existence, alas, there is little out of the ordinary that is healthy, and not much room for conspicuous heroism. Not that heroic demands are never put to us on the contrary—and this is just what is so irritating and irksome—the banal everyday makes banal demands on our patience, our devotion, perseverance, self-sacrifice; and for us to fulfil these demands (as we must) humbly and without courting applause through heroic gestures, a heroism is needed that cannot be seen from the outside. It does not glitter, is not belauded, and it always seeks concealment in everyday attire. Carl Jung, CW 4, Para 72

Moral law is nothing other than an outward manifestation of man’s innate urge to dominate and control himself. This impulse to domestication and civilization is lost in the dim, unfathomable depths of man’s evolutionary history and can never be conceived as the consequence of laws imposed from without, Man himself, obeying his instincts, created his laws. Carl Jung, CW 4, Para 486

We should never forget that what today seems to us a moral commandment will tomorrow be cast into the melting-pot and transformed, so that in the near or distant future it may serve as a basis for new ethical formations. This much we ought to have learnt from the history of civilization, that the forms of morality belong to the category of transitory things. Carl Jung, CW 4, Para 667

Widely accepted ideas are never the personal property of their so-called author; on the contrary, he is the bondservant of his ideas. Impressive ideas which are hailed as truths have something peculiar about them. Although they come into being at a definite time, they are and have always been timeless; they arise from that realm of creative psychic life out of which the ephemeral mind of the single human being grows like a plant that blossoms, bears fruit and seed, and then withers and dies. Ideas spring from something greater than the personal human being. Man does not make his ideas; we could say that man’s ideas make him. Carl Jung, CW 4, Para 769

We can understand at once the fear that the child and the primitive have of the great unknown. We have the same childish fear of our inner side, where we likewise touch upon a great unknown world. All we have is the affect, the fear, without knowing that this is a world-fear—for the world of affects is invisible. We have either purely theoretical prejudices against it, or superstitious ideas. One cannot even talk about the unconscious before many educated people without being accused of mysticism. The fear is legitimate in so far as our rational Weltanschauung with its scientific and moral certitudes—so hotly believed in because so deeply questionable—is shattered by the facts of the other side. Carl Jung, CW 4, Para 324

Has mankind ever really got away from myths? Everyone who has his eyes and wits about him can see that the world is dead, cold, and unending. Never yet has he beheld a God or been compelled to require the existence of such a God from the evidence of his senses. On the contrary, it needed the strongest inner compulsion, which can only be explained by the irrational force of instinct, for man to invent those religious beliefs whose absurdity was long since pointed out by Tertullian. In the same way one can withhold the material content of primitive myths from a child but not take from him the need for mythology, and still less his ability to manufacture it for himself. One could almost say that if all the world's traditions were cut off at a single blow, the whole of mythology and the whole history of religion would start all over again with the next generation. Carl Jung, CW 4, Para 30

It was of profound psychological significance when Christianity first proclaimed that the orientation to the future was the redeeming principle for mankind. In the past nothing can be altered, and in the present little, but the future is ours and capable of raising life's intensity to the highest pitch. A little span of youth belongs to us, all the rest belongs to our children. Carl Jung, CW 4, Para 668

We must never forget that the world is, in the first place, a subjective phenomenon. The impressions we receive from these accidental happenings are also our own doing. It is not true that the impressions are forced on us unconditionally, our own predisposition conditions the impression. A man whose libido is blocked will have, as a rule, quite different and very much more vivid impressions than one whose libido is organized in a wealth of activities. A person who is sensitive in one way or another will receive a deep impression from an event which would leave a less sensitive person cold. Carl Jung, CW 4, Para 400

Is not every experience, even in the best of circumstances, at least fifty-per-cent subjective interpretation? On the other hand, the subject is also an objective fact, a piece of the world; and what comes from him comes, ultimately, from the stuff of the world itself, just as the rarest and strangest organism is none the less supported and nourished by the earth which is common to all. It is precisely the most subjective ideas which, being closest to nature and to our own essence, deserve to be called the truest. But: "What is truth?" Carl Jung, CW 4, Para 770

We know that the first impressions of childhood accompany us inalienably throughout life, and that, just as indestructibly, certain educational influences can keep people all their lives within those limits. In these circumstances it is not surprising that conflicts break out between the personality moulded by educational and other influences of the infantile milieu and one's own individual style of life. It is a conflict which all those must face who are called upon to live a life that is independent and creative. Carl Jung, CW 4, Para 310

Theology does not help those who are looking for the key, because theology demands faith, and faith cannot be made: it is in the truest sense a gift of grace. We moderns are faced with the necessity of rediscovering the life of the spirit; we must experience it anew for ourselves. It is the only way in which to break the spell that binds us to the cycle of biological events. Carl Jung, CW 4, Para 780

The more highly developed men of our time do not want to be guided by a creed or a dogma; they want to understand. So it is not surprising if they throw aside everything they do not understand; and religious symbols, being the least intelligible of all, are generally the first to go overboard. The sacrifice of the intellect demanded by a positive belief is a violation against which the conscience of the more highly developed individual rebels. Carl Jung, CW 4, Para 434

When someone knocks in a nail with a hammer in order to hang something up, we can understand every detail of the action; it is immediately evident. It is otherwise with the act of baptism, where every phase is problematic. We call these actions, whose meaning and purpose are not immediately evident, symbolic actions, or symbols. On the basis of this reasoning we call a dream symbolic because it is a psychological product whose origin, meaning, and purpose are obscure, and is therefore one of the purest products of unconscious constellation. As Freud aptly says, the dream is the via regia to the unconscious. Carl Jung, CW 4, Para 334

It will not have escaped you that the greatest difficulty lies in assigning limits to the pre-sexual stage. I am ready to confess my great uncertainty in regard to this problem. When I look back on my own psychoanalytic experiences with children-insufficiently numerous as yet unfortunately-at the same time bearing in mind the observations made by Freud, it seems to me that the limits of this phase lie between the third and fifth year, subject, of course, to individual variation. This age is an important one in many respects. The child has already outgrown the helplessness of a baby, and a number of important psychological functions have acquired a reliable hold. From this period on, the profound darkness of the early infantile amnesia, or discontinuity of consciousness, begins to be illuminated by the sporadic continuity of memory. It seems as if, at this stage, an essential step forward is taken in the emancipation and centering of the new personality. So far as we know, the first signs of interests and activities which may fairly be called sexual also fall into this period, even though these indications still have the infantile characteristics of harmlessness and naiveté." Carl Jung, CW 4, Para 266

Freud's approach is not always mistaken, however, for consciousness is not always firmly established. This presupposes a good deal of experience of life and a certain amount of maturity. Young people, who are very far from knowing who they really are, would run a great risk if they obscured their knowledge of themselves still further by letting the "dark night of the soul" pour into their immature, labile consciousness. Here a certain depreciation of the unconscious is justified. Experience has convinced me that there are not only different temperaments ("types"), but different stages of psychological development, so that one can well say that there is an essential difference between the psychology of the first and the second half of life. Here again I differ from the others in maintaining that the same psychological criteria are not applicable to the different stages of life. Carl Jung, CW 4, Para 762

For thousands of years, rites of initiation have been teaching rebirth from the spirit; yet, strangely enough, man forgets again and again the meaning of divine procreation. Though

this may be poor testimony to the strength of the spirit, the penalty for misunderstanding is neurotic decay, embitterment, atrophy, and sterility. It is easy enough to drive the spirit out of the door, but when we have done so the meal has lost its savour—the salt of the earth. Fortunately, we have proof that the spirit always renews its strength in the fact that the essential teaching of the initiations is handed on from generation to generation. Ever and again there are human beings who understand what it means that God is their father. The equal balance of the flesh and the spirit is not lost to the world. Carl Jung, CW 4, Para 783

Among neurotics, there are not a few who do not require any reminders of their social duties and obligations but are born and destined rather to be bearers of new cultural ideals. Carl Jung, CW 4, Para 658

(As you know, by libido I mean very much what the ancients meant by the cosmogonic principle of Eros, or in modern language, "psychic energy.") Carl Jung, CW 4, Para 661

If the analyst himself is neurotic and insufficiently adapted to the demands of life or of his own personality, the patient will copy this defect and reflect it in his own attitudes: with what results you can imagine. Carl Jung, CW 4, Para 661

I ought not to conceal from you at this point that the stubborn assertion of sexual values would not be maintained so tenaciously if they did not have a profound significance for that period of life in which propagation is of primary importance. Carl Jung, CW 4, Para 664

The discovery of the value of human personality is reserved for a riper age. For young people the search for personality values is very often a pretext for evading their biological duty. Carl Jung, CW 4, Para 664

Conversely, the exaggerated longing of an older person for the sexual values of youth is a short-sighted and often cowardly evasion of a duty which demands recognition of the value of personality and submission to the hierarchy of cultural values. Carl Jung, CW 4, Para 664

The young neurotic shrinks back in terror from the expansion of life’s duties, the old one from the dwindling of the treasures he has attained. Carl Jung, CW 4, Para 664

External causes can account for at most half the reaction, the other half is due to the peculiar attributes of living matter itself, without which the specific reaction formation could never come about at all. Carl Jung, CW 4, Para 665

The psyche does not merely react, it gives its own specific answer to the influences at work upon it, and at least half the resulting formation is entirely due to the psyche and the determinants inherent within it. Carl Jung, CW 4, Para 665

Culture can never be understood as reaction to environment. That shallow explanation can safely be left to the past century. Carl Jung, CW 4, Para 665

But in certain cases it is a recognized fact that "immoral" tendencies are not got rid of by analysis but appear more and more clearly until it becomes evident that they belong to the biological duties of the individual. Carl Jung, CW 4, Para 665

Nowadays we have no real sexual morality, only a legalistic attitude to sexuality; just as

the Middle Ages had no real morality of money-making but only prejudices and a legalistic point of view. Carl Jung, CW 4, Para 666

We are not yet far enough advanced to distinguish between moral and immoral behaviour in the realm of free sexual activity. This is clearly expressed in the customary treatment, or rather ill-treatment, of unmarried mothers. Carl Jung, CW 4, Para 666

All the repulsive hypocrisy, the high tide of prostitution and of venereal diseases, we owe to the barbarous, wholesale legal condemnation of certain kinds of sexual behaviour, and to our inability to develop a finer moral sense for the enormous psychological differences that exist in the domain of free sexual activity. Carl Jung, CW 4, Para 666

The existence of this exceedingly complicated and significant contemporary problem may serve to make clear to you why we so often find among our patients people who, because of their spiritual and social gifts, are quite specifically called to take an active part in the work of civilization—that is their biological destiny. Carl Jung, CW 4, Para 667

We should never forget that what today seems to us a moral commandment will tomorrow be cast into the melting-pot and transformed, so that in the near or distant future it may serve as a basis for new ethical formations. Carl Jung, CW 4, Para 667

Five percent on money lent is fair interest, twenty per cent is despicable usury. We have to apply this view to the sexual situation as well. Carl Jung, CW 4, Para 667

We deceive ourselves greatly if we think that many married women are neurotic merely because they are unsatisfied sexually or because they have not found the right man or because they have an infantile sexual fixation. The real reason in many cases is that they cannot recognize the cultural task that is waiting for them. Carl Jung, CW 4, Para 668

It was of profound psychological significance when Christianity first proclaimed that the orientation to the future was the redeeming principle for mankind. Carl Jung, CW 4, Para 668

In the past nothing can be altered, and in the present little, but the future is ours and capable of raising life's intensity to the highest pitch. A little span of youth belongs to us, all the rest belongs to our children. Carl Jung, CW 4, Para 668

The dream presents itself to us as a more or less unintelligible jumble of elements not at first conscious and only recognized afterwards through their associations. It should be added that not all parts of the dream have a recognizable quality from which their conscious character can be deduced; they are often, and indeed mostly, unrecognizable at first. Only afterwards does it occur to us that we have consciously experienced this or that part of the dream. From this standpoint alone we may regard the dream as a product of unconscious origin Carl Jung, CW 4, Para 324

Freud attaches great significance to verbal expression one of the most important components of our thinking because the double meaning of words is a favourite channel for the displacement and improper expression of affects Carl Jung, CW 4, Para 46

An object in which, on the contrary, I feel much interest will evoke numerous associations and preoccupy me for a long while. Every emotion produces a more or less extensive complex of

associations which I have called the “feeling-toned complex of ideas” Carl Jung, CW 4, Para 67

In studying an individual case history we always discover that the complex exerts the strongest “constellating” force, from which we conclude that in any analysis we shall meet with it from the start Carl Jung, CW 4, Para 67

The complexes appear as the chief components of the psychological disposition in every psychic structure. In the dream, for example, we encounter the emotional components, for it is easy to understand that all the products of psychic activity depend above all upon the strongest “constellating” influences Carl Jung, CW 4, Para 67

In Freud’s definition the term libido connotes an exclusively sexual need, hence everything that Freud means by libido must be understood as sexual need or sexual desire Carl Jung, CW 4, Para 252

In medicine the term libido is certainly used for sexual desire, and specifically for sexual lust Carl Jung, CW 4, Para 252

But the classical use of the word [libido] as found in Cicero, Sallust, and others was not so exclusive; there it is used in the more general sense of passionate desire Carl Jung, CW 4, Para 252

I mention this fact now, because further on it will play an important part in our argument, and because it is important to know that the term libido really has a much wider range of meaning than it has in medicine Carl Jung, CW 4, Para 252

The symptoms of a neurosis must be regarded as exaggerated functions over-invested with libido Carl Jung, CW 4, Para 254

The energy used for this purpose has been taken from somewhere else, and it is the task of the psychoanalyst to discover the place it was taken from or where it was never applied Carl Jung, CW 4, Para 254

The question has to be reversed in the case of those syndromes characterized mainly by lack of libido, for instance apathetic states Carl Jung, CW 4, Para 255

Here we have to ask, where did the libido go? The patient gives us the impression of having no libido, and there are many doctors who take him at face value Carl Jung, CW 4, Para 255

Such doctors have a primitive way of thinking, like a savage who, seeing an eclipse of the sun, believes that the sun has been swallowed and killed. But the sun is only hidden, and so it is with these patients. The libido is there, but it is not visible and is inaccessible to the patient himself. Superficially, we have here a lack of libido Carl Jung, CW 4, Para 255

It is the task of psychoanalysis to search out that hidden place where the libido dwells and where the patient himself cannot get at it Carl Jung, CW 4, Para 255

The hidden place is the “non-conscious,” which we may also call the “unconscious” without attributing to it any mystical significance Carl Jung, CW 4, Para 255

We shall now try to fit the new conception of libido into the theory of infantile sexuality, which is so very important for the theory of neurosis Carl Jung, CW 4, Para 290

In infants we find that libido as energy, as a vital activity, first manifests itself in the nutritional zone, where, in the act of sucking, food is taken in with a rhythmic movement and with every sign of satisfaction Carl Jung, CW 4, Para 290

With the growth of the individual and development of his organs the libido creates for itself new avenues of activity Carl Jung, CW 4, Para 290

The primary model of rhythmic movement [in infants], producing pleasure and satisfaction, is now transferred to the zone of the other functions, with sexuality as its ultimate goal Carl Jung, CW 4, Para 290

A considerable portion of the “alimentary libido” has to convert itself into “sexual libido” Carl Jung, CW 4, Para 290

This transition does not take place quite suddenly at puberty, but only very gradually during the course of childhood. The libido can free itself only with difficulty and quite slowly from the modality of the nutritive function in order to pass over into the sexual function Carl Jung, CW 4, Para 290

In this transitional stage there are, so far as I am able to judge, two distinct phases: the phase of sucking, and the phase of displaced rhythmic activity Carl Jung, CW 4, Para 291

Sucking belongs by its very nature to the sphere of the nutritive function, but outgrows it by ceasing to be a function of nutrition and becoming a rhythmic activity aiming at pleasure and satisfaction without intake of nourishment Carl Jung, CW 4, Para 291

As a rule, it is the other body-openings that become the first objects of libidinal interests; then the skin, or special parts of it Carl Jung, CW 4, Para 291

The activities carried out in these places, taking the form of rubbing, boring, picking, pulling, and so forth, follow a certain rhythm and serve to produce pleasure Carl Jung, CW 4, Para 291

After lingering for a while at these stations, the libido continues its wanderings until it reaches the sexual zone, where it may provide occasion for the first attempts at masturbation Carl Jung, CW 4, Para 291

This migration of libido takes place during the presexual stage, whose special distinguishing-mark is that the libido gradually sloughs off the character of the nutritive instinct and assumes that of the sexual instinct. At the stage of nutrition, therefore, we cannot yet speak of a true sexual libido Carl Jung, CW 4, Para 291

It is characteristic that the babyish word for mother, “mamma,” is the name for the maternal breast Carl Jung, CW 4, Para 346

Dr. Beatrice Hinkle has informed me, interrogation of small children elicited the fact that

they defined “mother” as the person who gives food, chocolate, etc. Carl Jung, CW 4, Para 346

One could hardly assert that for children of this age food is only a symbol for sex, though this is sometimes true for adults Carl Jung, CW 4, Para 346

A superficial glance at the history of civilization will show just how enormous the nutritive source of pleasure is. The colossal feasts of Rome in its decadence were an expression of anything you like, only not of repressed sexuality, for that is the last thing one could accuse the Romans of in those days Carl Jung, CW 4, Para 346

There is no doubt that these excesses were some kind of substitute, but not for sexuality; they were far more a substitute for neglected moral functions, which we are too prone to regard as laws forced on man from outside. Men have the laws which they make for themselves Carl Jung, CW 4, Para 346

I [Jung] do not identify the feeling of pleasure eo ipso with sexuality. Sexuality has an increasingly small share in pleasure-sensations the further back we go in childhood Carl Jung, CW 4, Para 347

Nevertheless, jealousy can play a large role, for it too is something that does not belong entirely to the sexual sphere, since the desire for food has itself much to do with the first stirrings of jealousy one has only to think of animals! Carl Jung, CW 4, Para 347

Certainly jealousy is reinforced by a budding eroticism relatively early Carl Jung, CW 4, Para 347

It is characteristic that the babyish word for mother, “mamma,” is the name for the maternal breast Carl Jung, CW 4, Para 346

Certainly jealousy is reinforced by a budding eroticism relatively early Carl Jung, CW 4, Para 347

This element gains in strength as the years go on, so that the Oedipus complex soon assumes its classical form Carl Jung, CW 4, Para 347

We have seen that psychoanalytic theory started from a traumatic experience in childhood, which later on was found to be partly or wholly unreal. In consequence, the theory made a change of front and sought the aetiologically significant factor in the development of abnormal fantasies Carl Jung, CW 4, Para 353

The investigation of the unconscious, continued over a period of ten years with the help of an increasing number of workers, gradually brought to light a mass of empirical material which showed that the incest complex was a highly important and never-failing element in pathological fantasy Carl Jung, CW 4, Para 353

But it was found that the incest complex was not a special complex of neurotic people; it proved to be a component of the normal infantile psyche. We cannot tell from its mere existence whether this complex will give rise to a neurosis or not. To become pathogenic, it must precipitate a conflict; the complex, which in itself is inactive, must be activated and intensified to the point where a conflict breaks out Carl Jung, CW 4, Para 353

This brings us to a new and important question. If the infantile “nuclear complex” is only a general form, not in itself pathogenic but requiring special activation, then the whole aetiological problem is altered Carl Jung, CW 4, Para 354

In that case we would dig in vain among the reminiscences of earliest childhood, since they give us only the general forms of later conflicts but not the actual conflict. It makes no difference that there were already conflicts in childhood, for the conflicts of childhood are different from the conflicts of adults Carl Jung, CW 4, Para 354

Those who have suffered ever since childhood from a chronic neurosis do not suffer now

from the same conflict they suffered from then. Maybe the neurosis broke out when they first had to go to school as children. Then it was the conflict between indulgence and duty, between love for their parents and the necessity of going to school. But now it is the conflict between, say, the joys of a comfortable bourgeois existence and the strenuous demands of professional life. It only seems to be the same conflict Carl Jung, CW 4, Para 354

Many of these tendencies has its psychological prehistory, and in our case it can clearly be shown that the peculiar resistance at the bottom of the patient's critical sensitiveness was in fact bound up historically with certain infantile sexual activities, and also with that so-called traumatic experience things which may very well cast a shadow on sexuality Carl Jung, CW 4, Para 396

From this standpoint we cannot assert that our patient's peculiar prehistory was to blame for her sensitiveness at the critical moment; it would be more correct to say that this sensitiveness was inborn and naturally manifested itself most strongly in any unusual situation Carl Jung, CW 4, Para 397

This excessive sensitiveness very often brings an enrichment of the personality and contributes more to its charm than to the undoing of a person's character. Only, when difficult and unusual situations arise, the advantage frequently turns into a very great disadvantage, since calm consideration is then disturbed by untimely affects Carl Jung, CW 4, Para 398

Nothing could be more mistaken, though, than to regard this excessive sensitiveness as in itself a pathological character component. If that were really so, we should have to rate about one quarter of humanity as pathological. Yet if this sensitiveness has such destructive consequences for the individual, we must admit that it can no longer be considered quite normal Carl Jung, CW 4, Para 398

Primitive people and animals have nothing like that capacity for reviving memories of unique impressions which we find among civilized people Carl Jung, CW 4, Para 403

Very young children are not nearly as impressionable as older children. The higher development of the mental faculties is an indispensable prerequisite for impressionability. We can therefore safely assume that the earlier a patient places some impressive experience in his childhood, the more likely it is to be a fantastic and regressive one Carl Jung, CW 4, Para 403

Deeper impressions are to be expected only from experiences in late childhood. At any rate, we generally have to attribute only regressive significance to the events of early infancy, that is, from the fifth year back Carl Jung, CW 4, Para 403

In later years, too, regression can sometimes play an overwhelming role, but even so one must not attribute too little importance to accidental events. In the later course of a neurosis, accidental events and regression together form a vicious circle: retreat from life leads to regression, and regression heightens resistance to life Carl Jung, CW 4, Para 403

The non-fulfillment of the demands of adaptation, or the shrinking of the neurotic from difficulties, is, at bottom, the hesitation of every organism in the face of a new effort to adapt Carl Jung, CW 4, Para 410

The training of animals provides instructive examples in this respect, and in many cases

such an explanation is, in principle, sufficient. From this standpoint the earlier mode of explanation, which maintained that the resistance of the neurotic was due to his bondage to fantasies, appears incorrect Carl Jung, CW 4, Para 410

But it would be very one-sided to take our stand solely on a point of principle. There is also a bondage to fantasies, even though the fantasies are, as a rule, secondary. The neurotic's bondage to fantasies (illusions, prejudices, etc.) develops gradually, as a habit, out of innumerable regressions from obstacles since earliest childhood Carl Jung, CW 4, Para 410

All this grows into a regular habit familiar to every student of neurosis; we all know those patients who use their neurosis as an excuse for running away from difficulties and shirking their duty Carl Jung, CW 4, Para 410

Their habitual evasion produces a habit of mind which makes them take it for granted that they should live out their fantasies instead of fulfilling disagreeable obligations. And this bondage to fantasy makes reality seem less real to the neurotic, less valuable and less interesting, than it does to the normal person Carl Jung, CW 4, Para 410

The libido, which is not used for this purpose stagnates, and will then make the inevitable regression to former objects or modes of adaptation Carl Jung, CW 4, Para 470

The result is a striking activation of the incest complex. The libido withdraws from the object which is so difficult to attain and which demands such great efforts, and turns instead to the easier ones, and finally to the easiest of all, the infantile fantasies, which are then elaborated into real incest fantasies Carl Jung, CW 4, Para 470

The fact that, whenever there is a disturbance of psychological adaptation, we always find an excessive development of these fantasies must likewise be conceived as a regressive phenomenon. That is to say, the incest fantasy is of secondary and not of causal significance, while the primary cause is the resistance of human nature to any kind of exertion Carl Jung, CW 4, Para 470

Accordingly, drawing back from certain tasks cannot be explained by saying that man prefers the incestuous relationship, rather he falls back into it because he shuns exertion Carl Jung, CW 4, Para 470

Otherwise we would have to say that resistance to conscious effort is identical with preference for the incestuous relationship Carl Jung, CW 4, Para 470

This would-be obvious nonsense, since not only primitive man but animals too have a mighty dislike of all intentional effort, and are addicted to absolute laziness until circumstances prod them into action Carl Jung, CW 4, Para 470

Neither of primitive people nor of animals can it be asserted that preference for incestuous relationships is the cause of their aversion to efforts at adaptation, for, especially in the case of animals, there can be absolutely no question of an incestuous relationship Carl Jung, CW 4, Para 470

Before we start analysing this dream, I must mention its parallels with certain mythological ideas. Since ancient times the thunderstorm has had the meaning of an earth-fecundating

act, it is the cohabitation of Father Heaven and Mother Earth, where the lightning takes over the role of the winged phallus Carl Jung, CW 4, Para 507

The stork in flight is just the same thing, a winged phallus, and its psychosexual meaning is known to every child Carl Jung, CW 4, Para 507

But the psychosexual meaning of the thunderstorm is not known to everyone, and certainly not to our little patient. In view of the whole psychological constellation previously described, the stork must unquestionably be given a psychosexual interpretation Carl Jung, CW 4, Para 507

The fact that the thunderstorm is connected with the stork and, like it, has a psychosexual meaning seems difficult to accept at first Carl Jung, CW 4, Para 507

To return to the analysis of the dream: the associations that led to the heart of this image began with the idea of rain during a thunderstorm. Her actual words were: I think of watery uncle was drowned in the water it must be awful to be stuck in the water like that, in the dark but wouldn't the baby drown in the water, too? Does it drink the water that is in the stomach? Queer, when I was ill Mama sent my water to the doctor. I thought he was going to mix something with it like syrup, which babies grow from, and Mama would have to drink it Carl Jung, CW 4, Para 508

We see with unquestionable clearness from this string of associations that the child connected psychosexual ideas specifically relating to fertilization with the rain during the thunderstorm Carl Jung, CW 4, Para 509

Here again we see that remarkable parallelism between mythology and the individual fantasies of our own day. This series of associations is so rich in symbolical connections that a whole dissertation could be written about them. The symbolism of drowning was brilliantly interpreted by the child herself as a pregnancy fantasy, an explanation given in the psychoanalytic literature long ago Carl Jung, CW 4, Para 510

The psychoanalyst naturally makes his anamnesis as carefully as any other specialist. But this is merely the patient's history and must not be confused with analysis Carl Jung, CW 4, Para 525

Analysis is the reduction of actual contents of consciousness, ostensibly of a fortuitous nature, to their psychological determinants. This process has nothing to do with the anamnestic reconstruction of the history of the illness Carl Jung, CW 4, Para 525

In contradistinction to all previous methods, psychoanalysis endeavours to overcome the disorders of the neurotic psyche through the unconscious, and not from the conscious side. In this work we naturally have need of the patient's conscious contents, for only in this way can we reach the unconscious. The conscious content from which our work starts is the material supplied by the anamnesis Carl Jung, CW 4, Para 528

In many cases the anamnesis provides useful clues which make the psychic origin of his symptoms clear to the patient. This, of course, is necessary only when he is convinced that his neurosis is organic in origin Carl Jung, CW 4, Para 528

But even in those cases where the patient is convinced from the start of the psychic nature of his illness, a critical survey of the anamnesis can be of advantage, for it discloses a psychological context of which he was unaware before Carl Jung, CW 4, Para 528

In this way problems that need special discussion are frequently brought to the surface. This work may occupy many sittings Carl Jung, CW 4, Para 528

Finally, the elucidation of the conscious material comes to an end when neither the analyst nor the patient can contribute anything further of decisive importance. In the most favourable cases the end comes with the formulation of the problem which, very often, proves insoluble Carl Jung, CW 4, Para 528

The best examples of such regressions are found in hysterical cases where a disappointment in love or marriage has precipitated a neurosis Carl Jung, CW 4, Para 569

There we find those well-known digestive disorders, loss of appetite, dyspeptic symptoms of all sorts, etc. In these cases the regressive libido, turning back from the task of adaptation, gains power over the nutritive function and produces marked disturbances Carl Jung, CW 4, Para 569

Similar effects can be observed in cases where there is no disturbance of the nutritive function but, instead, a regressive revival of reminiscences from the distant past Carl Jung, CW 4, Para 569

We then find a reactivation of the parental imagos, of the Oedipus complex. Here the events of early infancy never before important suddenly become so. They have become regressively reactivated Carl Jung, CW 4, Para 569

Remove the obstacle from the path of life and this whole system of infantile fantasies at once breaks down and becomes as inactive and ineffective as before Carl Jung, CW 4, Para 569

But let us not forget that, to a certain extent, it is at work all the time, influencing us in unseen ways Carl Jung, CW 4, Para 569

A sensitive and somewhat unbalanced person, as a neurotic always is, will meet with special difficulties and perhaps with more unusual tasks in life than a normal individual, who as a rule has only to follow the well-worn path of an ordinary existence Carl Jung, CW 4, Para 572

For the neurotic there is no established way of life, because his aims and tasks are apt to be of a highly individual character Carl Jung, CW 4, Para 572

He tries to go the more or less uncontrolled and half-conscious way of normal people, not realizing that his own critical and very different nature demands of him more effort than the normal person is required to exert Carl Jung, CW 4, Para 572

There are neurotics who have shown their heightened sensitiveness and their resistance to adaptation in the very first weeks of life, in the difficulty they have in taking the mother’s breast [breast feeding] and in their exaggerated nervous reactions, etc. Carl Jung, CW 4, Para 572

For this peculiarity in the neurotic predisposition it will always be impossible to find a psychological aetiology, because it is anterior to all psychology Carl Jung, CW 4, Para 572

This predisposition you can call it “congenital sensitiveness” or what you likes the cause of the first resistances to adaptation Carl Jung, CW 4, Para 572

As the way to adaptation is blocked, the biological energy we call libido does not find its appropriate outlet or activity, with the result that a suitable form of adaptation is replaced by an abnormal or primitive one Carl Jung, CW 4, Para 572

Interpretations of earlier symbols will themselves be used again as fresh symbols in later dreams Carl Jung, CW 4, Para 649

It often happens, for instance, that sexual situations which appeared in earlier dreams in symbolic form will appear “undisguised” in later ones once more, be it noted, in symbolic form as analysable expressions for ideas of a different nature hidden behind them Carl Jung, CW 4, Para 649

Thus the not infrequent dream of incestuous cohabitation is by no means an “undisguised” content, but a dream as freshly symbolic and capable of analysis as all others Carl Jung, CW 4, Para 649

For one type of person (called the infantile-rebel) a positive transference is, to begin with, an important achievement with a healing significance; for the other (the infantile-obedient) it is dangerous backsliding, a convenient way of evading life’s duties Carl Jung, CW 4, Para 659

For the first a negative transference denotes increased insubordination, hence a back-sliding and an evasion of life’s duties, for the second it is a step forward with a healing significance Carl Jung, CW 4, Para 659

The terrifying spectres of a black man and a black snake threaten the dreamer as well as his mother. “Black” indicates something dark, the unconscious Carl Jung, CW 4, Para 737

The snake’s attack on the boy’s face, the part that “sees,” represents the danger to consciousness (blinding) Carl Jung, CW 4, Para 737

This little example shows what goes on in the psyche of an eight-year-old child who is over dependent on his parents, the blame for this lying partly on the too strict father and the too tender mother Carl Jung, CW 4, Para 738

The boy’s identification with his mother and fear of his father are in this individual instance an infantile neurosis, but they represent at the same time the original human situation, the clinging of primitive consciousness to the unconscious, and the compensating impulse which strives to tear consciousness away from the embrace of the darkness Carl Jung, CW 4, Para 738

Because man has a dim premonition of this original situation behind his individual experience, he has always tried to give it generally valid expression through the universal motif of the divine hero’s fight with the mother dragon, whose purpose is to deliver man from the power of darkness Carl Jung, CW 4, Para 738

This [hero] myth has a “saving,” i.e., therapeutic significance, since it gives adequate expression to the dynamism underlying the individual entanglement. The myth is not to be casually explained as the consequence of a personal father-complex, but should be understood teleologically, as an attempt of the unconscious itself to rescue consciousness from the danger of regression Carl Jung, CW 4, Para 738

It is a means of unlocking the unconscious directly, although mostly it is simply a technique for obtaining a wide selection of faulty reactions which can then be used for exploring the unconscious by psychoanalysis Carl Jung, CW 4, Para 339

The process of regression is beautifully illustrated in an image used by Freud. The libido can be compared with a river which, when it meets with an obstruction, gets dammed up and causes an inundation Carl Jung, CW 4, Para 367

If later an obstruction occurs, so that the damming up of libido reactivates the old channels, this state is properly speaking a new and at the same time an abnormal one Carl Jung, CW 4, Para 368

The earlier, infantile state represents a normal application of libido, whereas the reversion of libido to infantile ways is something abnormal Carl Jung, CW 4, Para 368

I am therefore of the opinion that Freud is not justified in calling the infantile sexual manifestations “perverse,” since a normal manifestation should not be designated by a pathological term. This incorrect usage has had pernicious consequences in confusing the scientific public. Such a terminology is a misapplication to normal people of insights gained from neurotic psychology, on the assumption that the abnormal by-path taken by the libido in neurotics is still the same phenomenon as in children Carl Jung, CW 4, Para 368

The moment of the outbreak of neurosis is not just a matter of chance; as a rule it is most critical. It is usually the moment when a new psychological adjustment, that is, a new adaptation, is demanded. Such moments facilitate the outbreak of a neurosis, as every experienced neurologist knows Carl Jung, CW 4, Para 563

When the parents have long been dead and have lost, or should have lost, all significance, the situation of the patient having perhaps completely changed since then, they are still somehow present and as important as if they were still alive Carl Jung, CW 4, Para 305

The patient’s love, admiration, resistance, hatred, and rebelliousness still cling to their effigies, transfigured by affection or distorted by envy, and often bearing little resemblance to the erstwhile reality Carl Jung, CW 4, Para 305

It was this fact that compelled me to speak no longer of “father” and “mother” but to employ instead the term “imago,” because these fantasies are not concerned any more with the real father and mother but with subjective and often very much distorted images of them which lead a shadowy but nonetheless potent existence in the mind of the patient Carl Jung, CW 4, Para 305

Carl Jung: CW 5 “Symbols of Transformations”

[6]Symbols of Transformation (Collected Works of C.G. Jung Vol.5)

The same is true of the religious attitude: it must be fully conscious of itself and of its foundations if it is to signify anything more than unconscious imitation. Carl Jung, CW 5, Para 106

“The spirit of evil is fear, negation, the adversary who opposes life in its struggles for eternal duration and thwarts every great deed, who infuses into the body the poison of weakness and age through the treacherous bite of the serpent; he is the spirit of regression, who threatens us with bondage to the mother and with dissolution and extinction in the unconscious. For the hero, fear is a challenge and a task because only boldness can deliver from fear. And if the risk is not taken, the meaning of life is somewhat violated, and the whole future is condemned to hopeless staleness, to a dab grey lit by will-o’-the-wisps Carl Jung, CW 5, Para 551.

The anima is the archetype of the feminine and plays a very important role in a man’s unconscious. Carl Jung, CW 5, Para 406, fn 142

The “mother” corresponds to the “virgin anima,” who is not turned towards the outer world and is therefore not corrupted by it. She is turned rather towards the “inner sun” … Carl Jung, CW 5, Para 464

Dogma must be a physical impossibility, for it has nothing whatever to say about the physical world but is a symbol of “transcendental” or unconscious processes which, so far as psychology can understand them at all, seem to be bound up with the unavoidable development of consciousness. Carl Jung, CW 5, Para 674

The neurotic who tries to wriggle out of the necessity of living wins nothing and only burdens himself with a constant foretaste of aging and dying. Carl Jung, CW 5, Para 617

In the morning of life the son tears himself loose from the mother, from the domestic hearth, to rise through battles to his destined heights. Always he imagines his worst enemy in front of him, yet he carries the enemy within himself—a deadly longing for the abyss, a longing to drown in his own source, to be sucked down to the realm of the Mothers. His life is a constant struggle against extinction, a violent yet fleeting deliverance from ever-lurking night. This death is no external enemy, it is his own inner longing for the stillness and profound peace of all-knowing non-existence, for all-seeing sleep in the ocean of coming-to-be and passing away. Even in his highest strivings for harmony and balance, for the profundities of philosophy and the raptures of the artist, he seeks death, immobility, satiety, rest . . . If he is to live, he must fight and sacrifice his longing for the past in order to rise to his own heights. And having reached the noonday heights, he must sacrifice his love for his own achievement, for he may not loiter. The sun, too, sacrifices its greatest strength in order to hasten onwards to the fruits of autumn, which are the seeds of rebirth . . . Carl Jung, CW 5, Para 553

Belief in dogma is an equally unavoidable stop-gap which must sooner or later be replaced by adequate understanding and knowledge if our civilization is to continue. Carl Jung, CW 5, Para 674

That which compels us to create a substitute for ourselves is not the external lack of objects, but our incapacity to lovingly include a thing outside of ourselves. Carl Jung. CW 5, Page 173

A state of introversion. What this means we already know: the libido sinks “into its own depths” (a favourite image of Nietzsche’s), and discovers in the darkness a substitute for the upper world it has abandoned the world of memories (“Amidst a hundred memories”), the strongest and most influential of which are the earliest ones Carl Jung, CW 5, Para 448

Yet “the danger is great” as Mephistopheles says, for these depths fascinate. Carl Jung, CW 5, Para 449

It is a fact not less remarkable than well attested, that the Druids in their groves were accustomed to select the most stately and beautiful tree as an emblem of the deity they adored; and, having cut off the side branches, they affixed two of the largest of them to the highest part of the trunk, in such manner that those branches, extended on each side like the arms of a man, together with the body, presented to the spectator the appearance of a huge cross [cf. fig. 26]; and on the bark, in various places, was actually inscribed the letter "tau." Carl Jung, CW 5, Para 402

The Creator God [takes] on an astromythological, or rather an astrological, character. He has become the sun, and thus finds a natural expression that transcends his moral division into a Heavenly Father and his counterpart the devil. Carl Jung; CW 5; Symbols of Transformation; Para 176.

Christ wrestles with himself in Gethsemane in order to complete his work. Mithras has to fight the bull, Carl Jung, CW 5, Para 526

Christ carries the Cross (the “transitus”) and in so doing carries himself to the grave. Mithras carries the bull (the “transitus”) into the cave (grave) where he kills it. Carl Jung, CW 5, Para 526

From Christ’s death comes a divinity who is eaten in the Lord’s Supper, i.e., the mystical food. From the death of Mithras’ bull comes fruitfulness, especially things to eat. Carl Jung, CW 5, Para 526

The Christian images express the same fundamental thought: that Christ is a divinity who is eaten in the Last Supper. His death transforms him into bread and wine, which we relish as mystical food. The relation of Agni to the soma-drink and of Dionysus to the wine should not pass without mention here. Carl Jung, CW 5, Para 526

Another parallel is Samson’s strangling of the lion, and the subsequent inhabitation of the dead lion by a swarm of bees, which gave rise to the riddle: “Out of the eater came forth meat, and out of the strong came forth sweetness.” Carl Jung, CW 5, Para 526

The parallel to the motif of dying and rising again is that of being lost and found again.

It appears ritually at exactly same place, in connection with the hierosgamos-like spring festivities, where the image of the god was hidden and then found again. Carl Jung, CW 5, Para 531

There is an uncanonical tradition that Moses left his father's house at the age of twelve in order to instruct mankind. Carl Jung, CW 5, Para 531

It is well known that Brünhilde, the Valkyrie, looked with favour on the brother-sister incest [of Sigmund and Sieglinde] that gave birth to Siegfried. But whereas Sieglinde is the human mother, Brünhilde acts the part of the symbolic mother, the "spirit-mother" (mother-imago), not as a persecutor, like Hera with the infant Heracles, but as a helper. Carl Jung, CW 5, Para 555

The sin of incest, of which she makes herself guilty by her complicity, is the reason for her banishment by Wotan. Siegfried's birth from the sister-wife characterizes him as a Horus, the reborn sun, a reincarnation of the aging sun-god. Carl Jung, CW 5, Para 555

The birth of the young sun, the god-man, stems from human partners, but they are really only vehicles for cosmic symbols. The spirit-mother therefore lends it her protection; she sends Sieglinde forth, with the child in her womb, on the night sea journey to the East. Carl Jung, CW 5, Para 555

The persecution motif is not connected here with the mother, but with Wotan, as in the Linus legend, where the father is the vengeful pursuer. Brünhilde stands in a peculiar relation to her father Wotan. Carl Jung, CW 5, Para 559

Brünhilde is a sort of "split-off" from Wotan, part of his personality, just as Pallas Athene was an emanation of Zeus. She is, as it were, Wotan's emissary or agent, and therefore corresponds to the angel of Yahweh, to the "eye of Ahura" or Vohu Manah, God's good thought in Persian legend, or to the Babylonian Nabu, the word of fate, or to Hermes, the messenger of the gods, whom the philosophers equated with Reason and Logos. Carl Jung, CW 5, Para 560

In Assyria the role of Logos falls to the fire god, Gibil. That Wagner should have put the designs of so martial a god as Wotan into the hands of a feminine agent is somewhat remarkable, despite the Greek precedent of Pallas Athene Carl Jung, CW 5, Para 560

Wagner's Brünhilde is one of the numerous anima-figures who are attributed to masculine deities, and who without exception represent a dissociation in the masculine psychea "split-off" with a tendency to lead an obsessive existence of its own. Carl Jung, CW 5, Para 563

This tendency to autonomy causes the anima to anticipate the thoughts and decisions of the masculine consciousness, with the result that the masculine consciousness is constantly confronted with unlooked-for situations which it has apparently done nothing to provoke. Carl Jung, CW 5, Para 563

Brünhilde's sin was her support of Siegmund, but behind that lies the incest which was projected into the brother-sister pair Siegmund and Sieglinde. The symbolical meaning, however, is that Wotan, the father, has entered into his own daughter in order to rejuvenate himself. Carl Jung, CW 5, Para 565

Wotan is justly indignant with Brünhilde, for she has taken over the role of Isis and through the birth of a son has deprived the old man of his power. Carl Jung, CW 5, Para 565

Wotan beats off the first herald of doom, Siegmund, and smashes his sword, but Siegmund rises again in the grandson, Siegfried. And the instrument of fate is always the woman, who knows and reveals his secret thoughts; hence the impotent rage of Wotan, who cannot bring himself to recognize his own contradictory nature. Carl Jung, CW 5, Para 565

At Siegfried's birth Sieglinde dies, as is proper. The foster-parent who brings him up is not a woman, but a chthonic god, Mime, a crippled dwarf who belongs to a race that has abjured love. Similarly, the god of the Egyptian underworld, the crippled shadow of Osiris (who underwent a sorry resurrection in Harpocrates), brings up the infant Horus to avenge the death of his father. Carl Jung, CW 5, Para 566

Meanwhile Brünhilde lies in enchanted slumber on the mountain where Wotan has put her to sleep with the magic thorn (Edda), surrounded by a curtain of fire that keeps off all who approach and at the same time symbolizes the fiery longing of the hero for the forbidden goal. Carl Jung, CW 5, Para 567

But Siegfried's conversation with the bird lures Fafner out of the cave. Siegfried's longing for the mother-imago has unwittingly exposed him to danger of looking back to his childhood and to the human mother, who immediately changes into the death-dealing dragon. He has conjured up the evil aspect of the unconscious, its devouring nature personified by the cave-dwelling terror of the woods. Carl Jung, CW 5, Para 569

Fafner is the guardian of the treasure; in his cave lies the hoard, the source of life and power. The mother apparently possesses the libido of the son (the treasure she guards so jealously), and this is in fact true so long as the son remains unconscious of himself. Carl Jung, CW 5, Para 569

In psychological terms this means that the "treasure hard to attain" lies hidden in the mother-imago, i.e., in the unconscious. This symbol points to one of life's secrets which is expressed in countless symbolical ways in mythology. When such symbols occur in individual dreams, they will be found on examination to be pointing to something like a centre of the total personality, of the psychic totality which consists of both conscious and unconscious. Here I must refer the reader to my later works, where I deal at some length with the symbol of the Self. Carl Jung, CW 5, Para 569

The rewards of this battle with Fafner are glowingly described in the Siegfried legend. According to the Edda, Siegfried eats Fafner's heart, the seat of life Carl Jung, CW 5, Para 569

He [Siegfried] wins the magic cap through whose power Alberich had changed himself into a serpentan allusion to the motif of rejuvenation by casting the skin. Another lucky cap is the caul that is occasionally found over the heads of new-born children. Carl Jung, CW 5, Para 569

In addition, by drinking the dragon's blood Siegfried learns to understand the language of birds, and thus enjoys a peculiar relationship to nature, which he now dominates by knowledge. Carl Jung, CW 5, Para 569

Cecrops was half snake, half man. In primitive times he was probably the snake of the Athenian citadel itself. As a buried god he was, like Erechtheus, a chthonic snake-deity. Above his subterranean dwelling rose the Parthenon, the temple of the virgin goddess. Carl Jung, CW 5, Para 594

For psychology it makes a vast difference whether the Self is to be considered "of the same nature" as the Father, or merely "of a similar nature." The decision in favour of homoousia was of great psychological importance, for it asserted that Christ is of the same nature as God. Carl Jung, CW 5, Para 612

Christ, from the point of view of psychology and comparative religion, is a typical manifestation of the Self. For psychology the Self is an imago Dei and cannot be distinguished from it empirically. The two ideas are therefore of the same nature. Carl Jung, CW 5, Para 612

Although the religion and philosophy of India are largely dominated by the idea of homoousia, there is less danger in this direction because the Indian has an equally homoousian idea of God (Brahman), which is very definitely not the case with the Christian. The Christian has far too little introspection to be able to realize what modifications in his present conception of God the homoousia of the Self (Atman) would involve. Carl Jung, CW 5, Para 612

As most people know, one of the basic principles of analytical psychology is that dream-images are to be understood symbolically; that is to say, one must not take them literally, but must surmise a hidden meaning in them. Carl Jung, CW 5, Para 4.

We must begin by overcoming our virtuousness, with the justifiable fear of falling into vice on the other side. This danger certainly exists, for the greatest virtuousness is always compensated inwardly by a strong tendency to vice, and how many vicious characters treasure inside themselves sugary virtues and a moral megalomania. Carl Jung, CW 5, Para 221

The psychic health of the adult individual, who in childhood was a mere particle revolving in a rotary system, demands that he should himself become the centre of a new system. Carl Jung, CW 5, Para 644

That the highest summit of life can be expressed through the symbolism of death is a well-known fact, for any growing beyond oneself means death. Carl Jung, CW 5, Para 432

I do not take kindly to the argument that because certain working hypotheses may not possess eternal validity or may possibly be erroneous, they must be withheld from the public. Carl Jung, CW 5, Para 685

I do not regard the pursuit of science as a bickering about who is right, but as an endeavour to augment and deepen human knowledge. Carl Jung, CW 5, Para 685

The world comes into being when man discovers it. But he only discovers it when he sacrifices his containment in the primal mother, the original state of unconsciousness. Carl Jung, CW 5, Para 652

Fear of our erotic fate is quite understandable, for there is something unpredictable about it. Carl Jung, CW 5, Para 101

Symbols are not allegories and not signs; they are images of contents which for the most part transcend consciousness. Carl Jung, CW 5, Para 114

The dream, we would say, originates in an unknown part of the psyche and prepares the dreamer for the events of the following day. Carl Jung, CW 5, Para 5

One such successful interpretation has been, for instance, Mother Church, but once this form begins to show signs of age and decay a new interpretation becomes inevitable. Carl Jung, CW 5, Para 351

The religious interest, which ought normally to be the greatest and most decisive factor, turned away from the inner world, and great figures of dogma dwindled to strange and incomprehensible vestiges, a prey to every sort of criticism. Carl Jung, CW 5, Para 113.

One might expect, perhaps, that a man of genius would luxuriate in the greatness of his own thoughts and renounce the cheap approbation of the rabble he despises; yet he succumbs to the more powerful impulse of the herd instinct. His seeking and his finding, his heart's cry, are meant for the herd and must be heeded by them. Carl Jung, CW 5, Para 14

We quite forget that we can be as deplorably overcome by a virtue as by a vice. There is a sort of frenzied, orgiastic virtuousness which is just as infamous as a vice and leads to just as much injustice and violence. Carl Jung, CW 5, Para 222

The wounding and painful shafts do not come from outside, through gossip which only pricks us only on the surface, but from the ambush of our own unconscious. It is our own repressed desires that stick like arrows in our flesh. Carl Jung, CW 5, Para 438

Just as our bodies still retain vestiges of obsolete functions and conditions in many of their organs, so our minds, which have apparently outgrown those archaic impulses, still bear the marks of the evolutionary stages we have traversed and re-echo the dim bygone in dreams and fantasies. Carl Jung, CW 5, Para 36

Therefore the sun is perfectly suited to represent the visible God of this world, i.e., the creative power of our own soul, which we call libido, and whose nature it is to bring forth the useful and to bring forth the useful and the harmful, the good and the bad. Carl Jung; CW 5, Para 176.

Purusha is evidently a sort of Platonic world-soul who surrounds the earth from outside: "Being born he overtopped the world before, behind, and in all places" (Rig-Veda) Carl Jung, CW 5, Para 649

As the all-encompassing world-soul Purusha has a maternal character, for he represents the original "dawn state" of the psyche: he is the encompasser and the encompassed, mother and unborn child, an undifferentiated, unconscious state of primal being Carl Jung, CW 5, Para 650

As such a condition must be terminated, and as it is at the same time an object of regressive longing, it must be sacrificed in order that discriminated entities i.e., conscious contents may come into being. Carl Jung, CW 5, Para 650

The foregoing passage is very remarkable. If one attempted to put this mythologem on

the Procrustean bed of logic sore violence would be done to it. How on earth ordinary “sages” come to be sacrificing the primal being side by side with the gods is an utterly fantastic conception, quite apart from the fact that in the beginning (i.e., before the sacrifice) nothing existed except the primal being! Carl Jung, CW 5, Para 651

But if this primal being [Purusha] means the great mystery of the original psychic state, then everything becomes clear: Carl Jung, CW 5, Para 651

It is evident that by this is meant not a physical, but a psychological cosmogony. The world comes into being when man discovers it. But he only discovers it when he sacrifices his containment in the primal mother, the original state of unconsciousness Carl Jung, CW 5, Para 652

The intellect is its progenitor and father, and what the intellect conceives the world-soul brings to birth in reality. “What lies enclosed in the intellect comes to birth in the world-soul as Logos, fills it with meaning and makes it drunken as if with nectar” (Plotinus, Enneads, III, 5, 9.) Carl Jung, CW 5, Para 198

Nectar, like soma, is the drink of fertility and immortality. The soul is fructified by the intellect; as the “oversoul” it is called the heavenly Aphrodite, as the “under-soul” the earthly Aphrodite. It knows “the pangs of birth.” It is not without reason that the dove of Aphrodite is the symbol of the Holy Ghost Carl Jung, CW 5, Para 198

Certain early Christian sects gave a maternal significance to the Holy Ghost (world-soul or moon) Carl Jung, CW 5, Para 198

But, on the other hand, “love” is an extreme example of anthropomorphism and, together with hunger, the immemorial psychic driving-force of humanity Carl Jung, CW 5, Para 97

Love is, psychologically considered, a function of relationship on the one hand and a feeling-toned psychic condition on the other, which, as we have seen, practically coincides with the God-image Carl Jung, CW 5, Para 97

There can be no doubt that love has an instinctual determinant; it is an activity peculiar to mankind, and, if the language of religion defines God as “love,” there is always the great danger of confusing the love which works in man with the workings of God Carl Jung, CW 5, Para 97

This is an obvious instance of the above-mentioned fact that the archetype is inextricably interwoven with the individual psyche, so that the greatest care is needed to differentiate the collective type, at least conceptually, from the personal psyche Carl Jung, CW 5, Para 97

In practice, however, this differentiation is not without danger if human “love” is thought of as the prerequisite for the divine presence (I John 4:12) Carl Jung, CW 5, Para 97

“Love,” in the experience of psychology, proves to be the power of fate par excellence, whether it manifests itself as base concupiscentia or as the most spiritual affection. It is one of the mightiest movers of humanity Carl Jung, CW 5, Para 98

If it is conceived as “divine,” this designation falls to it with absolute right, since the mighti-

est force in the psyche has always been described as “God.” Whether we believe in God or not, whether we marvel or curse, the word “God” is always on our lips Carl Jung, CW 5, Para 98

Anything psychically powerful is invariably called “God.” At the same time “God” is set over against man and expressly set apart from him Carl Jung, CW 5, Para 98

This means, psychologically, that the libido, regarded as the force of desire and aspiration, as psychic energy in the widest sense, stands in part at the disposal of the ego, and in part confronts the ego autonomously, sometimes influencing it so powerfully that it is either put in a position of unwilling constraint, or else discovers in the libido itself a new and unexpected source of strength Carl Jung, CW 5, Para 98

Just as Christ left behind his redeeming blood, a true pharmakon athanasias in the wine, so Agni is the soma, the holy drink of inspiration, the mead of immortality CW 5 Para 246

Soma and fire are identical in Vedic literature. The ancient Hindus saw fire both as a symbol of Agni and as an emanation of the inner libido-fire, and for them the same psychic dynamism was at work in the intoxicating drink (“fire-water,” Soma-Agni as rain and fire). The Vedic definition of soma as “seminal fluid” confirms this view Carl Jung, CW 5, Para 246

‘The “somatic” significance of Agni has its parallel in the Christian interpretation of the Eucharistic Blood as the body of Christ Carl Jung, CW 5, Para 246

Soma is also the “nourishing drink.” Its mythological characteristics coincide with those of fire, and so both are united in Agni. The drink of immortality, Amrita, was stirred by the Hindu gods like the fire. Carl Jung, CW 5, Para 247

The Sanskrit word for fire is agnis (Lat. ignis), personified as Agni, the god of fire, a divine mediator whose symbolism has certain affinities with Christian ideas CW 5 Para 239

Agni, fire, was worshipped as a golden-winged bird Carl Jung, CW 5, Para 271

After the birth of Buddha, the four genies of the East, West, North, and South come to offer their services as palanquin-bearers. To complete the symbolism, there is in the Buddha myth, besides the fertilization by star and wind, fertilization by a theriomorphic symbol, the elephant, who, as Bodhisattva, begets the Buddha. In Christian picture-language the unicorn, as well as the dove, is a symbol of the spermatic Word or Spirit Carl Jung, CW 5, Ser: 1

As Otto Rank has shown with a wealth of examples, the hero is frequently exposed and then reared by foster-parents. In this way he gets two mothers Carl Jung, CW 5, Para 494

An excellent example of this is the relation of Heracles to Hera. In the Hiawatha epic, Wenonah dies after giving birth, and her place is taken by Nokomis. Buddha, too, was brought up by a foster-mother Carl Jung, CW 5, Para 494

The foster-mother is sometimes an animal, e.g., the she-wolf mother of Romulus and Remus, etc. Carl Jung, CW 5, Para 494

The light and fire attributes depict the intensity of the feeling-tone and are therefore expressions for the psychic energy which manifests itself as libido Carl Jung, CW 5, Para 128

If one worships God, sun, or fire, one is worshipping intensity and power, in other words the phenomenon of psychic energy as such, the libido. Every force and every phenomenon is a special form of energy Carl Jung, CW 5, Para 128

Form is both an image and a mode of manifestation. It expresses two things: the energy which takes shape in it, and the medium in which that energy appears. On the one hand one can say that energy creates its own image, and on the other hand that the character of the medium forces it into a definite form Carl Jung, CW 5, Para 128

One man will derive the idea of God from the sun, another will maintain that it is the but feelings it arouses which give the sun its godlike significance. The former, by attitude and temperament, believes more in the causal nexus of the environment, the latter more in the spontaneity of psychic experience Carl Jung, CW 5, Para 128

Since, psychologically speaking, the God-image is a complex of ideas of an archetypal nature, it must necessarily be regarded as representing a certain sum of energy (libido) which appears in projection Carl Jung, CW 5, Para 89

In most of the existing religions it seems that the formative factor which creates the attributes of divinity is the father-imago, while in older religions it was the mother-imago. These attributes are omnipotence, a sternly persecuting paternalism ruling through fear (Old Testament), and loving paternalism (New Testament) Carl Jung, CW 5, Para 89

In certain pagan conceptions of divinity the maternal element is strongly emphasized, and there is also a wide development of the animal or theriomorphic element. Carl Jung, CW 5, Para 89

The God-concept is not only an image, but an elemental force. The primitive power which Job's Hymn of Creation vindicates, absolute and inexorable, unjust and superhuman, is a genuine and authentic attribute of the natural power of instinct and fate which "leads us into life," which makes "all the world become guilty before God" (Romans 3:19), and against which all struggle is in vain. Carl Jung, CW 5, Para 89

The archetype of the wise old man first appears in the father, being a personification of meaning and spirit in its procreative sense Carl Jung, CW 5, Para 515

The hero's father is often a master carpenter or some kind of artisan. According to an Arabian legend, Terah, the father of Abraham, was a master craftsman who could cut a shaft from any bit of wood, which means in Arabic usage that he was a begetter of excellent sons. In addition, he was a maker of images Carl Jung, CW 5, Para 515

Tvashtri, the father of Agni, was the cosmic architect, a smith and carpenter, and the inventor of fire-boring Carl Jung, CW 5, Para 515

Joseph, the father of Jesus, was a carpenter, and so was Cinyras, the father of Adonis, who was supposed to have invented the hammer, the lever, roof-building and mining Carl Jung, CW 5, Para 515

The father of the many-faced Hermes, Hephaestus, was a cunning technician and sculp-

tor ‘Carl Jung, CW 5, Para 515

In fairytales, the hero’s father is, more modestly, the traditional woodcutter Carl Jung, CW 5 Para 515

In the Rig-Veda the world is hewn from a tree by the cosmic architect, Tvashtri CW 5, Para 515

To say that Hiawatha’s father-in-law was an arrowsmith means, therefore, that the mythological attribute otherwise characteristic of the hero’s father has been transferred to the father-in-law. This corresponds to the psychological fact that the anima always stands in the relationship of a daughter to the wise old man. Nor is it uncommon to find the father-in-law so much emphasized that he replaces the real father Carl Jung, CW 5, Para 515

Finally, father-attributes may occasionally fall to the son himself, i.e., when it has become apparent that he is of one nature with the father. The hero symbolizes a man’s unconscious Self, and this manifest itself empirically as the sum total of all archetypes and therefore includes the archetype of the father and of the wise old man. To that extent the hero is his own father and his own begetter Carl Jung, CW 5, Para 516

This combination of motifs can be found in the legend of Mani. He performs his great deeds as a religious teacher, then goes into hiding for years in a cave, dies, and is skinned, stuffed, and hung up. Besides that, he is an artist and has a crippled foot. There is a similar combination of motifs in Wieland the Smith Carl Jung, CW 5. Para 516

The hero himself appears as a being of more than human stature. He is distinguished from the very beginning by his godlike characteristics Carl Jung, CW 5, Para 612

Since he is psychologically an archetype of the Self, his divinity only confirms that the Self is numinous, a sort of god, or having some share in the divine nature Carl Jung, CW 5, Para 612

The hero is the protagonist of God’s transformation in man; he corresponds to what I call the “mana personality.” The mana personality has such an immense fascination for the conscious mind that the ego all too easily succumbs to the temptation to identify with the hero, thus bringing on a psychic inflation with all its consequences. For this reason the repugnance felt by certain ecclesiastical circles for the “inner Christ” is understandable enough, at least as a preventive measure against the danger of psychic inflation which threatens the Christian European Carl Jung, CW 5, Para 612

Heroes are usually wanderers, and wandering is a symbol of longing, of the restless urge which never finds its object, of nostalgia for the lost mother. The sun comparison can easily be taken in this sense: the heroes are like the wandering sun, from which it is concluded that the myth of the hero is a solar myth Carl Jung, CW 5, Para 299

It seems to us, rather, that he is first and foremost a self-representation of the longing of the unconscious, of its unquenched and unquenchable desire for the light of consciousness. But consciousness, continually in danger of being led astray by its own light and of becoming a rootless will o’ the wisp, longs for the healing power of nature, for the deep wells of being and for unconscious communion with life in all its countless forms Carl Jung, CW 5, Para 299

It is not man as such who has to be regenerated or born again as a renewed whole, but, according to the statements of mythology, it is the hero or god who rejuvenates himself. These figures are generally expressed or characterized by libido-symbols (light, fire, sun, etc.), so that it looks as if they represented psychic energy. They are, in fact, personifications of the libido Carl Jung, CW 5, Para 388

The hero is a hero just because he sees resistance to the forbidden goal in all life's difficulties and yet fights that resistance with the whole-hearted yearning that strives towards the treasure hard to attain, and perhaps unattainable a yearning that paralyses and kills the ordinary man Carl Jung, CW 5, Para 510

The hero is an extraordinary being who is inhabited by a daemon, and it is this that makes him a hero. That is why the mythological statements about heroes are so typical and so impersonal Carl Jung, CW 5, Para 536

Taken purely as a psychologem the hero represents the positive, favourable action of the unconscious, while the dragon is its negative and unfavourable action not birth, but a devouring, not a beneficial and constructive deed, but greedy retention and destruction. (cf. fig. 035) and (fig. 030) Carl Jung, CW 5, Para 580

He is the one who has the great longing for an understanding soul-mate Carl Jung, CW 5, Para 465

He is the seeker who survives the adventures which the conscious personality studiously avoids Carl Jung, CW 5, Para 465

He it is who, with a magnificent gesture, offers his breast to the slings and arrows of a hostile world, and displays the courage which is so sadly lacking to the conscious mind Carl Jung, CW 5, Para 465

He is the measure against which the man who comes in contact with such a woman is compared with, being relentlessly set up as the ideal who receives direct punishment from her should he ever be otherwise 'Carl Jung, CW 5, Para 465

The animus, a typical "son"-hero, true to his ancient prototype, is seeking the mother. This youthful hero is always the son-lover of the mother-goddess and is doomed to an early death (fig. 020) Carl Jung, CW 5, Para 466

The libido that will not flow into life at the right time regresses to the mythical world of the archetypes, where it activates images which, since the remotest times, have expressed the non-human life of the gods, whether of the upper world or the lower Carl Jung, CW 5, Para 466

He is therefore sure of his success and cuts out all possible rivals. He wins the soul of the dreamer, not in order to lead her back to normal life, but to her spiritual destiny Carl Jung, CW 5, Para 468

For he is a bridegroom of death, one of the son-lovers who die young because they have no life of their own but are only fast-fading flowers on the maternal tree. Their meaning and their vitality begin and end in the mother-goddess Carl Jung, CW 5, Para 468

The answer to this question is that the hero is not born like an ordinary mortal because his birth is a rebirth from the mother-wife. That is why the hero so often has two mothers Carl Jung, CW 5, Para 494

One would think it possible for a hero to be born in the normal manner, and then gradually to grow out of his humble and homely surroundings, perhaps with a great effort and in face of many dangers. (This motif is by no means uncommon in the hero-myths) Carl Jung, CW 5, Para 493

As a general rule, however, the story of his origins is miraculous. The singular circumstances of his procreation and birth are part and parcel of the hero-myth. What is the reason for these beliefs? Carl Jung, CW 5, Para 493

As Rank (The Myth of the Birth of the Hero), has shown with a wealth of examples, the hero is frequently exposed and then reared by foster-parents. In this way he gets two mothers Carl Jung, CW 5, Para 494

An excellent example of this is the relation of Heracles to Hera. In the Hiawatha epic, Wenonah dies after giving birth, and her place is taken by Nokomis. Buddha, too, was brought up by a foster-mother Carl Jung, CW 5, Para 494

The world is not a garden of God the Father, it is also a place of horror. Not only is heaven no father and earth no mother and men are not brothers, but they represent as many hostile destructive forces to which we are the more surely delivered over the more confidently and thoughtlessly we entrust ourselves to the so-called fatherly hand of God. Carl Jung, CW 5, Para 224

Nothing remains for mankind but to work in harmony with this will. To work in harmony with the libido does not mean letting oneself drift with it, for the psychic forces have no uniform direction, but are often directly opposed to one another. Carl Jung, CW 5, Para 89

A mere letting go of oneself leads in the shortest space of time to the most hopeless confusion. It is often difficult, if not impossible, to feel the ground current and to know the true direction; at any rate collisions, conflicts, and mistakes are scarcely avoidable. Carl Jung, CW 5, Para 89

We thus arrive at the objectionable conclusion that, from the psychological point of view, the God-image is a real but subjective phenomenon. Carl Jung, CW 5, Para 129

This “game with oneself” is anything but ridiculous; on the contrary, it is extremely important. To carry a god around in yourself means a great deal; it is guarantee of happiness, or power, and even of omnipotence, in so far as these are attributes of divinity. Carl Jung, CW 5, Para 130

To carry a god within oneself is practically the same as being God oneself. In Christianity, despite the weeding out of the most grossly sensual ideas and symbols, we can still find traces of this psychology. Carl Jung, CW 5, Para 130

The idea of “becoming a god” is even more obvious in the pagan mystery cults, where

the neophyte, after initiation, is himself lifted up to divine status: at the conclusion of the consecration rites in the syncretistic Isis mysteries he was crowned with a crown of palm leaves, set up on a pedestal, and worshipped as Helios. Carl Jung, CW 5, Para 130

When man becomes God, his importance and power are enormously increased. That seems to have been its main purpose: to strengthen the individual against his all-too-human weakness and insecurity in personal life. Carl Jung, CW 5, Para 134

But the strengthening of his power-consciousness is only the outward effect of his becoming God; far more important are the deeper lying processes in the realm of feeling. Carl Jung, CW 5, Para 134

For whoever introverts libido, i.e., withdraws it from the external object, suffers the necessary consequences of introversion: the libido, which is turned inwards, into the subject, reverts to the individual past and digs up from the treasure-house of memory those images glimpsed long ago, which bring back the time when the world was a full and rounded whole. Carl Jung, CW 5, Para 134

First and foremost are the memories of childhood, among them the imagos of father and mother. These are unique and imperishable, and in adult life not many difficulties are needed to reawaken those memories and make them active. Carl Jung, CW 5, Para 134

The regressive reactivation of the father and mother imagos plays an important role in religion. Carl Jung, CW 5, Para 134

The benefits of religion are equivalent, in their effects, to the parental care lavished upon the child, and religious feelings are rooted in unconscious memories of certain tender emotions in early infancy memories of archetypal intuitions. Carl Jung, CW 5, Para 134

The sun is the only truly “rational” image of God, whether we adopt the standpoint of the primitive savage or of modern science Carl Jung, CW 5, Para 176

In either case the sun is the father-god from whom all living things draw life; he is the fructifier and creator, the source of energy for our world. Carl Jung, CW 5. Para 176

The discord into which the human soul has fallen can be harmoniously resolved through the sun as a natural object which knows no inner conflict. Carl Jung, CW 5, Para 176

The sun is not only beneficial, but also destructive; hence the zodiacal sign for August heat is the ravaging lion which Samson slew in order to rid the parched earth of its torment. Carl Jung, CW 5, Para 176

Yet it is the nature of the sun to scorch, and its scorching power seems natural to man. It shines equally on the just and the unjust and allows useful creatures to flourish as well as the harmful. Carl Jung, CW 5, Para 176

The chthonic god was in all probability a snake that was housed in a cave and was fed with (fig. 258.57b). In the Asclepieia of the later period the sacred snakes were hardly ever visible, so they may have existed only figuratively Carl Jung, CW 5, Para 577

Here the serpent lies on the treasury as protector of the hoard. Fear of the deadly maternal womb has become the guardian of the treasure of life. That the snake really is a death-symbol is evident from the fact that the souls of the dead, like the chthonic gods, appear as serpents, as dwellers in the kingdom of the deadly mother Carl Jung, CW 5, Para 578

Thus the crevice at Delphi with the Castalian spring was the habitation of the chthonic Python who was vanquished by the sun-hero Apollo. The Python, incited by Hera, had pursued Apollo's mother, Leto, when he was still in her womb; but she fled to the floating island of Delos on a "night sea journey" and was there safely delivered of her child, who later slew the Python Carl Jung, CW 5, Para 577

In Hierapolis (Edessa) a temple was built over the earth where the flood subsided, and in Jerusalem the foundation-stone of the temple was laid over the great abyss, in the same way that Christian churches are often built over caves, grottoes, wells, etc. Carl Jung, CW 5. Para 577

We find the same motif in the Grotto of Mithras and the various other cave-cults, including the Christian catacombs, which owe their importance not to legendary persecutions but to the cult of the dead Carl Jung, CW 5, Para 577

Even the burial of the dead in consecrated ground ("garden of the dead," cloisters, crypts, etc.) is a rendering back to the mother with the hope of resurrection which such burials presuppose Carl Jung, CW 5, Para 577

Hence the Attic custom of giving the dead man the (same as, honey-cakes), with which to pacify the hound of hell, the three-headed monster guarding the door of the underworld Carl Jung, CW 5, Para 577

I have had occasion to observe, in the course of my daily professional work [that] a dream, often of visionary clarity, occurs about the time of the onset of the illness or shortly before, which imprints itself indelibly on the mind and, when analyzed, reveals to the patient a hidden meaning that anticipates the subsequent events of his life. Carl Jung; CW 5; para 78

A substitute for the gifts seems to have been the obolus given to Charon, which is why Rohde calls him the second Cerberus, akin to the jackal-headed Anubis of the Egyptians. Carl Jung, CW 5, Para 577

The dog and the underworld serpent are identical. In the Greek tragedies the Erinyes are serpents as well as dogs; the monsters Typhon and Echidna are parents of the Hydra, of the dragon of the Hesperides, and of the Gorgon; they also spawned the dogs Cerberus, Orthros, and Scylla. Snakes and dogs are guardians of the treasure Carl Jung, CW 5, Para 577

It is hard to believe that this teeming world is too poor to provide an object for human love - it offers boundless opportunities to everyone. It is rather the inability to love which robs a person of these opportunities. The world is empty only to him who does not know how to direct his libido towards things and people, and to render them alive and beautiful. What compels us to create a substitute from within ourselves is not an external lack, but our own inability to include anything outside ourselves in our love. Certainly the difficulties and adversities of the struggle for existence may oppress us, yet even the worst conditions need not hinder love; on the contrary, they often spur us on to greater efforts. Carl Jung, CW 5, 253.

We have, therefore, two kinds of thinking: directed thinking, and dreaming or fantasy-thinking. The former operates with speech elements for the purpose of communication and is difficult and exhausting; the latter is effortless, working as it were spontaneously, with the contents ready to hand, and guided by unconscious motives. The one produces innovations and adaptation, copies reality, and tries to act upon it; the other turns away from reality, sets free subjective tendencies, and as regards adaptation, is unproductive Carl Jung, CW 5, para. 20.

What he is describing here is the libido, which is not only creative and procreative, but possesses an intuitive faculty, a strange power to “smell the right place,” almost as if it were a live creature with an independent life of its own (which is why it is so easily personified). It is purposive, like sexuality itself, a favorite object of comparison. Carl Jung; CW 5, Para. 182.

The sun is not only beneficial, but also destructive; hence the zodiacal sign for August heat is the ravaging lion which Samson slew in order to rid the parched earth of its torment. Yet it is in the nature of the sun to scorch, and its scorching power seems natural to man. It shines equally on the just and the unjust and allows useful creatures to flourish as well as the harmful. Carl Jung; CW 5, para 176.

Numerous mythological and philosophical attempts have been made to formulate and visualize the creative force which man knows only by subjective experience. To give but a few examples, I would remind the reader of the cosmogonic significance of Eros in Hesiod, and also of the Orphic figure of Phanes, the ‘Shining One,’ the first-born, the ‘Father of Eros.’ In Orphic terms, Phanes also denotes Priapos, a god of love, androgynous, and equal to the Theban Dionysus Lysios. The Orphic meaning of Phanes is the same as that of the Indian Kama, the God of love, which is also a cosmogonic principle. Carl Jung, CW 5, para. 198.

Our civilization enormously underestimates the importance of sexuality, but just because of the repressions imposed upon it, sexuality breaks through into every conceivable field where it does not belong and uses such an indirect mode of expression that we may expect to meet it all of a sudden practically everywhere. Thus the very idea of an intimate understanding of the human psyche, which is actually a very pure and beautiful thing, becomes besmirched and perversely distorted by the intrusion of an indirect sexual meaning. A direct and spontaneous expression of sexuality is a natural occurrence and, as such, never ugly or repulsive. It is "moral" repression that makes sexuality on the one hand dirty and hypocritical, and on the other shameless and blatant. This secondary significance, or rather the misuse which the repressed and suborned sexuality makes of the highest psychic functions, gives certain of our opponents an opportunity to sniff out the prurient eroticism of the confessional in psychoanalysis. Carl Jung, CW 5, Para 295

An individual is infantile because he has freed himself insufficiently, or not at all, from his childish environment and his adaptation to his parents, with the result that he has a false reaction to the world on the one hand he reacts as a child towards his parents, always demanding love and immediate emotional rewards, while on the other hand he is so identified with his parents through his close ties with them that he behaves like his father or his mother. He is incapable of living his own life and finding the character that belongs to him. Carl Jung, CW 5, Para 431

It is not possible to live too long amid infantile surroundings, or in the bosom of the

family, without endangering one's psychic health. Life calls us forth to independence, and anyone who does not heed this call because of childish laziness or timidity is threatened with neurosis. And once this has broken out, it becomes an increasingly valid reason for running away from life and remaining forever in the morally poisonous atmosphere of infancy. Carl Jung, CW 5, Para 461

If we wish to stay on the heights we have reached, we must struggle all the time to consolidate our consciousness and its attitude. But we soon discover that this praiseworthy and apparently unavoidable battle with the years leads to stagnation and desiccation of soul. Our convictions become platitudes ground out on a barrel-organ, our ideals become starchy habits, enthusiasm stiffens into automatic gestures. The source of the water of life seeps away. We ourselves may not notice it, but everybody else does, and that is even more painful. If we should risk a little introspection, coupled perhaps with an energetic attempt to be honest for once with ourselves, we may get a dim idea of all the wants, longings, and fears that have accumulated down there—a repulsive and sinister sight. The mind shies away, but life wants to flow down into the depths. Fate itself seems to preserve us from this, for each of us tends to become an immovable pillar of the past. Carl Jung, CW 5, Para 553

For all these things have taken on shape, and all shapes are worn thin by the working of time; they age, sicken, crumble to dust—unless they change. But change they can, for the invisible spark that generated them is potent enough for infinite generation. No one should deny the danger of the descent, but it can be risked. No one need risk it, but it is certain that some will. And let those who go down the sunset way do so with open eyes, for it is a sacrifice which daunts even the gods. Yet every descent is followed by an ascent; the vanishing shapes are shaped anew, and a truth is valid in the end only if it suffers change and bears witness in new images, in new tongues, like a new wine that is put into new bottles. Carl Jung, CW 5, Para 553

Nature has the primary claim on mankind, and only long after that comes the luxury of reason. The medieval ideal of a life lived for death should gradually be replaced by a more natural attitude to life, in which the natural claims of man are fully acknowledged, so that the desires of the animal sphere need no longer drag down the higher values of the spiritual sphere in order to be able to function at all. Carl Jung, CW 5, Para 295

What aroused a feeling of horror in the Greeks still remains true, but it is true for us only if we give up the vain illusion that we are different, i.e., morally better, than the ancients. We have merely succeeded in forgetting that an indissoluble link binds us to the men of antiquity. This truth opens the way to an understanding of the classical spirit such as has never existed before—the way of inner sympathy on the one hand and of intellectual comprehension on the other. By penetrating into the blocked subterranean passages of our own psyches we grasp the living meaning of classical civilization, and at the same time we establish a firm foothold outside our own culture from which alone it is possible to gain an objective understanding of its foundations. That at least is the hope we draw from the rediscovery of the immortality of the Oedipus problem. Carl Jung, CW 5, Para 1

People who strive to be excessively ethical, who always think, feel, and act altruistically and idealistically, avenge themselves for their intolerable ideals by a subtly planned maliciousness, of which they are naturally not conscious as such, but which leads to misunderstandings and unhappy situations. All these difficulties appear to them as "especially unfortunate circumstances," or the fault and the malice of other people, or as tragic complications. Consciously they imagine they are rid of the conflict, but it is still there, unseen, to be stumbled over at

every step. Carl Jung, CW 5, Para 62

The essential thing is that we should be able to stand up to our judgment of ourselves. From outside this attitude looks like self-righteousness, but it is so only if we are incapable of criticizing ourselves. If we can exercise self-criticism, criticism from outside will affect us only on the outside and not pierce to the heart, for we feel that we have a sterner critic within us than any who could judge us from without. And anyway, there are as many opinions as there are heads to think them. We come to realize that our own judgment has as much value as the judgment of others. One cannot please everybody; therefore it is better to be at peace with oneself. Carl Jung, CW 5, Para 911

All through our lives we possess, side by side with our newly acquired directed and adapted thinking, a fantasy thinking which corresponds to the antique state of mind. Just as our bodies still retain vestiges of obsolete functions and conditions in many of their organs, so our minds, which have apparently outgrown those archaic impulses, still bear the marks of the evolutionary stages we have traversed and re-echo the dim bygone in dreams and fantasies. Carl Jung, CW 5, Para 36

It would be a ridiculous and unwarranted assumption on our part if we imagined that we were more energetic or more intelligent than the men of the past. Our material knowledge has increased, but not our intelligence. This means that we are just as bigoted in regard to new ideas, and just as impervious to them, as people were in the darkest days of antiquity. We have become rich in knowledge, but poor in wisdom. Carl Jung, CW 5, Para 23

The world changes its face —tempora mutantur et nos mutamur in illis—for we can grasp the world only as a psychic image in ourselves, and it is not always easy to decide, when the image changes, whether the world or ourselves have changed, or both. The picture of the world can change at any time, just as our conception of ourselves changes. Every new discovery, every new thought, can put a new face on the world. We must be prepared for this, else we suddenly find ourselves in an antiquated world, itself a relic of lower levels of consciousness. We shall all be as good as dead one day, but in the interests of life we should postpone this moment as long as possible, and this we can only do by never allowing our picture of the world to become rigid. Carl Jung, CW 5, Para 700

If we do not fashion for ourselves a picture of the world, we do not see ourselves either, who are the faithful reflections of that world. Only when mirrored in our picture of the world can we see ourselves in the round. Only in our creative acts do we step forth into the light and see ourselves whole and complete. Never shall we put any face on the world other than our own, and we have to do this precisely in order to find ourselves. For higher than science or art as an end in itself stands man, the creator of his instruments. Carl Jung, CW 5, Para 737

In the same way one can withhold the material content of primitive myths from a child but not take from him the need for mythology, and still less his ability to manufacture it for himself. One could almost say that if all the world's traditions were cut off at a single blow, the whole of mythology and the whole history of religion would start all over again with the next generation. Carl Jung, CW 5, Para 30

The conscious mind must have reason, firstly to discover some order in the chaos of disorderly individual events occurring in the world, and secondly to create order, at least in human affairs. We are moved by the laudable and useful ambition to extirpate the chaos of

the irrational both within and without to the best of our ability. Apparently the process has gone pretty far. As a mental patient once told me: "Doctor, last night I disinfected the whole heavens with bichloride of mercury, but I found no God." Something of the sort has happened to us as well. Carl Jung, CW 5, Para 104A

The myth of the hero is first and foremost a self-representation of the longing of the unconscious, of its unquenched and unquenchable desire for the light of consciousness. But consciousness, continually in danger of being led astray by its own light and of becoming a rootless will o'the wisp, longs for the healing power of nature, for the deep wells of being and for unconscious communion with life in all its countless forms. Carl Jung, CW 5, Para 299

People often behave as if they did not rightly understand what constitutes the destructive character of the creative force. A woman who gives herself up to passion, particularly under present-day civilized conditions, experiences this all too soon. We must think a little beyond the framework of purely bourgeois moral conditions to understand the feeling of boundless uncertainty which befalls the man who gives himself over unconditionally to fate. Even to be fruitful is to destroy oneself, for with the creation of a new generation the previous generation has passed beyond its climax. Our offspring thus become our most dangerous enemies, with whom we cannot get even, for they will survive us and so inevitably will take the power out of our weakening hands. Fear of our erotic fate is quite understandable, for there is something unpredictable about it. Carl Jung, CW 5, Para 101

Fear of fate is a very understandable phenomenon, for it is incalculable, immeasurable, full of unknown dangers. The perpetual hesitation of the neurotic to launch out into life is readily explained by his desire to stand aside so as not to get involved in the dangerous struggle for existence. But anyone who refuses to experience life must stifle his desire to live—in other words, he must commit partial suicide. Carl Jung, CW 5, Para 165

Flight from life does not exempt us from the laws of old age and death. The neurotic who tries to wriggle out of the necessity of living wins nothing and only burdens himself with a constant foretaste of aging and dying, which must appear especially cruel on account of the total emptiness and meaninglessness of his life. If it is not possible for the libido to strive forwards, to lead a life that willingly accepts all dangers and ultimate decay, then it strikes back along the other road and sinks into its own depths, working down to the old intimation of the immortality of all that lives, to the old longing for rebirth. Carl Jung, CW 5, Para 617

The sun, rising triumphant, tears himself from the enveloping womb of the sea, and leaving behind him the noonday zenith and all its glorious works, sinks down again into the maternal depths, into all-enfolding and all regenerating night. This image is undoubtedly a primordial one, and there was profound justification for its becoming a symbolical expression of human fate: in the morning of life the son tears himself loose from the mother, from the domestic hearth, to rise through battle to his destined heights. Always he imagines his worst enemy in front of him, yet he carries the enemy within himself—a deadly longing for the abyss, a longing to drown in his own source, to be sucked down to the realm of the Mothers. His life is a constant struggle against extinction, a violent yet fleeting deliverance from ever-lurking night. This death is no external enemy, it is his own inner longing for the stillness and profound peace of all-knowing non-existence, for all-seeing sleep in the ocean of coming-to-be and passing away. Even in his highest strivings for harmony and balance, for the profundities of philosophy and the raptures of the artist, he seeks death, immobility, satiety, rest. If, like Peirithous, he tarries too long in this abode of rest and peace, he is overcome by apathy, and

the poison of the serpent paralyses him for all time. If he is to live, he must fight and sacrifice his longing for the past in order to rise to his own heights. And having reached the noonday heights, he must sacrifice his love for his own achievement, for he may not loiter. The sun, too, sacrifices its greatest strength in order to hasten onward to the fruits of autumn, which are the seeds of rebirth. Carl Jung, CW 5, Para 553

When the libido leaves the bright upper world, whether from choice, or from inertia, or from fate, it sinks back into its own depths, into the source from which it originally flowed, and returns to the point of cleavage, the navel, where it first entered the body. This point of cleavage is called the mother, because from her the current of life reached us. Whenever some great work is to be accomplished, before which a man recoils, doubtful of his strength, his libido streams back to the fountainhead—and that is the dangerous moment when the issue hangs between annihilation and new life. For if the libido gets stuck in the wonderland of this inner world, then for the upper world man is nothing but a shadow, he is already moribund or at least seriously ill. But if the libido manages to tear itself loose and force its way up again, something like a miracle happens: the journey to the underworld was a plunge into the fountain of youth, and the libido, apparently dead, wakes to renewed fruitfulness. Carl Jung, CW 5, Para 449

To the degree that the modern mind is passionately concerned with anything and everything rather than religion, religion and its prime object—original sin—have mostly vanished into the unconscious. That is why, today, nobody believes in either. People accuse psychology of dealing in squalid fantasies, and yet even a cursory glance at ancient religions and the history of morals should be sufficient to convince them of the demons hidden in the human soul. This disbelief in the devilishness of human nature goes hand in hand with a blank incomprehension of religion and its meaning. Carl Jung, CW 5, Para 106

At a time when a large part of mankind is beginning to discard Christianity, it may be worth our while to try to understand why it was accepted in the first place. It was accepted as a means of escape from the brutality and unconsciousness of the ancient world. As soon as we discard it, the old brutality returns in force, as has been made overwhelmingly clear by contemporary events. We have had bitter experience of what happens when a whole nation finds the moral mask too stupid to keep up. The beast breaks loose, and a frenzy of demoralization sweeps over the civilized world. Carl Jung, CW 5, Para 341

The conflict between horse and snake or bull and snake represents a conflict within the libido itself, a striving forward and backwards at one and the same time. It is as if the libido were not only a ceaseless forward movement, an unending will for life, evolution, creation, such as Schopenhauer envisaged in his cosmic Will, where death is a mishap or fatality coming from outside; like the sun, the libido also wills its own descent, its own involution. During the first half of life it strives for growth; during the second half, softly at first and then ever more perceptibly, it points towards an altered goal. And just as in youth the urge for limitless expansion often lies hidden under veiling layers of resistance to life, so that “other urge” often hides behind an obstinate and purposeless cleaving to life in its old form. This apparent contradiction in the nature of the libido is illustrated by a statue of Priapus in the archaeological museum at Verona: Priapus, with a sidelong smile, points with his finger to a snake biting his phallus. Carl Jung, CW 5, Para 680

“The demands of the unconscious act at first like a paralysing poison on a man’s energy and resourcefulness, so that it may well be compared to the bite of a poisonous snake. Appar-

ently it is a hostile demon who robs him of energy, but in actual fact it is his own unconscious whose alien tendencies are beginning to check the forward striving of the conscious mind. The cause of this process is often extremely obscure, the more so as it is complicated by all kinds of external factors and subsidiary causes, such as difficulties in work, disappointments, failures, reduced efficiency due to age, depressing family problems, and so on and so forth. According to the myths it is the woman who secretly enslaves a man, so that he can no longer free himself from her and becomes a child again. It is also significant that Isis, the sister-wife of the sun-god, creates the poisonous serpent from his spittle, which, like all bodily secretions, has a magical significance, being a libido equivalent. She creates the serpent from the libido of the god, and by this means weakens him and makes him dependent on her. Delilah acts in the same way with Samson: by cutting off his hair, the sun's rays, she robs him of his strength. This demon-woman of mythology is in truth the "sister-wife-mother," the woman in the man, who unexpectedly turns up during the second half of life and tries to effect a forcible change of personality. I have dealt with certain aspects of this change in my essay on "The Stages of Life." It consists in a partial feminization of the man and a corresponding masculinization of the woman. Often it takes place under very dramatic circumstances: the man's strongest quality, his Logos principle, turns against him and as it were betrays him. The same thing happens with the Eros of the woman. The man becomes rigidly set in his previous attitude, while the woman remains caught in her emotional ties and fails to develop her reason and understanding, whose place is then taken by equally obstinate and inept "animus" opinions. The fossilization of the man shrouds itself in a smoke-screen of moods, ridiculous irritability, feelings of distrust and resentment, which are meant to justify his rigid attitude. A perfect example of this type of psychology is Schreber's account of his own psychosis, Memoirs of My Nervous Illness. Carl Jung, CW 5, Para 458

But what we have here is a masculine figure which, in view of the role it plays in the Miller fantasies, must be regarded as a personification of the masculine component of the woman's personality. (Cf. pi. xvii.) In my later writings I have called this personification the "animus." Carl Jung, CW 5, Para 267

The mother's influence is mainly on the Eros of her son; therefore it was only logical that Oedipus should end up by marrying his mother. But the father exerts his influence on the mind or spirit of his daughter—on her "Logos." This he does by increasing her intellectuality, often to a pathological degree which in my later writings I have described as "animus possession. Carl Jung, CW 5, Para 272

The man becomes rigidly set in his previous attitude, while the woman remains caught in her emotional ties and fails to develop her reason and understanding, whose place is then taken by equally obstinate and inept "animus" opinions. Carl Jung, CW 5, Para 458

Chiwantopel is a typical animus-figure, that is to say, a personification of the masculine side of the woman's psyche. Carl Jung, CW 5, Para 462

It is all up with the man whom the whims of fortune bring into contact with this infantile woman: he will at once be made identical with her animus-hero and relentlessly set up as the ideal figure, threatened with the direst punishments should he ever make a face that shows the least departure from the ideal! Carl Jung, CW 5, Para 465

The animus, a typical "son"-hero, is not after her at all; true to his ancient prototype, he is seeking the mother. This youthful hero is always the son-lover of the mother-goddess and

is doomed to an early death. Carl Jung, CW 5, Para 466

The hero as an animus-figure acts vicariously for the conscious individual; that is to say, he does what the subject ought, could, or would like to do, but does not do. Carl Jung, CW 5, Para 469

Hiawatha to his task is represented by Nokomis, the mother, who is a feminine principle in the breast of the hero. The latter is Hiawatha's anima, and the former would correspond to the animus of the Terrible Mother. Carl Jung, CW 5, Para 543

These are archetypes like the anima, animus, wise old man, witch, shadow, earth-mother, etc., and the organizing dominants, the self, the circle, and the quaternity, i.e., the four functions or aspects of the self (cf. pis. lvi, lx) or of consciousness. Carl Jung, CW 5, Para 611

The morally significant act is delegated to the hero, while Miss Miller only looks on admiringly and applaudingly, without, it seems, realizing that her animus-figure is constrained to do what she herself so signally fails to do. Carl Jung, CW 5, Para 675

When Chiwantopel calls the snake his "little sister," this is not without significance for Miss Miller, because the hero is in fact her brother-beloved, her "ghostly lover," the animus. She herself is his life-snake which brings death to him. Carl Jung, CW 5, Para 679

Any very intensive train of thought works itself out more or less in verbal form if, that is to say, one wants to express it, or teach it, or convince someone of it. It is evidently directed outwards, to the outside world Carl Jung, CW 5, Para 11

To that extent, directed or logical thinking is reality-thinking, a thinking that is adapted to reality, by means of which we imitate the successiveness of objectively real things, so that the images inside our mind follow one another in the same strictly causal sequence as the events taking place outside it Carl Jung, CW 5, Para 11

We also call this "thinking with directed attention." It has in addition the particularity of causing fatigue, and is for that reason brought into play for short periods only Carl Jung, CW 5, Para 11

The whole laborious achievement of our lives is adaptation to reality, part of which consists in directed thinking. In biological terms it is simply a process of psychic assimilation that leaves behind a corresponding state of exhaustion, like any other vital achievement Carl Jung, CW 5, Para 11

The material with which we think is language and verbal concepts something which from time immemorial has been directed outwards and used as a bridge, and which has but a single purpose, namely that of communication. So long as we think directedly, we think for others and speak to others Carl Jung, CW 5, Para 12

Directed thinking or, as we might also call it, thinking in words, is manifestly an instrument of culture, and we shall not be wrong in saying that the tremendous work of education which past centuries have devoted to directed thinking, thereby forcing it to develop from the subjective, individual sphere to the objective, social sphere, has produced a readjustment of the human mind to which we owe our modern empiricism and technics Carl Jung, CW 5, Para 17

These are absolutely new developments in the history of the world and were unknown to earlier ages. Inquiring minds have often wrestled with the question of why the first-rate knowledge which the ancients undoubtedly had of mathematics, mechanics, and physics, coupled with their matchless craftsmanship, was never applied to developing the rudimentary techniques already known to them (e.g., the principles of simple machines) into real technology in the modern sense of the word, and why they never got beyond the stage of inventing amusing curiosities Carl Jung, CW 5, Para 17

There is only one answer to this: the ancients, with a few illustrious exceptions, entirely lacked the capacity to concentrate their interest on the transformations of inanimate matter and to reproduce the natural artificially, by which means alone they could have gained control of the forces of nature. What they lacked was training in directed thinking Carl Jung, CW 5, Para 17

The secret of cultural development is the mobility and disposability of psychic energy. Directed thinking, as we know it today, is a more or less modern acquisition which earlier ages lacked Carl Jung, CW 5, Para 17

Directed thinking operates with speech elements for the purpose of communication and is difficult and exhausting. It produces innovations and adaptation, copies reality, and tries to act upon it. Carl Jung, CW 5, Para 20

History shows that directed thinking was not always as developed as it is today. The clearest expression of modern directed thinking is science and the techniques fostered by it. Both owe their existence simply and solely to energetic training in directed thinking. Carl Jung, CW 5, Para 21

Our thinking then lacks all leading ideas and the sense of direction emanating from them. We no longer compel our thoughts along a definite track, but let them float, sink or rise according to their specific gravity. In Kuelpe's view, thinking is a sort of "inner act of will," and its absence necessarily leads to an "automatic play of ideas" (Outlines, p. 448). William James regards non-directed thinking, or "merely associative" thinking as the ordinary kind (Principles, II, p. 325) Carl Jung, CW 5, Para 18

We can supplement James's definitions by saying that this sort of thinking does not tire us, that it leads away from reality into fantasies of the past or future. At this point thinking in verbal forms ceases, image piles on image, feeling on feeling, and there is an ever-increasing tendency to shuffle things about and arrange then not as they are in reality but as one would like them to be. Naturally enough, the stuff of this thinking which shies away from reality can only be the past with its thousand-and-one memory images. Common speech calls this kind of thinking "dreaming" Carl Jung, CW 5, Para 19

Dreaming or fantasy thinking is effortless, working as it were spontaneously, with the contents ready to hand, and guided by unconscious motives. It turns away from reality, sets free subjective tendencies, and as regards adaptation, is unproductive Carl Jung, CW 5, Para 20

At the time when the forerunners of our present-day culture, such as the poet Petrarch, were just beginning to approach nature in a spirit of understanding, an equivalent of our science already existed in scholasticism Carl Jung, CW 5, Para 21

Scholasticism took its subjects from fantasies of the past, but it gave the mind a dialectical training in directed thinking. The one goal of success that shone before the thinker was rhetorical victory in disputation, and not the visible transformation of reality Carl Jung, CW 5, Para 21

The subjects he thought about were often unbelievably fantastic; for instance, it was debated how many angels could stand on the point of a needle, whether Christ could have performed his work of redemption had he come into the world in the shape of a pea etc., etc. The fact that these problems could be posed at all and the stock metaphysical problem of how to know the unknowable comes into this category proves how peculiar the medieval mind must have been, that it could contrive questions which for us are the height of absurdity Carl Jung, CW 5, Para 21

Nietzsche glimpsed something of the background of this phenomenon when he spoke of the “glorious tension of mind” which the Middle Ages produced Carl Jung, CW 5, Para 21

Scholasticism consisted essentially in a dialectical gymnastics which gave the symbol of speech, the word, an absolute meaning, so that words came in the end to have a substantiality with which the ancients could invest their Logos only by attributing to it a mystical value Carl Jung, CW 5, Para 22

The great achievement of scholasticism was that it laid the foundations of a solidly built intellectual function, the sine qua non of modern science and technology Carl Jung, CW 5, Para 22

All the creative power that modern man pours into science and technics the man of antiquity devoted to his myths. This creative urge explains the bewildering confusion, the kaleidoscopic changes and syncretistic regroupings, the continual rejuvenation, of myths in Greek culture Carl Jung, CW 5, Para 24

We move in a world of fantasies which, untroubled by the outward course of things, well up from an inner source to produce an ever-changing succession of plastic or phantasmal forms Carl Jung, CW 5, Para 24

This activity of the early classical mind was in the highest degree artistic: the goal of its interest does not seem to have been how to understand the real world as objectively and accurately as possible, but how to adapt it aesthetically to subjective fantasies and expectations Carl Jung, CW 5, Para 24

The naïve man of antiquity saw the sun as the great Father of heaven and earth, and the moon as the fruitful Mother. Everything had its demon, was animated like a human being, or like his brothers the animals. Everything was conceived anthropomorphically or theriomorphically, in the likeness of man or beast. Even the sun’s disc was given wings or little feet to illustrate its motion. Carl Jung, CW 5, Para 24

Thus there arose a picture of the universe, which was completely removed from reality, but which corresponded exactly to man’s subjective fantasies. It needs no very elaborate proof to show that children think in much the same way. They too animate their dolls and toys, and with imaginative children it is easy to see that they inhabit a world of marvels Carl Jung, CW 5, Para 24

This idea is not at all strange; we know it quite well from comparative anatomy and from evolution, which show that the structure and function of the human body are the result of a series of embryonic mutations corresponding to similar mutations in our racial history Carl Jung, CW 5, Para 26

The supposition that there may also be in psychology a correspondence between onto-genesis and phylogenesis therefore seems justified. If this is so, it would mean that infantile thinking and dream-thinking are simply a recapitulation of earlier evolutionary stages. Carl Jung, CW 5, Para 26

Faced by the vast uncertainty of the future, the adolescent puts the blame for it on the past, saying to himself: "If only I were not the child of my very ordinary parents, but the child of a rich and elegant count and had merely been brought up by foster-parents, then one day a golden coach would come and the count would take his long-lost child back with him to his wonderful castle," and so on, just as in a Grimms' fairy-story Carl Jung, CW 5, Para 34

There was a time, however, in the ancient world, when the fantasy was a legitimate truth that enjoyed universal recognition. Hence the fantasy of our adolescent is simply a re-echo of an ancient folk-belief which was once very widespread Carl Jung, CW 5, Para 34

The fantasy of ambition therefore chooses, among other things, a classical form which at one time had real validity Carl Jung, CW 5, Para 34

The Judas legend is itself a typical motif, namely that of the mischievous betrayal of the hero. One is reminded of Siegfried and Hagen, Baldur and Loki: Siegfried and Baldur were both murdered by a perfidious traitor from among their closest associates Carl Jung, CW 5, Para 42

This myth is moving and tragic, because the noble hero is not felled in a fair fight but through treachery Carl Jung, CW 5, Para 42

At the same time it is an event that was repeated many times in history, for instance in the case of Caesar and Brutus. Through the myth is extremely old it is still a subject for repetition, as it expresses the simple fact that envy does not let mankind sleep in peace Carl Jung, CW 5, Para 42

This rule can be applied to the mythological tradition in general: it does not perpetuate accounts of ordinary everyday events in the past, but only of those which express the univer-sal and ever-renewed thoughts of mankind Carl Jung, CW 5, Para 42

Thus the lives and deeds of the culture-heroes and founders of religions are the purest condensations of typical mythological motifs, behind which the individual figures entirely disappear Carl Jung, CW 5, Para 42

Why should the pious Abbé Oegger worry about the old Judas legend? We are told that he went out into the world to preach the gospel of God's unending mercy. Not long afterwards he left the Catholic Church and became a Swedenborgian Carl Jung, CW 5, Para 43

Now we understand his fantasy: he was the Judas who betrayed his Lord. Therefore he

had first of all to assure himself of God's mercy in order to play the role of Judas undisturbed Carl Jung, CW 5, Para 43

Oegger's case throws light on the mechanism of fantasies in general. The conscious fantasy may be woven of mythological or any other material; it should not be taken literally, but must be interpreted according to its meaning Carl Jung, CW 5, Para 44

If it is taken too literally it remains unintelligible, and makes one despair of the meaning and purpose of the psychic function Carl Jung, CW 5, Para 44

But the case of the Abbé Oegger shows that his doubts and his hopes are only apparently concerned with the historical person of Judas, but in reality revolve round his own personality, which was seeking a way to freedom through the solution of the Judas problem Carl Jung, CW 5, Para 44

Conscious fantasies therefore illustrate, through the use of mythological material, certain tendencies in the personality which are either not yet recognized or are recognized no longer Carl Jung, CW 5, Para 45

It will be readily understood that a tendency which we fail to recognize and which we treat as non-existent can hardly contain anything that would fit in with our conscious character. Hence it is mostly a question of things which we regard as immoral or impossible, and whose conscious realization meets with the strongest resistances Carl Jung, CW 5, Para 45

What would Oegger have said had one told him in confidence that he was preparing himself for the role of Judas Carl Jung, CW 5, Para 45

Because he found the damnation of Judas incompatible with God's goodness, he proceeded to think about this conflict. That is the conscious causal sequence Carl Jung, CW 5, Para 45

Hand in hand with this goes the unconscious sequence: because he wanted to be Judas, or had to be Judas, he first made sure of God's goodness Carl Jung, CW 5, Para 45

For him Judas was the symbol of his own unconscious tendency, and he made use of this symbol in order to reflect on his own situation its direct realization would have been too painful for him Carl Jung, CW 5, Para 45

There must, then, be typical myths which serve to work out our racial and national complexes. Jacob Burckhardt seems to have glimpsed this truth when he said that every Greek of the classical period carries in himself a little bit of Oedipus, and every German a little bit of Faust. Carl Jung, CW 5, Para 45

One might describe the theater, somewhat unaesthetically, as an institution for working out private complexes in public Carl Jung, CW 5, Para 48

The enjoyment of comedy, or of the blissful dénouement of the plot, is the direct result of identifying one's own complexes with those personified by the actors, while enjoyment of tragedy lies in the thrilling yet satisfying feeling that what is happening to somebody else may very well happen to you Carl Jung, CW 5, Para 48

The fantasies reveal the symbolic transition from sun to man in the third and last of her creations which she calls “Chiwantopel, A hypnagogic drama” Carl Jung, CW 5, Para 251

It is hardly to be supposed that Miss Miller, who evidently had not the faintest clue as to the real meaning of her visions would be able to meet the next phase of the process, namely the assimilation of the hero to her conscious personality, with the right attitude Carl Jung, CW 5, Para 683

Miss Miller’s fantasies show Chiwantopel as the hero, or brother-beloved of the author, Miss Miller, i.e., as her animus. Carl Jung, CW 5, Para 679

In order to do so she would have had to recognize what fate demanded of her, and what was the meaning of the bizarre images that had broken in upon her consciousness Carl Jung, CW 5, Para 683

That there was already some degree of dissociation is obvious, since the unconscious went ahead independently and kept on churning out images which she had not consciously produced herself and which she felt as strange and portentous Carl Jung, CW 5, Para 683

Their melancholy outcome is due largely to the fact that they break off at the critical moment when the threat of invasion by the unconscious is plainly apparent Carl Jung, CW 5, Para 683

To the objective observer it is perfectly clear that the fantasies were products of a psychic energy not under the control of the conscious mind. They were longings, impulses, and symbolic happenings which it was quite unable to cope with either positively or negatively Carl Jung, CW 5, Para 683

The instinctual impulse that was trying to rouse the dreamer from the sleep of childhood was opposed by a personal pride that was distinctly out of place, and also, one must suppose, by a correspondingly narrow moral horizon, so that there was nothing to help her understand the spiritual content of the symbols Carl Jung, CW 5, Para 683

Our civilization has long since forgotten how to think symbolically, and even the theologian has no further use for the hermeneutics of the Church Fathers. The cure of souls in Protestantism is in an even more parlous condition. Whoever would go to the trouble, nowadays, of patching together the basic ideas of Christianity from a “welter of pathological fantasies”? Carl Jung, CW 5, Para 683

For patients in this situation it is a positive life-saver when the doctor takes such products seriously and gives the patient access to the meanings they suggest. In this way he makes it possible for the patient to assimilate at least part of the unconscious and to repair the menacing dissociation by just that amount Carl Jung, CW 5, Para 683

At the same time the assimilation guards against the dangerous isolation which everyone feels when confronted by an incomprehensible and irrational aspect of his personality. Isolation leads to panic, and that is only too often the beginning of a psychosis Carl Jung, CW 5, Para 683

The wider the gap between conscious and unconscious, the nearer creeps the fatal splitting of the personality, which in neurotically disposed individuals leads to neurosis, and, in

those with a psychotic constitution, to schizophrenia and fragmentation of personality Carl Jung, CW 5, Para 683

The aim of psychotherapy is therefore to narrow down and eventually abolish the dissociation by integrating the tendencies of the unconscious into the conscious mind Carl Jung, CW 5, Para 683

We know from analytical experience that the initial dreams of patients at the beginning of an analysis are of especial interest, not least because they often bring out a critical evaluation of the personality of the doctor or psychoanalyst which previously he would have asked for in vain Carl Jung, CW 5, Para 62

They enrich the patient's conscious impression of the doctor, often on very important points, and they frequently contain erotic comments which the unconscious had to make in order to counterbalance the patient's underestimation and uncertain appraisal of the impression Carl Jung, CW 5, Para 62

Expressed in the drastic and hyperbolic manner peculiar to dreams, the impression often appears in almost unintelligible form owing to the incongruity of the symbolism Carl Jung, CW 5, Para 62

A further peculiarity, which seems due to the historical stratification of the unconscious, is that when an impression is denied conscious recognition it reverts to an earlier form of relationship Carl Jung, CW 5, Para 62

That explains why young girls, at the time of their first love, have great difficulty in expressing themselves owing to disturbances brought about by regressive reactivation of the father-imago Carl Jung, CW 5, Para 62

I purposely give preference to the term "imago" rather than to "complex," in order to make clear, by this choice of a technical term, that the psychological factor which I sum up under "imago" has a living independence in the psychic hierarchy, i.e., possesses that autonomy which wide experience has shown to be the essential feature of feeling-toned complexes. This is brought out by the term "imago" Carl Jung, CW 5, Para 62

My critics have seen in this view a return to medieval psychology and have therefore repudiated it. This "return" was made consciously and deliberately on my part, because the psychology of ancient and modern superstition furnishes abundant evidence for my point of view Carl Jung, CW 5, Para 62

Since, psychologically speaking, the God-image is a complex of ideas of an archetypal nature, it must necessarily be regarded as representing a certain sum of energy (libido) which appears in projection Carl Jung, CW 5, Para 89

In most of the existing religions it seems that the formative factor which creates the attributes of divinity is the father-imago, while in older religions it was the mother-imago. These attributes are omnipotence, a sternly persecuting paternalism ruling through fear (Old Testament), and loving paternalism (New Testament) Carl Jung, CW 5, Para 89

I am of the opinion that, in general, psychic energy or libido creates the God-image by

making use of archetypal patterns, and that man in consequence worships the psychic force active within him as something divine (fig. 258.05a) Carl Jung, CW 5, Para 129

We thus arrive at the objectionable conclusion that, from the psychological point of view, the God-image is a real but subjective phenomenon Carl Jung, CW 5, Para 129

As Seneca says: "God is near you, he is with you, he is within you," or, as in the First Epistle of John, "He who does not love does not know God; for God is love," and "If we love one another, God abides in us" Carl Jung, CW 5, Para 129

To anyone who understands libido merely as the psychic energy over which he has conscious control, the religious relationship, as we have defined it, is bound to appear as a ridiculous game of hide-and-seek with oneself. But it is rather a question of the energy which belongs to the archetype, to the unconscious, and which is therefore not his to dispose of Carl Jung, CW 5, Para 130

This idea of becoming a god is age-old. The old belief relegates it to the time after death, but the mystery cults bring it about in this world. Carl Jung, CW 5, Para 133

The naïve intellect cannot help taking its autonomy into account and putting the dialectical relationship to practical use. It does this by calling upon the divine presence in all difficult or dangerous situations, for the purpose of unloading all its unbearable difficulties upon the Almighty and expecting help from that quarter Carl Jung, CW 5, Para 95

In the psychological sense this means that complexes weighing on the soul are consciously transferred to the God-image. This, it should be noted, is the direct opposite of an act of repression, where the complexes are handed over to an unconscious authority, inasmuch as one prefers to forget them Carl Jung, CW 5, Para 95

But in any religious discipline it is of the highest importance that one should remain conscious of one's difficulties in other words, of one's sins. An excellent means to this end is the mutual confession of sin (James 5: 16), which effectively prevents one from becoming unconscious Carl Jung, CW 5, Para 95

These measures aim at keeping the conflicts conscious, and that is also a sine qua non of the psychotherapeutic procedure. Just as medical treatment appoints the person of the doctor to take over the conflicts of his patients, so Christian practice appoints the Saviour, "in whom we have redemption through his blood, the forgiveness of sins" (Ephesians I:7 and Colossians I:14) Carl Jung, CW 5, Para 95

He is the deliverer and redeemer of our guilt, a God who stands above sin, who "committed no sin, no guile was found on his lips" (I Peter 2:22), who "himself bore our sins in his body on the tree" (I Peter 2: 24) Carl Jung, CW 5, Para 95

The conscious projection at which Christian education aims therefore brings a double psychic benefit: firstly, one keeps oneself conscious of the conflict ("sin") of two mutually opposing tendencies, thus preventing a known suffering from turning into an unknown one, which is far more tormenting, by being repressed and forgotten; and secondly, one lightens one's burden by surrendering it to God, to whom all solutions are known Carl Jung, CW 5, Para 95

Religious experience in antiquity was frequently conceived as bodily union with the deity, and certain cults were saturated with sexuality of every kind. Sexuality was all too close to the relations of people with one another Carl Jung, CW 5, Para 102

The Stoics called this condition Heimarmene, compulsion by the stars, to which every "unredeemed" soul is subject Carl Jung, CW 5, Para 644

The moral degeneracy of the first centuries of the Christian era produced a moral reaction which then, in the second and third centuries, after germinating in the darkness of the lowest strata of society, expressed itself at its purest in the two mutually antagonistic religions, Christianity and Mithraism Carl Jung, CW 5, Para 102

These religions strove after precisely that higher form of social intercourse symbolized by a projected ("incarnate") idea (the Logos), whereby all the strongest impulses of man which formerly had flung him from one passion to another and seemed to the ancients like the compulsion of evil stars, Heimarmene, or like what we psychologists would call the compulsion of libido could be made available for the maintenance of society Carl Jung, CW 5, Para 102

There is no doubt this is one of the main causes of the singular melancholy that reigned all through the time of the Caesars Carl Jung, CW 5, Para 104

It was not in the long run possible for those who wallowed in pleasure not to be infected, through the mysterious working of the unconscious, by the deep sadness and still deeper wretchedness of their brothers Carl Jung, CW 5, Para 104

The old idea of a mediator in whose name new ways of love would be opened, became a fact, and with that human society took an immense stride forward. This was not the result of any speculative, sophisticated philosophy, but of an elementary need in the great masses of humanity vegetating in spiritual darkness Carl Jung, CW 5, Para 104

They were evidently driven to it by the profoundest inner necessities, for humanity does not thrive in a state of licentiousness. The meaning of these cults Christianity and Mithraism is clear: moral subjugation of the animal instincts Carl Jung, CW 5, Para 104

The spread of both these religions betrays something of that feeling of redemption which animated their first adherents, and which we can scarcely appreciate today. We can hardly realize the whirlwinds of brutality and unchained libido that roared through the streets of Imperial Rome Carl Jung, CW 5, Para 104

The world and its beauty had to be shunned, not only because of their vanity and transitoriness, but because love of created nature soon makes man its slave. As St. Augustine says (X, 6): "they love these things too much and become subject to them, and subjects cannot judge" Carl Jung, CW 5, Para 112

One would certainly think it possible to love something, to have a positive attitude towards it, without supinely succumbing to it and losing one's power of rational judgment Carl Jung, CW 5, Para 112

But St. Augustine knew his contemporaries, and knew furthermore how much godliness

and godlike power dwelt in the beauty of the world Carl Jung, CW 5, Para 112

Thus Lucretius extols “alma Venus” as the ruling principle of nature. To such a daimonion man falls an abject victim unless he can categorically reject its seductive influence at the outset. It is not merely a question of sensuality and of aesthetic corruption, butane this is the point of paganism and nature worship (fig. 001) Carl Jung, CW 5, Para 113

Because gods dwell in created things, man falls to worshipping them, and for that reason he must turn away from them utterly lest he be overwhelmed. In this respect the fate of Alypius is extremely instructive Carl Jung, CW 5, Para 113

If the flight from the world is successful, man can then build up an inner, spiritual world which stands firm against the onslaught of sense-impressions Carl Jung, CW 5, Para 113

The struggle with the world of the senses brought to birth a type of thinking independent of external factors. Man won for himself that sovereignty of the idea, which was able to withstand the aesthetic impact, so that thought was no longer fettered by the emotional effect of sense-impressions, but could assert itself and even rise, later, to reflection and observation Carl Jung, CW 5, Para 113

In the flight from the world during the first few centuries after Christ (cities of the anchorites in the desert), the Desert Fathers mortified themselves through spirituality in order to escape the extreme brutality of the decadent Roman civilization Carl Jung, CW 5, Para 119

Asceticism occurs whenever the animal instincts are so strong that they need to be violently exterminated. Carl Jung, CW 5, Para 119

I believe that miscegenation makes rather for a coarsened joie de vivre. To all appearances the ascetics were ethical people who, disgusted with the melancholy of the age which was merely an expression of the disruption of the individual, put an end to their lives in order to mortify an attitude that was itself obsolete Carl Jung, CW 5, Para 119

His [Faust] equally importunate longing for the beauties of this world plunged him into renewed ruin, doubt and wretchedness, which culminated in the tragedy of Gretchen’s death Carl Jung, CW 5, Para 119

Faust’s mistake was that he made the worst of both worlds by blindly following the urge of his libido, like a man overcome by strong and violent passions. Faust’s conflict is a reflection of the collective conflict at the beginning of the Christian era, but in him, curiously enough, it takes the opposite course Carl Jung, CW 5, Para 119

Faust takes the opposite road; for him the ascetic ideal is sheer death. He struggles for liberation and wins life by binding himself over to evil, thereby bringing about the death of what he loves most: Gretchen Carl Jung, CW 5, Para 120

He tears himself away from his grief, and sacrifices his life in unceasing work, thus saving many lives. His double mission as saviour and destroyer had been hinted at from the beginning Carl Jung, CW 5, Para 120

Faust’s desire, like that of every hero, is a yearning for the mystery of rebirth, for immortality;

therefore his way leads out to sea and down into the maw of death, that frighteningly narrow "passage" which signals the new day Carl Jung, CW 5, Para 417

Nature is beautiful because I love it, and good is everything that my feeling regards as good. Values are chiefly created by the quality of one's subjective reactions Carl Jung, CW 5, Para 126

In the erotic sphere, it is abundantly evident how little the object counts, and how much the subjective reaction counts Carl Jung, CW 5, Para 126

The well-known fact that in worshipping the sun's strength we pay homage to the great generative force of Nature is the plainest possible evidence if evidence were still needed that in God we honour the energy of the archetype Carl Jung, CW 5, Para 135

Religious regression makes use of the parental imago, but only as a symbol that is to say, it clothes the archetype in the image of the parents, just as it bodies forth the archetype's energy by making use of sensuous ideas like fire, light, heat, fecundity, generative power, and so on Carl Jung, CW 5, Para 138

The phallus is the source of life and libido the creator and worker of miracles, and as such it was worshipped everywhere Carl Jung, CW 5, Para 146

Ikhnaton (Amenophis IV) achieved, by his reforms, a psychologically valuable work of interpretation. He united all the bull, ram, crocodile, and pile-dwelling gods into the sun-disc, and made it clear that their various attributes were compatible with those of the sun Carl Jung, CW 5, Para 148

But the striving for unity is opposed by a possibly even stronger tendency to create multiplicity, so that even in strictly monotheistic religions like Christianity the polytheistic tendency cannot be suppressed Carl Jung, CW 5, Para 149

The deity is divided into three parts, and on top of that come all the heavenly hierarchies. These two tendencies are in constant warfare: sometimes there is only one God with countless attributes, sometimes there are many gods, who are simply called by different names in different places, and who personify one or the other attribute of their respective archetype, as we have seen in the case of the Egyptian gods Carl Jung, CW 5, Para 149

We saw, however, that the snake is to be taken not only in the phallic sense, but as an attribute of the sun's image (the Egyptian uraeus) and as a libido-symbol. It is therefore possible for the sun-disc to be equipped not only with hands and feet (cf.fig. 007) and (fig. 258.01), but also with a phallus. We find proof of this in a strange vision in the Mithraic liturgy: "And likewise the so-called tube, the origin of the ministering wind. For you will see hanging down from the disc of the sun something that looks like a tube" (Dieterich, Mithras liturgie, pp. 6-7) Carl Jung, CW 5, Para 149

The Holy Ghost of the New Testament appeared to the apostles in the form of flames, because the pneuma was believed to be fiery Carl Jung, CW 5, Para 149

The Iranian conception of Hvareno was similar: it signified the "Grace of Heaven" through which the monarch ruled Carl Jung, CW 5, Para 149

This “Grace” was understood as a sort of fire or shining glory, something very substantial. We come across ideas of the same type in Kerner’s Seeress of Prevorst Carl Jung, CW 5, Para 149

The various attributes of the sun appear one after another in the Mithraic liturgy. After the vision of Helios, seven maidens appear with faces like snakes, and seven gods with the faces of black bulls. The maiden can easily be understood as a causative libido analogy Carl Jung, CW 5, Para 155

The bull is a notorious fertility-symbol. In the Mithraic liturgy, the bull-gods are called

guardians of the world's axis,' who turn the

axle of the wheel of heaven’ Carl Jung, CW 5, Para 155

The serpent in Paradise is usually thought of as feminine, as the seductive principle in woman, and is represented as feminine by the old painters. Through a similar change of meaning the snake in antiquity became a symbol of the earth, which has always been considered feminine Carl Jung, CW 5, Para 155

The same attribute falls also to Mithras: sometimes he is the Sol invictus itself, sometimes the companion and ruler Helios; in his right hand he holds “the constellation of the Bear, which moves and turns the heavens round” Carl Jung, CW 5, Para 155

The bull-head deities,

sacred and valorous youths' like Mithras himself, who is also given the attribute,

the younger one,’ are merely aspects of the same divinity Carl Jung, CW 5, Para 155

The chief god of the Mithraic liturgy is himself divided into Mithras and Helios both of whom have closely related attributes Carl Jung, CW 5, Para 155

Numerous fire- and light-symbols are attributed to the saints in Christian legend. The twelve apostles, for example, were likened to the twelve signs of the zodiac and were therefore represented each with a star over his head Carl Jung, CW 5, Para 163

The pictures in the catacombs likewise contain a good deal of sun symbolism. For instance there is a swastika (sun-wheel) on the robe of Fossor Diogenes in the cemetery of Peter and Marcellinus Carl Jung, CW 5, Para 163

The symbols of the rising sun bull and ramare found in the Orpheus frescoes in the cemetery of Domitilla; also the ram and peacock (a sun-symbol like the phoenix) on an epitaph in the Callistus catacomb Carl Jung, CW 5, Para 163

The power of God is menaced by the seductions of passion; heaven is threatened with a second fall of angels Carl Jung, CW 5, Para 170

If we translate this projection back into the psychological sphere whence it came, it would mean that the good and rational Power which rules the world with wise laws is threatened by

the chaotic, primitive force of passion Carl Jung, CW 5, Para 170

Therefore passion must be exterminated, which means, in mythological projection, that the race of Cain and the whole sinful world must be wiped out, root and branch, by the Flood Carl Jung, CW 5, Para 170

That is the inevitable result of a passion that sweeps away all barriers. It is like the sea breaking through its dikes, like the waters of the deep and the torrential rains, the creative, fructifying, “motherly” waters, as Indian mythology calls them Carl Jung, CW 5, Para 170

Now [the waters] depart from their natural courses and surge over the mountain-tops and engulf all living things Carl Jung, CW 5, Para 170

If evil were to be utterly destroyed, everything daemonic, including God himself, would suffer a grievous loss; it would be like performing an amputation on the body of the Deity Carl Jung, CW 5, Para 170

Passion raises a man not only above himself, but also above the bounds of his mortality and earthliness, and by the very act of raising him, it destroys him Carl Jung, CW 5, Para 171

This “rising above himself” is expressed mythologically in the building of the heaven-high tower of Babel that brought confusion to mankind, and in the revolt of Lucifer Carl Jung, CW 5, Para 171

(In Byron’s poem [“Heaven and Earth,” CW 5: par. 169], it is the overweening ambition of the race of Cain, whose strivings make the stars subservient and corrupt the sons of God themselves. Even if a longing for the highest is legitimate in itself, the sinful presumption and inevitable corruption lie in the very fact that it goes beyond the fixed human boundaries Carl Jung, CW 5, Para 171

Through excess of longing man can draw the gods down into the murk of his passions. He seems to be raising himself up to the Divine, but in so doing he abandons his humanity Carl Jung, CW 5, Para 171

There, where the deep fountains of the ocean are, dwells Leviathan; from there the all-destroying flood ascends, the tidal wave of animal passion Carl Jung, CW 5, Para 174

The choking, heart-constricting surge of instinct is projected outwards as a mounting flood to destroy everything that exists, so that a new and better world may arise from the ruins of the old Carl Jung, CW 5, Para 174

The sun’s the only truly “rational” image of God, whether we adopt the standpoint of the primitive savage or of modern science. (In either case the sun is the father-god from whom all living things draw life; he is the fructifier and creator, the source of energy for our world Carl Jung, CW 5, Para 176

Samson as a sun-god. The killing of the lion, like the Mithraic bull-sacrifice, is an anticipation of the god’s self-sacrifice Carl Jung, CW 5, Para 176

The same is true of many other sexual images which are found not only in dreams and

fantasies but in everyday speech. In neither case should they be taken literally, for they are not to be understood semiotically, as signs for definite things, but as symbols Carl Jung, CW 5, Para 180

A symbol is an indefinite expression with many meanings, pointing to something not easily defined and therefore not fully known. But the sign always has a fixed meaning, because it is a conventional abbreviation for, or a commonly accepted indication of, something known Carl Jung, CW 5, Para 180

The symbol therefore has a large number of analogous variants, and the more of these variants it has at its disposal, the more complete and clear-cut will be the image it projects of its object Carl Jung, CW 5, Para 180

The same creative force, which is symbolized by Tom Thumb, etc., can also be represented by the phallus or by numerous other symbols which delineate further aspects of the process underlying them all. Thus the creative dwarfs toil away in secret; the phallus, also working in darkness, begets a living being and the key unlocks the mysterious forbidden door behind which some wonderful thing awaits discovery. One thinks, in this connection, of "The Mothers" in Faust: Carl Jung, CW 5, Para 180

Here the devil again puts into Faust's hand the marvelous tool [the key], as once before when, in the form of the black dog, he introduced himself to Faust as part of that power which would ever work evil but engenders good. Carl Jung, CW 5, Para 181

What he is describing here is the libido, which is not only creative and procreative, but possesses an intuitive faculty, a strange power to "smell the right place," almost as if it were a live creature with an independent life of its own (which is why it is so easily personified). It is purposive, like sexuality itself, a favorite object of comparison Carl Jung, CW 5, Para 182

The "realm of the Mothers" has not a few connections with the womb with the matrix, which frequently symbolizes the creative aspect of the unconscious Carl Jung, CW 5, Para 182

This libido is a force of nature, good and bad at once, or morally neutral. Uniting himself with it, Faust succeeds in accomplishing his real life's work, at first with evil results and then for the benefit of mankind Carl Jung, CW 5, Para 182

In the realm of the Mothers he finds the tripod, the Hermetic vessel in which the "royal marriage" is consummated. But he needs the phallic wand in order to bring off the greatest wonder of all the creation of Paris and Helen. Carl Jung, CW 5, Para 182

The insignificant-looking tool in Faust's hand is the dark creative power of the unconscious, which reveals itself to those who follow its dictates and is indeed capable of working miracles Carl Jung, CW 5, Para 182

This paradox appears to be very ancient, for the Shvetashvatara Upanishad (9, 20) goes on to say of the dwarf-god, the cosmic purusha: Carl Jung, CW 5, Para 182

The phallus often stands for the creative divinity, Hermes being an excellent example. It is sometimes thought of as an independent being, an idea that is found not only in antiquity

but in the drawings of children and artists of our own day Carl Jung, CW 5, Para 183

So we ought not to be surprised if certain phallic characteristics are also found in the seers, artists, and wonder-workers of mythology. Hephaestus, Wieland the Smith, and Mani (the founder of Manichaeism, famous also for his artistic gifts), had crippled feet Carl Jung, CW 5, Para 183

The foot, as I shall explain in due course, is supposed to possess a magical generative power. The ancient seer Melampus, who is said to have introduced the cult of the phallus, had a very peculiar name Blackfoot, and it also seems characteristic of seers to be blind Carl Jung, CW 5, Para 183

Ugliness and deformity are especially characteristic of those mysterious chthonic gods, the sons of Hephaestus, the Cabiri, to whom mighty wonder-working powers were ascribed Carl Jung, CW 5, Para 183

Their cult was closely bound up with that of the ithyphallic Hermes, who according to Herodotus was brought to Attica by the Pelasgians. They were called, ‘great gods’ Carl Jung, CW 5, Para 183

Their near relatives were the Idaean dactyls (fingers or else Tom Thumbs), to whom the mother of the gods had taught the blacksmith’s art (“Follow it down, it leads you to the Mothers!”) Carl Jung, CW 5, Para 183

They [Idaean dactyls] were the first Wise Men, the teachers of Orpheus, and it was they who invented the Ephesian magic formulae and the musical rhythms Carl Jung, CW 5, Para 183

The characteristic disparity which we noted in the Upanishads and Faust crops up again here, since the giant Hercules was said to be an Idaean dactyl. Also the colossal Phrygians, Rhea’s technicians, were dactyls Carl Jung, CW 5, Para 183

The two Dioscuri are related to the Cabiri; they too wear the queer little pointed hat, the pileus, which is peculiar to these mysterious gods and was thenceforward perpetuated as a secret mark of identification. Attis and Mithras both wore the pileus (fig. 020). It had become the traditional headgear of our infantile chthonic gods today, the pixies and goblins Carl Jung, CW 5, Para 183

Cicero gives it a very wide meaning: will is a rational desire, but when it is divorced from reason and is too violently aroused, that is “libido,” or unbridled desire, which is found in all fools (Cicero, Tusculan Disputations, Gook IV, vi, 12) Carl Jung, CW 5, Para 185

Here libido means a

want' or a

wish,’ and also, in contradiction to the

will' of the Stoics,

unbridled desire.’ Cicero uses it in this sense when he says: (“to do something from willful desire and not from reason”) Carl Jung, CW 5, Para 186

The use of libido is so general that the phrase “libido est scire” merely means:

```
I like,'
```

it pleases me.’ In the phrase libido has the meaning of ‘urge’ Carl Jung, CW 5, Para 186

It can also have the nuance of ‘lasciviousness.’ St. Augustine aptly defines libido as a “general term for all desire” and says: There is a lust for revenge, which is called rage; a lust for having money, which is called avarice; a lust for victory at all costs, which is called stubbornness; a lust for self-glorification, which is called boastfulness. There are many and varied kinds of lust (De Civitate Dei, XIV, xv.) Carl Jung, CW 5, Para 186

For St. Augustine libido denotes an appetite like hunger and thirst, and so far as sexuality is concerned he says: Pleasure is preceded by an appetite that is felt in the flesh, a kind of desire like hunger and thirst (De Civitate Dei, XIV, xv.) Carl Jung, CW 5, Para 187

Libido is connected etymologically with: it pleases, gladly, willingly, to experience violent longing, excites longing, eager, love, hope, praise, and glory Carl Jung, CW 5, Para 188

We can say, then, that the concept of libido in psychology has functionally the same significance as the concept of energy in physics since the time of Robert Mayer Carl Jung, CW 5, Para 189

The term describes the Indian concept of tejas which denotes a subjective intensity, i.e., anything potent and highly charged with energy Carl Jung, CW 5, Para 238

Libido is symbolized by the human figure as demon or hero one that passes from joy to sorrow, from sorrow to joy, and like the sun, now stands high at the zenith and now plunged into darkest night, only to rise again in new splendor Carl Jung, CW 5, Para 251

Libido denotes a desire or impulse which is unchecked by any kind of authority, moral or otherwise. It appetite in its natural state Carl Jung, CW 5, Para 194

From the genetic point of view it is bodily needs like hunger, thirst, sleep, sex, and emotional states or affects which constitute the essence of libido Carl Jung, CW 5, Para 194

Like energy, the libido never manifests itself as such, but only in the form of a “force,” that is to say, in the form of something in a definite energic state, be it moving bodies, chemical or electrical tension, etc. Carl Jung, CW 5, Para 505

The libido expresses itself in images of sun, light, fire, sex, fertility, and growth Carl Jung, CW 5, Para 324

This leads to a conception of libido which expands into a conception of intentionality in general. We would be better advised, therefore, when speaking of libido, to understand it as an energy-value which is able to communicate itself to any field of activity whatsoever, be it power, hunger, hatred, sexuality, or religion, without ever being itself a specific instinct Carl Jung, CW 5, Para 197

Intricate overlapping’s of meaning can only be disentangled if we reduce them to a common

denominator. This denominator is the libido Carl Jung, CW 5, Para 659

As a power which transcends consciousness the libido is by nature daemonic: it is both God and devil Carl Jung, CW 5, Para 170

As we know, an important change occurred in the principles of propagation during the ascent through the animal kingdom: the vast numbers of gametes which chance fertilization made necessary were progressively reduced in favor of assured fertilization and effective protection of the young Carl Jung, CW 5, Para 194

The decreased production of ova and spermatozoa set free considerable quantities of energy which soon sought and found new outlets Carl Jung, CW 5, Para 194

Thus we find the first stirrings of the artistic impulse in animals, but subservient to the reproductive instinct and limited to the breeding season Carl Jung, CW 5, Para 194

The original sexual character of these biological phenomena gradually disappears as they become organically fixed and achieve functional independence Carl Jung, CW 5, Para 194

Although there can be no doubt that music originally belonged to the reproductive sphere, it would be an unjustified and fantastic generalization to put music in the same category as sex Carl Jung, CW 5, Para 194

Such a view would be tantamount to treating of Cologne Cathedral in a text-book of mineralogy, on the ground that it consisted very largely of stones Carl Jung, CW 5, Para 194

According to Plotinus, the world-soul has a tendency towards separation and divisibility, the sine qua non of all change, creation, and reproduction. It is an “unending All of life” and wholly energy; a living organism of ideas which only become effective and real in it Carl Jung, CW 5, Para 198

It seems as if the process of analogy-making has gradually altered and added to the common stock of ideas and names, with the result that man’s picture of the world was considerably broadened Carl Jung, CW 5, Para 203

Specially colourful or intense contents (the “feeling-toned” complexes) were reflected in countless analogies, and gave rise to synonyms whose objects were thus drawn into the magic circle of the psyche Carl Jung, CW 5, Para 203

In this way there came into being those intimate relationships by analogy which Lévy-Bruhl fittingly describes as participation mystique Carl Jung, CW 5, Para 203

It is evident that this tendency to invent analogies deriving from feeling-toned contents has been of enormous significance for the development of the human mind Carl Jung, CW 5, Para 203

We are in thorough agreement with Steinthal when he says that a positive overwhelming importance attaches to the little word “like” in the history of human thought Carl Jung, CW 5, Para 203

One can easily imagine that the canalization of libido into analogy-making was responsible for some of the most important discoveries ever made by primitive man Carl Jung, CW 5, Para 203

At the same time there develops in the motor sphere in general a pleasurable rhythmic movement of the arms and legs (kicking, etc.) Carl Jung, CW 5, Para 206

With the growth of the individual and development of his organs the libido creates for itself new avenues of activity. The primary model of rhythmic movement, producing pleasure and satisfaction, is transferred to the zone of other functions, with sexuality as its ultimate goal Carl Jung, CW 5, Para 206

This is not to say that the rhythmic activity derives from the act of nutrition. A considerable part of the energy supplied by nutrition for growth has to convert itself into sexual libido and other forms of activity Carl Jung, CW 5, Para 206

The transition of libido does not take place suddenly at the time of puberty, as is commonly supposed, but only very gradually during the course of childhood Carl Jung, CW 5, Para 206

Sucking still belongs to the sphere of the nutritive function, but outgrows it by ceasing to be a function of nutrition and becoming an analogous rhythmic activity without intake of nourishment Carl Jung, CW 5, Para 206

At this point the hand comes in as an auxiliary organ. It appears even more clearly as an auxiliary organ in the phase of rhythmic activity, which then leaves the oral zone and turns to other regions. Numerous possibilities now present themselves Carl Jung, CW 5, Para 206

As a rule, it is the other body openings that become the main object of interest; then the skin, or special parts of it; and finally rhythmic movements of all kinds Carl Jung, CW 5, Para 206

In the course of its migrations the libido carries traces of the nutritional phase into its new field of operations, which accounts for the many intimate connections between the nutritive and the sexual function. Should this more developed activity meet with an obstacle that forces it to regress, the regression will be to an earlier stage of development Carl Jung, CW 5, Para 206

The phase of rhythmic activity generally coincides with the development of mind and speech. I therefore propose to call the period from birth up to the time of the first clear manifestations of sexuality the “presexual stage.” As a rule it falls between the first and the fourth year and is comparable to the chrysalis stage in butterflies. It is characterized by a varying mixture of elements from the nutritional and sexual phases Carl Jung, CW 5, Para 206

They dig a hole in the ground, so shaping it and setting it about with bushes that it looks like a woman’s genitals Carl Jung, CW 5, Para 213

Then they dance round this hole all night, holding their spears in front of them in imitation of an erect penis. As they dance round, they thrust their spears into the hole, shouting:. Obscene dances of this kind are found among other tribes as well Carl Jung, CW 5, Para 213

In this rite of spring there is enacted a sacramental mating, with the hole in the earth representing the woman, and the spear the man. The hierosgamos was an essential component of many cults and played an important part in various sects Carl Jung, CW 5, Para 213

The tensions inside a primitive group are never greater than those involved in the struggle for existence of the group as a whole. Were it otherwise, the group would speedily perish Carl Jung, CW 5, Para 213

What does constitute a serious threat to the primitive group is the endogamous tendency, which has to be checked in order to exorcize the danger Carl Jung, CW 5, Para 217

The best means to this end seems to be the widespread custom of cross-cousin marriage because it keeps the endogamous (incestuous) and exogamous tendencies balanced Carl Jung, CW 5, Para 217

The danger that then threatens the group comes from the very advantages it has gained through checking the endogamous tendency [incest] to which the incest-taboo applies Carl Jung, CW 5, Para 217

The group acquires an inner stability, opportunities for expansion, and hence greater security. That is to say, the source of fear does not lie inside the group, but in the very real risks which the struggle for existence entails Carl Jung, CW 5, Para 217

Fear of enemies and of hunger predominates even over sexuality, which is, as we know, no problem at all for the primitive, as it is far simpler to get a woman than it is to get food Carl Jung, CW 5, Para 217

Fear of the consequences of being unadapted is a compelling reason for checking the instincts Carl Jung, CW 5, Para 217

Confronted with disaster, one is obliged to ask oneself how it is to be remedied. The libido that is forced into regression by the obstacle always reverts to the possibilities lying dormant in the individual. A dog, finding the door shut, scratches at it until it is opened, and a man unable to find the answer to a problem rubs his nose, pulls his lower lip, scratches his ear, and so on Carl Jung, CW 5, Para 217

If he gets impatient, all sorts of other rhythms appear; he starts drumming with his fingers, shuffles his feet about, and it will not be long before certain distinctly sexual analogies manifest themselves, such as masturbation gestures Carl Jung, CW 5, Para 217

Koch-Grünberg, writing on South American rock-paintings, tells us how the Indians sit on the rocks and scratch lines on them with sharp stones while waiting for their canoes to be transported round the rapids Carl Jung, CW 5, Para 217

Now when the libido is forced back by an obstacle, it does not necessarily regress to earlier sexual modes of application, but rather to the rhythmic activities of infancy which serve as a model both for the act of nutrition and for the sexual act itself. The material before us does not seem to preclude the possibility that the invention of fire-making came about in the manner suggested, that is, through the regressive reawakening of rhythm Carl Jung, CW 5, Para 218

If certain tribes can dance all night long to a monotonous tune of three notes, then, to our way of thinking, the play-element is entirely lacking: it is more like an exercise with a set purpose Carl Jung, CW 5, Para 219

This is in the fact the case, for rhythm is a classic device for impressing certain ideas or activities on the mind, and what has to be impressed and firmly organized is the canalization of libido into a new form of activity Carl Jung, CW 5, Para 219

Since the rhythmic activity can no longer find an outlet in the act of feeding after the nutritional phase of development is over, it transfers itself not only to the sphere of sexuality in the strict sense, but also to the “decoy mechanisms,” such as music and dancing, and finally to the sphere of work Carl Jung, CW 5, Para 219

The close connection which work always has with music, singing, dancing, drumming, and all manner of rhythms in primitive societies, indeed its absolute dependence on these things, is very striking Carl Jung, CW 5, Para 219

This [Music] connection forms the bridge to sexuality, thus giving the primitive an opportunity to sidetrack and evade the task in hand Carl Jung, CW 5, Para 219

Because diversions of this kind are a frequent occurrence and are to be found in all spheres of culture, people have been led to believe that there is no differentiated achievement that is not a substitute for some form of sexuality. I regard this as an error, albeit a very understandable one considering the enormous psychological importance of the sexual instinct Carl Jung, CW 5, Para 219

The rhythmic tendency does not come from the nutritional phase at all, as if it had migrated from there to the sexual, but that it is a peculiarity of emotional processes in general Carl Jung, CW 5, Para 219

Any kind of excitement, no matter in what phase of life, displays a tendency to rhythmic expression, perseveration, and repetition, as can easily be seen from the repetition, assonance, and alliteration of complex-toned reaction words in the association experiment Carl Jung, CW 5, Para 219

Rhythmic patterns therefore offer no ground for assuming that the function they affect originated in sexuality Carl Jung, CW 5, Para 219

The psychological importance of sexuality and the existence of plausible sexual analogies make a deviation into sex extremely easy in cases of regression, so that it naturally seems as if all one’s troubles were due to a sexual wish that is unjustly denied fulfilment. This reasoning is typical of the neurotic Carl Jung, CW 5, Para 220

Primitives seem to know instinctively the dangers of this deviation: when celebrating the heiros gamos, the Wachandi, of Australia, may not look at a woman during the entire ceremony. Among a certain tribe of American Indians, it was the custom for the warriors, before setting out on the warpath, to move in a circle round a beautiful young girl standing naked in the center. Whoever got an erection was disqualified as unfit for military operation Carl Jung, CW 5, Para 220

The deviation into sex is used not always, but very frequently as a means of escaping the real problem Carl Jung, CW 5, Para 220

One makes oneself and others believe that the problem is purely sexual, that the trouble started long ago and that its causes lie in the remote past Carl Jung, CW 5, Para 220

This provides a heaven-sent way out of the problem of the present by shifting the whole question on to another and less dangerous plane. But the illicit gain is purchased at the expense of adaptation, and one gets a neurosis into the bargain Carl Jung, CW 5, Para 220

The checking of the instincts can be traced back to fear of the very real dangers of existence in this world Carl Jung, CW 5, Para 221

But external reality is not the only source of this instinct-inhibiting fear, for primitive man is often very much more afraid of "inner" reality the world of dreams, ancestral spirits, demons, gods, magicians, and witches Carl Jung, CW 5, Para 221

Although we, with our rationalism, think we can block this source of fear by pointing to its unreality, it nevertheless remains one of those psychic realities whose irrational nature cannot be exorcized by rational argument Carl Jung, CW 5, Para 221

There is a psychic reality which is just as pitiless and just as inexorable as the outer world, and just as useful and helpful, provided one knows how to circumvent its dangers and discover its hidden treasures Carl Jung, CW 5, Para 221

"Magic is the science of the jungle," a famous explorer once said. Civilized man contemptuously looks down on primitive superstitions, which is about as sensible as turning up one's nose at the pikes and halberds, the fortresses and tall-spired cathedrals of the Middle Ages Carl Jung, CW 5, Para 221

Primitive methods are just as effective under primitive conditions as machine-guns or the radio are under modern conditions Carl Jung, CW 5, Para 221

If there is an inhibition of sexuality, a regression will eventually occur in which the sexual energy flowing back from this sphere activates a function in some other sphere. In this way the energy changes its form Carl Jung, CW 5, Para 226

Let us take as an example the Wachandi ceremony: in all probability the hole in the earth is an analogy of the mother's genitals, for when a man is forbidden to look at a woman, his Eros reverts to the mother. But as incest has to be avoided at all costs, the hole in the earth acts as a kind of mother-substitute Carl Jung, CW 5, Para 226

Thus, by means of ceremonial exercise, the incestuous energy-component becomes, as it were, desexualized, is led back to an infantile level where, if the operation is successful, it attains another form, which is equivalent to another function Carl Jung, CW 5, Para 226

It is to be assumed, however, that the operation is accomplished only with difficulty, for the primary instinct is composed of an endogamous ("incestuous") tendency and an exogamous one and must therefore be split into two. This splitting is connected with consciousness

and the process of becoming conscious Carl Jung, CW 5, Para 226

The regression is always attended by certain difficulties because the energy clings with specific force to its object, and on being changed from one form carries something of its pervious character into the next form. So although the resultant phenomena have the character of a sexual act, it is not a sexual act any longer Carl Jung, CW 5, Para 226

In the same way, fire-boring is only an analogy of the sexual act, just as the latter often has to serve as a linguistic analogy for all sorts of other activities. The presexual, early infantile state to which the libido reverts is characterized by numerous possibilities of application, because, once the libido has arrived there, it is restored to its original undifferentiated polyvalency Carl Jung, CW 5, Para 226

It is therefore understandable that the libido which regressively “invests” this stage sees itself confronted with a variety of possible applications Carl Jung, CW 5, Para 226

Since, in the Wachandi ceremony, the libido is bound to its object sexuality it will carry at least part of this function into the new form as an essential characteristic Carl Jung, CW 5, Para 226

But the aim of the action is to bring forth the fruits of the field, and it is magical rather than sexual. Here the regression leads to a reactivation of the mother as the goal of desire, this time as a symbol not of sex but of the giver of nourishment Carl Jung, CW 5, Para 226

The libido, forced into regression by the checking of instinct, reactivates the infantile boring and provides it with objective material to work unfittingly called “material” because the object at this stage is the mother (mater) Carl Jung, CW 5, Para 227

As I have pointed out above, the act of boring requires only the strength and perseverance of an adult man and suitable “material” in order to generate fire Carl Jung, CW 5, Para 227

Consequently, the production of fire may have originally occurred as the objective expression of a quasi-masturbatory activity analogous to the aforementioned case of masturbatory boring. Though we can never hope to advance any real proof of our contention, it is at least thinkable that some traces of these first exercises in fire-making may have been preserved. I have succeeded in finding a passage in a monument of Indian literature [the Brihadaranyaka Upanishad] which describes this conversion of libido into fire-making Carl Jung, CW 5, Para 227

The pleasure and satisfaction the baby finds in feeding is localized in the mouth, but to interpret this pleasure as sexual is quite unjustified. Feeding is a genuine activity, satisfying in itself, and because it is a vital necessity nature has here put a premium on pleasure Carl Jung, CW 5, Para 229

The mouth soon begins to develop another significance as the organ of speech. The extreme importance of speech doubles the significance of the mouth in small children Carl Jung, CW 5, Para 229

The rhythmic activities it carries out express a concentration of emotional forces, i.e., of libido, at this point. Thus the mouth (and to a lesser degree the anus) becomes the prime

place of origin Carl Jung, CW 5, Para 229

According to the Brihadaranyaka Upanishad, the most important discovery ever made by primitive man, the discovery of fire, came out of the mouth. As we might expect, there are texts which draw a parallel between fire and speech. The Aitareya Upanishad says: From the mouth came speech, and from speech fire Carl Jung, CW 5, Para 229

Tejas, therefore, describes the psychological situation covered by the word “libido.” It really denotes subjective intensity. Anything potent, any content highly charged with energy, therefore has a wide range of symbolic meanings Carl Jung, CW 5, Para 238

Agni is the sacrificial flame, the sacrificer and the sacrificed Carl Jung, CW 5, Para 246

The wise Diotima in Plato’s Symposium has a conception of the divine messenger and mediator. She teaches Socrates that Eros is “the intermediary between mortals and immortals a mighty daemon, dear Socrates; for everything daemonic is the intermediary between God and man” Carl Jung, CW 5, Para 242

His function is to “interpret and convey messages to the gods from men and to men from the gods, prayers and sacrifices from the one, and commands and rewards from the other, thus bridging the gap between them, so that by his mediation the universe is at one with itself” Carl Jung, CW 5, Para 242

He is neither mortal nor immortal; but on one and the same day he will live and flourish (when things go well with him), and also meet his death; and then come to life again through the force of his father’s nature Carl Jung, CW 5, Para 242

We read in the third chapter of the book of the prophet Daniel that Nabuchodonosor, the King of Babylon, caused three men to be placed in a glowing furnace, and that the king came to the furnace and looked in, and saw with the three a fourth, who was like the Son of God. The three signify for us the Holy Trinity of the person, and the fourth the unity of being. Thus Christ in his transfiguration signified the Trinity of the person and the unity of being Carl Jung, CW 5, Para 244

The fiery furnace, like the fiery tripod in Faust, is a mother symbol. From the tripod come Paris and Helen, the royal pair of alchemy, and in popular tradition children are baked in the oven Carl Jung, CW 5, Para 245

The alchemical athanor, or melting pot, signifies the body, while the alembic or cucurbita, the Hermetic vessel, represents the uterus Carl Jung, CW 5, Para 245

The “fourth” in the fiery furnace appears like a son of God made visible in the fire. Jehovah himself is a fire. Isaiah 10:17 (RSV) says of the saviour of Israel: “And the light of Israel will become a fire, and his Holy One a flame” Carl Jung, CW 5, Para 245

A hymn of Ephraem the Syrian says of Christ: “Thou who art all fire, have pity on me.” This view is based on the apocryphal saying of our Lord: “He who is near unto me is near unto the fire” Carl Jung, CW 5, Para 245

So far our exposition has been based on the pramantha component of the Agni sacrifice, and we have concerned ourselves with only one meaning of the word manthami or mathnami, namely with that which expresses the idea of rubbing Carl Jung, CW 5, Para 248

It is the custom in the Catholic Church to light a new fire at Easter. So, even in the Occident, fire-making is an element in a religious mystery, which testifies to its symbolical and ambiguous character. The rules of the ritual must be scrupulously observed if it is to have its intended magical effect Carl Jung, CW 5, Para 248

Speech and fire-making represent primitive man's victory over his brutish unconsciousness and subsequently became powerful magical devices for overcoming the ever present "daemonic" forces lurking in the unconscious Carl Jung, CW 5, Para 248

The blocking of libido leads to an accumulation of instinctuality and, in consequence, to excesses and aberrations of all kinds. Among them, sexual disturbances are fairly frequent, as we might expect Carl Jung, CW 5, Para 249

A particularly instructive example is the psychology of incendiarism: incendiarism is really a regressive act of fire-making, and in certain cases it is combined with masturbation Carl Jung, CW 5, Para 249

Schmid tells of an imbecile peasant youth who started numerous fires. On one occasion he aroused suspicion by standing in the door of a house with his hands in his trouser pockets, gazing with delight at the conflagration. Later, under examination, he admitted that he always masturbated while enjoying the spectacle of the fires he had started ("Zu Psychologie der Brandstifter," p. 80) Carl Jung, CW 5, Para 249

But there was always a tendency to prepare fire in a mysterious ceremonial manner on special occasions just as with ritual eating and drinking and to do it according to prescribed rules from which no one dared to differ Carl Jung, CW 5, Para 250

This ritual serves to remind us of the original numinosity of fire-making, but apart from that it has no practical significance. The anamnesis of fire-making is on a level with the recollection of the ancestors among primitives and of the gods at a more civilized stage Carl Jung, CW 5, Para 250

From the psychological point of view the ceremony has the significance of a meaningful institution, inasmuch as it represents a clearly defined procedure for canalizing the libido Carl Jung, CW 5, Para 250

It has, in fact, the functional value of a paradigm, and its purpose is to show us how we should act when the libido gets blocked. What we call the "blocking of libido" is, for the primitive, a hard and concrete fact: his life ceases to flow, things lose their glamour, plants, animals, and men no longer prosper Carl Jung, CW 5, Para 250

The ancient Chinese philosophy of the I Ching devised some brilliant images for this state of affairs. Modern man, in the same situation, experiences a standstill ("I am stuck"), a loss of energy and enjoyment ("the zestlibidohas gone out of life"), or a depression Carl Jung, CW 5, Para 250

One frequently has to tell the patient what is happening to him, for modern man's powers of introspection leave much to be desired Carl Jung, CW 5, Para 250

If, even today, the new fire is kindled at Eastertide, it is in commemoration of the redemptive and saving significance of the first fire-boring. In this way man wrested a secret from nature the Promethean theft of fire. He made himself guilty of an unlawful intervention, incorporating a fragment of the age-old unconscious into the darkness of his mind. With this theft he appropriated something precious and offended against the gods Carl Jung, CW 5, Para 250

Anyone who knows the primitive's fear of innovations and their unforeseen consequences can imagine the uncertainty and uneasy conscience which such a discovery would arouse Carl Jung, CW 5, Para 250

This primordial experience finds an echo in the widespread motif of robbery (sun-cattle of Geryon, apples of the Hesperides, herb of immortality). And it is worth remembering that in the cult of Diana at Aricia [Lake Nemi], only he could become her priest who plucked the golden bough from the sacred grove of the goddess Carl Jung, CW 5, Para 250

The pramantha, or instrument of the manthana (fire-sacrifice), is conceived under a purely sexual aspect in India Carl Jung, CW 5, Para 210

The fire-stick being the phallus or man, and the bored wood underneath the vulva or woman Carl Jung, CW 5, Para 210

The fire that results from the boring is the child, the divine son Agni. The two pieces of wood are ritually known as pururavas and urvasi, and, when personified, are thought of as man and woman Carl Jung, CW 5, Para 210

The fire is born from the genitals of the woman. Weber gives the following account of the fire-producing ceremony: Carl Jung, CW 5, Para 210

A sacrificial fire is kindled by rubbing two fire-sticks together Carl Jung, CW 5, Para 210

One of the fire-sticks is taken up with the words: "Thou art the birthplace of fire," and two blades of grass are placed upon it: "Ye are the two testicles" Carl Jung, CW 5, Para 210

The priest then places on them the adhararani (the underlying piece of wood), saying: "Thou art Urvasi," and anoints the uttararani (uppermost piece) with butter: "Thou art the power" (semen) Carl Jung, CW 5, Para 210

This is then placed on the adhararani, with the words: "Thou art Pururavas." Rubbing them together three times the priest says: "I rub thee with the Gayatrimetrum: I rub thee with the Trishtubhmetrum: I rub thee with the Jagatimetrum" (Weber, Indische Studien, I, p. 197, cited in Kuhn, p. 71) Carl Jung, CW 5, Para 210

The sexual symbolism is unmistakable. We find the same idea and symbolism in a hymn of the Rig-Veda Carl Jung, CW 5, Para 211

These examples, coming from different periods of history and from different peoples, prove the existence of a widespread tendency to equate fire-making with sexuality Carl Jung, CW 5, Para 213

The ceremonial or magical repetition of this age-old discovery shows how persistently the human mind clings to the old forms, and how-deep rooted is the memory of fire-boring Carl Jung, CW 5, Para 213

The finest of all symbols of the libido is the human figure, conceived as a demon or hero. Here the symbolism leaves the objective, material realm of astral and meteorological images and takes on human form, changing into a figure who passes from joy to sorrow, from sorrow to joy, and, like the sun, now stands high at the zenith and now is plunged into darkest night only to rise again in new splendour Carl Jung, CW 5, Para 251

Hence the beautiful name of the sun-hero Gilgamesh, “The Man of Joy and Sorrow,” Carl Jung, CW 5, Para 251

Just as the sun, by its own motion and in accordance with its own inner law, climbs from morn till noon, crosses the meridian and goes its downward way towards evening, leaving its radiance behind it, and finally plunges into all-enveloping night, so man sets his course by immutable laws and, his journey over, sinks into darkness to rise again in his children and begin the cycle anew Carl Jung, CW 5, Para 251

The symbolic transition from sun to man is easily made, and the third and last creation of the Miller Fantasies follows this pattern. She calls it “Chiwantopel, A hypnogogic drama” Carl Jung, CW 5, Para 251

These, so far as psychological experience is concerned, are the archetypal contents of the (collective) unconscious, the archaic heritage of humanity, the legacy left behind by all differentiation and development and bestowed upon all men like sunlight and air Carl Jung, CW 5, Para 259

But in loving this inheritance men love that which is common to all; they turn back to the mother of humanity, to the psyche, which was before consciousness existed, and in this way they make contact with the source and regain something of that mysterious and irresistible power which comes from the feeling of being part of the whole Carl Jung, CW 5, Para 259

It is the problem of Antaeus, who could only keep his giant strength through contact with mother earth. This temporary withdrawal into oneself seems, within certain limits, to have a favourable effect upon the psychic well-being of the individual Carl Jung, CW 5, Para 259

The concrete reality of religious figures assists the canalization of libido into the equivalent symbols, provided that the worship of them does not get stuck at the outward object Carl Jung, CW 5, Para 259

But even if it does, it at least remains bound to the representative human figure and loses its original primitive form, even though it does not attain the desired symbolic form Carl Jung, CW 5, Para 259

These, so far as psychological experience is concerned, are the archetypal contents of the (collective) unconscious, the archaic heritage of humanity, the legacy left behind by all differentiation and development and bestowed upon all men like sunlight and air Carl Jung, CW 5, Para 259

But in loving this inheritance men love that which is common to all; they turn back to the mother of humanity, to the psyche, which was before consciousness existed, and in this way they make contact with the source and regain something of that mysterious and irresistible power which comes from the feeling of being part of the whole Carl Jung, CW 5, Para 259

Dreams are full of these theriomorphic representations of libido. Hybrids and monsters, like the one found here, are not at all infrequent. Bertschinger has given us a series of illustrations in which the lower (animal) half in particular is represented theriomorphically. The libido so represented is the "animal" instinct which has got repressed Carl Jung, CW 5, Para 261

It is therefore conceivable that my patient was damaging his instinct precisely through his manifest lack of sexual repression. His fear of my imposing some medical prohibition on him is reflected a little too faithfully in the dream for the latter to be altogether above suspicion Carl Jung, CW 5, Para 261

Dreams which repeat the real situation too emphatically, or insist too plainly in some anticipated reality, are making use of conscious contents as a means of expression Carl Jung, CW 5, Para 261

His dream is really expressing a projection: he projects the killing of the animal on to the doctor. That is the way it appears to him, because he does not know that he himself is injuring his instinct Carl Jung, CW 5, Para 261

The pointed instrument generally means the needle of the intellect, with which insects are pinned down and classified Carl Jung, CW 5, Para 261

He has "modern" ideas about sex and does not know that he has an unconscious fear of my taking his pet theories away from him. This possibility is rightly feared, for if it were not in him he would hardly have had this dream Carl Jung, CW 5, Para 261

Thus the theriomorphic symbols always refer to unconscious manifestations of libido Carl Jung, CW 5, Para 261

Repression, as we have seen, is not directed solely against sexuality, but against the instincts in general which are the vital foundations, the laws governing all life Carl Jung, CW 5, Para 263

The regression caused by repressing the instincts always leads back to the psychic past, and consequently to the phase of childhood where the decisive factors appear to be, and sometimes actually are, the parents Carl Jung, CW 5, Para 263

But the inborn instincts of the child play a distinct role aside from the parents, as can be seen from the fact that the parents do not exercise a uniform influence on their children, who each react to them in a different way. They [inborn instincts] must, therefore, possess individual determinants Carl Jung, CW 5, Para 263

Yet, to the empty consciousness of the child, it must seem as if all the determining influences came from outside, because children cannot distinguish their own instincts from the influence and will of their parents Carl Jung, CW 5, Para 263

This lack of discrimination in the child makes it possible for the animals which represent the instincts to appear at the same time as attributes of the parents, and for the parents to appear in animal form, the father as a bull, the mother as a cow, and so on Carl Jung, CW 5, Para 263

If the regression goes still further back, beyond the phase of childhood to the preconscious, prenatal stage, then archetypal images appear, no longer connected with the individual's memories, but belonging to the stock of inherited possibilities of representation that are born anew in every individual Carl Jung, CW 5, Para 264

It is from them [archetypal images] that there arise those images of "divine" beings which are part animal, part human. The guise in which these figures appear depend on the attitude of the conscious mind: if it is negative towards the unconscious, the animals will be frightening: if positive, they appear as the "helpful animals" of fairytale and legend Carl Jung, CW 5, Para 264

It frequently happens that if the attitude towards the parents is too affectionate and too dependent, it is compensated in dreams by frightening animals, who represent the parents just as much as the helpful animals did. The Sphinx is a fear-animal of this kind and still shows clear traces of a mother derivative Carl Jung, CW 5, Para 264

Oedipus, thinking he had overcome the Sphinx sent by the mother-goddess merely because he had solved her childishly simple riddle, fell victim to matriarchal incest and had to marry Jocasta, his mother, for the throne and the hand of the widowed queen belonged to him who freed the land from the plague of the Sphinx. This had all those tragic consequences which could easily have been avoided if only Oedipus had been sufficiently intimidated by the frightening appearance of the

terrible' or

devouring' Mother whom the Sphinx personified Carl Jung, CW 5, Para 264

It is evident that a factor of such magnitude cannot be disposed of by solving a childish riddle. The riddle was, in fact, the trap which the Sphinx laid for the unwary wanderer. Overestimating his intellect in a typically masculine way, Oedipus walked right into it, and all unknowingly committed the crime of incest. The riddle of the Sphinx was herself the terrible mother-imago, which Oedipus would not take as a warning Carl Jung, CW 5, Para 265

Echidna was a monster with the top half of a beautiful maiden, and a hideous serpent below Carl Jung, CW 5, Para 265

This double-being corresponds to the mother-imago: above, the lovely and attractive human half; below, the horrible animal half, changed into a fear-animal by the incest prohibition Carl Jung, CW 5, Para 265

Echidna was born of the All-Mother, Mother Earth, Gaia, who conceived her with Tartarus, the personification of the underworld Carl Jung, CW 5, Para 265

Echidna herself was the mother of all terrors, of the Chimera, Scylla, the Gorgon, of frightful Cerberus, of the Nemean lion, and of the eagle that devoured the liver of Prometheus Carl Jung, CW 5, Para 265

She also gave birth to a number of dragons. One of her sons was Orthrus, the dog of the monster Geryon, who was slain by Heracles. With this dog, her own son, Echidna incestuously begat the Sphinx Carl Jung, CW 5, Para 265

The act of naming is, like baptism, extremely important as regards the creation of personality, for a magical power has been attributed to the name since time immemorial Carl Jung, CW 5, Para 274

To know the secret name of a person is to have power over him. A well-known example of this is the tale of Rumpelstiltskin. In an Egyptian myth, Isis permanently robs the sun-god Ra of his power by compelling him to tell her his real name Carl Jung, CW 5, Para 274

Therefore, to give a name means to give power, to invest with a definite personality or soul. Hence the old custom of giving children the names of saints Carl Jung, CW 5, Para 274

The anal region is very closely connected with veneration. An Oriental fairy-tale relates that the Crusaders used to anoint themselves with the excrement of the Pope in order to make themselves more formidable Carl Jung, CW 5, Para 276

One of my patients, who had a special veneration for her father, had a fantasy in which she saw her father sitting on a commode in a dignified manner, while people filed past greeting him effusively Carl Jung, CW 5, Para 276

We might also mention the intimate connection between excrement and gold: the lowest value allies itself to the highest Carl Jung, CW 5, Para 276

The alchemists sought their prima materia in excrement, one of the arcane substances from which it was hoped that the mystic figure of the filius philosophorum would emerge (“in stercore invenitur”). A very religiously brought-up young patient once dreamt that she saw the Crucifix formed of excrement on the bottom of a blue-flowered chamber-pot Carl Jung, CW 5, Para 276

The contrast is so enormous that one can only assume that the valuations of childhood are totally different from ours. And so, indeed, they are Carl Jung, CW 5, Para 276

Children bring to the act of defecation and its products an interest such as is later evinced only by the hypochondriac Carl Jung, CW 5, Para 276

We can only begin to understand this interest when we realize that the young child connects defecation with a theory of propagation. This puts a somewhat different complexion on the matter. The child thinks: that is how things are produced, how they “come out” Carl Jung, CW 5, Para 276

In popular humour excrement is often regarded as a monument or souveniran idea related to anal birth or creation by throwing something behind oneself Carl Jung, CW 5, Para

279

The two-horned derives from an Arabic term referring to the strength of the sun-bull. Alexander is often found on coins with the horns of Jupiter Ammon.This is one of the identifications of the legendary ruler with the spring sun in the sign of the Ram. There can be no doubt that mankind felt a great need to eliminate everything personal and human from its heroes so as to make them equal to the sun, i.e., absolute libido-symbols, through a kind of metastasis Carl Jung, CW 5, Para 283

Dhulqarnein brought his “friend” Khidr to the source of life, that he might drink of immortality. Alexander himself bathed in the stream of life and performed the ritual ablutions Carl Jung, CW 5, Para 288

There are, therefore, two figures who resemble one another but are nevertheless distinct Carl Jung, CW 5, Para 288

The analogous situation in Christianity is the scene by the Jordan, where John leads Christ to the source of life Carl Jung, CW 5, Para 288

Christ, as the baptized, is here the subordinate, while John plays the superior role, as in the case of Dhulqarnein and Khidr, or Khidr and Moses, and Khidr and Elias Carl Jung, CW 5, Para 288

The god, Tages, bore the epithet ‘the fresh-ploughed boy,’ because, according to legend, he sprang out of a furrow behind a peasant ploughing his fields. This image illustrates the Mondamin motif very clearly; the plough has the well-known phallic meaning, and the furrow, as in India, stands for the woman Carl Jung, CW 5, Para 527

Psychologically this image is a symbolical equivalent of copulation, the son being the edible fruit of the field Carl Jung, CW 5, Para 527

The Etruscan Tages, the boy who sprang from the freshly ploughed furrow, was also a teacher of wisdom. In the Litaolane myth of the Basuto, we are told how a monster devoured all human beings and left only one woman alive, who gave birth to a son, the hero, in a cowshed (instead of a cave). Before she could prepare a bed of straw for the infant, he was already grown up and spoke “words of wisdom” Carl Jung, CW 5, Para 291

The rapid growth of the hero, a recurrent motif, seems to indicate that the birth and apparent childhood of the hero are extraordinary because his birth is really a rebirth, for which reason he is able to adapt so quickly to his heroic role Carl Jung, CW 5, Para 291

The journey of Moses with his servant Joshua is a life-journey (it lasted eighty years). They grow old together and lose the life-force, i.e., the fish, which “in wondrous wise took its way to the sea” (setting of the sun) Carl Jung, CW 5, Para 291

When the two notice their loss, they discover at the place where the source of life is found (where the dead fish revived and sprang into the sea) Khidr wrapped in his mantle, sitting on the ground Carl Jung, CW 5, Para 291

Where the fish vanished Khidr, the Verdant One, was born as a “son of the watery deep,” his

head veiled, proclaiming divine wisdom Carl Jung, CW 5, Para 291

They form a pair of brothers whose characters are revealed by the symbolic position of the torches. Cumont not unjustly connects then with the sepulchral Erotes, who as genies with inverted torches have a traditional meaning. One would stand for death, the other for life Carl Jung, CW 5, Para 294

There are certain points of resemblance between the Mithraic sacrifice (where the bull in the center is flanked on either side by dadophors) and the Christian sacrifice of the lamb (or ram). The Crucified is traditionally flanked by two thieves, one of whom ascends to paradise while the other descends to hell Carl Jung, CW 5, Para 294

The two dadophors are, as Cumont has offshoots from the main figure of Mithras, who was supposed to have a secret triadic character. Dionysius the Areopagite reports that the magicians held a feast in honor of (the threefold Mithras) Carl Jung, CW 5, Para 294

As Cumont observes Cautes and Cautopates sometimes carry in their hands the head of a bull and of a scorpion respectively Carl Jung, CW 5, Para 295

Taurus and Scorpio are equinoctial signs, and this is a clear indication that the sacrifice was primarily connected with the sun cycle: the rising sun that sacrifices itself at the summer solstice, and the setting sun. Since it was not easy to represent sunrise and sunset in the sacrificial drama, this idea had to be shown outside it Carl Jung, CW 5, Para 295

We have already pointed out that the Dioscuri represent a similar idea in somewhat different form: one sun is mortal, the other immortal. As this whole solar mythology is psychology projected into the heavens, the underlying idea could probably be paraphrased thus: just as man consists of a mortal and an immortal part, so the sun is a pair of brothers, one of whom is mortal (the setting sun), the other immortal (the ever-renewing sun). Man is mortal, yet there is something immortal in us Carl Jung, CW 5, Para 296

Thus the gods, or figures like Khidr and the Comte de Saint-Germain, are our immortal part which continue intangibly to exist 296.

The sun comparison tells us over and over again that the dynamic of the gods is psychic energy. This is our immortality, the link through which man feels inextinguishably one with the continuity of all life. The life of the psyche is the life of mankind. Welling up from the depths of the unconscious, its springs gush forth from the root of the whole human race, since the individual is, biologically speaking, only a twig broken off from the mother and transplanted Carl Jung, CW 5, Para 296

Both possibilities are found on a late Babylonian gem from Lajard’s collection. In the middle stands an androgynous deity. On the masculine side there is a snake with a sun halo round its head; on the feminine side another snake with a sickle moon above it Carl Jung, CW 5, Para 297

This picture has a symbolic sexual nuance: on the masculine side there is a lozenge, a favourite symbol of the female genitals, and on the feminine side a wheel without its rim. The spokes are thickened at the ends into knobs, which, like the fingers we mentioned earlier, have a phallic meaning Carl Jung, CW 5, Para 297

It seems to be a phallic wheel such as was not unknown in antiquity. There are obscene gems on which Cupid is shown turning a wheel consisting entirely of phalli. As to what the sun signifies, I discovered in the collection of antiquities at Verona a late Roman inscription Carl Jung, CW 5, Para 297

The symbolism is plain: sun = phallus, moon = vessel (uterus). This interpretation is confirmed by another monument from the same collection. The symbols are the same, except that the vessel has been replaced by the figure of a woman Carl Jung, CW 5, Para 298

Certain symbols on coins can probably be interpreted in a similar manner. In Lajard's Recherches sur la culte de Vénus there is a coin from Perga, showing Artemis as a conical stone flanked by a masculine figure (alleged to be the deity Men) and a female figure (alleged to be Artemis). Men (otherwise called Lunus) appears on an Attic bas-relief with a spear, flanked by Pan with a club, and a female figure. From this it is clear that sexuality as well as the sun can be used to symbolize the libido Carl Jung, CW 5, Para 298

Sex being one of the most obvious examples of instinctuality, it is sex which is liable to be most affected by these sacrificial measures, i.e., through abstinence Carl Jung, CW 5, Para 299

Just as Attis unmans himself for the sake of his mother, and his effigy was hung on the pine-tree in memory of this deed, so Christ hangs on the tree of life, on the wood of martyr-dom, the and mother, and ransoms creation from death Carl Jung, CW 5, Para 671

Attis also wears the pileus [or "Phrygian cap"] like Men, Mithras, and the dadophors Carl Jung, CW 5, Para 29

The hero himself appears as a being of more than human stature. He is distinguished from the very beginning by his godlike characteristics Carl Jung, CW 5, Para 612

Since he is psychologically an archetype of the Self, his divinity only confirms that the Self is numinous, a sort of god, or having some share in the divine nature Carl Jung, CW 5, Para 612

The hero is the protagonist of God's transformation in man; he corresponds to what I call the "mana personality." The mana personality has such an immense fascination for the conscious mind that the ego all too easily succumbs to the temptation to identify with the hero, thus bringing on a psychic inflation with all its consequences. For this reason the repugnance felt by certain ecclesiastical circles for the "inner Christ" is understandable enough, at least as a preventive measure against the danger of psychic inflation which threatens the Christian European Carl Jung, CW 5, Para 612

Heroes are usually wanderers, and wandering is a symbol of longing, of the restless urge which never finds its object, of nostalgia for the lost mother. The sun comparison can easily be taken in this sense: the heroes are like the wandering sun, from which it is concluded that the myth of the hero is a solar myth Carl Jung, CW 5, Para 299

It seems to us, rather, that he is first and foremost a self-representation of the longing of the unconscious, of its unquenched and unquenchable desire for the light of consciousness. But consciousness, continually in danger of being led astray by its own light and of becoming a rootless will o' the wisp, longs for the healing power of nature, for the deep wells of be-

ing and for unconscious communion with life in all its countless forms Carl Jung, CW 5, Para 299

It is not man as such who has to be regenerated or born again as a renewed whole, but, according to the statements of mythology, it is the hero or god who rejuvenates himself. These figures are generally expressed or characterized by libido-symbols (light, fire, sun, etc.), so that it looks as if they represented psychic energy. They are, in fact, personifications of the libido Carl Jung, CW 5, Para 388

The hero is a hero just because he sees resistance to the forbidden goal in all life's difficulties and yet fights that resistance with the whole-hearted yearning that strives towards the treasure hard to attain, and perhaps unattainable yearning that paralyses and kills the ordinary man Carl Jung, CW 5, Para 510

The hero is an extraordinary being who is inhabited by a daemon, and it is this that makes him a hero. That is why the mythological statements about heroes are so typical and so impersonal Carl Jung, CW 5, Para 536

It is therefore understandable that the three mother-goddesses, Rhea, Cybele, and Diana, all wear the mural crown. The Old Testament treats the cities of Jerusalem, Babylon, etc. just as if they were women Carl Jung, CW 5, Para 303

The Boeotian city of Thebes founded by Cadmus received on that account the cognomen "Ogygian." This cognomen was also applied to the great Flood, which was called "Ogygian" because it happened under Ogyges. We shall see later on that this coincidence can hardly be accidental Carl Jung, CW 5, Para 306

There is a similar idea in Hindu mythology, where Indra appears as the husband of Urvara. But Urvara means the "fertile land." In the same way the seizure of a country by the king was regarded as his marriage with the land Carl Jung, CW 5, Para 306

Similar ideas must also have existed in Europe. Princes at their accession had to guarantee a good harvest. The Swedish king Domaldi was actually killed as a result of failure of the crops. In the Hindu Ramayana, the hero Rama marries Sita, the furrow Carl Jung, CW 5, Para 306

To the same circle of ideas belongs the Chinese custom of the emperor's having to plough a furrow on ascending the throne Carl Jung, CW 5, Para 306

The motif of continuous cohabitation is expressed in the well-known lingam symbol found everywhere in Indian temples: the base is a female symbol, and within it stands the phallus (fig. 258.25). This symbol is rather like the phallic baskets and chests of the Greeks Carl Jung, CW 5, Para 306

The chest or casket is a female, i.e., the womb, a common enough conception in the older mythologies. The chest, barrel, or basket with its precious contents was often thought of as floating on the water, thus forming an analogy to the course of the sun. The sun sails over the sea like an immortal god who every evening is immersed in the maternal waters and is born anew in the morning Carl Jung, CW 5, Para 306

Another form of the same motif is the Persian idea of the tree of life, which stands in

the lake of rain, Vouru-Kasha. The seeds of this tree were mixed with the water and so maintained the fertility of the earth. The Vendidad, says that the waters flow “to the sea Vouru-Kasha, towards the well-watered tree, whereon grow the seeds of my plants of every kind” Carl Jung, CW 5, Para 306

It is easy to see what the battle with the sea monster means: it is the attempt to free the ego-consciousness from the deadly grip of the unconscious. The making of a fire in the monster’s belly suggests as much, for it is a piece of apotropaic magic aimed at dispelling the darkness of unconsciousness Carl Jung, CW 5, Para Carl Jung, CW 5, Para 539

The bird probably signifies the renewed ascent of the sun, the rebirth of the phoenix, and is at the same time one of those “helpful animals” who render supernatural aid during the birth: birds as aerial beings, symbolize spirits or angels Carl Jung, CW 5, Para 538

Divine messengers frequently appear at these mythological births, as can be seen from the use we still make of god-parents Carl Jung, CW 5, Para 538

The sun-symbol of the bird rising from the water is preserved etymologically in the idea of the singing swan.

Swan' derives from the root sven, like

sun’ and ‘sound’ Carl Jung, CW 5, Para 538

This ascent signifies rebirth, the bringing forth of life from the mother, and the ultimate conquest of death, which, according to an African Negro myth, came into the world through the carelessness of one old woman: when the season of universal skin-casting came round again (for in those days people renewed themselves by casting their skins like snakes), she was absent-minded enough to put on her old skin instead of the new one, and in consequence died Carl Jung, CW 5, Para 538

The myth often spans a period of three-days. The “three-days” are a stereotyped expression for the “night sea imprisonment” (December 21-24). Christ, too, spent three days in the underworld Carl Jung, CW 5, Para 512

The myth is exemplified in the battle of Hiawatha with Mishe-Nahma, the fish-king. Mishe-Nahma is a monster fish who lives at the bottom of the waters. Challenged to battle by Hiawatha, he swallows the hero together with his boat 537.

Just as Hera, in her role of the pursuing mother, is the real source of the mighty deeds performed by Heracles, so Nokomis allows Hiawatha no rest, but piles up new difficulties in his path, hazardous adventures in which the hero may be victorious, but may also meet with his death Carl Jung, CW 5, Para 540

Man with his consciousness is always a long way behind the goals of the unconscious; unless his libido calls him forth to new dangers he sinks into slothful inactivity, or in the prime of life he is overcome with longing for the past and is paralysed Carl Jung, CW 5, Para 540

A Polynesian myth tells how the hero, in the belly of Kombili, the King Fish, seized his obsidian knife and cut open the fish’s belly. “He slipped out and beheld a splendour. Then he sat down and began to think. ‘I wonder where I am?’ he said to himself” Carl Jung, CW 5, Para 311

In the light of these ideas we can understand the mythological statements about Ogyges: it is he who possesses the mother, the city, and is thus united with the mother; therefore under him came the great flood, for it is typical of the sun myth that the hero, once he is united with the woman “hard to attain,” is exposed in a cask and thrown out to sea, and then lands on a distant shore to begin a new life Carl Jung, CW 5, Para 312

The middle section, the night sea journey in the ark, is lacking in the Ogyges tradition. But the rule in mythology is that the typical parts of a myth can be fitted together in every conceivable variation, which makes it extraordinarily difficult to interpret one myth without a knowledge of all the others Carl Jung, CW 5, Para312

The meaning of this cycle of myths is clear enough: it is the longing to attain rebirth through a return to the womb, and to become immortal like the sun. This longing for the mother is amply expressed in the literature of the Bible Carl Jung, CW 5, Para 312

The symbol-creating process substitutes for the mother the city, the well, the cave, the Church, etc. This substitution is due to the fact that the regression of libido reactivates the ways and habits of childhood, and above all the relation to the mother; but what was natural and useful to the child is a psychic danger for the adult, and this is expressed by the symbol of incest Carl Jung, CW 5, Para 313

Because the incest taboo opposes the libido and blocks the path to regression, it is possible for the libido to be canalized into the mother analogies thrown up by the unconscious Carl Jung, CW 5, Para 313

In that way the libido becomes progressive again, and even attains a level of consciousness higher than before Carl Jung, CW 5, Para 313

The meaning and purpose of this canalization are particularly evident when the city appears in place of the mother: the infantile attachment (whether primary or secondary) is a crippling limitation for the adult, whereas attachment to the city fosters his civic virtues and at least enables him to lead a useful existence Carl Jung, CW 5, Para 313

In primitives the tribe takes the place of the city Carl Jung, CW 5, Para 313

The birds are soul-images, by which are meant the souls of the damned and evil spirits. Thus the mother becomes the underworld, the City of the Damned Carl Jung, CW 5, Para 315

In this primordial image of the woman on the dragon we recognize Echidna, the mother of every hellish horror Carl Jung, CW 5, Para 315

Babylon is the symbol of the Terrible Mother, who leads the peoples into whoredom with her devilish temptations and makes them drunk with her wine. Here the intoxicating drink is closely associated with fornication, for it too is a libido symbol, as we have already seen in the soma-fire-sun parallel Carl Jung, CW 5, Para 31

From water comes life; hence, of the two deities who here interest us most, Christ and Mithras, the latter is represented as having been born beside a river, while Christ experienced his “rebirth” in the Jordan Carl Jung, CW 5, Para 319

Christ, moreover, was born of the, the sempiternal fons amoris or Mother of God, whom pagan-Christian legend turned into a nymph of the spring Carl Jung, CW 5, Para 319

The spring is also found in Mithraism. A Pannonian dedication reads “Fonti perenni.” An inscription from Apulum is dedicated to the “Fons aeternus.” In Persian, Ardvisura is the fount of the water of life Carl Jung, CW 5, Para 319

Ardvisura-Anahita is a goddess of water and love (just as Aphrodite is the “foam-born”) Carl Jung, CW 5, Para 319

In the Vedas, the waters are called matritamah, ‘most maternal.’ All living things rise, like the sun, from water, and sink into it again at evening Carl Jung, CW 5, Para 319

Born of springs, rivers, lakes, and seas, man at death comes to the waters of the Styx, and there embarks on the “night sea journey.” Those black waters of death are the water of life, for death with its cold embrace is the maternal womb, just as the sea devours the sun but brings it forth again Carl Jung, CW 5, Para 319

The projection of the mother-imago upon water endows the water with a number of numinous or magical qualities peculiar to the mother. A good example of this is the baptismal water symbolism in the Church Carl Jung, CW 5, Para 320

The maternal aspect of water coincides with the nature of the unconscious, because the unconscious (particularly in men) can be regarded as the mother or matrix of consciousness Carl Jung, CW 5, Para 320

Numerous myths say that human beings came from trees, and many of them tell how the hero was enclosed in the maternal tree-trunk, like the dead Osiris in the cedar-tree, Adonis in the myrtle, ecocar Jung, CW 5, Para 321

Hence when Attis castrates himself under a pine-tree, he did so because the tree has a maternal significance Carl Jung, CW 5, Para 321

Not only the gods, but the goddesses, too, are libido-symbols, when regarded from the point of view of their dynamism. The libido expresses itself in images of sun, light, fire, sex, fertility, and growth Carl Jung, CW 5, Para 324

In this way the goddesses, as we have seen, come to possess phallic symbols, even though the latter are essentially masculine. One of the main reasons for this is that, just as the female lies hidden in the male (fig. 258.29), so the male lies hidden in the female Carl Jung, CW 5, Para 324

The feminine quality of the tree that represents the goddesses contaminated with the phallic symbolism, as is evident from the genealogical tree that grows out of Adam’s body. In my Psychology and Alchemy I have reproduced, from a manuscript in Florence, a picture of Adam showing the membrum virile as a tree Thus the tree has a bisexual character, as is also suggested by the fact that in Latin the names of trees have masculine endings and feminine gender Carl Jung, CW 5, Para 324

She was in a garden, where she found an exotic-looking tree with strange red fleshy flowers or fruits. She picked and ate them. Then, to her horror, she felt that she was poisoned Carl Jung, CW 5, Para 325

It is the tree of libido, which here represents the feminine as well as the masculine side, because it simply expresses the relationship of the two to one another Carl Jung, CW 5, Para 326

The various meanings of the treesun, tree of Paradise, mother, phallus are explained by the fact that it is a libido-symbol and not an allegory of this or that concrete object. Thus a phallic symbol does not denote the sexual organ, but the libido, and however clearly it appears as such, it does not mean itself but is always a symbol of the libido Carl Jung, CW 5, Para 329

Symbols are not signs or allegories for something known; they seek rather to express something that is little known or completely unknown. The tertium comparationis [the 'third for comparison'] for all these symbols is the libido, and the unity of meaning lies in the fact that they are all analogies of the same thing. In this realm the fixed meaning of things comes to an end Carl Jung, CW 5, Para 329

The sole reality is the libido, whose nature we can only experience through its effect on us. Thus, it is not the mother who is symbolized, but the libido of the son, whose object was once the mother Carl Jung, CW 5, Para 329

We take mythological symbols much too concretely and are puzzled at every turn by the endless contradictions of myths. But we always forget that it is the conscious creative force which wraps itself in images Carl Jung, CW 5, Para 329

When, therefore, we read: "His mother was a wicked witch," we must translate it as: the son is unable to detach his libido from the mother-imago, he suffers from resistances because he is tied to the mother Carl Jung, CW 5, Para 329

One of the simplest ways would be to impregnate the mother and beget oneself in identical form all over again. But here the incest prohibition intervenes; consequently the sun myths and rebirth myths devise every conceivable kind of mother-analogy for the purpose of canalizing the libido into new forms and effectively preventing it from regressing to actual incest Carl Jung, CW 5, Para 332

The effect of the incest-taboo and of the attempts at canalization is to stimulate the creative imagination, which gradually opens up possible avenues for the self-realization of libido. In this way the libido becomes imperceptibly spiritualized Carl Jung, CW 5, Para 332

The power which "always desires evil" thus creates spiritual life. That is why the religions exalt this procedure into a system. It is instructive to see the pains they take to further the translation into symbols Carl Jung, CW 5, Para 332

To the above, I would add that it is hardly possible to restrict this impulse to sexuality. It is primarily a question of primitive instinctuality, of insufficiently differentiated libido which prefers to take a sexual form. Sexuality is by no means the only form of the "full feeling of life." There are some passions that cannot be derived from sex Carl Jung, CW 5, Para 332

It is not possible to discuss the problem of symbol-formation without reference to the instinctual processes, because it is from them that the symbol derives its motive power. It has no meaning whatever unless it strives against the resistance of instinct, just as undisciplined instincts would bring nothing but ruin to man if the symbol does not give them form Carl Jung, CW 5, Para 338

Vollers compares Khidr and Elias on the one hand with Gilgamesh and his primitive brother Eabani or Enkidu, and on the other hand with the Dioscuri, one of whom was mortal and the other immortal (Vollers, “Chidher,” pp. 234-84) Carl Jung, CW 5, Para 288

The rapid growth of the hero, a recurrent motif, seems to indicate that the birth and apparent childhood of the hero are extraordinary because his birth is really a rebirth, for which reason he is able to adapt so quickly to his heroic role Carl Jung, CW 5, Para 291

The journey of Moses with his servant Joshua is a life-journey (it lasted eighty years). They grow old together and lose the life-force, i.e., the fish, which “in wondrous wise took its way to the sea” (setting of the sun) Carl Jung, CW 5, Para 291

It is not man as such who has to be regenerated or born again as a renewed whole, but, according to the statements of mythology, it is the hero or god who rejuvenates himself. These figures are generally expressed or characterized by libido-symbols (light, fire, sun, etc.), so that it looks as if they represented psychic energy. They are, in fact, personifications of the libido Carl Jung, CW 5, Para 388

The hero is a hero just because he sees resistance to the forbidden goal in all life’s difficulties and yet fights that resistance with the whole-hearted yearning that strives towards the treasure hard to attain, and perhaps unattainable yearning that paralyses and kills the ordinary man Carl Jung, CW 5, Para 510

The hero is an extraordinary being who is inhabited by a daemon, and it is this that makes him a hero. That is why the mythological statements about heroes are so typical and so impersonal Carl Jung, CW 5, Para 536

He [the hero] shares this paradoxical nature with the snake. According to Philo the snake is the most spiritual of all creatures; it is of a fiery nature, and its swiftness is terrible. It has a long life and sloughs off old age with its skin. In actual fact the snake is a cold-blooded creature, unconscious and unrelated. It is both toxic and prophylactic, equally a symbol of the good and bad daemon (the Agathodaimon), of Christ and the devil. Among the Gnostics it was regarded as an emblem of the brain-stem and spinal cord, as is consistent with its predominantly reflex psyche. It is an excellent symbol for the unconscious, perfectly expressing the latter’s sudden and unexpected manifestations, its painful and dangerous intervention in our affairs, and it’s frightening effects Carl Jung, CW 5, Para 580

It is therefore understandable that the three mother-goddesses, Rhea, Cybele, and Diana, all wear the mural crown. The Old Testament treats the cities of Jerusalem, Babylon, etc. just as if they were women Carl Jung, CW 5, Para 303

The fact that the city and the wife of Ogyges both have the same name indicates that there must be some relation between the city and the woman, which is not difficult to understand because the city is identical with the woman Carl Jung, CW 5, Para 306

Another form of the same motif is the Persian idea of the tree of life, which stands in the lake of rain, Vouru-Kasha. The seeds of this tree were mixed with the water and so maintained the fertility of the earth. The Vendidad, says that the waters flow “to the sea Vouru-Kasha, towards the well-watered tree, whereon grow the seeds of my plants of every kind” Carl Jung, CW 5, Para 306

Frobenius describes the hero’s journey as going through eight stages: Carl Jung, CW 5, Para 310

Jung believed that the causal explanation was incorrect because the so-called “incest prohibition” which is supposed to operate here is not in itself a primary phenomenon, but goes back to something much more fundamental, namely the primitive system of marriage classes which, in its turn, is a vital necessity in the organization of the tribe Carl Jung, CW 5, Para 332

So it is more a question of phenomena requiring a teleological explanation than of simple causalities. Moreover it must be pointed out that the basis of the “incestuous” desire is not cohabitation, but, as every sun myth shows, the strange idea of becoming a child again, of returning to the parental shelter, and of entering into the mother in order to be reborn through her. But the way to this goal lies through incest, i.e., the necessity of finding some way into the mother’s body Carl Jung, CW 5, Para 332

It is not incestuous cohabitation that is desired, but rebirth. The incest prohibition acts as an obstacle and makes the creative fantasy inventive: for instance, there are attempts to make the mother pregnant by means of fertility magic Carl Jung, CW 5, Para 332

The effect of the incest-taboo and of the attempts at canalization is to stimulate the creative imagination, which gradually opens up possible avenues for the self-realization of libido. In this way the libido becomes imperceptibly spiritualized Carl Jung, CW 5, Para 332

The power which “always desires evil” thus creates spiritual life. That is why the religions exalt this procedure into a system. It is instructive to see the pains they take to further the translation into symbols Carl Jung, CW 5, Para 332

It is less than two thousand years since the cult of sex was in full bloom. In those days, of course, they were heathens and did not know any better, but the nature of the symbol-creating forces does not change from age to age Carl Jung, CW 5, Para 339

If one has any conception of the sexual content of those ancient cults, and if one realizes that the experience of union with God was understood in antiquity as a more or less concrete coitus, then one can no longer pretend that the forces motivating the production of symbols have suddenly become different since the birth of Christ Carl Jung, CW 5, Para 339

The fact that primitive Christianity resolutely turned away from nature and the instincts in general, and, through its asceticism, from sex in particular, clearly indicates the source from which its motive forces came Carl Jung, CW 5, Para 339

So it is not surprising that this transformation has left noticeable traces in Christian symbolism. Had it not done so; Christianity would never have been able to transform libido. It succeeded in this largely because its archetypal analogies were for the most part in tune with the instinctual

forces it wanted to transform Carl Jung, CW 5, Para 339

At a time when a large part of mankind is beginning to discard Christianity, it may be worth our while to try to understand why it was accepted in the first place Carl Jung, CW 5, Para 341

It was accepted as a means of escape from the brutality and unconsciousness of the ancient world. As soon as we discard it [Christianity], the old brutality returns in force, as has been made overwhelmingly clear by contemporary events Carl Jung, CW 5, Para 341

He who throws Christianity overboard and with it the whole basis of morality, is bound to be confronted with the age-old problem of brutality. We have had bitter experience of what happens when a whole nation finds the moral mask too stupid to keep up. The beast breaks loose, and a frenzy of demoralization sweeps over the civilized world Carl Jung, CW 5, Para 341

Today there are countless neurotics who are neurotic simply because they do not know why they cannot be happy in their own way they do not even know that the fault lies with them Carl Jung, CW 5, Para 342

Besides these neurotics there are many more normal people, men and women of the better kind, who feel restricted and discontented because they have no symbol which would act as an outlet for their libido Carl Jung, CW 5, Para 342

For all these people a reductive analysis down to the primal facts should be undertaken, so that they can become acquainted with their primitive personality and learn how to take due account of it. Only in this way can certain requirements be fulfilled and others rejected as unreasonable because of their infantile character Carl Jung, CW 5, Para 342

We like to imagine that our primitive traits have long since disappeared without trace. In this we are cruelly disappointed, for never before has our civilization been so swamped with evil. Mere faith cannot be counted as an ethical ideal either, because it too is an unconscious transformation of libido. Faith is a charisma for those who possess it, but it is no way for those who need to understand before they can believe. This is a matter of temperament and cannot be discounted as valueless. For, ultimately, even the believer believes that God gave man reason, and for something better than to lie and cheat with Carl Jung, CW 5, Para 342

Although we naturally believe in symbols in the first place, we can also understand them, and this is indeed the only viable way for those who have not been granted the charisma of faith Carl Jung, CW 5, Para 342

Psychological truth by no means excludes metaphysical truth, though psychology, as a science, has to hold aloof from all metaphysical assertions. Its subject is the psyche and its contents. Both are realities, because they work Carl Jung, CW 5, Para 344

Though we do possess a physics of the soul, and are not even able to observe it and judge it from some Archimedean point “outside” ourselves, and can therefore know nothing objective about it since all knowledge of the psyche is itself psychic, in spite of all this the soul is the only experiment of life and existence Carl Jung, CW 5, Para 344

It is, in fact, the only immediate experience we can have and the sine qua non of the

subjective reality of the world. The symbols it creates are always grounded in the unconscious archetype, but their manifest forms are moulded by the ideas acquired by the conscious mind Carl Jung, CW 5, Para 344

The archetypes are the numinous, structural elements of the psyche and possess a certain autonomy and specific energy which enables them to attract, out of the conscious mind, those contents which are best suited to themselves Carl Jung, CW 5, Para 344

The symbols act as transformers, their function to convert libido from a “lower” into a “higher” form. This function is so important that feeling accords it the highest values Carl Jung, CW 5, Para 344

The symbol works by suggestion; that is to say, it carries conviction and at the same time expresses the content of the conviction. It is able to do this because of the numen, the specific energy stored up in the archetype. Experience of the archetype is not only impressive, but it also seizes and possesses the whole personality, and is naturally productive of faith Carl Jung, CW 5, Para 344

Rhea was pregnant with Osiris and his twin sister Isis, and they mated together even in their mother’s womb (night sea journey with incest) Carl Jung, CW 5, Para 349

Isis is said to have been born in the “All-Wetness”, and of Osiris it is related that a certain Pamyles of Thebes, whilst drawing water, heard a voice from the temple of Zeus which commanded him to proclaim that Osiris, “the great and beneficent king”, was born. In honour of this Pamyles the Pamylia were celebrated, similar to the Phallophoria Carl Jung, CW 5, Para 349

Pamyles seems, therefore, to have been originally a phallic daimon, like Dionysus. In his phallic form he represents the creative power which “draws” things out of the unconscious (i.e., the water) and begets the god (Osiris) as a conscious content Carl Jung, CW 5, Para 349

This process can be understood both as an individual experience: Pamyles drawing water, and as a symbolic act or experience of the archetype: a drawing up from the depths Carl Jung, CW 5, Para 349

What is drawn up is a numinous, previously unconscious content which would remain dark were it not interpreted by the voice from above as the birth of a god. This type of experience recurs in the baptism [Christ’s] in the Jordan (Matthew 3: 17) Carl Jung, CW 5, Para 349

Typical of the trees found in myth is the tree of paradise, or tree of life; most people know of the pine-tree of Attis, the tree or trees of Mithras, and the word-ash Yggdrasill of Nordic mythology, and so on Carl Jung, CW 5, Para 349

The hanging of Attis, in effigy, on a pine-tree, the hanging of Marsyas, which became a popular theme for art, the hanging of Odin, the Germanic hanging sacrifices and the whole series of hanged gods all teach us that the hanging of Christ on the Cross is nothing unique in religious mythology, but belongs to the same circle of ideas Carl Jung, CW 5, Para 349

In this world of images the Cross is the Tree of Life and at the same time a Tree of Death coffin

(fig. 258.36). Just as the myths tell us that human beings were descended from trees, so there were burial customs where people were buried in hollow tree-trunks, whence the German Totenbaum, 'tree of death,' for coffin, which is still in use today Carl Jung, CW 5, Para 349

If we remember that the tree is predominantly a mother-symbol, then the meaning of this mode of burial becomes clear. The dead are delivered back to the mother for rebirth Carl Jung, CW 5, Para 349

Osiris was killed in a crafty manner by the god of the underworld, Set (Typhon in Greek) who locked him in a chest Carl Jung, CW 5, Para 350

After completing the night sea journey, the coffer containing Osiris was cast ashore at Byblos and came to rest in the branches of a cedar-tree which shot up and enclosed the coffer in its trunk (fig. 023) Carl Jung, CW 5, Para 353

The king of the country, admiring the splendid tree, caused it to be cut down and made into a pillar supporting the roof of his house time that coincides with the age-old lament for the dead god Carl Jung, CW 5, Para 353

Isis collected the pieces together again with the help of the jackal-headed Anubis. Here the dogs and jackals, devourers of corpses by night, assist in the reconstitution or reproduction of Osiris. To this necrophagous function the Egyptian vulture probably owes its symbolic mother significance Carl Jung, CW 5, Para 354

Although Isis had managed to collect the pieces of the body, its resuscitation was only partially successful because the phallus could not be found; it had been eaten by the fishes, and the reconstituted body lacked vital force Carl Jung, CW 5, Para 356

The phantom Osiris lay once more with Isis, but the fruit of their union was Harpocrates [the young Horus] who was weak "in the lower limbs," i.e., in the feet Carl Jung, CW 5, Para 356

Osiris, although only a phantom, now makes the young sun (his son Horus), ready for battle with Set, the evil spirit of darkness Carl Jung, CW 5, Para 356

Osiris and Horus represent the father-son symbolism mentioned at the beginning. Osiris is thus flanked by the comely Horus and the misshapen Harpocrates, who is mostly shown as a cripple, sometimes distorted to the point of freakishness Carl Jung, CW 5, Para 356

The serpent symbolizes the mysterious numen of the "mother" (and of other daimonia) who kills, but who is at the same time man's only security against death, as she is the source of life. Accordingly, only the mother can cure him who is sick unto death, and the hymn goes on to describe how the gods were called together to take counsel: Carl Jung, CW 5, Para 452

Finally Ra decides to utter his true name. He was only partially cured, just as Osiris was only incompletely reconstituted, and in addition he lost his power and finally had to retire on the back of the heavenly cow Carl Jung, CW 5, Para 454

From this wound Ra never recovered, so that he finally had to retire on the back of the heavenly cow. But the cow was the cow-headed mother-goddess (fig. 258.30b), just as

Osiris was the bull Apis. The mother is accused as though she were the cause of his having to fly to her in order to be cured of the wound she herself had inflicted Carl Jung, CW 5, Para 351

So when the sun-god Ra retires on the back of the heavenly cow, it means that he is going back into the mother in order to rise again as Horus. In the morning the goddess is the mother, at noon she is the sister-wife, and at evening once more the mother who takes back the dead into her womb Carl Jung, CW 5, Para 360

The poisonous worm is a deadly form of libido instead of an animating form. The "true name" is Ra's soul and magic power (his libido). What Isis demands is the transference of libido to the mother. This request is fulfilled to the letter, for the aging god returns to the heavenly cow, the symbol of the mother Carl Jung, CW 5, Para 455

But the real cause of the wound is the incest-taboo, which cuts a man off from the security of childhood and early youth, from all those unconscious, instinctive happenings that allow the child to live without responsibility as an appendage of his parents Carl Jung, CW 5, Para 351

It is significant that it is "evil" which lures Osiris into the chest; for, in the light of teleology, the motif of containment signifies the latent state that precedes regeneration Carl Jung, CW 5, Para 351

Actually Isis collected the pieces of Osiris' body together with the help of the jackal-headed Anubis. Here the dogs and jackals, devourers of corpses by night, assist in the reconstitution or reproduction of Osiris. To this necrophagous function the Egyptian vulture probably owes its symbolic mother significance Carl Jung, CW 5, Para 354

In ancient times the Persians used to throw out their corpses for the dogs to devour, just as, today in Tiber, the dead are left to the vultures, and in Bombay, where the Parsis expose their corpses on the "tower of silence" Carl Jung, CW 5, Para 354

The Persians had the custom of leading a dog to the bedside of a dying man, who then had to give the dog a morsel to eat. This custom suggests that the morsel should belong to the dog, so that he will spare the body of the dying man, just as Cerberus was pacified with the honey-cakes which Heracles gave him on his journey to hell Carl Jung, CW 5, Para 354

Hence the bringing in of the dog would have a compensatory significance, death being made equal to the sun at its highest point. This is a thoroughly psychological interpretation, as can be seen from the fact that death is quite commonly regarded as an entry into the mother's womb (for rebirth) Carl Jung, CW 5, Para 354

The interpretation would seem to be supported by the otherwise enigmatic function of the dog in the Mithraic sacrifice. In the monuments a dog is often shown leaping upon the bull killed by Mithras. In the light of the Persian legend, and on the evidence of the monuments themselves, this sacrifice should be conceived as the moment of supreme fruitfulness Carl Jung, CW 5, Para 354

This moment of supreme fruitfulness is most beautifully portrayed in the Mithraic relief at Heddernheim. On one side of a large (formerly rotating) stone slab there is a stereotyped representation of the overthrow and sacrifice of the bull, while on the other side stand Sol with a bunch of grapes in his hand, Mithras with the cornucopia, and the dadophors bearing fruits,

in accordance with the legend that from the dead bull comes all fruitfulness: fruits from his horns, wine from his blood, corn from his tail, cattle from his semen, garlic from his nostrils, and so forth. Over this scene stands Sylvanus, the beasts of the forest leaping away from him Carl Jung, CW 5, Para 354

In this context the dog might very well have the significance suspected by Creuzer. Moreover the goddess of the underworld, Hecate, is dog-headed, like Anubis. As Canicula, she received dog sacrifices to keep away the pest Carl Jung, CW 5, Para 355

Hecate's close relation to the moon-goddess suggests that she was a promoter of growth. Hecate was the first to bring Demeter news of her stolen daughter, another reminder of Anubis Carl Jung, CW 5, Para 355

Dog sacrifices were also offered to Eileithyia, the goddess of birth, and Hecate herself (fig. 258.58) is, on occasion, a goddess of marriage and birth Carl Jung, CW 5, Para 355

The dog is also the regular companion of Aesculapius, the god of healing, who, while still a mortal, raised a man from the dead and was struck by a thunderbolt as a punishment. These associations help to explain the following passage in Petronius: I earnestly beseech you to paint a small dog round the foot of my statue so that by your kindness I may attain to life after death Carl Jung, CW 5, Para 355

Diocletian dedicated a crypt to Hecate, with 365 steps leading down to it. Cave mysteries in her honor seem also to have been celebrated in Samothrace. The Hecate mysteries flourished in Rome towards the end of the fourth century Carl Jung, CW 5, Para 577

Hecate plays an important part in Greek syncretism, being confused with Artemis, who was also called the, 'far-hitting,' or 'she who hits at will,' a name that once more reveals her superordinate power. Artemis is the huntress with hounds, and Hecate too is the wild huntress prowling at night Carl Jung, CW 5, Para 577

The goddess of the underworld, Hecate, is sometimes represented with a horse's head As goddess of the underworld, Hecate, is dog-headed, like Anubis. As Canicula, she received dog sacrifices to keep away the pest Carl Jung, CW 5, Para 355

As guardian of the gate of Hades and as the triple-bodied goddess of dogs, she is more or less identical with Cerberus. Thus, in bringing up Cerberus, Heracles was really bringing the vanquished mother of death to the upper world Carl Jung, CW 5, Para 577

It is she who sends that horrible and fearful night-time apparition, the Empusa, which Aristophanes says comes wrapped in a bladder swollen with blood. According to Libanius, the mother of Aischines was also called Empusa, because she "rushed out upon women and children from dark places" Carl Jung, CW 5, Para 577

As an incubus or vampire she appears in the form of Empusa, or as a man-eating lamia or again in that more beautiful guise, the "Bride of Corinth". The Empusa had peculiar feet: one foot was of brass, the other of ass's dung Carl Jung, CW 5, Para 577

Hecate is a real spook-goddess of the night and phantoms, a nightmare; she is sometimes shown riding a horse, and in Hesiod she is counted the patron goddess of riders Carl

Jung, CW 5, Para 577

She [Hecate] is the mother of all witchcraft and witches, the patron goddess of Medea, because the power of the Terrible Mother is irresistible, coming as it does from the unconscious Carl Jung, CW 5, Para 577

The pillory where criminals were scourged was also known as the Hekate; and to her, as to the Roman Trivia, were dedicated junctions of three roads, forked roads, and crossroads. Where the roads branch off or meet, dog-sacrifices were offered to her, and there too were thrown the bodies of the executed: the sacrifice occurs at the point of union Carl Jung, CW 5, Para 577

Where the roads cross and enter into one another, thereby symbolizing the union of opposites, there is the "mother," the object and epitome of all union Carl Jung, CW 5, Para 577

Where the roads divide, where there is parting, separation, splitting, there we find the "division," the cleft the symbol of the mother and at the same time the essence of what the mother means for us, namely cleavage and farewell. Accordingly, the meaning of a sacrifice on this spot would be propitiation of the mother in both senses Carl Jung, CW 5, Para 577

Hecate is a birth-goddess (), the 'multiplier of cattle,' and goddess of marriage. In Orphic cosmogony, she occupies the centre of the world as Aphrodite and Gaia, if not as the world-soul itself Carl Jung, CW 5, Para 577

In Tralles, Hecate appears side by side with Priapus; there is also a Hecate Aphrodisias Carl Jung, CW 5, Para 577

The identification of Hecate with Brimo as the underworldly mother is understandable, also her identification with Persephone and Rhea, the primitive All-Mother. Her maternal significance also explains her confusion with Eileithyia, the goddess of childbirth Carl Jung, CW 5, Para 577

In the Hecate mysteries a wand, named the ('white leaved') was broken. This wand protected the purity of virgins and caused madness in anyone who touched it. We recognize here the motif of the sacred tree, the mother who might not be touched. Only a madman would attempt to do so Carl Jung, CW 5, Para 577

Her close relation to the moon-goddess suggests that she was a promoter of growth. Hecate was the first to bring Demeter news of her stolen daughter, another reminder of Anubis. Hecate herself is, on occasion, a goddess of marriage and birth Carl Jung, CW 5, Para 355

As the "spirit-mother" she sends madness, the moon sickness. This idea is perfectly sensible, because most forms of lunacy consist of affections which amount to an invasion by the unconscious and an inundation of the conscious mind Carl Jung, CW 5, Para 577

Nun is therefore invoked as "Amon, the primordial waters, which was in the beginning." He is also called the father of fathers, the mother of mothers Carl Jung, CW 5, Para 358

The word nun means 'young, fresh, new,' and also the new flood-waters of the Nile. In

a metaphorical sense it is used for the chaotic waters of the beginning, and for the birth-giving primary substance, which is personified as the goddess Naunet Carl Jung, CW 5, Para 359

From her sprang Nut, the sky-goddess, who is represented with a starry body or as a heavenly cow dotted with stars Carl Jung, CW 5, Para 359

A primitive myth tells of a sun-hero who has to be freed from a creeping plant. The girl dreams that her lover has fallen into the water; she tries to rescue him, but first has to pull seaweed out of the water, then she catches him Carl Jung, CW 5, Para 362

In an African myth the hero, after his deed, has to be disentangled from the seaweed Carl Jung, CW 5, Para 362

In a Polynesian story the hero's canoe is caught in the tentacles of a giant polyp, just as Ra's barge was entwined by the nocturnal serpent on the night sea journey Carl Jung, CW 5, Para 362

The motif of entwining also occurs in Sir Edwin Arnold's poetic version of the story of Buddha's birth:

Queen Maya stood at noon, her days fulfilled,

Under a palsa in the palace-grounds,

A stately trunk, straight as a temple-shaft,

With crown of glossy leaves and fragrant blooms.

And knowing the time come for all things knew

The conscious tree bent down its boughs to make.

A bower about Queen Maya's majesty:

And Earth put forth a thousand sudden flowers.

To spread a couch; while, ready for the bath,

The rock hard by gave out a limpid stream.

Of crystal flow. So brought she forth her child (The Light of Asia, p. 5) Carl Jung, CW 5, Para 362

There is a very similar motif in the cult-legend of the Samian Hera. Every year her image "disappeared" from the temple, attached itself to a lygos-tree somewhere on the seashore, and was entwined in its branches Carl Jung, CW 5, Para 363

In Plataea and Argos a wedding procession was staged in their honour with bridesmaids, wedding feast, etc. The festival took place in the "wedding month" of Gamelion (beginning of February). The image was carried to a lonely spot in the woods, which is in keeping with

Plutarch's story that Zeus kidnapped Hera and hid her in a cave on Mount Cithaeron Carl Jung, CW 5, Para 363

After our previous remarks we have to conclude that there is still another train of thought connected with the hierosgamos, namely, rejuvenation magic. The disappearance and hiding of the image in the wood, in the cave, on the seashore, its twining-about by the lygos-treefall this points to death and rebirth. The early springtime, Gamelion, fits in very well with this theory. In fact, Pausanias tells us that the Argive Hera became a virgin again by taking a yearly dip in the fountain of Kanathos Carl Jung, CW 5, Para 363

The motif of "devouring" which Frobenius has shown to be one of the commonest components of the sun myth, is closely connected with embracing and entwining Carl Jung, CW 5, Para 365

The "whale-dragon" always "devours" the hero, but the devouring can also be partial. For instance, a six-year-old girl who hated going to school once dreamt that her leg was encircled by a large red worm. Contrary to what might be expected, she evinced a tender interest in the creature Carl Jung, CW 5, Para 365

The motif of entwining is a mother-symbol. The entwining trees are at the same time birth-giving mothers, as in the Greek myth where there ash-trees, the mothers of the men of the Bronze Age. According to a Nordic myth, God created man by breathing life into a substance called tre (tree, wood) Carl Jung, CW 5, Para 367

In the wood of the world-ash Yggdrasill a human pair hide themselves at the end of the world, and from them will spring a new race of men. At the moment of universal destruction the world-ash becomes the guardian mother, the tree pregnant with death and life Carl Jung, CW 5, Para 367

The regenerative function of the world-ash helps to explain the image in the chapter of the Egyptian Book of the Dead called "The Gate of Knowledge of the Souls of the East": Carl Jung, CW 5, Para 367

The hero often has to steer his ship between two rocks that clash together. (A similar idea is that of the biting door or the snapping tree-trunk.) In its passage the stern of the ship (or the tail of the bird) is pinched off, another reminder of the mutilation motif (twisting out the arm) Carl Jung, CW 5, Para 367

The 19th-cent. German poet J. V. von Scheffel uses this image in his poem "A herring loved an oyster." The poem ends with the oyster nipping off the herring's head in a kiss. The doves which bring Zeus his ambrosia have to pass through the clashing rocks Carl Jung, CW 5, Para 367

Frobenius points out that these rocks are closely connected with the rocks or caves that only open at a magic word. The most striking illustration of this is a South African myth: "You must call the rock by name and cry loudly: 'Rock Untunjambili, open, so that I may enter."' But if the rock does not want to open, it answers: "The rock will not open to children, it opens to the swallows that fly in the air" (Frobenius, Zeitalter p. 407) Carl Jung, CW 5, Para 367

The remarkable thing is that no human power can open the rock, only the magic word or a bird. This formulation implies that opening the rock is an undertaking that can never be

accomplished in reality, it can only be wished. Wünschen (wish) in Middle High German means the “power to do something extraordinary.” The bird is a symbol of “wishful thinking” Carl Jung, CW 5, Para 367

The idea is that Ra rises up, born from the tree. The representations of the sun-god Mithras should probably be interpreted in the same way Carl Jung, CW 5, Para 368

In the Heddernheim Relief, Mithras is shown with half his body rising from the top of a tree, and in other monuments half his body is stuck in the rock, which clearly points to the rock-birth Carl Jung, CW 5, Para 368

Often there is a stream near Mithras’ birthplace. This conglomeration of symbols is also found in the birth of Aschanes, the first Saxon king, who grew from the Harz rocks in the middle of a wood near a fountain Carl Jung, CW 5, Para 368

Nor is it surprising that Christian legend transformed the tree of death, the Cross, into the Tree of Life, so that Christ is often shown hanging on a green tree among the fruit Carl Jung, CW 5, Para 368

The derivation of the Cross from the Tree of Life, which was an authentic religious symbol even in Babylonian times, is considered entirely probable by Zöckler, an authority on the history of the Cross. The pre-Christian meaning of so universal a symbol does not contradict this view; quite the contrary, for its meaning is life Carl Jung, CW 5, Para 368

Nor does the existence of the cross in the sun-cult (where the regular cross and the swastika represent the sun-wheel) and in the cult of the love-goddesses in any way contradict its historical significance. Christian legend has made abundant use of this symbolism Carl Jung, CW 5, Para 368

As we know, it was through Adam’s guilt that sin and death came into the world, and Christ through his death redeemed us from the guilt. If we ask, In what did Adam’s guilt consist? the answer is that the unpardonable sin to be punished by death was that he dared to eat of the tree of Paradise Carl Jung, CW 5, Para 368

The consequences of this are described in a Jewish legend: one who was permitted to gaze into Paradise after the Fall saw the tree and the four streams, but the tree was withered, and in its branches lay a babe. The “mother” had become pregnant Carl Jung, CW 5, Para 368

According to German legend, the saviour will be born when he can be rocked in a cradle made from the wood of a tree that is now but a feeble shoot sprouting from a wall Carl Jung, CW 5, Para 368

The formula runs: “A lime tree shall be planted, that shall throw out two plantschen [boughs] above, and out of their wood is a poie [buoy] to be made; the first child that therein lies is doomed to be brought from life to death by the sword, and then will salvation ensue” (Grimm, III, p. 969) Carl Jung, CW 5, Para 368

The legend relates that Lilith rose up into the air through the magic of God’s name and hid herself in the sea. Adam forced her to come back with the help of three angels, whereupon

Lilith changed into a nightmare or lamia who haunted pregnant women and kidnapped new-born infants Carl Jung, CW 5, Para 369

The original legend is that Lamia seduced Zeus, but the jealous Hera caused her to bring only dead children into the world. Ever since then, the raging Lamia has persecuted children, whom she destroys whenever she can Carl Jung, CW 5, Para 369

This motif is a recurrent one in fairytales, where the mother often appears as a murderess or eater of human flesh; a well-known German paradigm is the story of Hansel and Gretel. Lamia is also the name of a large, voracious fish, which links up with the whale-dragon motif worked out by Frobenius. Once again we meet the idea of the Terrible Mother in the form of a voracious fish, a personification of death Carl Jung, CW 5, Para 369

As mentioned above, Adam forced Lilith to come back with the help of three angels. Here we may discern, perhaps, the motif of the "helpful bird "angels are really birds. Cf. the feather-dress of the "soul-birds" in the underworld Carl Jung, CW 5, Para 369

In the Mithraic sacrifice the messenger of the gods the "angel "was a raven; the messenger is winged (Hermes) Carl Jung, CW 5, Para 369

In Jewish tradition angels are masculine. The symbolism of the three angels is important because it signifies the upper, aerial, spiritual triad in conflict with the one lower, feminine power Carl Jung, CW 5, Para 369

The riding takes on a special aspect in the light of researches into child psychology: the two contributions of Freud and myself have established the fear-significance of horses on the one hand, and the sexual meaning of riding fantasies on the other Carl Jung, CW 5, Para 370

The essential feature is the rhythm, which assumes a sexual significance only secondarily. If we take these factors into account, it will not surprise us to hear that the maternal world-ash Yggdrasill is called the Schreckross (terrible horse) in German Carl Jung, CW 5, Para 370

Cannegieter says of nightmares: Even today the peasants drive away these female spirits (mother-goddesses, moirae) by throwing the bone of a horse's head upon the roof, and you can often see such bones on peasant houses hereabouts. But at night lamias are believed to ride at the time of the first sleep and to tire out the horses for long journeys (Epistola de ara ad Noviomagum reperta, p. 25) Carl Jung, CW 5, Para 370

A synonym for the nightmare is the troll or "treader." The treading movement has been verified by the experience of Freud and myself with children, which shows that a secondary sexual meaning attaches to stamping or kicking, though the rhythm is obviously primary Carl Jung, CW 5, Para 370

May it perhaps point back to the great primordial image of the mother, who was once our only world and later became the symbol of the whole world? Carl Jung, CW 5, Para 373

Goethe says of the Mothers that they are "thronged round with images of all creation." Even the Christians could not refrain from reuniting their Mother of God with the water: "Ave maris stella" are the opening words of a hymn to Mary Carl Jung, CW 5, Para 373

It is probably significant that the infantile word ma-ma (mother's breast) is found in all languages, and that the mothers of two religious heroes were called Mary and Maya Carl Jung, CW 5, Para 373

Horus vanquished the wicked Set who had murdered his father Osiris, but Isis set him free again Carl Jung, CW 5, Para 374

Outraged, Horus lifted his hand against his mother and snatched the royal diadem from her head, in place of which Thoth gave her a cow's head. Horus then vanquished Set for a second time Carl Jung, CW 5, Para 374

In the Greek legend, Typhon (Set) is a dragon. But even without this confirmation it is evident that Horus' fight is the typical fight of the sun-hero with the "whale dragon" who, as we know, is a symbol of the Terrible Mother, of the voracious maw, the jaws of death in which men are crunched and ground to pieces Carl Jung, CW 5, Para 374

Whoever conquers this monster wins to eternal youth. But to this end, defying all danger, he must descend into the belly of the monster ("journey to hell") and sojourn there for some time ("night sea imprisonment:" Frobenius) Carl Jung, CW 5, Para 374

The fight with the "nocturnal serpent" accordingly signifies conquest of the mother, who is suspected of an infamous crime, namely the betrayal of her son. Complete confirmation of all this is furnished by the fragments of the Babylonian Creation Epic discovered by George Smith, most of which come from the library of Assurbanipal. The text dates from about the time of Hammurabi (2000 B.C.) Carl Jung, CW 5, Para 375

From this account of the Creation we learn that Ea, the son of the watery deep and god of wisdom, has overthrown Apsu. Apsu is the progenitor of the great gods, so Ea has conquered the father. But Tiamat, the mother of the gods, plots revenge, and arrays herself for battle against them Carl Jung, CW 5, Para 375

Against the fearful hosts of Tiamat the gods finally put up Marduk, the god of spring, who represents the victorious sun. Marduk prepares himself for battle and forges his invincible weapons Carl Jung, CW 5, Para 376

Since he [Marduk] is psychologically an archetype of the Self, his divinity only confirms that the Self is numinous, a sort of god, or having some share in the divine nature Carl Jung, CW 5, Para 612

The hero is the protagonist of God's transformation in man; he corresponds to what I call the "mana personality." The mana personality has such an immense fascination for the conscious mind that the ego all too easily succumbs to the temptation to identify with the hero, thus bringing on a psychic inflation with all its consequences. For this reason the repugnance felt by certain ecclesiastical circles for the "inner Christ" is understandable enough, at least as a preventive measure against the danger of psychic inflation which threatens the Christian European Carl Jung, CW 5, Para 612

Heroes are usually wanderers, and wandering is a symbol of longing, of the restless urge which never finds its object, of nostalgia for the lost mother. The sun comparison can easily

be taken in this sense: the heroes are like the wandering sun, from which it is concluded that the myth of the hero is a solar myth Carl Jung, CW 5, Para 299

It seems to us, rather, that he is first and foremost a self-representation of the longing of the unconscious, of its unquenched and unquenchable desire for the light of consciousness. But consciousness, continually in danger of being led astray by its own light and of becoming a rootless will o' the wisp, longs for the healing power of nature, for the deep wells of being and for unconscious communion with life in all its countless forms Carl Jung, CW 5, Para 299

It is not man as such who has to be regenerated or born again as a renewed whole, but, according to the statements of mythology, it is the hero or god who rejuvenates himself. These figures are generally expressed or characterized by libido-symbols (light, fire, sun, etc.), so that it looks as if they represented psychic energy. They are, in fact, personifications of the libido Carl Jung, CW 5, Para 388

Thus Khnum, the

maker,' the

potter,' the 'builder,' shapes his egg on the potter's wheel, for he is "immortal growth, his own generation and his own self-birth, the creator of the egg that came out of the primeval waters" Carl Jung, CW 5, Para 389

The Egyptian Book of the Dead says: "I have risen like the mighty hawk that comes forth from his egg," and: "I am the creator of Nun, who has taken up his abode in the underworld. My nest is not seen and my egg is not broken" Carl Jung, CW 5, Para 389

Yet another passage speaks of "that great and glorious god in his egg, who created himself for that which came forth from him". Therefore the god is also called Nagaga-uer, the "Great Cackler." (Book of the Dead 98:2: "I cackle like the goose, and whistle like the hawk") Carl Jung, CW 5, Para 389

The legend says that all creatures had pledged themselves not to harm Baldur; only the mistletoe was forgotten, because she was supposed to be too young Carl Jung, CW 5, Para 392

Mistletoe was also a sovereign remedy against barrenness. In Gaul, it was only after offering sacrifice that the Druid was allowed, amid solemn ceremonies, to climb the sacred oak and cut the ritual branch of mistletoe Carl Jung, CW 5, Para 392

That which grows on the tree is the child, or oneself, in renewed and rejuvenated form; and that is precisely what one cannot have, because the incest prohibition forbids it Carl Jung, CW 5, Para 392

We are told that the mistletoe which killed Baldur was "too young"; hence this clinging parasite could be interpreted as the "child of the tree" Carl Jung, CW 5, Para 392

But as the tree signifies the origin in the sense of the mother, it represents the source of life, of that magical life-force whose yearly renewal was celebrated in primitive times by the homage paid to a divine son, a puer aeternus Carl Jung, CW 5, Para 392

The graceful Baldur is such a figure. This type is granted only a fleeting existence, because he is never anything but an anticipation of something desired and hoped for Carl Jung, CW 5, Para 392

This is so literally true that a certain type of “mother’s son” actually exhibits all the characteristics of the flower-like, youthful god, and even dies an early death Carl Jung, CW 5, Para 392

The reason is that he only lives on and through the mother and can strike no roots in the world, so that he finds himself in a state of permanent incest. He is, as it were, only a dream of the mother, an ideal which she soon takes back to herself, as we can see from the Near Eastern “son-gods,” like Tammuz, Attis, Adonis, and Christ Carl Jung, CW 5, Para 392

The mistletoe, like Baldur, represents the “child of the mother,” the longed-for, revivified life-force that flows from her Carl Jung, CW 5, Para 392

But, separated from its host, the mistletoe dies. Therefore, when the Druid cuts it, he kills it and by this act symbolically repeats the fatal self-castration of Attis and the wounding of Adonis by the boar’s tusk Carl Jung, CW 5, Para 392

This is the dream of the mother in matriarchal times, when there was as yet no father to stand by the side of the son Carl Jung, CW 5, Para 392

But why should the mistletoe kill Baldur, since it is, in a sense, his sister or brother? The lovely apparition of the puer aeternus is, alas, a form of illusion. In reality he is a parasite on the mother, a creature of her imagination, who only lives when rooted in the maternal body Carl Jung, CW 5, Para 393

In actual psychic experience the mother corresponds to the collective unconscious, and the son to consciousness, which fancies itself free but must ever again succumb to the power of sleep and a deadening unconsciousness Carl Jung, CW 5, Para 393

The mistletoe, however, corresponds to the shadow brother, and whom the psychotherapist regularly meets as a personification of the personal unconscious. Just as, at evening, the shadows lengthen and finally engulf everything, so the mistletoe betokens Baldur’s end. Being an equivalent of Baldur himself, it is fetched down from the tree like the “treasure hard to attain “The shadow becomes fatal when there is too little vitality or too little consciousness in the hero for him to complete his heroic task Carl Jung, CW 5, Para 393

The “son of the mother” as a mere mortal, dies young, but as a god he can do that which is forbidden and superhuman: he commits the magical incest and thus obtains immortality. In the myths the hero does not die; instead, he has to overcome the dragon of death Carl Jung, CW 5, Para 394

The black horse Apaosha also has this meaning in the old Persian Song of Tishtriya, where he blocks up the sources of the rain-lake. The white horse, Tishtriya, makes two futile attempts to vanquish Apaosha; at the third attempt he succeeds with the help of Ahura-Mazda. Whereupon the sluices of heaven are opened and the fertilizing rain pours down upon the earth Carl Jung, CW 5, Para 395

In this symbolism we can see very clearly how libido fights against libido, instinct against

instinct, how the unconscious is in conflict with itself, and how mythological man perceived the unconscious in all the adversities and contrarieties of external nature without ever suspecting that he was gazing at the paradoxical background of his own consciousness Carl Jung, CW 5, Para 395

The dragon represents the negative mother-imago and thus expresses resistance to incest or fear of it. Dragon and snake are symbolic representations of the fear of the consequences of breaking the taboo and regressing to incest. It is therefore understandable that we should come over and over again upon the motif of the tree and the snake. Snakes and dragons are especially significant as guardians or defenders of the treasure Carl Jung, CW 5, Para 395

The tree entwined by the snake may therefore be taken as the symbol of the mother who is protecting against incest by fear. This symbol is frequently found on Mithraic monuments. The rock with a snake coiled round it has a similar meaning, for Mithras was born from a rock, as was the god Men Carl Jung, CW 5, Para 396

This fact points to the father as the cause of the fear, which as we know prompted Freud to his famous aetiological myth of the primal horde with the jealous old patriarch at the top Carl Jung, CW 5, Para 396

The immediate model for this is obviously the jealous Yahweh, struggling to protect his wife Israel from whoredoms with strange gods Carl Jung, CW 5, Para 396

The father represents the world of moral commandments and prohibitions, although, for lack of information about conditions in prehistoric times, it remains an open question how far the first moral laws arose from dire necessity rather than from the family preoccupations of the tribal father. At all events it would be easier to keep one's eye on a box full of spiders than on the females of a primal horde Carl Jung, CW 5, Para 396

The father is the representative of the spirit, whose function it is to oppose pure instinctuality. That is his archetypal role, which falls to him regardless of his personal qualities; hence he is very often an object of neurotic fears for the son Carl Jung, CW 5, Para 396

Accordingly, the monster to be overcome by the son frequently appears as a giant who guards the treasure Carl Jung, CW 5, Para 396

An excellent example of this is the giant Humbaba in the Gilgamesh Epic, who guards the garden of Ishtar. Gilgamesh conquers the giant and wins Ishtar, whereupon Ishtar immediately makes sexual advances to her deliverer. These facts should be sufficient to explain the role played by Horus in Plutarch, and especially the violent treatment of Isis Carl Jung, CW 5, Para 396

Here the bull has the same significance as the monster and may be compared with the bull that was conquered by Gilgamesh. He represents the father who paradoxically enforces the incest prohibition as a giant and dangerous animal Carl Jung, CW 5, Para 396

The paradox lies in the fact that, like the mother who gives life and takes it away again as the "terrible" or "devouring" mother, the father apparently lives a life of unbridled instinct and yet is the living embodiment of the law that thwarts instinct Carl Jung, CW 5, Para 396

There is, however, a subtle though important distinction to be made here: the father commits no incest, whereas the son has tendencies in that direction. The paternal law is directed against incest with all the violence and fury of the uninhibited instinct. Freud overlooks the fact that the spirit too is dynamic, as indeed it must be if the psyche is not to lose its self-regulating equilibrium Carl Jung, CW 5, Para 396

But as the "father," the representative of moral law, is not only an objective fact, but a subjective psychic factor in the son himself, the killing of the bull clearly denotes an overcoming of animal instinct, and at the same time a secret and furtive overcoming of the power of the law, and hence a criminal usurpation of justice. Since the better is always the enemy of the good, every drastic innovation is an infringement of what is traditionally right, and may sometimes even be a crime punishable by death Carl Jung, CW 5, Para 396

As we know, this dilemma played an important part in the psychology of early Christianity, at the time when it came into conflict with Jewish law. In the eyes of the Jews, Christ was undoubtedly a law-breaker. Not unjustly is he called Adam Secundus; for just as the first Adam became conscious through sin, through eating of the tree of knowledge, so the second Adam broke through to the necessary relation with a fundamentally different God Carl Jung, CW 5, Para 396

A third image shows Mithras reaching for the nimbus on the head of Sol. This act recalls the Christian idea that those who have conquered win the crown of eternal life Carl Jung, CW 5, Para 397

In the fourth image Sol kneels before Mithras These last two pictures [3 and 4], show that Mithras has arrogated to himself the strength of the sun and become its lord. He has conquered his animal nature (the bull). Animals represent instinct, and also the prohibition of instinct, so that man becomes human through conquering his animal instinctuality. Mithras has thus sacrificed his animal naturae solution already anticipated in the Gilgamesh Epic by the hero's renunciation of the terrible Ishtar Carl Jung, CW 5, Para 398

In the Mithraic sacrifice the conquest of instinctuality no longer takes the archaic form of overpowering the mother, but of renouncing one's own instinctive desires. The primitive idea of reproducing oneself by entering into the mother's body has become so remote that the hero, instead of committing incest, is now sufficiently far advanced in the domestic virtues to seek immortality through the sacrifice of the incest tendency Carl Jung, CW 5, Para 398

This significant change finds its true fulfillment only in the symbol of the crucified God. In atonement for Adam's sin a bloody human sacrifice is hung upon the tree of life. Although the tree of life has a mother significance, it is no longer the mother, but a symbolic equivalent to which the hero offers up his life. One can hardly imagine a symbol which expresses more drastically the subjugation of instinct Carl Jung, CW 5, Para 398

Underlying all fertility magic is the thought of renewal, which in turn is intimately connected with the cross. The idea of union expressed in the cross symbol is found in Plato's Timaeus, where the demiurge joins the parts of the world-soul together by means of two sutures, which form a X (chi) Carl Jung, CW 5, Para 404

A peculiar use is made of the cross symbol by the Muyscas Indians, of Peru; two ropes are stretched crosswise over the surface of the water (pool or stream), and fruits, oil, and

precious stones are thrown in as a sacrifice at the point of intersection Carl Jung, CW 5, Para 407

Here the divinity is evidently the water, not the cross, which only signifies the place of sacrifice. The symbolism is somewhat obscure. Water, and particularly deep water, usually has a maternal significance, roughly corresponding to “womb.” The point of intersection of the two ropes is the point of union where the “crossing” takes place Carl Jung, CW 5, Para 407

It is clear from all this that the cross is a many-faceted symbol, and its chief meaning is that of the “tree of life” and the “mother.” Its symbolization in human form is therefore quite understandable Carl Jung, CW 5, Para 411

Underlying all fertility magic is the thought of renewal, which in turn is intimately connected with the cross. The idea of union expressed in the cross symbol is found in Plato’s Timaeus, where the demiurge joins the parts of the world-soul together by means of two sutures, which form a X (chi) Carl Jung, CW 5, Para 404

It is important to know something about the attributes of this life-giving god. Tum of On-Heliopolis bears the name “the father of his mother,” and his attendant goddess, Jusas or Nebit-Hotpet, is called sometimes the mother, sometimes the daughter, and sometimes the wife of the god Carl Jung, CW 5, Para 408

The first day in autumn is known in the Heliopolitan inscriptions as the “feast-day of the goddess Jusasit,” as the arrival of the “sister who makes ready to unite herself with her father.” It is the day on which “the goddess Mehnit completes her work, so that the god Osiris may enter the left eye.” It is also called “the day for filling the sacred eye with what it needs” Carl Jung, CW 5, Para 408

In the autumn equinox the heavenly cow with the moon-eye, Isis, receives the seed that begets Horus (the moon being the guardian of the seed) Carl Jung, CW 5, Para 408

The “eye” evidently stands for the female genitals, as is clear from the myth of Indra, who, as a punishment for his wantonness, was smitten with yonis all over his body, but was so far pardoned by the gods that the shameful yonis were changed into eyes Carl Jung, CW 5, Para 408

The little image reflected in the eye, the “pupilla,” is a “child.” The great god becomes a child again: he enters into the mother’s womb for self-renewal Carl Jung, CW 5, Para 408

Tum of Pithum-Heroopolis not only carries the crux ansata as a symbol, but even has this emblem as the commonest of his titles, ankh or ankhi, which means

```
life' or the
```

Living One’ Carl Jung, CW 5, Para 410

Tum was chiefly worshipped as the Agathodaimon serpent, of whom it was said: “The sacred Agathodaimon serpent goes forth from the city of Nezi.” The snake, because it casts its skin, is a symbol of renewal, like the scarab beetle, a sun-symbol, which was believed to be of masculine sex only and to beget itself Carl Jung, CW 5, Para 410

“Khnum” (another name for Tum, but always the sun-god is meant) comes from the verb num, ‘to combine or unite.’ Khnum appears as the potter and maker of his own egg Carl Jung, CW 5, Para 410

The various forms of the crux ansata have the meaning of “life” and “fruitfulness,” and also of “union,” which can be interpreted as the hierosgamos of the god with his mother for the purpose of conquering death and renewing life. This mythologem, it is plain, has passed into Christianity CW Carl Jung, CW 5, 411

The separation of the son from the mother signifies man’s leave-taking from animal unconsciousness. It was only the power of the “incest prohibition” that created the self-conscious individual, who before had been mindlessly one with the tribe; and it was only then that the idea of the final death of the individual became possible Carl Jung, CW 5, Para 415

Thus through Adam’s sin, which lay precisely in his becoming conscious, death came into the world Carl Jung, CW 5, Para 415

The neurotic who cannot leave his mother has good reasons for not doing so: ultimately, it is the fear of death that holds him there. It seems as if no idea and no word were powerful enough to express the meaning of this conflict Carl Jung, CW 5, Para 415

Certainly the struggle for expression which has continued through the centuries cannot be motivated by what is narrowly and crudely conceived as “incest” Carl Jung, CW 5, Para 415

We ought rather to conceive the law that expresses itself first and last in the “incest prohibition” as the impulse to domestication, and regard the religious systems as institutions which take up the instinctual forces of man’s animal nature, organize them, and gradually make them available for higher cultural purposes Carl Jung, CW 5, Para 415

Incest prohibition is more a question of phenomena requiring a teleological explanation than of simple causalities Carl Jung, CW 5, Para 332

The incest prohibition acts as an obstacle and makes the creative fantasy inventive: for instance, there are attempts to make the mother pregnant by means of fertility magic Carl Jung, CW 5, Para 332

It does not constitute a primary phenomenon [as Freud believed] in the process of symbol-formation, but goes back to something more fundamental, namely the primitive system of marriage classes Carl Jung, CW 5, Para 332

His [Faust] equally importunate longing for the beauties of this world plunged him into renewed ruin, doubt and wretchedness, which culminated in the tragedy of Gretchen’s death Carl Jung, CW 5, Para 119

Faust’s mistake was that he made the worst of both worlds by blindly following the urge of his libido, like a man overcome by strong and violent passions. Faust’s conflict is a reflection of the collective conflict at the beginning of the Christian era, but in him, curiously enough, it takes the opposite course Carl Jung, CW 5, Para 119

Faust takes the opposite road; for him the ascetic ideal is sheer death. He struggles for liberation and wins life by binding himself over to evil, thereby bringing about the death of what he loves most: Gretchen Carl Jung, CW 5, Para 120

He [Faust] tears himself away from his grief, and sacrifices his life in unceasing work, thus saving many lives. His double mission as saviour and destroyer had been hinted at from the beginning Carl Jung, CW 5, Para 120

Faust's desire, like that of every hero, is a yearning for the mystery of rebirth, for immortality; therefore his way leads out to sea and down into the maw of death, that frighteningly narrow "passage" which signals the new day Carl Jung, CW 5, Para 417

We have already seen that the libido directed towards the mother actually symbolizes her as a horse. The mother-imago is a libido-symbol and so is the horse; at some points the meaning of the two symbols overlaps. But the factor common to both is the libido Carl Jung, CW 5 Para 421

The steeds of mythology are always invested with great significance and very often appear anthropomorphized. Thus Men's horse has human forelegs, Balaam's ass human speech, and the bull upon whose back Mithras springs to deliver the death blow is a life-giving deity Carl Jung, CW 5, Para 421

In the Iliad, the horse prophesies evil. They hear the words the corpse utters on its way to the grave words which no human can hear. Caesar was told by his human-footed horse (probably derived from an identification of Caesar with the Phrygian Men) that he would conquer the world Carl Jung, CW 5, Para 421

An ass prophesied to Augustus the victory of Actium. Horses also see ghosts. All these things are typical manifestations of the unconscious. We can therefore see why the horse, as a symbol of the animal component in man, has numerous connections with the devil Carl Jung, CW 5, Para 421

The Creator God [takes] on an astromythological, or rather an astrological, character. He has become the sun, and thus finds a natural expression that transcends his moral division into a Heavenly Father and his counterpart the devil. Carl Jung; CW 5, Para 176.

Horses also signify fire and light, like the fiery horses of Helios. Hector's horses were called Xanthos (yellow, glaring), Podargos (swift-footed), Lampos (shining), and Aithon (burning). Siegfried leaps over the wall of fi re on the thunder-horse Grani, who was sired by Sleipnir and was the only one capable of taking the fiery hedge. There is a distinct fi re symbolism in the mysticquadriga mentioned by Dio Chrysostom: the highest god always drives his chariot round in a circle. The chariot is drawn by four horses, and the outside horse moves very quickly. He has a shining coat, bearing on it the signs of the zodiac and the constellations. The second horse goes more slowly and is illuminated on one side only. The third horse is slower still, and the fourth horse runs round himself. Once, however, the outside horse set the mane of the second horse on fi re with his fiery breath, and the third horse drenched the fourth with streams of sweat. Then the horses dissolve and merge with the substance of the strongest and most fiery, which now becomes the charioteer. The horses represent the four elements. The catastrophe signifies world conflagration and the deluge, after which the division of God

into Many cases, and the divine One is restored. 27 There can be no doubt that the quadriga is meant as an astronomical symbol of Time. We saw in Part I that the Stoic conception of fate is a fi re-symbol, so it is a logical continuation of this idea when the closely related conception of time exhibits the same libido symbolism. Carl Jung, CW 5, Para 423

The Brihadaranyaka Upanishad says:

Carl Jung, CW 5, Para 424

Here the horse is undoubtedly conceived as a time-symbol, besides being the whole world. In the Mithraic religion we meet with a strange god, Aion (pl. XLIV), also called Chronos or deus leontocephalus because he is conventionally represented as a lion-headed human figure. He stands in a rigid attitude, wrapped in the coils of a serpent whose head juts forward over the head of the lion. In each hand he holds a key, on his breast is a thunderbolt, on his back are the four wings of the wind, and on his body are the signs of the zodiac.

His attributes are a cock and implements. In the Carolingian Utrecht Psalter, which was based on classical models, Aion is shown as a naked man bearing in his hand a snake. As the name indicates, he is a time-symbol, and is composed entirely of libido-images. The lion, the zodiacal sign for the torrid heat of summer, is the symbol of concupiscentia effrenata, “frenzied desire.” (“My soul roars with the voice of a hungry lion,” says Mechthild of Magdeburg.)

In the Mithraic mysteries the snake is often shown as the antagonist of the lion, in accordance with the myth of the sun’s fight with the dragon. In the Egyptian Book of the Dead, Tum is addressed as a tom-cat, because in that form he fought the Apophis-serpent. To be “entwined” or embraced is the same as to be “devoured,” which as we saw means entering into the mother’s womb. Time is thus defined by the rising and setting sun, by the death and renewal of libido, the dawning and extinction of consciousness. Carl Jung, CW 5, Para 425

The attribute of the cock again points to time, and the implements to creation through time (Bergson’s “durée créatrice”). Oazdes (Ahura-Mazda) and Ahriman came into being through Zrwan akarana, “infinitely long duration.” So time, this empty and purely formal concept, is expressed in the mysteries through transformations of the creative force, libido, just as time in physics is identical with the flow of the energic process. Macrobius remarks: “By the lion’s head the present time is indicated . . . because its condition is strong and fervent.” 31 Philo Judaeus evidently knows better: Time is regarded as a god by evil men who wish to hide the Essential Being. . .. Vicious men think that Time is the cause of the world, but the wise and good think it is God. Carl Jung, CW 5, Para Carl Jung, CW 5, Para 425

There is a similar instinct-sacrificing symbolism in the Mithraic religion, where the essential portions of the mystery consisted in the catching and subduing of the bull. A parallel figure to Mithras is the Original Man, Gayomart. He was created together with his ox, and the two lived in a state of bliss for six thousand years. But when the world entered the Aeon of Libra (the seventh zodiacal sign), the evil principle broke loose. In astrology, Libra is known as the “Positive House” of Venus, so the evil principle came under the dominion of the goddess of love, who personifies the erotic aspect of the mother. Since this aspect, as we have seen, is psychologically extremely dangerous, the classical catastrophe threatened to overtake the son. As a result of this constellation, Gayomart and his ox died only thirty years later. (The trials of Zarathustra also lasted for thirty years.) Fifty-five species of grain and twelve kinds of healing plants came from the dead ox. His seed entered into the moon for purification, but the seed of

Gayomart entered into the sun. This seems to suggest that the bull has a hidden feminine significance. Gosh or Drvashpa was the bull's soul and it was worshipped as a female divinity. At first she was so faint-hearted that she refused to become the goddess of cattle until, as a consolation, the coming of Zarathustra was announced to her. This has its parallel in the Purana where the earth received the promise of Krishna's coming. 33 Like Ardvisura, the goddess of love, Gosh rides in a chariot. So the bull-anima appears to be decidedly feminine. In astrology Taurus, too, is a House of Venus. The myth of Gayomart repeats in modified form the primitive "closed circle" of a self-reproducing masculine and feminine divinity. Carl Jung, CW 5, Para 662

That the thing perceived as an inner light, as the sun of the other world, is an emotional component of the psyche, is clear from Symeon's words: And questing after it, my spirit sought to comprehend the splendour it had seen but found it not as a creature and could not get away from created things, that it might embrace that uncreated and uncomprehended splendour. Nevertheless it wandered everywhere and strove to behold it. It searched through the air, it wandered over the heavens, it crossed the abysses, it searched, so it seemed, to the ends of the world. 36 But in all that it found nothing, for all was created. And I lamented and was sorrowful, and my heart burned, and I lived as one distraught in mind. But it came as it was wont, and descending like a luminous cloud, seemed to envelop my whole head, so that I cried out dismayed. But flying away again it left me alone. And when I wearily sought it, I realized suddenly that it was within me, and in the midst of my heart it shone like the light of a spherical sun. Carl Jung, CW 5, Para 141

Amenophis IV achieved, by his reforms, a psychologically valuable work of interpretation. He united all the bull, ram, crocodile, and pile-dwelling gods into the sun-disc and made it clear that their various attributes were compatible with those of the sun. A similar fate overtook Hellenic and Roman polytheism as a result of the syncretistic strivings of later centuries. An excellent illustration of this is in the beautiful prayer of Lucius to the Queen of Heaven (the moon): Queen of heaven, whether thou be named Ceres, bountiful mother of earthly fruits, or heavenly Venus, or Phoebus' sister, or Proserpina, who strikest terror with midnight ululations . . .. thou that with soft feminine brightness dost illume the walls of all cities . . . Carl Jung, CW 5, Para 138

Not a few traces of sun-worship are preserved in ecclesiastical art, for instance the nimbus round the head of Christ, and the haloes of the saints. Numerous fi re- and light-symbols are attributed to the saints in Christian legend. The twelve apostles, for example, were likened to the twelve signs of the zodiac and were therefore represented each with a star over his head. No wonder the heathen, as Tertullian reports, took the sun for the God of the Christians! "Some, in a more human and probable way, believe the Sun to be our god." Among the Manichees the sun actually was God. One of the most remarkable records of this period, an amalgam of pagan-Asiatic, Hellenistic, and Christian beliefs, is the 'Εξηϒησις περι των εν Ιερσιδι πραχθεντων, a book of fables which affords deep insight into syncretistic symbolism. There we find the following magical dedication: Δι 'Ηλιω θεϖ μεϒαλω βασιλει 'Ιησον. In certain parts of Armenia, Christians still pray to the rising sun, that it may "let its foot rest on the face of the worshipper." Carl Jung, CW 5, Para 163

Before I enter upon the contents of this second part, it seems necessary to cast a backward glance over the singular train of thought which the analysis of the poem "The Moth to the Sun" has revealed. Although this poem is very different from the preceding "Hymn of Creation," closer investigation of the longing for the sun has led us into a realm of mythological ideas that are closely related to those considered in the first poem: the Creator God, whose

dual nature was plainly apparent in the case of Job, has now taken on an astromythological, or rather an astrological, character. He has become the sun, and thus finds a natural expression that transcends his moral division into a Heavenly Father and his counterpart the devil. The sun, as Renan has observed, is the only truly “rational” image of God, whether we adopt the standpoint of the primitive savage or of modern science. In either case the sun is the father-god from whom all living things draw life; he is the fructifier and creator, the source of energy for our world. The discord into which the human soul has fallen can be harmoniously resolved through the sun as a natural object which knows no inner conflict. The sun is not only beneficial, but also destructive; hence the zodiacal sign for August heat is the ravaging lion which Samson slew in order to rid the parched earth of its torment. Yet it is in the nature of the sun to scorch, and its scorching power seems natural to man. It shines equally on the just and the unjust and allows useful creatures to flourish as well as the harmful. Therefore the sun is perfectly suited to represent the visible God of this world, i.e., the creative power of our own soul, which we call libido, and whose nature it is to bring forth the useful and the harmful, the good and the bad. That this comparison is not just a matter of words can be seen from the teachings of the mystics: when they descend into the depths of their own being they find “in their heart” the image of the sun, they find their own life-force which they call the “sun” for a legitimate and, I would say, a physical reason, because our source of energy and life actually is the sun. Our physiological life, regarded as an energy process, is entirely solar. The peculiar nature of this solar energy as inwardly perceived by the mystic is made clear in Indian mythology. The following passages, referring to Rudra, are taken from the Shvetashvatara Upanishad: There is one Rudra only, they do not allow a second, who rules all the worlds by his powers. Behind all creatures he stands, the Protector; having treated them, he gathers all beings together at the end of time. He has eyes on all sides, faces on all sides, arms on all sides, feet on all sides. He is the one God who created heaven and earth, forging all things together with his hands and wings. You who are the source and origin of the gods, the ruler of all, Rudra, the great seer, who of old gave birth to the Golden Seed – give us enlightenment! Carl Jung, CW 5, Para 176

The symbol for that portion of the zodiac in which the sun re-enters the yearly cycle at the time of the winter solstice is Capricorn, originally known as the “Goat-Fish” (αίγόχερως, “goat-horned”): the sun mounts like a goat to the tops of the highest mountains, and then plunges into the depths of the sea like a fish. The fish in dreams occasionally signifies the unborn child, because the child before its birth lives in the water like a fish; similarly, when the sun sinks into the sea, it becomes child and fish at once. The fish is therefore a symbol of renewal and rebirth. Carl Jung, CW 5, Para 290

The journey of Moses with his servant Joshua is a life-journey (it lasted eighty years). They grow old together and lose the life-force, i.e., the fish, which “in wondrous wise took its way to the sea” (setting of the sun). When the two notice their loss, they discover at the place where the source life is found (where the dead fish revived and sprang into the sea) Khidr wrapped in his mantle, sitting on the ground. In another version he was sitting on an island in sea, “in the wettest place on earth,” which means that he had just been born from the maternal depths. Where the fish vanished Khidr, the Verdant One, was born as a “son of the watery deep,” his head veiled, proclaiming divine wisdom, like the Babylonian Oannes-Ea, who was represented in fish form and daily came out of the sea as a fish to teach the people wisdom. Carl Jung, CW 5, Para 291

Oannes’ name was brought into connection with John’s. With the rising of the reborn sun the fish that dwelt in darkness, surrounded by all the terrors of night and death, becomes the

shining, fiery day-star. This gives the words of John the Baptist a special significance (Matthew 3:11): I indeed baptize you with water unto repentance; but he that cometh after me is mightier than I . . . he shall baptize you with the Holy Ghost, and with fire. Carl Jung, CW 5, Para 292

Following Vollers, we may compare Khidr and Elias (or Moses and his servant Joshua) with Gilgamesh and his brother Eabani (Enkidu). Gilgamesh wanders through the world, driven by fear and longing, to find immortality. His journey takes him across the sea to the wise Utnapishtim (Noah), who knows how to cross the waters of death. There Gilgamesh has to dive down to the bottom of the sea for the magical herb that is to lead him back to the land of men. On the return journey he is accompanied by an immortal mariner, who, banished by the curse of Utnapishtim, has been forbidden to return to the land of the blessed. But when Gilgamesh arrives home, a serpent steals the magic herb from him (i.e., the fish slips back into the sea). Because of the loss of the magic herb, Gilgamesh's journey has been in vain; instead he comes back in the company of an immortal, whose fate we cannot learn from the fragments of the epic. Jensen believes that this banished immortal is the prototype of Ahasuerus. Once again we meet the motif of the Dioscuri: mortal and immortal, the setting and rising sun. The Mithraic bull-sacrifice is often represented as flanked by the two dadophors, Gautes and Cautopates, one with a raised and the other with a lowered torch. They form a pair of brothers whose characters are revealed by the symbolic position of the torches. Cumont not unjustly connects them with the sepulchral Erotes, who as genies with inverted torches have a traditional meaning. One would stand for death, the other for life. There are certain points of resemblance between the Mithraic sacrifice (where the bull in the centre is flanked on either side by dadophors and the Christian sacrifice of the lamb (or ram). The Crucified is traditionally flanked by two thieves, one of whom ascends to paradise while the other descends to hell. The Semitic gods were often flanked by two paredroi; for instance, the Baal of Edessa was accompanied by Aziz and Monimos (Baal being astrologically interpreted as the sun, and Aziz and Monimos as Mars and Mercury). According to the Babylonian view, the gods are grouped into triads. Thus the two thieves somehow go together with Christ. The two dadophors are, as Cumont has shown, offshoots 61 from the main figure of Mithras, who was supposed to have a secret triadic character. Dionysius the Areopagite reports that the magicians held a feast in honour of τοϋ τρι-πλασίου Μίθρον (the threefold Mithras). Carl Jung, CW 5, Para 293

As Cumont observes, Cautes and Cautopates sometimes carry in their hands the head of a bull and of a scorpion respectively. Taurus and Scorpio are equinoctial signs, and this is a clear indication that the sacrifice was primarily connected with the sun cycle: the rising sun that sacrifices itself at the summer solstice, and the setting sun. Since it was not easy to represent sunrise and sunset in the sacrificial drama, this idea had to be shown outside it. Carl Jung, CW 5, Para 295

The psychic life-force, the libido, symbolizes itself in the sun or personifies itself in figures of heroes with solar attributes. At the same time it expresses itself through phallic symbols. Both possibilities are found on a late Babylonian gem from Lajard's collection. In the middle stands an androgynous deity. On the masculine side there is a snake with a sun halo round its head; on the feminine side another snake with a sickle moon above it. This picture has a symbolic sexual nuance: on the masculine side there is a lozenge, a favourite symbol of the female genitals, and on the feminine side a wheel without its rim. The spokes are thickened at the ends into knobs, which, like the fingers we mentioned earlier, have a phallic meaning. It seems to be a phallic wheel such as was not unknown in antiquity. There are obscene gems on which Cupid is shown turning a wheel consisting entirely of phalli. As to what the sun signifies, I discovered in the collection of antiquities at Verona a late Roman

inscription with the following symbols. Carl Jung, CW 5, Para 297

The symbolism is plain: sun = phallus, moon = vessel (uterus). This interpretation is confirmed by another monument from the same collection. The symbols are the same, except that the vessel has been replaced by the figure of a woman. Certain symbols on coins can probably be interpreted in a similar manner. In Lajards Recherches sur la culte de Vénus there is a coin from Perga, showing Artemis as a conical stone flanked by a masculine figure (alleged to be the deity Men) and a female figure (alleged to be Artemis). Men (otherwise called Lunus) appears on an Attic bas-relief with a spear, flanked by Pan with a club, and a female figure. From this it is clear that sexuality as well as the sun can be used to symbolize the libido. Carl Jung, CW 5, Para 298

One further point deserves mention here. The dadophor Cautopates is often represented with a cock and pine-cones. These are the attributes of the Phrygian god Men; whose cult was very widespread. He was shown with the pileus (or “Phrygian cap”) and pine-cones, riding on the cock, and also in the form of a boy, just as the dadophors were boyish figures. (This latter characteristic relates both them and Men to the Cabiri and Dactyls.) Now Men has affinities with Attis, the son and lover of Cybele. In Imperial times Men and Attis merged into one. Attis also wears the pileus like Men, Mithras, and the dadophors. As the son and lover of his mother he raises the incest problem. Incest leads logically to ritual castration in the Attis-Cybele cult; for according to legend the hero, driven mad by his mother, mutilates himself. I must refrain from going into this question more deeply at present, as I would prefer to discuss the incest problem at the end of this book. Here I would only point out that the incest motif is bound to arise, because when the regressing libido is introverted for internal or external reasons it always reactivates the parental imagos and thus apparently re-establishes the infantile relationship. But this relationship cannot be re-established, because the libido is an adult libido which is already bound to sexuality and inevitably imports an incompatible, incestuous character into the reactivated relationship to the parents. It is this sexual character that now gives rise to the incest symbolism. Since incest must be avoided at all costs, the result is either the death of the son lover or his self-castration as punishment for the incest he has committed, or else the sacrifice of instinctuality, and especially of sexuality, as a means of preventing or expiating the incestuous longing. Sex being one of the most obvious examples of instinctuality, it is sex which is liable to be most affected by these sacrificial measures, i.e., through abstinence. The heroes are usually wanderers, and wandering is a symbol of longing, of the restless urge which never finds its object, of nostalgia for the lost mother. The sun comparison can easily be taken in this sense: the heroes are like the wandering sun, from which it is concluded that the myth of the hero is a solar myth. It seems to us, rather, that he is first and foremost a self-representation of the longing of the unconscious, of its unquenched and unquenchable desire for the light of consciousness. But consciousness, continually in danger of being led astray by its own light and of becoming a rootless will o’ the wisp, longs for the healing power of nature, for the deep wells of being and for unconscious communion with life in all its countless forms. Carl Jung, CW 5, Para 299

The devil has a horse’s hoof and sometimes a horse’s form. At critical moments he shows the proverbial cloven hoof, just as, during the abduction of Hadding, Sleipnir suddenly looked out from behind Wotan’s mantle. The devil, like the nightmare, rides the sleeper; hence it is said that those who have nightmares are ridden by the devil. In Persian lore the devil is the steed of God. He represents the sexual instinct; consequently at the Witches’ Sabbath he appears in the form of a goat or horse Carl Jung, CW 5, Para 421

The sexual nature of the devil is imparted to the horse as well, so that this symbol is found in contexts where the sexual interpretation is the only one that fits. Loki propagates in the form of a horse, and so does the devil, as an ancient god of fire Carl Jung, CW 5, Para 421

Lightning, too, is represented theriomorphically as a horse. An uneducated hysterical patient once told me that as a child she was terrified of thunderstorms, because after each flash of lightning she saw a huge black horse rearing up to the sky. Indian legend tells of the black thunder-horse of Yama, the god of death, who dwells in the south, the mythical place of storms. In German folklore the devil is a god of lightning who hurls the horse's hoof lightning on the rooftops Carl Jung, CW 5, Para 421

In accordance with the primitive idea that thunder fertilizes the earth, lightning and horses' hoofs both have a phallic meaning. An uneducated woman patient who had been violently forced by her husband to have coitus with him often dreamt that a wild horse leapt over her and kicked her in the abdomen with his hind foot Carl Jung, CW 5, Para 421

Pegasus struck the fountain of Hippocrene from the earth with his hoof. A Corinthian statue of Bellerophon, which was also a fountain, was made so that the water flowed from the hoof of the horse. Baldur's horse struck forth a spring with his kick. The horse's foot is therefore the dispenser of fruitful moisture Carl Jung, CW 5, Para 421

In German legend, Mother Holle, the goddess of childbirth, comes on horseback. Pregnant women nearing confinement would often give oats to a white horse from their aprons and ask him for a speedy delivery. Originally it was the custom for the horse to nuzzle the woman's genitals Carl Jung, CW 5, Para 421

The horse, like the ass, has the significance of a priapic animal. Hoof-marks were once worshipped as dispensers of blessings and fertility; they also established the right of possession and were of importance in determining boundaries, like the Priapic statues of Latin antiquity Carl Jung, CW 5, Para 421

It was a horse who, like the Dactyls, discovered the mineral wealth of the Harz Mountains with his hoof. The horse-shoe, an equivalent for the horse's foot, brings luck and has an apotropaic meaning. In the Netherlands, a hoof is hung up in the stable to ward off sorcery. The analogous effect of the phallus is well known, hence the phalli on gates. The shank in particular is supposed to keep off lightning, on the principle that like cures like Carl Jung, CW 5, Para 421

The goddess of the underworld, Hecate, is sometimes represented with a horse's head. Demeter and Philyra, wishing to escape the attentions of Kronos or Poseidon, change themselves into mares Carl Jung, CW 5, Para 421

Witches can easily change into horses; hence the nail-marks of the horseshoe may be seen on their hands. The devil rides on the witch's horse, and priests' housekeepers are changed after death into horses Carl Jung, CW 5, Para 421

On account of their speed, horses signify wind, and here again the tertium comparationis is the libido-symbol. German legend knows the wind as the wild huntsman in lustful pursuit of the maiden. Wotan gallops along in a storm after the wind-bride (Frigg) fleeing before him Carl Jung, CW 5, Para 422

Storm-centres often get their names from horses, e.g., the Schimmelberge (‘white horse hills’) on Lüneburg heath. The centaurs are, among other things, wind-gods Carl Jung, CW 5, Para 422

We have already seen that the horse is connected through Yggdrasill with the symbolism of the tree. The horse too is a “tree of death;” for instance in the Middle Ages the bier was called “St. Michael’s Horse,” and the modern Persian word for coffin means ‘wooden horse.’ The horse also plays the part of a psychopomp who leads the way to the other world the souls of the dead are fetched by horsewomen, the Valkyries. Modern Greek songs speak of Charon as riding on a horse Carl Jung, CW 5, Para 427

Finally, the horse symbol appears in yet another form: sometimes the devil rides on a three-legged horse. The goddess of death, Hel, rides on a three-legged horse in time of pestilence Carl Jung, CW 5, Para 428

In the Bundahish there is a monstrous three-legged ass who stands in the heavenly rain-lake Vouru-Kasha; his urine purifies its waters, and at his cry all useful animals become pregnant and all harmful animals drop their young. The contrasting symbolism of Hel is fused into one image in the ass of Vouru-Kasha. The libido is fructifying as well as destructive Carl Jung, CW 5, Para 428

Mithras springs upon the bull to deliver the death blow the bull being a life-giving deity Carl Jung, CW 5, Para 421

The conquered bull has the same significance as the monster conquered by Gilgamesh who represents the father as a giant and dangerous animal Carl Jung, CW 5, Para 396

Hector’s horses were called Xanthos (yellow, glaring), Podargus (swift-footed), Lampos (shining), and Aithon (burning) Carl Jung, CW 5, Para 423

Siegfried leaps over the wall of fire on the thunder-horse Grani, who was sired by Sleipnir and was the only one capable of taking the fiery hedge Carl Jung, CW 5, Para 423

The idea is that Ra rises up, born from the tree. The representations of the sun-god Mithras should probably be interpreted in the same way Carl Jung, CW 5, Para 368

In the Heddernheim Relief, Mithras is shown with half his body rising from the top of a tree, and in other monuments half his body is stuck in the rock, which clearly points to the rock-birth Carl Jung, CW 5, Para 368

Often there is a stream near Mithras’ birthplace. This conglomeration of symbols is also found in the birth of Aschanes, the first Saxon king, who grew from the Harz rocks in the middle of a wood near a fountain Carl Jung, CW 5, Para 368

Here all the mother symbols are united earth, wood, and water. So it is only logical that in the Middle Ages the tree was poetically addressed with the honorific title of “Lady” Carl Jung, CW 5, Para 368

Nor is it surprising that Christian legend transformed the tree of death, the Cross, into

the Tree of Life, so that Christ is often shown hanging on a green tree among the fruit Carl Jung, CW 5, Para 368

The derivation of the Cross from the Tree of Life, which was an authentic religious symbol even in Babylonian times, is considered entirely probable by Zöckler, an authority on the history of the Cross. The pre-Christian meaning of so universal a symbol does not contradict this view; quite the contrary, for its meaning is life Carl Jung, CW 5, Para 368

Nor does the existence of the cross in the sun-cult (where the regular cross and the swastika represent the sun-wheel) and in the cult of the love-goddesses in any way contradict its historical significance. Christian legend has made abundant use of this symbolism Carl Jung, CW 5, Para 368

The student of medieval art will be familiar with the representation of the Cross growing from Adam's grave (fig. 258.37). The legend says that Adam was buried on Golgotha, and that Seth planted on his grave a twig from the tree of Paradise, which grew into Christ's Cross, the Tree of Death Carl Jung, CW 5, Para 368

What is remarkable that in the German legends the heralding of the future event is connected with a budding tree. Christ was sometimes called a "branch" or a "rod" Carl Jung, CW 5, Para 368

In mythology, too, the blossoming and withering of the tree of life denotes the turning point, the beginning of a new age Carl Jung, CW 5, Para 423

The highest god always drives his chariot round in a circle. The chariot is drawn by four horses, and the outside horse moves very quickly. He has a shining coat, bearing on it the sign of the zodiac and the constellations Carl Jung, CW 5, Para 423

The horses represent the four elements. The catastrophe signifies world conflagration and the deluge, after which the division of God into Many cases, and the divine One is restored Carl Jung, CW 5, Para 423

As the name indicates, he is a time-symbol, and is composed entirely of libido-images. The lion, the zodiacal sign for the torrid heat of summer, is the symbol of concupiscentia effrenata, 'frenzied desire.' ("My soul roars with the voice of a hungry lion," says Mechthild of Magdeburg) Carl Jung, CW 5, Para 425

In the Mithraic mysteries the snake is often shown as the antagonist of the lion, in accordance with the myth of the sun's fight with the dragon. In the Egyptian Book of the Dead, Tum is addressed as a tom-cat, because in that form he fought the Apophis-serpent. To be "entwined" or embraced is the same as to be "devoured," which as we saw means entering into the mother's womb Carl Jung, CW 5, Para 425

So time, this empty and purely formal concept, is expressed in the mysteries through transformations of the creative force, libido, just as time in physics is identical with the flow of the energic process Carl Jung, CW 5, Para 425

The hero Chiwantopel represents her ideal, who is here projected as a masculine figure; for Miss Miller is still youthful enough to see her ideal in a man. She has evidently received

no salutary disappointments in this respect, but is still enjoying her illusions Carl Jung, CW 5, Para 432

She does not yet know that her ideal figure ought really to be feminine, because such a figure might touch her too closely. So long as the ideal is portrayed in the person of a man, it does not commit her to anything; it merely stimulates her fantastic demands Carl Jung, CW 5, Para 432

This yearning for death anticipates the inevitable end of the illusion that the other person is the ideal. Miss Miller's ideal figure is evidently about to change his psychic localization he might even take up his abode in the author herself. That would mark a very critical point in her career Carl Jung, CW 5, Para 432

For when such a vitally important figure as the ideal is about to change, it is as though that figure had to die. It then creates in the individual all sorts of unaccountable and apparently unfounded presentiments of death romantic world weariness. Her infantile world wants to come to an end and be replaced by the adult phase Carl Jung, CW 5, Para 432

The wish of young girls to die is often only an indirect expression of this, but it remains a pose even if they really do die, for even death can be dramatized. Such an outcome merely makes the pose more effective Carl Jung, CW 5, Para 432

As an infantile person Miss Miller cannot realize what her task is in life; she cannot set herself any goal or standard for which she feels responsible. Therefore she is not yet prepared to accept the problem of love either, for this demands full consciousness and responsibility, circumspection and foresight. It is a decision in favour of life, at whose end death stands. Love and death have not a little to do with one another Carl Jung, CW 5, Para 432

It is a well-known fact that hysterics substitute a physical pain for a psychic pain which is not felt because repressed. Catherina Emmerich's biographer has understood this more or less correctly, but her own interpretation of the pain is based, as usual, on a projection: it is always the others who secretly say all sorts of wicked things about her, and this is the cause of her pains Carl Jung, CW 5, Para 436

The facts of the matter are rather different: the renunciation of all life's joys, this fading before the flower, is always painful, and especially painful are the unfulfilled desires and the attempts of nature to break through the barrier of repression, without which no such differentiation would be possible Carl Jung, CW 5, Para 436

It is a well-known fact that scenes of mystic union with the Saviour are strongly tinged with erotic libido. Stigmatization amounts to an incubation with the Saviour, a slight modification of the ancient conception of the unio mystica as cohabitation with the god Carl Jung, CW 5, Para 438

[Dr. Jung acknowledges the work of Sabina Spielrein] Spielrein, Sabina: on archaic definitions of words, in paranoia, 140; on death-instinct, 32871; on symbols, 141; case, 13972, 28172, 43777; allusions to dismemberment, 237; "arrows from God." 353; association of boring with fire and procreation, 153; communion, 40972; God's ray, 412; images, 30277; sickness, 3017?; snake, 437; splitting the earth, 28872; wine and water, 37672 Carl Jung, CW 5, Para 549

“To make sharp arrows” is an Arabic expression for begetting valiant sons. To announce the birth of a son the Chinese used to hang a bow and arrow in front of the house. Accordingly the Psalms declare (127: 4, RV): “As arrows in the hand of a mighty man, so are the children of youth” Carl Jung, CW 5, Para 439

A similar significance attaches to the lance: men are descended from the lance; the ash is the mother of lances; therefore the men of the Bronze Age are derived from her Carl Jung, CW 5, Para 439

Kaineus commanded that his lance was to be worshipped. Pindar says of this Kaineus that, in the legend, “he descended into the depths, splitting the earth with a straight foot.” Originally he is supposed to have been a maiden named Kainis, who, as a reward for her submissiveness, was changed by Poseidon into an invulnerable man Carl Jung, CW 5, Para 439

“Iron is used for boring into the earth With iron you can make menthe earth is split, burst open, man is divided Man is cut up and put together again In order to put a stop to being buried alive, Jesus told his disciples to bore into the earth” Carl Jung, CW 5, Para 439

Mithras shoots water from the rock with his arrow in order to stop the drought. On Mithraic monuments the knife, otherwise used as the sacrificial instrument for killing the bull, is sometimes found stuck in the earth (Cumont, Textes, I, pp. 115, 116, 165) Carl Jung, CW 5, Para Carl Jung, CW 5, Para 439

In other words, they remained stuck in the mother and were lost to the upper world. Later Theseus was rescued by Heracles, who appeared in the role of the death-conquering hero. The Theseus myth is therefore a representation of the individuation process Carl Jung, CW 5, Para 449

When the libido leaves the bright upper world, whether from choice, or from inertia, or from fate, it sinks back into its own depths, into the source from which it originally flowed, and returns to the point of cleavage, the navel, where it first entered the body. This point of cleavage is called the mother, because from her the current of life reached us Carl Jung, CW 5, Para 449

Whenever some great work is to be accomplished, before which a man recoils, doubtful of his strength, his libido streams back to the fountainhead and that is the dangerous moment when the issue hangs between annihilation and new life Carl Jung, CW 5, Para 449

For if the libido gets stuck in the wonderland of this inner world, then for the upper world man is nothing but a shadow, he is already moribund or at least seriously ill Carl Jung, CW 5, Para 449

But if the libido manages to tear itself loose and force its way up again, something like a miracle happens: the journey to the underworld was a plunge into the fountain of youth, and the libido, apparently dead, wakes to renewed fruitfulness Carl Jung, CW 5, Para 449

Vishnu sank into a profound trance, and in his slumber brought forth Brahma who, enthroned on a lotus, rose out of Vishnu’s navel, bringing with him the Vedas, which he diligently read (Birth of creative thought from introversion) Carl Jung, CW 5, Para 449

But through Vishnu's ecstatic absentmindedness a mighty flood came upon the world (Devouring and destruction of the world through introversion) Carl Jung, CW 5, Para 449

For if the libido gets stuck in the wonderland of this inner world, then for the upper world man is nothing but a shadow, he is already moribund or at least seriously ill Carl Jung, CW 5, Para 449

A state of introversion. What this means we already know: the libido sinks "into its own depths" (a favourite image of Nietzsche's), and discovers in the darkness a substitute for the upper world it has abandoned the world of memories ("Amidst a hundred memories"), the strongest and most influential of which are the earliest ones Carl Jung, CW 5, Para 448

It is the world of the child, the paradisal state of early infancy, from which we are driven out by the relentless law of time. In this subterranean kingdom slumber sweet feelings of home and the hopes of all that is to be Carl Jung, CW 5, Para 448

The deadly arrows do not strike the hero from without; it is himself who hunts, fights, and tortures himself. In him, instinct wars with instinct; therefore the poet says, "Thyself pierced through," which means that he is wounded by his own arrow. As we know that the arrow is a libido-symbol, the meaning of this "piercing" is clear: it is the act of union with one-self, a sort of self-fertilization, and also a self-violation, a self-murder Carl Jung, CW 5, Para 447

These are the primordial images, the archetypes, which have been so enriched with individual memories through the introversion of libido as to become perceptible to the conscious mind, in much the same way as the crystalline structure latent in the saturated solution takes visible shape from the aggregation of molecules Carl Jung, CW 5, Para 450

Since these introversions and regressions only occur at moments when a new orientation and a new adaptation are necessary, the constellated archetype is always the primordial image of the need of the moment Carl Jung, CW 5, Para 450

Although the changing situations of life must appear infinitely various to our way of thinking, their possible number never exceeds certain natural limits; they fall into more or less typical patterns that repeat themselves over and over again Carl Jung, CW 5, Para 450

The archetypal structure of the unconscious corresponds to the average run of events. When therefore a distressing situation arises, the corresponding archetype will be constellated in the unconscious Carl Jung, CW 5, Para 450

Since this archetype is numinous, i.e., possesses a specific energy, it will attract to itself the contents of consciousness conscious ideas that render it perceptible and hence capable of conscious realization. Its passing over into consciousness is felt as an illumination, a revelation, or repeated experience of this process has had the general result that, whenever a critical situation arises, the mechanism of introversion is made to function artificially by means of ritual actions which bring about a spiritual preparation, e.g., magical ceremonies, sacrifices, invocations, prayers, and suchlike. The aim of these ritual actions is to direct the libido towards the unconscious and compel it to introvert Carl Jung, CW 5, Para 450

If the libido connects with the unconscious, it is as though it were connecting with the mother, and this raises the incest-taboo. But as the unconscious is infinitely greater than the mother and is only symbolized by her, the fear of incest must be conquered if one is to gain

possession of those “saving” contents the treasure hard to attain Carl Jung, CW 5, Para 450

Since the son is not conscious of his incest tendency, it is projected upon the mother or her symbol. But the symbol of the mother is not the mother herself, so in reality there is not the slightest possibility of incest, and the taboo can therefore be ruled out as a reason for resistance. In so far as the mother represents the unconscious, the incest tendency, particularly when it appears as the amorous desire of the mother (e.g., Ishtar and Gilgamesh) or of the anima (e.g., Chryse and Philoctetes), is really only the desire of the unconscious to be taken notice of Carl Jung, CW 5, Para 450

The rejection of the unconscious usually has unfortunate results; its instinctive forces, if persistently disregarded, rise up in opposition: Chryse changes into a venomous serpent Carl Jung, CW 5, Para 450

The more negative the attitude of the conscious towards the unconscious, the more dangerous does the latter become. Chryse’s curse was fulfilled so completely that Philoctetes, on approaching her altar, wounded himself in the foot with his own poison-tipped arrow, or, according to other versions which are in fact better attested, was bitten in the foot by a poisonous snake, and fell into a decline Carl Jung, CW 5, Para 450

So when the sun-god Ra retires on the back of the heavenly cow, it means that he is going back into the mother in order to rise again as Horus. In the morning the goddess is the mother, at noon she is the sister-wife, and at evening once more the mother who takes back the dead into her womb Carl Jung, CW 5, Para 360

The poisonous worm is a deadly form of libido instead of an animating form. The “true name” is Ra’s soul and magic power (his libido). What Isis demands is the transference of libido to the mother. This request is fulfilled to the letter, for the aging god returns to the heavenly cow, the symbol of the mother Carl Jung, CW 5, Para 455

But the real cause of the wound is the incest-taboo, which cuts a man off from the security of childhood and early youth, from all those unconscious, instinctive happenings that allow the child to live without responsibility as an appendage of his parents Carl Jung, CW 5, Para 351

The more a person shrinks from adapting himself to reality, the greater becomes the fear which increasingly besets his path at every point. Thus a vicious circle is formed: fear of life and people causes more shrinking back, and this in turn leads to infantilism and finally “into the mother” Carl Jung, CW 5, Para 456

The reasons for this are generally projected outside oneself: the fault lies with external circumstances, or else the parents are made responsible Carl Jung, CW 5, Para 456

And indeed, it remains to be found out how much the mother is to blame for not letting the son go. The son will naturally try to explain everything by the wrong attitude of the mother, but he would do better to refrain from all such futile attempts to excuse his own ineptitude by laying the blame on his parents Carl Jung, CW 5, Para 456

This fear of life is not just an imaginary bogy, but a very real panic, which seems disproportionate only because its real source is unconscious and therefore projected: the young, growing part of the personality, if prevented from living or kept in check, generates fear and

changes into fear Carl Jung, CW 5, Para 457

The fear seems to come from the mother, but actually it is the deadly fear of the instinctive, unconscious, inner man who is cut off from life by the continual shrinking back from reality Carl Jung, CW 5, Para 457

If the mother is felt as the obstacle, she then becomes the vengeful pursuer. Naturally it is not the real mother, although she too may seriously injure her child by the morbid tenderness with which she pursues it into adult life, thus prolonging the infantile attitude beyond the proper time Carl Jung, CW 5, Para 457

It is rather the mother-imago that has turned into a lamia. The mother-imago, however, represents the unconscious, and it is as much a vital necessity for the unconscious to be joined to the conscious as it is for the conscious not to lose contact with the unconscious Carl Jung, CW 5, Para 457

Nothing endangers this connection more in a man than a successful life; it makes him forget his dependence on the unconscious. The case of Gilgamesh is instructive in this respect: he was so successful that the gods, the representatives of the unconscious, saw themselves compelled to deliberate how they could best bring about his downfall. Their efforts were unavailing at first, but when the hero had won the herb of immortality and was almost at his goal, a serpent stole the elixir of life from him while he slept Carl Jung, CW 5, Para 457

Apparently it is a hostile demon who robs him of energy, but in actual fact it is his own unconscious whose alien tendencies are beginning to check the forward striving of the conscious mind Carl Jung, CW 5, Para 458

The cause of this process is often extremely obscure, the more so as it is complicated by all kinds of external factors and subsidiary causes, such as difficulties in work, disappointments, failures, reduced efficiency due to age, depressing family problems, and so on and so forth Carl Jung, CW 5, Para 458

According to the myths it is the woman who secretly enslaves a man, so that he can no longer free himself from her and becomes a child again. It is also significant that Isis, the sister-wife of the sun-god, creates the poisonous serpent from his spittle, which, like all bodily secretions, has a magical significance, being a libido equivalent. She creates the serpent from the libido of the god, and by this means weakens him and makes him dependent on her Carl Jung, CW 5, Para 458

Delilah acts in the same way with Samson: by cutting off his hair, the sun's rays, she robs him of his strength Carl Jung, CW 5, Para 458

This demon-woman of mythology is in truth the "sister-wife-mother," the woman in the man, who unexpectedly turns up during the second half of life and tries to effect a forcible change of personality Carl Jung, CW 5, Para 458

I have dealt with certain aspects of this change in my essay on "The Stages of Life." It consists in a partial feminization of the man and a corresponding masculinization of the woman. Often it takes place under very dramatic circumstances: the man's strongest quality, his Logos principle, turns against him and as it were betrays him. Carl Jung, CW 5, Para 458

The same thing happens with the Eros of the woman. The man becomes rigidly set in his previous attitude, while the woman remains caught in her emotional ties and fails to develop her reason and understanding, whose place is then taken by equally obstinate and inept “animus” opinions. Carl Jung, CW 5, Para 458

The fossilization of the man shrouds itself in a smoke-screen of moods, ridiculous irritability, feelings of distrust and resentment, which are meant to justify his rigid attitude. Carl Jung, CW 5, Para 458

It seems like an unwelcome accident or a disagreeable positive catastrophe, which one would naturally rather avoid. In most cases the conscious personality rises up against the assault of the unconscious and resists its demands, which, it is clearly felt, are directed not only against all the weak spots in the man’s character, but also against his chief virtue (the differentiated function and the ideal) Carl Jung, CW 5, Para 459

It is evident from the myths of Heracles and Gilgamesh that this assault can become the source of energy for a heroic conflict; indeed, so obvious is this impression that one has to ask oneself whether the apparent enmity of the maternal archetype is not a ruse on the part of Mater Natura for spurring on her favored child to his highest achievement Carl Jung, CW 5, Para 459

The vengeful Hera would then appear as the stern “Mistress Soul,” who imposes the most difficult labors on her hero and threatens him with destruction unless he plucks up courage for the supreme deed and actually becomes what he always potentially was. Carl Jung, CW 5, Para 459

The hero’s victory over the “mother,” or over her daemonic representative (dragon, etc.), is never anything but temporary. What must be regarded as a regression in a young person feminization of the man (partial identity with the father) acquired different meaning in the second half of life Carl Jung, CW 5, Para 459

The assimilation of contrasexual tendencies then becomes a task that must be fulfilled in order to keep the libido in a state of progression. The task consists in integrating the unconscious, in bringing together “conscious” and “unconscious.” I have called this the individuation process. At this stage the mother-symbol no longer connects back to the beginnings, but points towards the unconscious as the creative matrix of the future. “Entry into the mother” then means establishing a relationship between the ego and the unconscious Carl Jung, CW 5, Para 459

The way of this passion leads to the cave in which the bull is sacrificed. So, too, Christ had to bear the Cross to the place of sacrifice, where, according to the Christian version, the Lamb was slain in the form of the god, and was then laid to earth in the sepulchre Carl Jung, CW 5, Para 460

The cross, or whatever other heavy burden the hero carries, is himself, or rather the Self, his wholeness, which is both God and animal not merely the empirical man, but the totality of his being, which is rooted in his animal nature and reaches out beyond the merely human towards the divine Carl Jung, CW 5, Para 460

His [Christ] wholeness implies a tremendous tension of opposites paradoxically at one with themselves, as in the cross, their most perfect symbol Carl Jung, CW 5, Para 460

Ixion first murdered his father-in-law but was afterwards absolved from guilt by Zeus and blessed with his favour Carl Jung, CW 5, Para 460

Ixion, with gross ingratitude, then tried to seduce Hera, but Zeus tricked him by getting the cloud-goddess Nephele to assume Hera's shape. From this union the centaurs are said to have sprung Carl Jung, CW 5, Para 460

Ixion boasted of his deed, but as a punishment for his crimes Zeus cast him into the underworld, where he was bound on a wheel that turned forever in the wind Carl Jung, CW 5, Para 460

Samson carried the gate-posts of the city of Gaza, and died between the pillars of the temple of the Philistines Carl Jung, CW 5, Para 460

Heracles carried his pillars to Gades (Cadiz), where, according to the Syrian version of the legend, he died. The Pillars of Hercules mark the point in the west where the sun sinks into the sea Carl Jung, CW 5, Para 460

The cross of Heracles may well be the sun-wheel, for which the Greeks used the symbol of the cross Carl Jung, CW 5, Para 460

The fantasy of the arrow-shot is part of this struggle for personal independence. As yet, however, the need for such a decision has not penetrated to the conscious mind of the dreamer: the fatal arrow of Cupid has not yet found its mark Carl Jung, CW 5, Para 462

Chiwantopel, playing the role of the author, is not yet wounded or killed. He is the bold adventurer who dares to do what Miss Miller obviously shrinks from doing: he offers himself, of his own free will, as a target for the fatal arrow-shot Carl Jung, CW 5, Para 462

The fact that this gesture of self-exposure is projected upon a masculine figure is direct proof that the dreamer is quite unconscious of its necessity Carl Jung, CW 5, Para 462

Chiwantopel is a typical animus-figure, that is to say, a personification of the masculine side of the woman's psyche. He is an archetypal figure who becomes particularly active when the conscious mind refuses to follow the feelings and instincts prompted by the unconscious: instead of love and surrender there is mannishness, argumentativeness, obstinate self-assertion, and the demon of opinion in every possible shape and form (power instead of love) Carl Jung, CW 5, Para 462

The animus is not a real man at all; he is a slightly hysterical, infantile hero whose longing to be loved shows through the gaps in his armour. Carl Jung, CW 5, Para 462

Chiwantopel is a significant relation for Miss Miller where the hero is her brother-beloved, her "ghostly lover," she being his life-snake ultimately bringing death to him Carl Jung, CW 5, Para 679

The hero as an animus-figure acts vicariously for the conscious individual; that is to say,

he does what the subject ought, could, would like to do, but does not do. All the things that could happen in conscious life, but do not happen, are acted out in the unconscious and consequently appear in projection Carl Jung, CW 5, Para 469

Chiwantopel is characterized as the hero who leaves his family and his ancestral home in order to seek his psychic counterpart. He thus represents what in the normal course of events ought to happen Carl Jung, CW 5, Para 469

The fact that this appears as a fantasy-figure shows how little the author is doing it herself. What happens in fantasy is therefore compensatory to the situation or attitude of the conscious mind. This is also the rule in dreams Carl Jung, CW 5, Para 469

The animus, a typical “son”-hero, true to his ancient prototype, is seeking the mother. This youthful hero is always the son-lover of the mother-goddess and is doomed to an early death (fig. 020) Carl Jung, CW 5, Para 466

The libido that will not flow into life at the right time regresses to the mythical world of the archetypes, where it activates images which, since the remotest times, have expressed the non-human life of the gods, whether of the upper world or the lower Carl Jung, CW 5, Para 466

He [Animus [is therefore sure of his success and cuts out all possible rivals. He wins the soul of the dreamer, not in order to lead her back to normal life, but to her spiritual destiny Carl Jung, CW 5, Para 468

For he is a bridegroom of death, one of the son-lovers who die young because they have no life of their own but are only fast-fading flowers on the maternal tree. Their meaning and their vitality begin and end in the mother-goddess Carl Jung, CW 5, Para 468

The original concrete meaning of words like comprehend, comprendre, begreifen, erfassen (grasp, seize), etc., is literally to seize hold of something with the hands and hold it tight in the arms Carl Jung, CW 5, Para 465

That is just what the mother does with her child when it asks for help or protection, and what binds the child to its mother Carl Jung, CW 5, Para 465

The older the child grows, the greater becomes the danger of this kind of “comprehension” hindering its natural development. Instead of adapting itself, as is necessary, to its new surroundings, the libido of the child regresses to the sheltering ease of the mother’s arms and fails to keep pace with the passing of time Carl Jung, CW 5, Para 465

I observed that the dance-step of the Pueblo Indians consisted in a “calcare terram” a persistent, vigorous pounding of the earth with the heels. (: “with unfettered foot now we are to beat on the ground”) Carl Jung, CW 5, Para 480

Kaineus, as we saw, descended into the depths, “splitting the earth with a straight foot.” Faust reached the Mothers by stamping on the ground: “Stamping descend and stamping rise up again!” Carl Jung, CW 5, Para 480

The heroes in the sun-devouring myths often stamp or kick in the gullet of the monster.

Thor stamped clean through the bottom of the boat in his struggle with the monster and touched the bottom of the sea Carl Jung, CW 5, Para 481

The regression of libido makes the ritual act of treading out the dance-step seem like a repetition of the infantile "kicking." Kicking is associated with the mother and with pleasurable sensations and recapitulates a movement that was already practised inside the mother's womb. The foot and the treading movement are invested with a phallic significance, or with that of re-entry into the womb, so that the rhythm of the dance transports the dancer into an unconscious state. The Dancing Dervishes and other primitive dancers offer confirmation of this Carl Jung, CW 5, Para 481

The comparison of the water flowing from Gitche Manito's footprints with a comet means that it is a light- or libido-symbol for the fertilizing moisture (sperma) Carl Jung, CW 5, Para 481

According to a note in Humboldt's Cosmos, certain South American Indian tribes call meteors the "piss of the stars" (Humboldt, Cosmos, I, p. 99. n.) Carl Jung, CW 5, Para 481

We should also mention that Gitche Manito is a fire-maker: he blows upon a forest so that the trees rub against one another and burst into flame. Hence this god too is a libido-symbol, since he produces not only water but fire Carl Jung, CW 5, Para 481

The answer to this question is that the hero is not born like an ordinary mortal because his birth is a rebirth from the mother-wife. That is why the hero so often has two mothers Carl Jung, CW 5, Para 494

One would think it possible for a hero to be born in the normal manner, and then gradually to grow out of his humble and homely surroundings, perhaps with a great effort and in face of many dangers. (This motif is by no means uncommon in the hero-myths) Carl Jung, CW 5, Para 493

As a general rule, however, the story of his origins is miraculous. The singular circumstances of his procreation and birth are part and parcel of the hero-myth. What is the reason for these beliefs? Carl Jung, CW 5, Para 493

The immaculate conception tells us that a content of the unconscious ("child") has come into existence without the help of a human father, (i.e., consciousness) (fig. 258.08) Carl Jung, CW 5, Para 497

It tells us, on the contrary, that some god has begotten the son, and further that the son is identical with the father, which in psychological language means that a central archetype, the God image, has renewed itself ("been reborn") and become "incarnate" in a way perceptible to consciousness Carl Jung, CW 5, Para 497

The "mother" corresponds to the "virgin anima," who is not turned towards the outer world and therefore not corrupted by it. She is turned rather to the "inner sun," the archetype of transcendent wholeness the Self Carl Jung, CW 5, Para 497

This is typical of Hiawatha's deeds. Whatever he kills generally lies by or in the water, or better still, half in water and half on land. His subsequent adventures will explain why this is so. Further, the roebuck was no ordinary animal, but a magic one with an unconscious (i.e.,

symbolical) significance Carl Jung, CW 5, Para 503

Hiawatha made himself gloves and moccasins from its hide: the gloves gave such power to his arms that he could crumble rocks to dust, and the moccasins had the virtue of seven-leagued boots. By clothing himself in the hide he became a sort of giant Carl Jung, CW 5, Para 503

Therefore the roebuck killed at the ford was a “doctor animal,” a magician who had changed his shape, or a daemonic being a symbol, that is to say, which points to the “animal” and other such powers of the unconscious Carl Jung, CW 5, Para 503

That is why it was killed at the ford, i.e., at the crossing, on the border-line between conscious and unconscious. The animal is a representative of the unconscious, and the unconscious, as the matrix of consciousness, has a maternal significance, which explains why the mother was also represented by the bear Carl Jung, CW 5, Para 503

All animals belong to the Great Mother (fig. 258.51), and the killing of any wild animal is a transgression against the mother. Just as the mother seems a giantess to the small child, so the attribute of size passes to the archetypal Great Mother, Mother Nature Carl Jung, CW 5, Para 503

Whoever succeeds in killing the “magic” animal, the symbolic representative of the animal mother, acquires something of her gigantic strength. This is expressed by saying that the hero clothes himself in the animal’s skin and in this way obtains for the magic animal a sort of resurrection Carl Jung, CW 5, Para 503

At the Aztec human sacrifices criminals played the part of gods: they were slaughtered and flayed, and the priests then wrapped themselves in the dripping pelts in order to represent the gods’ resurrection and renewal Carl Jung, CW 5, Para 503

In killing his first roebuck, therefore, Hiawatha was killing the symbolic representative of the unconscious, i.e., his own participation mystique with animal nature, and from that comes his giant strength Carl Jung, CW 5, Para 504

He now sallies forth to do battle with Mudjekeewis, the father, in order to avenge his mother Wenonah. (Cf. Gilgamesh’s fight with the giant Humbaba.) In this fight the father may also be represented by some sort of magic animal which has to be overcome, but he can equally well be represented by a giant or a magician or a wicked tyrant Carl Jung, CW 5, Para 504

Mutatis mutandis the animals can be interpreted as the “mother,” as the “mater saeva cupidinum,” or again as that amiable Isis who laid a horned viper in her husband’s path in short, they can be interpreted as the Terrible Mother who devours and destroys, and thus symbolizes death itself Carl Jung, CW 5, Para 504

I remember the case of a mother who kept her children tied to her with unnatural love and devotion. At the time of the climacteric she fell into a depressive psychosis and had delirious states in which she saw herself as an animal, especially as a wolf or pig, and acted accordingly, running about on all fours, howling like a wolf or grunting like a pig. In her psychosis she had herself become the symbol of the all-devouring mother Carl Jung, CW 5, Para 504

The imagos are representations which have arisen from the conjunction of parental peculiarities with the individual disposition of the child Carl Jung, CW 5, Para 505

The imagos are activated and varied in every possible manner by an energy which likewise pertains to the individual; it derives from the sphere of instinct and expresses itself as instinctuality. This dynamism is represented in dreams by theriomorphic symbols Carl Jung, CW 5, Para 505

All the lions, bulls, dogs, and snakes that populate our dreams represent an undifferentiated and as yet unnamed libido, which at the same time forms part of the human personality and can therefore fittingly be described as the anthropoid psyche Carl Jung, CW 5, Para 505

The archetype of the wise old man first appears in the father, being a personification of meaning and spirit in its procreative sense Carl Jung, CW 5, Para 515

The question of nourishment has to be considered here because regression to the mother is bound to revive the memory of the "alma mater," the mother as the nourishing source. Incest is not the only aspect characteristic of regression: there is also the hunger that drives the child to its mother Carl Jung, CW 5, Para 519

Whoever gives up the struggle to adapt and regresses into the bosom of the family, which in the last resort is the mother's bosom, expects not only to be warmed and loved, but also to be fed. If the regression has an infantile character, it aims without of course admitting it at incest and nourishment Carl Jung, CW 5, Para 519

When the regression is only apparent, and is in reality a purposive introversion of libido directed towards a goal, then the endogamous relationship, which is in any case prohibited by the incest-taboo, will be avoided, and the demand for nourishment replaced by intentional fasting Carl Jung, CW 5, Para 519

Solitude and fasting have from time immemorial been the best-known means of strengthening any meditation whose purpose is to open the doors to the unconscious Carl Jung, CW 5, Para 519

Mondamin is the maize, the Indian corn. Hiawatha's introversion gives birth to a god who is eaten. His hunger in the twofold sense his longing for the nourishing mother, calls forth from the unconscious another hero, an edible god, the maize, son of the Earth Mother Carl Jung, CW 5, Para 522

The Christian parallel is obvious. It is hardly necessary to suppose any Christian influence here, since Fray Bernardino de Sahagún had already described the eucharist of Huitzilopochtli among the Aztecs early in the sixteenth century. This god, too, was ceremonially eaten Carl Jung, CW 5, Para 522

Mondamin, the "friend of man," challenges Hiawatha to single combat in the glow of evening. In the "purple twilight" of the setting sun (i.e., in the western land) there now ensues the mythological struggle with the god who has sprung out of the unconscious like a transformed reflection of Hiawatha's introverted consciousness Carl Jung, CW 5, Para 522

As a god or god-man he is the prototype of Hiawatha's heroic destiny; that is to say, Hiawatha has in himself the possibility, indeed the necessity, of confronting his daemon Carl Jung, CW 5, Para 522

On the way to this goal he conquers the parents and breaks his infantile ties. But the deepest tie is to the mother. Once he has conquered this by gaining access to her symbolic equivalent, he can be born again Carl Jung, CW 5, Para 522

In this tie to the maternal source lies the strength that gives the hero his extraordinary powers, his true genius, which he frees from the embrace of the unconscious by his daring and sovereign independence. Thus the god is born in him Carl Jung, CW 5, Para 522

The mystery of the "mother" is divine creative power, which appears here in the form of the corn-god Mondamin Carl Jung, CW 5, Para 522

What the remarkable thing here is that it is not Hiawatha who passes through death and emerges reborn, as might be expected, but the god. It is not man who is transformed into a god, but the god who undergoes transformation in and through man. It is as though he had been asleep in the "mother," i.e., in Hiawatha's unconscious, and had then been roused and fought with so that he should not overpower his host, but should, on the contrary, himself experience death and rebirth and reappear in the corn in a new form beneficial to mankind 524.

Consequently he [the god] appears at first in hostile form, as an assailant with whom the hero has to wrestle. This is in keeping with the violence of all unconscious dynamism. In this manner the god manifests himself and in this form he must be overcome. The struggle has its parallel in Jacob's wrestling with the angel at the ford Jabbok Carl Jung, CW 5, Para 524

The onslaught of instinct then becomes an experience of divinity, provided that man does not succumb to it and follow it blindly, but defends his humanity against the animal nature of the divine power Carl Jung, CW 5, Para 524

This ravenous hunger aptly describes man's repressive instinctuality at the stage where the parents have a predominantly nutritive significance Carl Jung, CW 5, Para 526

The image of Iacchus was carried at the head of the great Eleusinian procession. It is not easy to say exactly what god Iacchus is, but he was probably a boy or a new-born son, similar perhaps to the Etruscan Tages, who bore the epithet "the fresh-ploughed boy," because, according to legend, he sprang out of a furrow behind a peasant ploughing his fields Carl Jung, CW 5, Para 527

The lexicographers called him "Demeter's daimon." He was identified with Dionysus, especially with the Thracian Dionysus-Zagreus, who is supposed to have undergone the typical fate of being reborn Carl Jung, CW 5, Para 527

Hera, we are told, had stirred up the Titans against Zagreus, who tried to escape them by changing into various shapes. In the end they caught him when he had taken on the form of a bull. They then killed him, cut him in pieces, and threw the pieces into a cauldron; but Zeus slew the Titans with a thunderbolt and swallowed the still-throbbing heart of Zagreus. In this manner he was regenerated, and Zagreus stepped forth again as Iacchus Carl Jung, CW

5, Para 527

Another thing carried in the Eleusinian procession was the winnowing-basket, the cradle of Iacchus (, mystica vannus Iacchi). The Orphic legend relates that Iacchus was reared by Persephone in the underworld, where after slumbering for three years, he awoke in the winnowing-basket. The 20th of Boedromion (the month of Boedromion lasted from about September 5 to October 5) was called Iacchus, in honour of the hero Carl Jung, CW 5, Para 528

In the Eleusinian procession the 20th of Boedromion (the month of Boedromion lasted from about September 5 to October 5) was called Iacchus, in honour of the hero. On the evening of this day a great torchlight procession was held on the sea-shore, where the search and lament of Demeter were re-enacted Carl Jung, CW 5, Para 527

The part of Demeter, who, abstaining from food and drink, wanders over the face of the earth seeking her lost daughter, has, in the American Indian epic, been taken over by Hiawatha. He turns to all creatures, but receives no answers Carl Jung, CW 5, Para 528

Just as Demeter first gets news of her daughter from the moon-goddess Hecate, so Hiawatha only finds the one he is looking for Mondamin through profound introversion, by a descent into the darkness of night, to the Mothers Carl Jung, CW 5, Para 528

The priestess of Demeter seems to have represented the earth-goddess, or possibly the ploughed furrow Carl Jung, CW 5, Para 528

The parallel to the motif of dying and rising again is that of being lost and found again. It appears ritually at exactly same place, in connection with the hierosgamos-like spring festivities, where the image of the god was hidden and then found again Carl Jung, CW 5, Para 531

There is an uncanonical tradition that Moses left his father’s house at the age of twelve in order to instruct mankind Carl Jung, CW 5, Para 531

Similarly, Christ was lost by his parents, and they found him teaching wisdom in the temple, just as in the Mohammedan legend Moses and Joshua, lose the fish and find in its stead Khidr, the teacher of wisdom Carl Jung, CW 5, Para 531

So, too, does the corn-god, lost and believed dead, suddenly spring from the earth in the splendor of youth Carl Jung, CW 5, Para 531

The believer descends into the grave in order to rise again from the dead with the hero. It can scarcely be doubted that the underlying meaning of the Church is the mother’s womb. The Tantric texts interpret the interior of the temple as the interior of the body, and the adyton is called “garbha griha,” the seeding-place or uterus Carl Jung, CW 5, Para 536

We can see this quite plainly in the worship of the Holy Sepulchre, a good example being the Holy Sepulchre of San Stefano in Bologna Carl Jung, CW 5, Para 536

The church itself, an extremely ancient polygonal building, was built from the remains of a temple to Isis. Inside, there is an artificial spelaeum, known as the Holy Sepulchre, into which one creeps through a tiny door. Worshippers in such a spelaeum could hardly help identifying themselves with him who died and rose again, i.e., with the reborn Carl Jung, CW

5, Para 536

trees are anointed with sweet-smelling waters, sprinkled with powder, adorned with garlands and draperies Carl Jung, CW 5, Para 545

Just as the people pierce their ears as an apotropaic charm against death, so they pierce the sacred tree Carl Jung, CW 5, Para 545

Of all the trees in India there is none more sacred to the Hindus than the peepul or aswatha (Ficus religiosa). It is known to them as Vriksha Raja (king of trees). Brahma, Vishnu, and Maheswar live in it, and the worship of it is the worship of the Triad. Almost every Indian village has an aswatha (Negelein, ed., Der Traumschlüssel des Jaggadeva, p. 256) Carl Jung, CW 5, Para 545

The woodpecker owes his special significance to the fact that he hammers holes in trees. Hence we can understand why he was honoured in Roman legend as an ancient king of the country, who was the possessor or ruler of the sacred tree, and the prototype of the pater familias Carl Jung, CW 5, Para 547

An old fable relates that Circe, the wife of king Picus, changed him into Picus martius, the woodpecker. She killed and magically transformed him into a soul-bird Carl Jung, CW 5, Para 547

Picus was also regarded as a wood demon and incubus, and a soothsayer. He was sometimes equated with Picumnus, the inseparable companion of Pilumnus, both of whom were called infantium dii, ‘gods of small children.’ Pilumnus especially was said to protect new-born infants from the wicked attacks of the wood-imp Sylvanus Carl Jung, CW 5, Para 547

This helpful little bird now counsels our hero [Hiawatha] to aim under the magician’s topknot, the only vulnerable spot. It is situated on the crown of the head, at the point where the mythical “head birth” takes place, which even today figures among the birth-theories of children Carl Jung, CW 5, Para 547

There Hiawatha shoots in three arrows and so makes an end of Megissogwon. He then steals the magic belt of wampum which makes him invisible; the dead magician he leaves lying in the water Carl Jung, CW 5, Para 547

He is the spirit of regression, who threatens us with bondage to the mother and with dissolution and extinction in the unconscious (cf. fig. 035) and (fig. 258.62) Carl Jung, CW 5, Para 551

For the hero, fear is a challenge and a task, because only boldness can deliver from fear Carl Jung, CW 5, Para 551

If the risk is not taken, the meaning of life is somehow violated, and the whole future is condemned to hopeless staleness, to a drab grey lit only by will-o’-the wisps. Carl Jung, CW 5, Para 551

This image is undoubtedly a primordial one, and there was profound justification for its becoming a symbolical expression of human fate Carl Jung, CW 5, Para 553

In the morning of life the son tears himself loose from the mother, from the domestic hearth, to rise through battle to his destined heights Carl Jung, CW 5, Para 553

Always he imagines his worst enemy in front of him, yet he carries the enemy within himself a deadly longing for the abyss, a longing to drown in his own source, to be sucked down to the realm of the Mothers Carl Jung, CW 5, Para 553

His life is a constant struggle against extinction, a violent yet fleeting deliverance from ever-lurking night. This death is no external enemy, it is his own inner longing for the stillness and profound peace of all-knowing non-existence, for all-seeing sleep in the ocean of coming-to-be and passing away Carl Jung, CW 5, Para 553

Even in his highest strivings for harmony and balance, for the profundities of philosophy and the raptures of the artist, he seeks death, immobility, satiety, rest Carl Jung, CW 5, Para 553

If, like Peirithous, he tarries too long in this abode of rest and peace, he is overcome by apathy, and the poison of the serpent paralyses him for all time Carl Jung, CW 5, Para 553

If he is to live, he must fight and sacrifice his longing for the past in order to rise to his own heights. And having reached the noonday heights, he must sacrifice his love for his own achievement, for he may not loiter Carl Jung, CW 5, Para 553

The sun, too, sacrifices its greatest strength in order to hasten onward to the fruits of autumn, which are the seeds of rebirth Carl Jung, CW 5, Para 553

The natural course of life demands that the young person should sacrifice his childhood and his childish dependence on the physical parents, lest he remain caught body and soul in the bonds of unconscious incest Carl Jung, CW 5, Para 553

This regressive tendency has been consistently opposed from the most primitive times by the great psychotherapeutic systems which we know as the religions. They seek to create an autonomous consciousness by weaning mankind away from the sleep of childhood Carl Jung, CW 5, Para 553

This archaic fact is expressed here in a rather veiled way. In the legend of the “Entkrist” it is expressed openly by the devil, the father of the Anti-Christ Carl Jung, CW 5, Para 565

Wotan is justly indignant with Brünhilde, for she has taken over the role of Isis and through the birth of a son has deprived the old man of his power Carl Jung, CW 5, Para 565

In psychological terms this means that the “treasure hard to attain” lies hidden in the mother-imago, i.e., in the unconscious. This symbol points to one of life’s secrets which is expressed in countless symbolical ways in mythology. When such symbols occur in individual dreams, they will be found on examination to be pointing to something like a centre of the total personality, of the psychic totality which consists of both conscious and unconscious. Here I must refer the reader to my later works, where I deal at some length with the symbol of the Self Carl Jung, CW 5, Para 569

Last but not least, Siegfried wins the hoard Carl Jung, CW 5, Para 569

Life is put together again from the broken pieces (miracle of Medea). Just as a blacksmith welds the broken pieces together, so the dismembered corpse is reconstituted Carl Jung, CW 5, Para 556

This comparison also occurs in Plato's Timaeus: the world's parts are joined together with pegs. In the Rig-Veda the world creator Brahmanaspati is a blacksmith Carl Jung, CW 5, Para 556

We have already seen that pastries in the form of snakes and phalli were flung into a pit at the Arrhetophoria. We mentioned this in connection with the earth fertilization ceremonies Carl Jung, CW 5, Para 571

It is significant that the deadly flood flowed off into the fissure, back into the mother again, for it was from the mother that death came into the world in the first place. The Deluge is simply the counterpart of the all-vivifying and all-producing water, of "the ocean, which is the origin of all things" Carl Jung, CW 5, Para 571

Honeycakes are offered to the mother that she may spare one from death. In Rome money-offerings were thrown every year into the lacus Curtius, formerly a chasm that had been closed through the sacrificial death of Curtius. He was the hero who went down to the underworld in order to conquer the danger that threatened the Roman state after the opening of the chasm Carl Jung, CW 5, Para 571

In the Anphiaraion at Oropos those healed through incubation in the temple threw their money-offerings into the sacred well. Carl Jung, CW 5, Para 571

Near Eleusis, there was a gorge through which Aidoneus came up and into which he descended after kidnapping the Kore Carl Jung, CW 5, Para 572

There were crevasses in the rocks where the souls could ascend to the upper world Carl Jung, CW 5, Para 572

Behind the temple of Chthonia in Hermione lay a spot sacred to Pluto, with a chasm through which Heracles came up with Cerberus Carl Jung, CW 5, Para 572

There was also an "Acherusian" lake. This chasm, therefore, was the entrance to the place where death had been conquered Carl Jung, CW 5, Para 572

The chasm on the Areopagus in Athens was believed to be the seat of the dwellers in the underworld Carl Jung, CW 5, Para 572

Similar ideas are suggested by an old Greek custom: girls used to be sent for a virginity test to a cave where there lived a poisonous serpent. If they were bitten, it was a sign that they were no longer chaste Carl Jung, CW 5, Para 572

The Self, as a symbol of wholeness, is a coincidentia oppositorum, and therefore contains light and darkness simultaneously (cf. fig. 039), (fig. 258.09), and (fig. 258.60) Carl Jung, CW 5, Para 576

In the Christ-figure the opposites which are united in the archetype are polarized into the “light” son of God on the one hand and the devil on the other. The original unity of opposites is still discernible in the original unity of Satan and Yahweh. Christ and the dragon of the Anti-Christ lie very close together so far as their historical development and cosmic significance are concerned Carl Jung, CW 5, Para 576

The dragon legend concealed under the myth of the Anti-Christ is an essential part of the hero’s life and is therefore immortal Carl Jung, CW 5, Para 576

Nowhere in the latter-day myths are the paired opposites so palpably close together as in the figures of Christ and Anti-Christ. (Here I would refer the reader to Merezhkovsky’s admirable account of this problem in his novel Leonardo da Vinci) Carl Jung, CW 5, Para 576

It is a convenient rationalistic conceit to say that the dragon is only “artificial,” thus banishing the mysterious gods with a word Carl Jung, CW 5, Para 576

Schizophrenic patients often make use of this mechanism for apotropaic purposes. “It’s all a fake,” they say, “all artificially made up.” The following dream of a schizophrenic is typical: Carl Jung, CW 5, Para 576

Sun and moon, as divine equivalents of the parent archetype, possess a tremendous psychic power that has to be weakened apotropaically, because the patient is already far too much under the power of the unconscious Carl Jung, CW 5, Para 576

Nothing was left but the hole in which the snake was said to dwell. There the honey cakes were placed and the obolus thrown in. The sacred cave in the temple at Cos consisted of a rectangular pit covered by a stone slab with a square hole in it Carl Jung, CW 5, Para 577

This arrangement served the purpose of a treasure-house: the snake-pit had become a slot for money, a “poor-box,” and the cave a “hoard.” That this development is fully in accord with the archaeological evidence is proved by a discovery in the temple of Aesculapius and Hygeia at Ptolemaïs Carl Jung, CW 5, Para 577

Here the serpent lies on the treasury as protector of the hoard. Fear of the deadly maternal womb has become the guardian of the treasure of life. That the snake really is a death-symbol is evident from the fact that the souls of the dead, like the chthonic gods, appear as serpents, as dwellers in the kingdom of the deadly mother Carl Jung, CW 5, Para 578

The hero himself appears as a being of more than human stature. He is distinguished from the very beginning by his godlike characteristics Carl Jung, CW 5, Para 612

Since he is psychologically an archetype of the Self, his divinity only confirms that the Self is numinous, a sort of god, or having some share in the divine nature Carl Jung, CW 5, Para 612

The hero is the protagonist of God’s transformation in man; he corresponds to what I call the “mana personality.” The mana personality has such an immense fascination for the conscious mind that the ego all too easily succumbs to the temptation to identify with the hero, thus bringing on a psychic inflation with all its consequences. For this reason the repugnance felt by certain ecclesiastical circles for the “inner Christ” is understandable enough, at least as a preventive measure against the danger of psychic inflation which threatens the Christian

European Carl Jung, CW 5, Para 612

Heroes are usually wanderers, and wandering is a symbol of longing, of the restless urge which never finds its object, of nostalgia for the lost mother. The sun comparison can easily be taken in this sense: the heroes are like the wandering sun, from which it is concluded that the myth of the hero is a solar myth Carl Jung, CW 5, Para 299

It seems to us, rather, that he is first and foremost a self-representation of the longing of the unconscious, of its unquenched and unquenchable desire for the light of consciousness. But consciousness, continually in danger of being led astray by its own light and of becoming a rootless will o' the wisp, longs for the healing power of nature, for the deep wells of being and for unconscious communion with life in all its countless forms Carl Jung, CW 5, Para 299

It is not man as such who has to be regenerated or born again as a renewed whole, but, according to the statements of mythology, it is the hero or god who rejuvenates himself. These figures are generally expressed or characterized by libido-symbols (light, fire, sun, etc.), so that it looks as if they represented psychic energy. They are, in fact, personifications of the libido Carl Jung, CW 5, Para 388

The hero is a hero just because he sees resistance to the forbidden goal in all life's difficulties and yet fights that resistance with the whole-hearted yearning that strives towards the treasure hard to attain, and perhaps unattainable a yearning that paralyses and kills the ordinary man Carl Jung, CW 5, Para 510

The hero is an extraordinary being who is inhabited by a daemon, and it is this that makes him a hero. That is why the mythological statements about heroes are so typical and so impersonal Carl Jung, CW 5, Para 536

The treasure which the hero fetches from the dark cavern is life: it is himself, new-born from the dark maternal cave of the unconscious where he was stranded by the introversion or regression of libido. Hence the Hindu fire-bringer is called Matarisvan, he who swells in the mother. The hero who clings to the mother is the dragon, and when the hero is reborn from the mother he becomes the conqueror of the dragon (fig. 258.59a) Carl Jung, CW 5, Para 580

The hero who sets himself the task of renewing the world and conquering death personifies the world-creating power which, brooding on itself in introversion, coiled round its own egg like a snake, threatens life with its poisonous bite, so that the living may die and be born again from the darkness Carl Jung, CW 5, Para 592

The hero is himself the snake, himself the sacrificer and the sacrificed, which is why Christ rightly compares himself with the healing Moses-serpent (fig. 258.09b) and why the saviour of the Christian Ophites was a serpent, too. It is both Agathodaimon (fig. 037) and Cacodaimon. In German legend we are told that the heroes have snake's eyes Carl Jung, CW 5, Para 593

One of my patients dreamt that a snake shot out of a cave and bit him in the genital region. The dream occurred at the moment when the patient was convinced of the truth of the analysis and was beginning to free himself from the bonds of his mother-complex Carl Jung, CW 5, Para 585

He felt that he was making progress and that he had more control over himself. But the moment he felt the impulse to go forward he also felt the pull of the bond of the mother Carl Jung, CW 5, Para 585

Being bitten in the genital region by a snake (fig. 258.61b) reminds us of Attis whose self-castration was occasioned by his mother's jealousy Carl Jung, CW 5, Para 585

The term tapas is to be translated, according to Deussen, as "he heated himself with his own heat," in the sense that "he brooded his own brooding," brooder and brooded being conceived not as separate, but as one and the same thing Carl Jung, CW 5, Para 589

As Hiranyagarbha (the Golden Germ), Prajapati is the self-begotten egg, the cosmic egg from which he hatches himself (fig. 036). He creeps into himself, becomes his own womb, makes himself pregnant with himself in order to hatch forth the world of multiplicity Carl Jung, CW 5, Para 589

Self-incubation, self-castigation, and introversion are closely related ideas. Immersion in oneself (introversion) is a penetration into the unconscious and at the same time asceticism. The result, for the philosophy of the Brahmanas, is the creation of the world, and for the mystic the regeneration and spiritual rebirth of the individual, who is born into a new world of the spirit. Indian philosophy also assumes that creativity as such springs from introversion Carl Jung, CW 5, Para 590

Above his subterranean dwelling rose the Parthenon, the temple of the virgin goddess Carl Jung, CW 5, Para 594

The flaying of the god, which we have already touched on in connection with the flaying-ceremonies of the Aztecs, is intimately bound up with the snake-like nature of the hero Carl Jung, CW 5, Para 594

It is reported of Mani, the founder of Manichaeism, that he was killed, flayed, stuffed, and hung up. The hanging up of the god has an unmistakable symbolic value, since suspension is the symbol of unfulfilled longing or tense expectation ("suspense"). Christ, Odin, Attis, and others all hung upon trees Carl Jung, CW 5, Para 594

We can in fact discover the same multiplicity of meanings and the same apparently limitless inter changeability of figures in dreams. On the other hand we are now in a position to establish certain laws, or at any rate rules, which make dream interpretation rather more certain. Thus we know that dreams generally compensate the conscious situation or supply what is lacking to it. This very important principle of dream interpretation also applies to myths Carl Jung, CW 5, Para 611

Furthermore, investigation of the products of the unconscious yields notable traces of archetypal structures which coincide with the myth-motifs among them certain types which deserve the name of dominants Carl Jung, CW 5, Para 611

The reason for this lies in the fact that no part of the hero-myth is single in meaning, and that, at a pinch, all the figures are interchangeable Carl Jung, CW 5, Para 611

The only certain and reliable thing is that the myth exists and shows unmistakable analogies

with other myths Carl Jung, CW 5, Para 611

Myth-interpretation is a tricky business and there is some justification for looking at it askance. Hitherto the myth-interpreter has found himself in a somewhat unenviable position, because he only had exceedingly doubtful points for orientation at his disposal, such as astronomical and meteorological data Carl Jung, CW 5, Para 611

Snake dreams always indicate a discrepancy between the attitude of the conscious mind and instinct, the snake being a personification of the threatening aspect of that conflict Carl Jung, CW 5, Para 615

The appearance of the green viper therefore means: “Look out! Danger ahead!” Carl Jung, CW 5, Para 615

It devoured all human beings (devouring-mother = death) until only one pregnant woman remained. She dug a ditch, covered it with a stone, and there gave birth to twins who afterwards became dragon-killers Carl Jung, CW 5, Para 620

The mating in the mother also occurs in the following West African legend: “In the beginning, Obatala the Sky and Odudua the Earth, his wife, lay pressed close together in a calabash” Carl Jung, CW 5, Para 620

Being “guarded in modest bud” is an image that is found in Plutarch, where it is said that the sun is born at dawn from a flower bud Carl Jung, CW 5, Para 620

Brahma, too, comes out of a bud, and in Assam a bud gave birth to the first human pair Carl Jung, CW 5, Para 620

Separation and differentiation from the mother, “individuation,” produces that confrontation of subject and object which is the foundation of consciousness Carl Jung, CW 5, Para 624

Before this, man was one with the mother; that is to say, he was merged with the world as a whole. He did not yet know the sun was his brother; only after the separation did he begin to realize his affinity with the stars Carl Jung, CW 5, Para 624

This is a not uncommon occurrence in psychosis. For instance, in the case of a young labouring-man who developed schizophrenia, the first symptoms of his illness consisted in the feeling that he had a special relation to the sun and the stars Carl Jung, CW 5, Para 624

The stars became full of meaning for him, he thought they had something to do with him personally, and the sun gave him all sorts of strange ideas. One finds this apparently quite novel feeling for Nature very often in this disease Carl Jung, CW 5, Para 624

Another patient began to understand the language of the birds, who brought him messages from his sweetheart Carl Jung, CW 5, Para 624

The separation from youth has even taken away the golden glamour of Nature, and the future appears hopeless and empty. But what robs Nature of its glamour, and life of its joy, is the habit of looking back for something that used to be outside, instead of looking inside, into the depths of the depressive state Carl Jung, CW 5, Para 625

This looking back leads to regression and is the first step along that path. Regression is also an involuntary introversion in so far as the past is an object of memory and therefore a psychic content, an endopsychic factor. It is a relapse into the past caused by a depression in the present Carl Jung, CW 5, Para 625

Depression should therefore be regarded as an unconscious compensation whose content must be made conscious if it is to be fully effective Carl Jung, CW 5, Para 625

This can only be done by consciously regressing along with the depressive tendency and integrating the memories so activated into the conscious mind which was what the depression was aiming at in the first place Carl Jung, CW 5, Para 625

Depression is a condition resulting from a blocking of libido where life ceases to flow Carl Jung, CW 5, Para 250

A person sinks into his childhood memories and vanishes from the existing world. He finds himself apparently in deepest darkness [inside the whale], but then has unexpected visions of a world beyond Carl Jung, CW 5, Para 631

The “mystery” he beholds represents the stock of primordial images which everybody brings with him as his human birthright, the sum total of inborn forms peculiar to the instincts. I have called this “potential” psyche the collective unconscious. If this layer is activated by the regressive libido, there is a possibility of life being renewed, and also of its being destroyed Carl Jung, CW 5, Para 631

Regression carried to its logical conclusion means a linking back with the world of natural instincts, which in its formal or ideal aspect is a kind of prima materia. If the prima materia can be assimilated by the conscious mind it will bring about a reactivation and reorganization of its contents Carl Jung, CW 5, Para 631

If the conscious mind proves incapable of assimilating the new contents pouring in from the unconscious, then a dangerous situation arises in which they keep their original, chaotic, and archaic form and consequently disrupt the unity of consciousness Carl Jung, CW 5, Para 631

All the libido that was tied up in family bonds must be withdrawn from the narrower circle into the larger one, because the psychic health of the adult individual, who in childhood was a mere particle revolving in a rotary system, demands that he should himself become the center of a new system Carl Jung, CW 5, Para 644

That such a step includes the solution, or at least some consideration, of the sexual problem is obvious enough, for unless this is done the unemployed libido will inevitably remain fixed in the unconscious endogamous relationship to the parents and will seriously hamper the individual’s freedom Carl Jung, CW 5, Para 644

We must remember that Christ’s teaching means ruthlessly separating a man from his family, and we saw in the Nicodemus dialogue how he took especial pains to give regression a symbolic meaning. Both tendencies serve the same goal, namely that of freeing man from his family fixations, from his weakness and uncontrolled infantile feelings Carl Jung, CW 5, Para

644

For if he allows his libido to get stuck in a childish milieu, and does not free it for higher purposes, he falls under the spell of unconscious compulsion. Wherever he may be, the unconscious will then recreate the infantile milieu by projecting his complexes, thus reproducing all over again, and in defiance of his vital interests, the same dependence and lack of freedom which formerly characterized his relations with his parents Carl Jung, CW 5, Para 644

His destiny no longer lies in his own hands: his (fortunes and fates) fall from the stars. The Stoics called this condition Heimarmene, compulsion by the stars, to which every "unredeemed" soul is subject Carl Jung, CW 5, Para 644

When the libido thus remains fixed in its most primitive form it keeps men on a correspondingly low level where they have no control over themselves and are at the mercy of their affects Carl Jung, CW 5, Para 644

That was the psychological situation of late antiquity, and the saviour and physician of that time was he who sought to free humanity from bondage to Heimarmene Carl Jung, CW 5, Para 644

For him who looks backwards the whole world, even the starry sky, becomes the mother who bends over him and enfolds him on all sides, and from the renunciation of this image, and of the longing for it, arises the picture of the world as we know it today Carl Jung, CW 5, Para 646

This simple thought is what constitutes the meaning of the cosmic sacrifice, a good example being the slaying of Tiamat (fig. 041), the Babylonian mother-dragon, from whose body heaven and earth were made Carl Jung, CW 5, Para 646

But he only discovers it when he sacrifices his containment in the primal mother, the original state of unconsciousness. What drives him towards this discovery is conceived by Freud as the "incest barrier." The incest prohibition blocks the infantile longing for the mother and forces the libido along the path of life's biological aim Carl Jung, CW 5, Para 652

The libido, driven back from the mother by the incest prohibition, seeks a sexual object in place of the forbidden mother. The fact that the infant finds pleasure in sucking does not prove that it is a sexual pleasure, for pleasure can have many different sources Carl Jung, CW 5, Para 652

Presumably, the caterpillar finds quite as much pleasure in eating, even though caterpillars possess no sexual function whatever and the food instinct is something quite different from the sex instinct, quite unconcerned about what a later sexual stage may make of these activities Carl Jung, CW 5, Para 652

Kissing, for instance, derives far more from the act of nutrition than from sexuality. Moreover the so-called "incest barrier" is an exceedingly doubtful hypothesis (admirable as it is for describing certain neurotic conditions), because it is a product of culture which nobody invented and which grew up naturally on the basis of complex biological necessities connected with the development of "marriage classes" Carl Jung, CW 5, Para 652

The main purpose of marriage classes is not to prevent incest but to meet the social danger of endogamy by instituting the “cross-cousin marriage.” The typical marriage with the daughter of the maternal uncle is actually implemented by the same libido which could equally well possess the mother or the sister Carl Jung, CW 5, Para 652

So it is not a question of avoiding incest, for which incidentally there are plenty of opportunities in the frequent fits of promiscuity to which primitives are prone, but of the social necessity of spreading the family organization throughout the whole tribe Carl Jung, CW 5, Para 652

Therefore it cannot have been the incest-taboo that forced mankind out of the original psychic state of non-differentiation. On the contrary, it was the evolutionary instinct peculiar to man, which distinguishes him so radically from all other animals and forced upon him countless taboos, among them the incest-taboo Carl Jung, CW 5, Para 653

Against this “other urge” the animal in us fights with all his instinctive conservatism and misoneism hatred of novelty which are the two outstanding features of the primitive and feebly conscious individual. Our mania for progress represents the inevitable morbid compensation Carl Jung, CW 5, Para 653

Even as the world is created by sacrifice, by renouncing the personal tie to childhood, so, according to the teaching of the Upanishads, will be created the new state of man, which can be described as immortal Carl Jung, CW 5, Para 657

This new state beyond the human one is again attained through a sacrifice, the horse-sacrifice, which has cosmic significance Carl Jung, CW 5, Para 657

The horse-sacrifice signifies a renunciation of the world. When the horse is sacrificed the world is sacrificed and destroyed Carl Jung, CW 5, Para 658

Pentheus climbed up into a pine-tree, curious to see the orgies of the Maenads, but was spotted by his mother Carl Jung, CW 5, Para 662

The Maenads cut down the tree, and Pentheus, taken for a wild animal, was torn to pieces by them in their frenzy, his own mother being the first to hurl herself upon him Carl Jung, CW 5, Para 662

The felling of the tree has the phallic meaning of castration, along with its maternal significance of “bearing” Pentheusthemes all present in the Attis-Cybele myth Carl Jung, CW 5, Para 662

The myth of Gayomart repeats in modified form the primitive “closed circle” of a self-reproducing masculine and feminine divinity Carl Jung, CW 5, Para 662

Gayomart was created together with his ox, and the two lived in a state of bliss for six thousand years. But when the world entered the Aeon of Libra (the seventh zodiacal sign), the evil principle broke loose Carl Jung, CW 5, Para 662

In astrology, Libra is known as the “Positive House” of Venus, so the evil principle came under the dominion of the goddess of love, who personifies the erotic aspect of the mother.

Since this aspect, as we have seen, is psychologically extremely dangerous, the classical catastrophe threatened to overtake the son Carl Jung, CW 5, Para 662

As a result of this constellation, Gayomart and his ox died only thirty years later. (The trials of Zarathustra also lasted for thirty years) Carl Jung, CW 5, Para 662

Fifty-five species of grain and twelve kinds of healing plants came from the dead ox. His seed entered into the moon for purification, but the seed of Gayomart entered into the sun Carl Jung, CW 5, Para 662

The hearth spirit is called Chi. He is dressed in bright red, resembling fire, and in appearance is like a lovely, attractive maiden" Carl Jung, CW 5, Para 663

The Book of Rites says: "Wood is burnt in the flames for the Au spirit. This sacrifice to Au is a sacrifice to the old women who are dead" Carl Jung, CW 5, Para 663

These hearth and fire spirits are the souls of departed cooks and are therefore referred to as "old women" Carl Jung, CW 5, Para 663

The god of kitchens grew out of this pre-Buddhistic tradition and later, as a man, became the ruler of the family and the link between it and heaven. In this way the original female fire-spirit became a sort of Logos and mediator Carl Jung, CW 5, Para 66

The annual sacrifice of a maiden to the dragon is perhaps the ideal sacrifice on a mythological level. In order to mollify the wrath of the Terrible Mother the most beautiful girl was sacrificed as a symbol of man's concupiscence Carl Jung, CW 5, Para 671

Milder forms were the sacrifice of the first-born and of various domestic animals Carl Jung, CW 5, Para 671

The alternative ideal is self-castration, of which a milder form is circumcision. Here at least only a modicum is sacrificed, which amounts to replacing the sacrifice by a symbolical act Carl Jung, CW 5, Para 671

By sacrificing these valued objects of desire and possession, the instinctive desire, or libido is given up in order that it may be regained in new form. Through sacrifice, man ransoms himself from the fear of death and is reconciled to the demands of Hades Carl Jung, CW 5, Para 671

In the late cults in olden times the hero conquered evil and death through his labors, thus becoming the divine protagonist, the priestly self-sacrificer and renewer of life. Since he is now a divine figure and his sacrifice is a transcendental mystery whose meaning far exceeds the value of an ordinary sacrificial gift, this deepening of the sacrificial symbolism is a reversion to the old idea of human sacrifice, because a stronger and more total expression is needed to portray the idea of self-sacrifice Carl Jung, CW 5, Para 671

The relation of Mithras to his bull comes very close to this idea of self-sacrifice. In Christianity it is the hero himself who dies of his own free will Carl Jung, CW 5, Para 671

On the Mithraic monuments we often come across a strange symbol: a krater (mixing-

bowl) with a snake coiled round it, and a lion facing the snake like an antagonist (fig. 258.63b). It looks as if they were fighting for the krater. The krater symbolizes the maternal vessel of rebirth, the snake fear and resistance, and the lion raging desire Carl Jung, CW 5, Para 671

The snake almost always assists at the bull-sacrifice by gliding towards the blood flowing from the wound. It seems to follow from this that the bull's lifeits blood is offered to the snake, that it is a sacrificial offering to the powers of the underworld, like the blood drunk by the shades in the nekyia of Odysseus Carl Jung, CW 5, Para 671

We have already seen pointed out the reciprocal relationship between bull and snake, and we saw that the bull symbolizes the living hero, whereas the snake symbolizes the dead, buried, chthonic hero. But as the dead hero is back in the mother, the snake also stands for the devouring mother. The combination of the bull's blood and the snake therefore looks like a union of opposites, and the lion and snake fighting for the krater may mean the same thing. This is probably the cause of the miraculous fertility that results from the sacrifice of the bull Carl Jung, CW 5, Para 671

Even on the primitive level, among the Australian blackfellows, we meet with the idea that the life-force wears out, turns "bad" or gets lost, and must therefore be renewed at regular intervals. Whenever such an abaissement occurs the rites of renewal must be performed Carl Jung, CW 5, Para 671

There is an infinite number of these rites, but even on a much higher level they retain their original meaning. Thus the Mithraic killing of the bull is a sacrifice to the Terrible Mother, to the unconscious, which spontaneously attracts energy from the conscious mind because it has strayed too far from its roots, forgetting the power of the gods, without whom all life withers or ends catastrophically in a welter of perversity Carl Jung, CW 5, Para 671

In the act of sacrifice the consciousness gives up its power and possessions in the interests of the unconscious. This makes possible a union of opposites resulting in a release of energy Carl Jung, CW 5, Para 671

At the same time the act of sacrifice is a fertilization of the mother: the chthonic serpent-demon drinks the blood, i.e., the soul, of the hero. In this way life becomes immortal, for, like the sun, the hero regenerates himself by his self-sacrifice and re-entry into the mother Carl Jung, CW 5, Para 671

After all this we should have no difficulty in recognizing the son's sacrifice to the mother in the Christian mystery. Just as Attis unmans himself for the sake of his mother and his effigy was hung on the pine-tree in memory of this deed, so Christ hangs on the tree of life, on the wood of martyrdom, the and mother (fig. 258.36), and ransoms creation from death Carl Jung, CW 5, Para 671

By entering again into the womb of the mother, he pays in death for the sin which the Protanthropos Adam committed in life, and by that deed he regenerates on a spiritual level the life which was corrupted by original sin Carl Jung, CW 5, Para 671

St. Augustine as we have already remarked, actually interprets Christ's death as a hierosgamos with the mother, similar to the feast of Adonis, where Venus and Adonis were laid upon the bridal couch Carl Jung, CW 5, Para 671

In another version his chains were drawn through a pillar. He suffered as a punishment the fate that Christ took upon himself willingly Carl Jung, CW 5, Para 671

The fate of Prometheus is therefore reminiscent of the misfortune that befell Theseus and Peirithous, who grew fast to the rocks, the chthonic mother Carl Jung, CW 5, Para 671

According to Athenaeus, Jupiter, on setting Prometheus free again, commanded him to wear a willow crown and an iron ring, thus symbolizing his captivity and bondage Carl Jung, CW 5, Para 671

Robertson (Christ and Krishna p. 397) compares the crown of Prometheus to Christ's crown of thorns. The devout wear crowns in honor of Prometheus, in order to represent his bondage. In this connection, therefore, the crown has the same meaning as the betrothal ring: the worshippers are captives of the god' Carl Jung, CW 5, Para 671

The snake symbolizes the numen of the transformative act as well as the transformative substance itself, as is particularly clear in alchemy Carl Jung, CW 5, Para 676

As the chthonic dweller in the cave she [the snake] lives in the womb of mother earth, like the Kundalini serpent who lies coiled in the abdominal cavity, at the base of the spine Carl Jung, CW 5, Para 676

Alchemy has the legend of Gabricus and Beya, the royal brother-sister pair. During the hierosgamos, Gabricus gets right inside the body of his sister and disappears completely; he is buried in her womb, where, dissolved into atoms, he changes into the soul-snake, the serpens mercurialis (fig. 006) Carl Jung, CW 5, Para 676

Such fantasies are not uncommon among patients. Thus one patient of mine had the fantasy that she was a snake which wound itself round her mother and finally crawled right into her Carl Jung, CW 5, Para 676

The snake that killed the hero [Hiawatha] is green. So was the snake of another patient, who said: "Then a little green snake came up to my mouth, it had the finest, loveliest feeling as if it had human reason and wanted to tell me something just as if it wanted to kiss me." The significance of the snake as an instrument of regeneration is unmistakable (fig. 037) Carl Jung, CW 5, Para 677

He does not live in a house like other men, does not eat and drink like other men, but lives a life of his own, sunk in a subjective mania of his own devising, which he believes to be the newly discovered truth Carl Jung, CW 5, Para 0

This plaything of his reason never grips his vitals. It may occasionally lie heavy on his stomach, for that organ is apt to reject the products of reason as indigestible Carl Jung, CW 5, Para 0

The psyche is not of today; its ancestry goes back many millions of years. Individual consciousness is only the flower and the fruit of a season, sprung from the perennial rhizome beneath the earth; and it would find itself in better accord with the truth if it took the existence of the rhizome into its calculations. For the root matter is the mother of all things Carl Jung,

CW 5, Para 0

So I suspected that myth had a meaning which I was sure to miss if I lived outside it in the haze of my own speculations. I was driven to ask myself in all seriousness: “What is the myth you are living?” Carl Jung, CW 5, Para 0

I found no answer to this question and had to admit that I was not living with a myth, or even in a myth, but rather in an uncertain cloud of theoretical possibilities which I was beginning to regard with increasing distrust. I did not know that I was living a myth, and even if I had known it, I would not have known what sort of myth was ordering my life without my knowledge Carl Jung, CW 5, Para 0

So, in the most natural way, I took it upon myself to get to know “my” myth, and I regarded this as the task of tasks, for so I told myself how could I, when treating my patients, make do allowance for the personal factor, for my personal equation, which is yet so necessary for a knowledge of the other person, if I was unconscious of it? I simply had to know what unconscious or preconscious myth was forming me, from what rhizome I sprang Carl Jung, CW 5, Para 0

Whether we believe in God or not, whether we marvel or curse, the word “God” is always on our lips Carl Jung, CW 5, Para 98

Anything psychically powerful is invariably called “God.” At the same time “God” is set over against man and expressly set apart from him Carl Jung, CW 5, Para 98

This means, psychologically, that the libido, regarded as the force of desire and aspiration, as psychic energy in the widest sense, stands in part at the disposal of the ego, and in part confronts the ego autonomously, sometimes influencing it so powerfully that it is either put in a position of unwilling constraint, or else discovers in the libido itself a new and unexpected source of strength Carl Jung, CW 5, Para 98

Dreams seem to remain spontaneously in the memory for just so long as they correctly sum up the psychological situation of the individual Carl Jung, CW 5, Para 78

We know that Tom Thumbs, dactyls, and Cabiri… are personifications of creative forces… Thus the creative dwarfs toil away in secret; the phallus also working in darkness, begets a living being” Carl Jung, CW 5, para. 180

Nietzsche says [paraphrase]: Dreams carry us back to remote conditions of human culture and give us a ready means of understanding them better. They come to us now so easily because of having been drilled into man for immense periods of time and now serve as a recreation for the brain which by day has to satisfy the stern demands of thought imposed by a higher culture Carl Jung, CW 5, Para 27

Green, the life-colour, suits her [the anima] very well … Carl Jung, CW 5, Para 678

… the feminine belongs to man as his own unconscious femininity, which I have called the anima. Carl Jung, CW 5, Para 678

[7]Psychological Types (The Collected Works of C. G. Jung, Vol. 6)

The more "eternal" a truth, the more lifeless it is and worthless; it says nothing more to us because it is self-evident. Carl Jung, CW 6, Para 87

So long as a symbol is a living thing, it is an expression for something that cannot be characterized in any other or better way. The symbol is alive only so long as it is pregnant with meaning. But once its meaning has been born out of it, once that expression is found which formulates the thing sought, expected, or divined even better than the hitherto accepted symbol, then the symbol is dead, i.e., it possesses only an historical significance. We may still go on speaking of it as a symbol, on the tacit assumption that we are speaking of it as it was before the better expression was born out of it. [...] For every esoteric interpretation the symbol is dead, because esotericism has already given it (at least ostensibly) a better expression, whereupon it becomes merely a conventional sign for associations that are more completely and better known elsewhere. Only from the exoteric standpoint is the symbol a living thing. Carl Jung, CW 6, Para 806

That indeed is reality if it is not a reality in ourselves, an esse in anima? Living reality is the product neither of the actual, objective behaviour of things nor of the formulated idea exclusively, but rather of the combination of both ...through esse in anima. Carl Jung, CW 6, Para 77

His [Prometheus’s] soul is Minerva ... The Prometheus of mythology has his soul-relation with Pandora or Athene. Carl Jung, CW 6, Para 289

... Pandora has the value of a soul-image ... Carl Jung, CW 6, Para 305

This latter analogy [between god and natural phenomenon] explains the well-attested connection between the renewal of the god and seasonal and vegetational phenomena. One is naturally inclined to assume that seasonal, vegetational, lunar, and solar myths underlie these analogies. But that is to forget that a myth, like everything psychic, cannot be solely conditioned by external events. Anything psychic brings its own internal conditions with it, so that one might assert with equal right that the myth is purely psychological and uses meteorological or astronomical events merely as a means of expression. The whimsicality and absurdity of many primitive myths often makes the latter explanation seem far more appropriate than any other. Carl Jung, CW 6, Page 325

Against this extreme concretization of a symbol Ratramnus, a monk of the same monastery where Radbertus was abbot, ventured to raise some opposition. Carl Jung, CW 6 Para 36

This being so, it seems safer to proceed from outside inwards, from the known to the unknown, from the body to the psyche. Thus all attempts at characterology have started from the outside world; astrology, in ancient times, even started from interstellar space in order to arrive at those lines of fate whose beginnings lie in the human heart. To the same

class of interpretations from outward signs belong palmistry, Gall's phrenology, Lavater's physiognomy, and – more recently – graphology, Kretschmer's physiological types, and Rorschach's klexographic method. As we can see, there are any number of paths leading from outside inwards, from the physical to the psychic, and it is necessary that research should follow this direction until the elementary psychic facts are established with sufficient certainty. But once having established these facts, we can reverse the procedure. We can then put the question: What are the bodily correlatives of a given psychic condition? Unfortunately we are not yet far enough advanced to give even an approximate answer. The first requirement is to establish the primary facts of psychic life, and this is far from having been accomplished. Indeed, we have only just begun the work of compiling an inventory of the psyche, not always with great success. Carl Jung, CW 6, Para 917

This historical retrospect may serve to assure us that our modern attempts to formulate a theory of types are by no means new and unprecedented, even though our scientific conscience does not permit us to revert to these old, intuitive ways of thinking. We must find our own answer to this problem, an answer which satisfies the need of science. And here we meet the chief difficulty of the problem of types – that is, the question of standards or criteria. The astrological criterion was simple and objective: it was given by the constellations at birth. As to the way characterological qualities could be correlated with the zodiacal signs and the planets, this is a question which reaches back into the grey mists of prehistory and remains unanswerable. The Greek classification according to the four physiological temperaments took as its criteria the appearance and behaviour of the individual, exactly as we do today in the case of physiological typology. But where shall we seek our criterion for a psychological theory of types? Carl Jung, CW 6, Para 934

However, Radbertus found a more resolute opponent in Scotus Erigena, one of the great philosophers and daring thinkers of the early Middle Ages for whom true philosophy was also true religion, was no blind follower of authority and the "once accepted" because, unlike the majority of his age, he himself could think. He set reason above authority, very unseasonably perhaps but in a way that assured him the acclaim of later centuries. Carl Jung, CW 6, Para 36

Thus he also held that the Communion was nothing more than a commemoration of that last supper which Jesus celebrated with his disciples, a view in which all reasonable men in every age will concur. Carl Jung, CW 6 Para 36

In this controversy we can easily recognize the basic elements: the abstract standpoint that abhors any contamination with the concrete object, and the concretistic that is turned towards the object. Carl Jung, CW 6 Para 37

It must not be overlooked, for instance, that it is precisely the belief in the reality of this miracle [of transubstantiation] that demands a detachment of the psychic process from the purely sensual, and this cannot remain without influence on the psychic process itself. Carl Jung, CW 6 Para 38

Directed thinking becomes absolutely impossible when the sensual has too high a threshold value. Because the sensual value is too high it constantly intrudes into the psyche, where it disrupts and destroys the function of directed thinking which is based on the exclusion of everything incompatible with thought. Carl Jung, CW 6 Para 38

What we may learn from this example is that the thinking of the introvert is incommensurable with the thinking of the extravert, since the two forms of thinking, as regards their determinant, are wholly and fundamentally different. We might perhaps say that the thinking of the introvert is rational, while that of the extravert is programmatic Carl Jung, CW 6 Para 38

This childlike attitude necessarily brings with it another guiding principle in place of self-will and rational intentions, as overwhelmingly powerful in effect as it is divine. Since it is of an irrational nature, the new guiding principle appears in miraculous form:

For unto us a child is born, unto us a son is given; and the government shall be on his shoulder; and his shall be called Wonderful, Counsellor, The mighty God, The everlasting Father, the Prince of Peace (Isaiah 9:6) These honorific titles reproduce the essential qualities of the redeeming symbol. Its "divine" effect comes from the irresistible dynamis of the unconscious. The saviour is always a figure endowed with magical power who makes the impossible possible. The symbol is the middle way along which the opposites flow together in a new movement, like a watercourse bringing fertility after a long drought. The tension that precedes solution is likened in Isaiah to pregnancy Carl Jung, CW 6 Para 442-443

Dissimilation is a condition where the empathetic type is assimilated to the object, although it feels as if the object were assimilated to him. But whenever the value of the object is emphasized, it at once assumes an importance which in its turn influences the subject, forcing him to a "dissimilation" from himself. Carl Jung, CW 6 Para 531

Identification with the love-object plays no small role in analytical psychology, and the psychology of primitives swarms with examples of dissimilation in favour of the totem animal or ancestral spirit. The stigmatization of saints in medieval and even in recent times is a similar phenomenon. In the imitatio Christi [imitation of Christ] dissimilation is exalted into a principle. Carl Jung, CW 6 Para 531

A fantasm is an idee-force. Fantasy as imaginative activity is identical with the flow of psychic energy. Carl Jung, CW 6, Para 722

But the complicated outer conditions under which we live, and the even more complicated conditions of our individual psychic make-up seldom permit a completely undisturbed flow of psychic energy. Carl Jung, CW 6, Paras 6-7

People may then discover thoughts in their mind they don't even agree with. Passive fantasy is always in need of self-reflective, critical evaluation from the conscious everyday standpoint. Active fantasy does not require criticism: rather, the symbolic material needs to be understood Carl Jung, CW 6, Para 714

Before [individuation] can be taken as a goal, the educational aim of adaptation to the necessary minimum of collective norms must first be attained. If a plant is to unfold its specific nature to the full, it must first be able to grow in the soil in which it is planted. Carl Jung; CW 6, par. 761.

As a rule, whenever such a falsification of type takes place the individual becomes neurotic later and can be cured only by developing the attitude consonant with his nature. Carl Jung, CW 6, Para 560.

Poets create from the very depths of the collective unconscious, voicing aloud what others only dream. Carl Jung; CW 6, Page 323.

The will is a psychological phenomenon that owes its existence to culture and moral education but is largely lacking in the primitive mentality. Carl Jung, CW 6, para 844.

We find in Gnosticism what was lacking in the centuries that followed: a belief in the efficacy of individual revelation and individual knowledge. This belief was rooted in the proud feeling of man's affinity with the gods. Carl Jung, CW 6, Page 242.

Like any archetype, the essential nature of the self is unknowable, but its manifestations are the content of myth and legend. Carl Jung, CW 6, Para 790.

The creation of something new is not accomplished by the intellect, creative mind plays with the object it loves. Carl Jung, CW 6, Para 197.

Everyone whose attitude is introverted thinks, feels, and acts in a way that clearly demonstrates that the subject is the prime motivating factor and that the object is of secondary importance. Carl Jung, CW 6, Par 769.

By psyche I understand the totality of all psychic processes, conscious as well as unconscious. By soul, on the other hand, I understand a clearly demarcated functional complex that can best be described as a "personality." Carl Jung; CW 6, par. 797

Intuition is not mere perception, or vision, but an active, creative process that puts into the object just as much as it takes out. Carl Jung, CW 6, para 610.

Passive fantasy [...] is always in need of conscious criticism [...] whereas active fantasy [„,] does not require criticism so much as understanding. Carl Jung, CW 6, Par. 714.

If he is intent only on the outer reality, he must live his myth; if he is turned only towards the inner reality, he must dream his outer, so-called real life. Carl Jung, CW 6, Para 280

The psychology of an individual can never be exhaustively explained from himself alone: a clear recognition is needed of the way it is also conditioned by historical and environmental circumstances. Carl Jung, CW 6, Para 717

This function of mediation between the opposites I have termed the transcendent function, by which I mean nothing mysterious, but merely a combined function of conscious and unconscious elements, or, as in mathematics, a common function of real and imaginary qualities. Carl Jung, CW 6, Para 184

Symbol-formation, therefore, must obviously be an extremely important biological function. Carl Jung, CW 6, Para 402

Childlikeness or lack of prior assumptions is of the very essence of the symbol and its function. Carl Jung, CW 6, Para 442

If the old were not ripe for death, nothing new would appear; and if the old were not in-

juriously blocking the way for the new; it could not and need not be rooted out. Carl Jung, CW 6, Para 446.

The creation of a symbol is not a rational process, for a rational process could never produce an image that represents a content which is at bottom incomprehensible. Carl Jung, CW 6, Para 425

The Symbol always says; in some such form as this a new manifestation of life will become possible, a release from bondage and world-weariness. Carl Jung, CW 6, Para 425.

The redeeming symbol is a highway, a way upon which life can move forward without torment and compulsion. Carl Jung, CW 6, Para 445.

For as the son of his father, he must, as if often the case with children, re-enact under unconscious compulsion the unlived lives of his parents. Carl Jung, CW 6, Para 307

It is not the purpose of a psychological typology to classify human beings into categories—this in itself would be pretty pointless. Carl Jung, CW 6, Para 986

As the individual is not just a single, separate being, but by his very existence presupposes a collective relationship, it follows that the process of individuation must lead to more intense and broader collective relationships and not to isolation. Carl Jung, CW 6, Para 758

Christianity, like every closed system of religion, has an undoubted tendency to suppress the unconscious in the individual as much as possible, thus paralyzing his fantasy activity. Carl Jung, CW 6, Para 80

Wherever we can observe a religion being born, we see how the doctrinal figures flow into the founder himself as revelations, in other words, as concretizations of his unconscious fantasy. Carl Jung, CW 6, Para 80

The renewed God signifies a regenerated attitude, a renewed possibility of life, a recovery of vitality, because, psychologically speaking, God always denotes the highest value, the maximum sum of libido, the fullest intensity of life, the optimum of psychological vitality. Carl Jung, CW 6, Para 301

We should not pretend to understand the world only by the intellect; we apprehend it just as much by feeling. Therefore the judgment of the intellect is, at best, only a half-truth, and must, if it be honest, also admit its inadequacy. Carl Jung, CW 6, Para 856

Doubtless there are exceptional people who are able to sacrifice their entire life to a particular formula; but for most of us such exclusiveness is impossible in the long run. Carl Jung, CW 6, Para 587

Everything old in our unconscious hints at something coming. Carl Jung, CW 6, Para 630

A man’s hatred is always concentrated on the thing that makes him conscious of his bad qualities. Carl Jung, CW 6, Para 453

A fact never exists only as it is in itself, but also as we see it. Carl Jung, CW 6, Para 510

Not the artist alone, but every creative individual whatsoever owes all that is greatest in his life to fantasy. Carl Jung, CW 6, Para 93

Purposively interpreted, it seems like a symbol, seeking to characterize a definite goal with the help of the material at hand, or trace out a line of future psychological development. Carl Jung, CW 6, Para 758

The idea wants changelessness and eternity. Whoever lives under the supremacy of the idea strives for permanence; hence everything that pushes towards change must be opposed to the idea. Carl Jung, CW 6, Para 153

The demand that he should see only objectively is quite out of the question, for it is impossible. We must be satisfied if he does not see too subjectively. Carl Jung, CW 6, Para 9

It should not be forgotten that science is not the summa of life, that it is actually only one of the psychological attitudes, only one of the forms of human thought. Carl Jung, CW 6, Para 60

Any age the vast majority of men are called upon to preserve and praise the status quo, thus helping to bring about the disastrous consequences which the prescience of the creative spirit had sought to avert. Carl Jung, CW 6, Para 434

To be adapted is certainly an ideal, but adaptation is not always possible. There are situations in which the only adaptation is patient endurance. Carl Jung, CW 6, Para 427

It is, pre-eminently, the creative activity from which the answers to all answerable questions come; it is the mother of all possibilities, where, like all psychological opposites, the inner and outer worlds are joined together in living union. Carl Jung, CW 6, Para 78

It should be someone already has a much-clouded vision or view of a very hazy distance, the human society, if he thinks that by uniform regulation of life an equal distribution of happiness could be achieved. Carl Jung; CW 6.

The concept of the unconscious is for me an exclusively psychological concept, and not a philosophical concept of a metaphysical nature. In my view the unconscious is a psychological borderline concept, which covers all psychic contents or processes that are not conscious, i.e., not related to the ego in any perceptible way. My justification for speaking of the existence of unconscious processes at all is derived simply and solely from experience. Carl Jung, CW 6, para 837.

It is just the beam in one's own eye that enables one to detect the mote in one's brother's eye. The beam in one's own eye does not prove that one's brother has no mote in his. But the impairment of one's own vision might easily give rise to a general theory that all motes are beams. The recognition and taking to heart of the subjective determination of knowledge in general, and of psychological knowledge in particular, are basic conditions for the scientific and impartial evaluation of a psyche different from that of the observing subject. These conditions are fulfilled only when the observer is sufficiently informed about

the nature and scope of his own personality. He can, however, be sufficiently informed only when he has in large measure freed himself from the levelling influence of collective opinions and thereby arrived at a clear conception of his own individuality. Carl Jung, CW 6, Para 10

Reason can give a man equilibrium only if his reason is already an equilibrating organ. But for how many individuals and at what periods in history has it been that? As a rule, a man needs the opposite of his actual situation to force him to find his place in the middle. For the sake of mere reason he can never forgo life's riches and the sensuous appeal of the immediate situation. Against the power and delight of the temporal he must set the joy of the eternal, and against the passion of the sensual the ecstasy of the spiritual. The undeniable reality of the one must be matched by the compelling power of the other. Carl Jung, CW 6, Para 386

SOUL. [psyche, personality, persona, anima,] I have been compelled, in my investigations into the structure of the unconscious, to make a conceptual distinction between soul and psyche. By psyche I understand the totality of all psychic processes, conscious as well as unconscious. By soul, on the other hand, I understand a clearly demarcated functional complex that can best be described as a "personality." In order to make clear what I mean by this, I must introduce some further points of view. It is, in particular, the phenomena of somnambulism, double consciousness, split personality, etc., whose investigation we owe primarily to the French school, that have enabled us to accept the possibility of a plurality of personalities in one and the same individual. Carl Jung, CW 6. Para 797

The symbol is always a product of an extremely complex nature, since data from every psychic function have gone into its making. It is, therefore, neither rational nor irrational (qq.v.). It certainly has a side that accords with reason, but it has another side that does not; for it is composed not 'only of rational but also of irrational data supplied by pure inner and outer perception. The profundity and pregnant significance of the symbol appeal just as strongly to thinking as to feeling (qq.v.), while its peculiar plastic imagery, when shaped into sensuous form, stimulates sensation as much as intuition (qq.v.). The living symbol cannot come to birth in a dull or poorly developed mind, for such a mind will be content with the already existing symbols offered by established tradition. Only the passionate yearning of a highly developed mind, for which the traditional symbol is no longer the unified expression of the rational and the irrational, of the highest and the lowest, can create a new symbol. Carl Jung, CW 6, Para 825

The birth of a saviour is equivalent to a great catastrophe, because a new and powerful life springs up just where there had seemed to be no life and no power and no possibility of further development. It comes streaming out of the unconscious, from that unknown part of the psyche which is treated as nothing by all rationalists. From this discredited and rejected region comes the new afflux of energy, the renewal of life. But what is this discredited and rejected source of vitality? It consists of all those psychic contents that were repressed because of their incompatibility with conscious values—everything hateful, immoral, wrong, unsuitable, useless, etc., which means everything that at one time or another appeared so to the individual concerned. The danger is that when these things reappear in a new and wonderful guise, they may make such an impact on him that he will forget or repudiate all his former values. What he once despised now becomes the supreme principle, and what was once truth now becomes error. This reversal of values amounts to the destruction of the old ones and is similar to the devastation of a country by floods. Carl Jung, CW 6, Para 449

The ways and customs of childhood, once so sublimely good, can hardly be laid aside

even when their harmful-ness has long since been proved. The same, only on a gigantic scale, is true of historical changes of attitude. A collective attitude is equivalent to a religion, and changes of religion constitute one of the most painful chapters in the world's history. In this respect our age is afflicted with a blindness that has no parallel. We think we have only to declare an accepted article of faith incorrect and invalid, and we shall be psychologically rid of all the traditional effects of Christianity or Judaism. We believe in enlightenment, as if an intellectual change somehow had a profounder influence on the emotional processes or even on the unconscious. We entirely forget that the religion of the last two thousand years is a psychological attitude, a definite form and manner of adaptation to the world without and within, that lays down a definite cultural pattern and creates an atmosphere which remains wholly uninfluenced by any intellectual denials. Carl Jung, CW 6, Para 313

Between the religion of a people and its actual mode of life there is always a compensatory relation, otherwise religion would have no practical significance at all. Beginning with the highly moral religion of the Persians and the notorious dubiousness—even in antiquity—of Persian habits of life, right down to our "Christian" epoch, when the religion of love assisted at the greatest blood-bath in the world's history—wherever we turn this rule holds true. Carl Jung, CW 6, Para 229

In the same measure as the conscious attitude may pride itself on a certain godlikeness by reason of its lofty and absolute standpoint, an unconscious attitude develops with a godlikeness oriented downwards to an archaic god whose nature is sensual and brutal. The enantiodromia of Heraclitus ensures that the time will come when this deus ahsconditus shall rise to the surface and press the God of our ideals to the wall. Carl Jung, CW 6, Para 150

Reason must always seek the solution in some rational, consistent, logical way, which is certainly justifiable enough in all normal situations but is entirely inadequate when it comes to the really great and decisive questions. It is incapable of creating the symbol because the symbol is irrational. When the rational way proves to be a cul de sac—as it always does after a time—the solution comes from the side it was least expected. Carl Jung, CW 6, Para 438

Faced with the bewildering profusion of animated objects, we create an abstraction, an abstract universal image which conjures the welter of impressions into a fixed form. This image has the magical significance of a defence against the chaotic flux of experience. The abstracting type becomes so lost and submerged in this image that finally its abstract truth is set above the reality of life; and because life might disturb the enjoyment of abstract beauty, it gets completely suppressed. He turns himself into an abstraction, he identifies with the eternal validity of the image and petrifies in it, because for him it has become a redeeming formula. He divests himself of his real self and puts his whole life into his abstraction, in which he is, so to speak, crystallized. The empathetic type suffers a similar fate. Since his activity, his life is empathized into the object, he himself gets into the object because the empathized content is an essential part of himself. He becomes the object; he identifies with it and in this way gets outside himself. By turning himself into an object he desubjectifies himself. Carl Jung, CW 6, Para 499

The tasks of every age differ, and it is only in retrospect that we can discern with certainty what had to be and what should not have been. In the momentary present the conflict of opinions will always rage, for "war is the father of all." History alone decides the issue. Truth is not eternal —it is a programme to be fulfilled. The more "eternal" a truth, the more lifeless it is and worthless; it says nothing more to us because it is self-evident. Carl Jung, CW 6, Para 87

The world exists not merely in itself but also as it appears to me. Indeed, at bottom, we have absolutely no criterion that could help us to form a judgment of a world which was unassimilable by the subject. If we were to ignore the subjective factor, it would be a complete denial of the great doubt as to the possibility of absolute cognition. And this would mean a relapse into the stale and hollow positivism that marred the turn of the century—an attitude of intellectual arrogance accompanied by crudeness of feeling; a violation of life as stupid as it is presumptuous. By overvaluing our capacity for objective cognition we repress the importance of the subjective factor, which simply means a denial of the subject. But what is the subject. The subject is man himself—we are the subject. Only a sick mind could forget that cognition must have a subject, and that there is no knowledge whatever and no world at all unless "I know" has been said, though with this statement one has already expressed the subjective limitation of all knowledge. Carl Jung, CW 6, Para 621

Man is not a machine that can be remodeled for quite other purposes as occasion demands, in the hope that it will go on functioning as regularly as before but in a quite different way. He carries his whole history with him; in his very structure is written the history of mankind. The historical element in man represents a vital need to which a wise psychic economy must respond. Somehow the past must come alive and participate in the present. Total assimilation to the object will always arouse the protest of the suppressed minority of those elements that belong to the past and have existed from the very beginning. Carl Jung, CW 6, Para 570

Certainly strife and misunderstanding will always be among the props of the tragi-comedy of human existence, but it is none the less undeniable that the advance of civilization has led from the law of the jungle to the establishment of courts of justice and standards of right and wrong which are above the contending parties. It is my conviction that a basis for the settlement of conflicting views would be found in the recognition of different types of attitude — a recognition not only of the existence of such types, but also of the fact that every man is so imprisoned in his type that he is simply incapable of fully understanding another standpoint. Failing a recognition of this exacting demand, a violation of the other standpoint is practically inevitable. Carl Jung, CW 6, Para 847

Because we are still such barbarians, any trust in the laws of human nature seems to us a dangerous and unethical naturalism. Why is this? Because under the barbarian’s thin veneer of culture the wild beast lurks in readiness, amply justifying his fear. But the beast is not tamed by locking it up in a cage. There is no morality without freedom. When the barbarian lets loose the beast within him, that is not freedom but bondage. Barbarism must first be vanquished before freedom can be won. This happens, in principle, when the basic root and driving force of morality are felt by the individual as constituents of his own nature and not as external restrictions. Carl Jung, CW 6, Para 357

Science as an end in itself is assuredly a high ideal, yet its consistent fulfilment brings about as many "ends in themselves" as there are sciences and arts. Naturally this leads to a high differentiation and specialization of the particular functions concerned, but also to their detachment from the world and from life, as well as to a multiplication of specialized fields which gradually lose all connection with one another. The result is an impoverishment and desiccation not merely in the specialized fields but also in the psyche of every man who has differentiated himself up or sunk down to the specialist level. Science must prove her value for life; it is not enough that she be the mistress, she must also be the maid. By so serving

she in no way dishonors herself. Carl Jung, CW 6, Para 84

If psychology remains for us only a science, we do not penetrate into life—we merely serve the absolute aim of science. It leads us, certainly, to a knowledge of the objective situation, but it always opposes every other aim but its own. The intellect remains imprisoned in itself just so long as it does not willingly sacrifice its supremacy by acknowledging the value of other aims. It shrinks from the step which takes it out of itself and which denies its universal validity, since from the standpoint of the intellect everything else is nothing but fantasy. But what great thing ever came into existence that was not first fantasy? Carl Jung, CW 6, Para 86

A child certainly allows himself to be impressed by the grand talk of his parents, but do they really imagine he is educated by it? Actually it is the parents' lives that educate the child—what they add by word and gesture at best serves only to confuse him. The same holds good for the teacher. But we have such a belief in method that, if only the method be good, the practice of it seems to sanctify the teacher. Carl Jung, CW 6, Para 665

An inferior man is never a good teacher. But he can conceal his pernicious inferiority, which secretly poisons the pupil, behind an excellent method or an equally brilliant gift of gab. Naturally the pupil of riper years desires nothing better than the knowledge of useful methods, because he is already defeated by the general attitude, which believes in the all-conquering method. He has learnt that the emptiest head, correctly echoing a method, is the best pupil. His whole environment is an optical demonstration that all success and all happiness are outside, and that only the right method is needed to attain the haven of one's desires. Or does, perchance, the life of his religious instructor demonstrate the happiness which radiates from the treasure of the inner vision? Carl Jung, CW 6, Para 665

Aestheticism is not fitted to solve the exceedingly serious and difficult task of educating man, for it always presupposes the very thing it should create—the capacity to love beauty. It actually hinders a deeper investigation of the problem, because it always averts its face from anything evil, ugly, and difficult, and aims at pleasure, even though it be of an edifying kind. Aestheticism therefore lacks all moral force, because au fond it is still only a refined hedonism. Carl Jung, CW 6, Para 194

Both these necessities exist in ourselves nature and culture. We cannot only be ourselves; we must also be related to others. Hence a way must be found that is not a mere rational compromise; it must be a state or process that is wholly consonant with the living being, "a highway and a holy way," as the prophet says, "a straight way, so that fools shall not err therein" (Isaiah 35:8). Carl Jung, CW 6, Para 135

Conscious capacity for one-sidedness is a sign of the highest culture, but involuntary one-sidedness, i.e., inability to be anything but one-sided, is a sign of barbarism. Hence the most one-sided differentiations are found among semi-barbarians—for instance, certain aspects of Christian asceticism that are an affront to good taste, and parallel phenomena among the yogis and Tibetan Buddhists. For the barbarian, this tendency to fall a victim to one-sidedness in one way or another, thus losing sight of his total personality, is a great and constant danger. Carl Jung, CW 6, Para 346

No culture is ever really complete, for it always swings more towards one side or the other. Sometimes the cultural idea is extraverted, and then the chief value lies with the object

and man's relation to it; sometimes it is introverted, and then the chief value lies with the subject and his relation to the idea. In the former case, culture takes on a collective character, in the latter an individual one. Carl Jung, CW 6, Para 110

We obviously need both civilization and culture. We cannot create one without the other, and we must admit, unfortunately, that modern humanity lacks both. Where there is too much of the one there is too little of the other, if we want to put it more cautiously. The continual harping on progress has by now become rather suspect. Carl Jung, CW 6, Para 477

The ideal and aim of science do not consist in giving the most exact possible description of the facts—science cannot compete as a recording instrument with the camera and the gramophone—but in establishing certain laws, which are merely abbreviated expressions for many diverse processes that are yet conceived to be somehow correlated. This aim goes beyond the purely empirical realm by means of the concept, which, though it may have general and proved validity, will always be a product of the subjective psychological constellation of the investigator. In the making of scientific theories and concepts many personal and accidental factors are involved. There is also a personal equation that is psychological and not merely psychophysical. Carl Jung, CW 6, Para 9

Since [in the Middle Ages] the psychic relation to woman was expressed in the collective worship of Mary, the image of woman lost a value to which human beings had a natural right. This value could find its natural expression only through individual choice, and it sank into the unconscious when the individual form of expression was replaced by a collective one. In the unconscious the image of woman received an energy charge that activated the archaic and infantile dominants. And since all unconscious contents, when activated by dissociated libido, are projected upon the external object, the devaluation of the real woman was compensated by daemonic features. She no longer appeared as an object of love, but as a persecutor or witch. The consequence of increasing Mariolatry was the witch hunt, that indelible blot on the later Middle Ages. Carl Jung, CW 6, Para 399

Whereas logic and objectivity are usually the predominant features of a man's outer attitude, or are at least regarded as ideals, in the case of a woman it is feeling. But in the soul it is the other way round inwardly it is the man who feels, and the woman who reflects. Hence a man's greater liability to total despair, while a woman can always find comfort and hope; accordingly a man is more likely to put an end to himself than a woman. However much a victim of social circumstances a woman may be, as a prostitute for instance, a man is no less a victim of impulses from the unconscious, taking the form of alcoholism and other vices. Carl Jung, CW 6, Para 805

Again, no psychological fact can ever be exhaustively explained in terms of causality alone; as a living phenomenon, it is always indissolubly bound up with the continuity of the vital process, so that it is not only something evolved but also continually evolving and creative. Anything psychic is Janus-faced it looks both backwards and forwards. Because it is evolving, it is also preparing the future. Were this not so, intentions, aims, plans, calculations, predictions, and premonitions would be psychological impossibilities. Carl Jung, CW 6, Para 718

The psychological investigator is always finding himself obliged to make extensive use of an indirect method of description in order to present the reality he has observed. Only in so far as elementary facts are communicated which are amenable to quantitative measurement

can there be any question of a direct presentation. But how much of the actual psychology of man can be experienced and observed as quantitatively measurable facts? Carl Jung, CW 6; Para 672

Reverence for the great mysteries of nature, which the language of religion seeks to express in symbols hallowed by their antiquity, profound significance, and beauty, will not suffer from the extension of psychology to this domain, to which science has hitherto found no access. We only shift the symbols back a little, shedding a little light on their darker reaches, but without succumbing to the erroneous notion that we have created more than merely a new symbol for the same enigma that perplexed all ages before us. Carl Jung, CW 6, Para 428

A symbol loses its magical or, if you prefer, its redeeming power as soon as its liability to dissolve is recognized. To be effective, a symbol must be by its very nature unassailable. It must be the best possible expression of the prevailing worldview, an unsurpassed container of meaning; it must also be sufficiently remote from comprehension to resist all attempts of the critical intellect to break it down; and finally, its aesthetic form must appeal so convincingly to our feelings that no arguments can be raised against it on that score. Carl Jung CW 6, Para 401

Do we ever understand what we think? We only understand that kind of thinking, which is a mere equation, from which nothing comes out but what we have put in. That is the working of the intellect. But besides that there is a thinking in primordial images, in symbols which are older than the historical man, which are inborn in him from the earliest times, and, eternally living, outlasting all generations, still make up the groundwork of the human psyche. As we can see from the example of Faust, the vision of the symbol is a pointer to the onward course of life, beckoning the libido towards a still distant goal—but a goal that henceforth will burn unquenchably within him, so that his life, kindled as by a flame, moves steadily towards the far-off beacon. This is the specific life-promoting significance of the symbol, and such, too, is the meaning and value of religious symbols. I am speaking, of course, not of symbols that are dead and stiffened by dogma, but of living symbols that rise up from the creative unconscious of the living man. The immense significance of such symbols can be denied only by those for whom the history of the world begins with the present day. Carl Jung, CW 6, Para 202

There is a deep gulf between what a man is and what he represents, between what he is as an individual and what he is as a collective being. His function is developed at the expense of the individuality. Should he excel, he is merely identical with his collective function; but should he not, then, though he may be highly esteemed as a function in society, his individuality is wholly on the level of his inferior, undeveloped functions, and he is simply a barbarian, while in the former case he has happily deceived himself as to his actual barbarism. Carl Jung, CW 6, Para 111

No social legislation will ever be able to overcome the psychological differences between men, this most necessary factor for generating the vital energy of a human society. It may serve a useful purpose, therefore, to speak of the heterogeneity of men. These differences involve such different requirements for happiness that no legislation, however perfect, could afford them even approximate satisfaction. No outward form of life could be devised, however equitable and just it might appear, that would not involve injustice for one or the other human type. That, in spite of this, every kind of enthusiast—political, social, philosophical, and religious—is busily endeavouring to find those uniform external conditions which would bring with them greater opportunities for the happiness of all seems to me connected with a general

attitude to life too exclusively. Although it is certainly a fine thing that every man should stand equal before the law, that every man should have his political vote, and that no man, through hereditary social position and privilege, should have unjust advantage over his brother, it is distinctly less fine when the idea of equality is extended to other walks of life. A man must have a very clouded vision, or view human society from a very misty distance, to cherish the notion that the uniform regulation of life would automatically ensure a uniform distribution of happiness. He must be pretty far gone in delusion if he imagines that equality of income, or equal opportunities for all, would have approximately the same value for everyone. But, if he were a legislator, what would he do about all those people whose greatest opportunities lie not without, but within? If he were just, he would have to give at least twice as much money to the one as to the other, since to the one it means much to the other little. Carl Jung, CW 6, Para 845

When a problem that is at bottom personal, and therefore apparently subjective, coincides with external events that contain the same psychological elements as the personal conflict, it is suddenly transformed into a general question embracing the whole of society. In this way the personal problem acquires a dignity it lacked hitherto, since a state of inner discord always has something humiliating and degrading about it, so that one sinks into an ignominious condition both without and within, like a state dishonoured by civil war. It is this that makes one shrink from displaying before the public a purely personal conflict, provided of course that one does not suffer from an overdose of self-esteem. But if the connection between the personal problem and the larger contemporary events is discerned and understood, it brings release from the loneliness of the purely personal, and the subjective problem is magnified into a general question of our society. Carl Jung, CW 6, Para 119

To establish a really mature attitude, he has to see the subjective value of all these images which seem to create trouble for him. He has to assimilate them into his own psychology; he has to find out in what way they are part of himself; how he attributes for instance a positive value to an object, when as a matter of fact it is he who could and should develop this value. And in the same way, when he projects negative qualities and therefore hates and loathes the object, he has to discover that he is projecting his own inferior side, his shadow, as it were, because he prefers to have an optimistic and one-sided image of himself. Carl Jung, CW 6, Para 813.

Abstraction is an activity pertaining to the psychological functions in general. There is an abstract thinking, just as there is abstract feeling, sensation, and intuition. Abstract thinking singles out the rational, logical qualities of a given content from its intellectually irrelevant components. Abstract feeling does the same with a content characterized by its feeling-values. Abstract sensation would be aesthetic as opposed to sensuous sensation, and abstract intuition would be symbolic as opposed to fantastic intuition. Carl Jung; CW 6, par. 678.

Opposites can be united only in the form of compromise, or irrationally, some new thing arising between them which, though different from both yet has the power to take up their energies in equal measure as an expression of both and of neither. Such an expression cannot be contrived by reason, it can only be created through living. Carl Jung, CW 6, Para 169

Out of a playful movement of elements whose interrelations are not immediately apparent, patterns arise which an observant and critical intellect can only evaluate afterwards. The creation of something new is not accomplished by the intellect but by the play instinct acting from inner necessity. The creative mind plays with the objects it loves. Carl Jung, CW 6, Para

197

The accumulated libido activates images lying dormant in the collective unconscious, among them the God-image, that engram or imprint which from the beginning of time has been the collective expression of the most overwhelmingly powerful influences exerted on the conscious mind by unconscious concentrations of libido. Carl Jung, CW 6, Para 412

The dammed-up instinctual forces in civilized man are immensely destructive and far more dangerous than the instincts of the primitive, who in a modest degree is constantly living out his negative instincts. Consequently no war of the historical past can rival in grandiose horror the wars of civilized nations. Carl Jung, CW 6, Para 230

Man is constantly inclined to forget that what was once good does not remain good eternally. He follows the old ways that once were good long after they have become bad and only with the greatest sacrifices and untold suffering can he rid himself of this delusion and see that what was once good is now perhaps grown old and is good no longer. This is so in great things as in small. Carl Jung, CW 6, Para 313

Just as the unconscious world of mythological images speaks indirectly, through the experience of external things, to the man who surrenders himself wholly to the outer world, so the real world and its demands find their way indirectly to the man who has surrendered himself wholly to the soul; for no man can escape both realities. Carl Jung, CW 6, Para 280

Apotropaic: Descriptive of "magical thinking," based on the desire to depotentiate the influence of an object or person. Apotropaic actions are characteristic of introversion as a mode of psychological orientation. I have seen an introverted child who made his first attempts to walk only after he had learned the names of all the objects in the room he might touch. Carl Jung, CW 6, par. 897.

Sensation must be strictly differentiated from feeling, since the latter is an entirely different process, although it may associate itself with sensation as "feeling-tone." Sensation is related not only to external stimuli but to inner ones, i.e., to changes in the internal organic processes. Carl Jung, CW 6, Para 792.

Nothing is so apt to challenge our self-awareness and alertness as being at war with oneself. One can hardly think of any other or more effective means of waking humanity out of the irresponsible and innocent half-sleep of the primitive mentality and bringing it to a state of conscious responsibility. Carl Jung; CW 6; Page 964.

He seizes on new objects or situations with great intensity, sometimes with extraordinary enthusiasm, only to abandon them cold -bloodedly, without any compunction and apparently without remembering them, as soon as their range is known, and no further developments can be divined. So long as a new possibility is in the offing, the intuitive is bound to it with the shackles of fate. (CW 6, par. 613)

The intuitive is never to be found in the world of accepted reality values, but he has a keen nose for anything new and in the making. Because he is always seeking out new possibilities, stable conditions suffocate him. Carl Jung, CW 6, para 613

If only he could stay put, he would reap the fruits of his labours; but always he must be

running after a new possibility, quitting his newly planted fields while others gather in the harvest. Carl Jung, CW 6, para 615.

No matter how reasonable and suitable it may be, and although every conceivable argument speaks for its stability, a day will come when nothing will deter him from regarding as a prison the very situation that seemed to promise him freedom and deliverance, and from acting accordingly. Neither reason nor feeling can restrain him or frighten him away from a new possibility, even though it goes against all his previous convictions. Carl Jung, CW 6, para 613

Since his intuition is concerned with externals and with ferreting out their possibilities, he readily turns to professions in which he can exploit these capacities to the full. Many business tycoons, entrepreneurs, speculators, stockbrokers, politicians, etc., belong to this type. Carl Jung, CW 6, para 613.

The extraverted intuitive is continually scenting out new possibilities, which he pursues with equal unconcern for his own welfare and for that of others, pressing on quite heedless of human considerations and tearing down what has just been built in his everlasting search for change. Carl Jung, CW 6, para 658.

The intuitive's morality is governed neither by thinking nor by feeling; he has his own characteristic morality, which consists in a loyalty to his vision and in voluntary submission to its authority. 'Carl Jung, CW 6, para 613

His capacity to inspire courage or to kindle enthusiasm for anything new is unrivaled. He brings his vision to life, he presents it convincingly and with dramatic fire, he embodies it, so to speak. But this is not playacting; it is a kind of fate. Carl Jung, CW 6, para 614

He is the natural champion of all minorities with a future. Because he is able, when oriented more to people than things, to make an intuitive diagnosis of their abilities and potentialities, he can also "make" men. Carl Jung, CW 6, para 614

Naturally this attitude holds great dangers, for all too easily the intuitive may fritter away his life on things and people, spreading about him an abundance of life which others live and not he himself. Carl Jung, CW 6, para 615

Conformity is one side of a man, uniqueness is another. Carl Jung, CW 6, Par 895.

God is a datum formulated as the "highest good" signifying the supreme psychic value, i.e., a concept endowed with the highest and most general significance in determining our thoughts and actions Carl Jung, CW 6, Para 67.

The God-concept coincides with the particular ideational complex which concentrates in itself the maximum amount of libido, or psychic energy Carl Jung, CW 6, Para 67

An idea psychologically different in different people e.g., God is the belly, or money, science, power, sex, etc. a concept varying according to the localization of the highest good Carl Jung, CW 6, Para 67

The organism confronts light with a new structure, the eye, and the psyche confronts

the natural process with a symbolic image, which apprehends it in the same way as the eye catches the light. And just as the eye bears witness to the peculiar and spontaneous creative activity of living matter, the primordial image expresses the intrinsic and unconditioned creative power of the psyche. The primordial image is thus a condensation of the living process. Carl Jung, CW 6, Para 748

Or as Wang Yang-ming, the Chinese father of Japanese philosophy, says: "In every heart there dwells a sejin (sage). Only, we do not believe it firmly enough, and therefore the whole has remained buried." Carl Jung, CW 6, Para 214-218

Just as conscious as well as unconscious phenomena are to be met with in practice, the self as psychic totality also has a conscious as well as an unconscious aspect. Empirically, the self appears in dreams, myths, and fairytales in the figure of the "supraordinate personality" (v. ego), such as a king, hero, prophet, saviour, etc., or in the form of a totality symbol, such as the circle, square, quadratura circuli, cross, etc. When it represents a complexio oppositorum, a union of opposites, it can also appear as a united duality, in the form, for instance, of Tao as the interplay of yang and yin, or of the hostile brothers, or of the hero and his adversary (arch-enemy, dragon), Faust and Mephistopheles, etc. Empirically, therefore, the self appears as a play of light and shadow, although conceived as a totality and unity in which the opposites are united. Since such a concept is irrepresentable — tertium non datur—it is transcendental on this account also. It would, logically considered, be a vain speculation were it not for the fact that it designates symbols of unity that are found to occur empirically. Carl Jung, CW 6, Para 790

The brahman concept also contains the concept of rta, right order, the orderly course of ...., be a vain speculation were it not for the fact that it designates symbols of unity that are found to occur empirically in the world. In brahman, the creative universal essence and universal Ground, all things come upon the right way, for in it they are eternally dissolved and recreated; all development in an orderly way proceeds from brahman. The concept of rta is a stepping-stone to the concept of Tao in Lao-tzu. Tao is the right way, the reign of law, the middle road between the opposites, freed from them and yet uniting them in itself. The purpose of life is to travel this middle road and never to deviate towards the opposites. The ecstatic element is entirely absent in Lao-tzu; its place is taken by sublime philosophic lucidity, an intellectual and intuitive wisdom obscured by no mystical haze—a wisdom that represents what is probably the highest attainable degree of spiritual superiority, as far removed from chaos as the stars from the disorder of the actual world. It takes all that is wild, without denaturing it and turning it into something higher. Carl Jung, CW 6, Para 192

Tao contains no ecstatic element, its place being taken by a sublime philosophic lucidity, an intellectual and intuitive wisdom obscured by no mystical haze. Carl Jung, CW 6, Para 192

According to the central concepts of Taoism, Tao is divided into a fundamental pair of opposites, yang and yin. Yang signifies warmth, light, maleness; yin is cold, darkness, female-ness. Yang is also heaven, yin earth. From the yang force arises shen, the celestial portion of the human soul, and from the yin force comes kwei, the earthly part. Carl Jung, CW 6, Para 366

Intuition, like sensation, is an irrational function of perception. As with sensation, its contents have the character of being “given,” in contrast to the “derived” or “produced” character of thinking and feeling contents Carl Jung, CW 6, Para 770

Intuition is the function that mediates perceptions in an unconscious way. Everything, whether outer or inner objects or their relationships, can be the focus of this perception Carl Jung, CW 6, Para 770

The primary function of intuition is simply to transmit images, or perceptions of relations between things, which could not be transmitted by the other functions or only in a very roundabout way Carl Jung, CW 6, Para 611

Intuition may be seen as the perception of one's own unconscious processes, withdrawing one from the object. It mounts above it, ever seeking to rule its material, to shape it, even violently, in accordance with one's own subjective viewpoint, though without being aware of doing so Carl Jung, CW 6, Para 219

The peculiarity of intuition is that it is neither sense perception, nor feeling, nor intellectual inference, although it may also appear in these forms Carl Jung, CW 6, Para 770

In intuition a content presents itself whole and complete, without our being able to explain or discover how this content came into existence. Intuition is a kind of instinctive apprehension, no matter of what contents Carl Jung, CW 6, Para 770

Intuition tries to apprehend the widest range of possibilities, since only through envisioning possibilities is intuition fully satisfied Carl Jung, CW 6, Para 612

In Schiller we have to reckon with a predominance of intellect, not at the expense of his poetic intuition but at the cost of feeling. To Schiller himself it seemed as though there were a perpetual conflict in him between imagination and abstraction, that is, between intuition and thinking. "Even now it happens often enough that the power of imagination disturbs my abstraction, and cold reasoning my poetry" (Goethe, ed. Beutler, XX, p. 20) Carl Jung, CW 6, Para 117

Intuition is constantly seeking fresh outlets and new possibilities in external life. In a very short time every existing situation becomes a prison for the intuitive, a chain that has to be broken Carl Jung, CW 6, Para 612

The intuitive does have sensations, of course, but is not guided by them as such; he uses them merely as starting-points for his perceptions. He selects them by unconscious predilections Carl Jung, CW 6. Para 611

Brahman requires that external opposites, such as heat and cold, first be denied participation in the psyche, and then extreme fluctuations of emotion, such as Fluctuations of emotion are, of course, the constant concomitants of all psychic opposites, and hence of all conflicts of ideas, whether moral or otherwise. We know from experience that the emotions thus aroused increase in proportion as the exciting factor affects the individual as a whole Carl Jung, CW 6. Para 329

The Indian purpose is therefore clear: it wants to free the individual altogether from the opposites inherent in human nature, so that he can attain a new life in Brahman, which is the state of redemption and at the same time God. It is an irrational union of opposites, their final overcoming. Although Brahman, the world-ground and world-creator, created the opposites, they must nevertheless be cancelled out in it again, for otherwise it would not amount to a

state of redemption Carl Jung, CW 6, Para 329

Brahman is the union and dissolution of all opposites, and at the same time stands outside them as an irrational factor. It is therefore wholly beyond cognition and comprehension. It is a divine entity, at once the Self (though to a lesser degree than the analogous Atman concept) and a definite psychological state characterized by isolation from the flux of affects Carl Jung, CW 6, Para 330

Since suffering is an affect, release from affects means deliverance. Deliverance from the flux of affects, from the tension of opposites, is synonymous with the way of redemption that gradually leads to Brahman Carl Jung, CW 6, Para 330

Brahman is not only the producer but the produced, the ever-becoming. The epithet "Gracious One" (vena), here bestowed on the sun, is elsewhere applied to the seer who is endowed with the divine light, for, like the Brahman sun, the mind of the seer traverses "earth and heaven contemplating Brahman." The intimate connection, indeed, identity, between the divine being and the Self (Atman) of the man is generally known Carl Jung, CW 6, Para 332

Brahman is also prana, the breath of life and the cosmic principle; it is vayu, wind, which is described in the Brihadaranyaka Upanishad (3.7) as "the thread by which this world and the other world and all things are tied together, the Self, the inner controller, the immortal" Carl Jung, CW 6, Para 334

Brahman is conceived in the Atharva Veda as the vitalistic-principle, the life force, which fashions all the organs and their respective instincts Carl Jung, CW 6, Para 335

Even man's strength comes from Brahman. The Brahman concept, by virtue of all its attributes and symbols, coincides with that of a dynamic or creative principle which I have termed libido Carl Jung, CW 6, Para 336

The word Brahman means prayer, incantation, sacred speech, sacred knowledge (Veda), holy life, the sacred caste (the Brahmans), the Absolute Carl Jung, CW 6, Para 336

If, therefore, we speak of the anima of a man, we must logically speak of the animus of a woman, if we are to give the soul of a woman its right name. Carl Jung, CW 6, Para 805

A bushman had a little son whom he loved with the tender monkey-love characteristic of primitives. Psychologically, this love is completely autoerotic – that is to say, the subject loves himself in the object. Carl Jung, CW 6, Para 403

I have called this process in its totality the transcendent function, "function" being here understood not as a basic function but as a complex function made up of other functions, and "transcendent" not as denoting a metaphysical quality but merely the fact that this function facilitates a transition from one attitude to another. The raw material shaped by thesis and antithesis, and in the shaping of which the opposites are united, is the living symbol. Carl Jung, CW 6, Para 828

But precisely because the new symbol is born of man's highest spiritual aspirations and must at the same time spring from the deepest roots of his being, it cannot be a one-sided product of the most highly differentiated mental functions but must derive equally from the

lowest and most primitive levels of the psyche. Carl Jung, CW 6, Para 823

Since every scientific theory contains a hypothesis and is therefore an anticipatory description of something still essentially unknown, it is a symbol" Carl Jung, CW 6, Para 817

Considered biologically, the sacrifice serves the interests of domestication, but psychologically it opens a door for new possibilities of spiritual development through the dissolution of old ties Carl Jung, CW 6, Para 24

These images are archaic forms of expression which become symbols, and these appear in their turn as equivalents of the devalued objects. This process is as old as mankind, for symbols may be found among the most primitive human types living today Carl Jung, CW 6, Para 402

The fact that the introvert, because of his abstracting attitude, naturally has a reflective and contemplative air is misleading. One is inclined to assume that in him the primacy falls to thinking Carl Jung, CW 6, Para 248

The extravert, on the contrary, naturally displays many immediate reactions, which easily lead one to conjecture a predominance of feeling. These suppositions are deceptive, since the extravert may well be a thinking, and the introvert a feeling type. Carl Jung, CW 6, Para 248

There is a constant influx of unconscious contents into the conscious psychological process, to such a degree that at times it is hard for the observer to decide which character traits belong to the conscious and which to the unconscious personality Carl Jung, CW 6, Para 576

Introversion and extraversion are not traits of character at all but mechanisms, which can, as it were, be switched on or off at will. Only from their habitual predominance do the corresponding characters develop. The predilection one way or the other no doubt depends on the inborn disposition, but this is not always the decisive factor Carl Jung, CW 6, Para 479

If we go right back to primitive psychology, we find absolutely no trace of the concept of an individual. Instead of individuality we find only collective relationship or what Lévy-Bruhl calls participation mystique Carl Jung, CW 6, Para 12

The collective attitude hinders the recognition and evaluation of a psychology different from the subject's, because the mind that is collectively oriented is quite incapable of thinking and feeling in any other way than by projection Carl Jung, CW 6, Para 12

What we understand by the concept "individual" is a relatively recent acquisition in the history of the human mind and human culture Carl Jung, CW 6, Para 12

The development of individuality, with the consequent psychological differentiation of man, goes hand in hand with the de-psychologizing work of objective science Carl Jung, CW 6, Para 12

Gnostic philosophy established three types, corresponding perhaps to three [out of four] of the basic psychological functions: thinking, feeling, and sensation [intuition missing]: The pneumatikoi could be correlated with thinking, The psychikoi with feeling, The hylikoi with sensation. Carl Jung, CW 6, Para 14

The inferior rating of the psychikoi was in accord with the spirit of Gnosticism, which, unlike Christianity, insisted on the value of knowledge Carl Jung, CW 6, Para 14

The Christian principles of love and faith kept knowledge at a distance. In the Christian sphere the pneumatikoi would accordingly get the lower rating, since they were distinguished merely by the possession of Gnosis, i.e., knowledge Carl Jung, CW 6, Para 14

Tertullian was a fanatic, brilliantly one-sided in his defense of a recognized truth, possessed of a matchless fighting spirit, a merciless opponent who saw victory only in the total annihilation of his adversary, his language a flashing blade wielded with ferocious mastery Carl Jung, CW 6, Para 17

Tertullian was the creator of the Church Latin that lasted for more than a thousand years. It was also he who coined the terminology of the early Church Carl Jung, CW 6, Para 17

Tertullian's impassioned thinking was so inexorable that again and again he alienated himself from the very thing for which he had given his heart's blood. Accordingly his ethical code was bitterly severe Carl Jung, CW 6, Para 17

Tertullian commanded that martyrdom be sought and not shunned; he permitted no second marriage, and required the permanent veiling of persons of the female sex Carl Jung, CW 6, Para 17

Gnosis, which in reality is a passion for thinking and knowing, he [Tertullian] attacked with unrelenting fanaticism, together with philosophy and science which differed from it so little Carl Jung, CW 6, Para 17

Thanks to the acuteness of his mind, Tertullian saw through the poverty of philosophical and Gnostic knowledge, and contemptuously rejected it. He invoked against it the testimony of his own inner world, his own inner realities, which were one with his faith. In shaping and developing these realities he became the creator of those abstract conceptions which still underlie the Catholic system of today Carl Jung, CW 6, Para 18

Type differences should also be borne in mind when we consider the long and perilous struggle which the Church from its earliest beginnings waged against Gnosticism. Owing to the predominantly practical trend of early Christianity the intellectual hardly came into his own, except when he followed his fighting instincts by indulging in polemical apologetics. Carl Jung, CW 6, Para 15

The irrational inner reality had for Tertullian an essentially dynamic nature; it was his principle, his foundation in the face of the world and of all collectively valid and rational science and philosophy Carl Jung, CW 6, Para 18

With the sacrificium intellectus [by Tertullian] philosophy and science, and hence also Gnosis, fell to the ground Carl Jung, CW 6, Para 19

Introverted thinking is of value for his contemporaries only so long as it is manifestly and intelligibly related to the known facts of the time. Once it has become mythological, it ceases to be relevant on in itself Carl Jung, CW 6, Para 637

In his own special field of work the introverted thinker provokes the most violent opposition, which he has no notion how to deal with, unless he happens to be seduced by his primitive affects into acrimonious and fruitless polemics Carl Jung, CW 6, Para 635

The introverted thinker may develop into a misanthropic bachelor with a childlike heart. Often he is gauche in his behavior, painfully anxious to escape notice, or remarkably unconcerned and childishly naïve Carl Jung, CW 6, Para 635

In Origen we may recognize the absolute opposite of Tertullian. He was born in Alexandria about A.D. 185. His father was a Christian martyr Carl Jung, CW 6, Para 21

Origen, by mutilating himself [self-castration], sacrificed his sensual tie to the world. For him, evidently, the specific danger was not the intellect but feeling and sensation, which bound him to the object Carl Jung, CW 6, Para 26

Through castration Origen freed himself from the sensuality that was coupled with Gnosticism; he could then surrender without fear to the treasures of Gnostic thought, whereas Tertullian through his sacrifice of the intellect turned away from Gnosis but also reached a depth of religious feeling that we miss in Origen Carl Jung, CW 6, Para 26

Extraversion is the opposite attitude of introversion, where a predilection one way or the other depends on the inborn disposition of the subject, but the inborn disposition is not always the decisive factor since environmental influences can be just as important Carl Jung, CW 6, Para 479

Both extraversion and introversion may appear in the personality so we cannot decide at first to which attitude the superior function belongs, i.e., to introversion or extraversion. This can only be determined by a thorough analysis of the qualities of each function Carl Jung, CW 6, Para 576

The extravert generally has a relaxed attitude. Exceptions, however, are frequent, even in one and the same individual e.g., put an extravert in a dark and silent room, where all his repressed complexes can gnaw at him, and he will get into such a state of tension that he will jump at the slightest stimulus Carl Jung, CW 6, Para 482

An extraverted consciousness is unable to believe in invisible forces.to the blind eyes of the extravert, the intensive sympathy of the introverted feeling type looks like coldness, because usually it does nothing visible Carl Jung, CW 6, Para 641

The extravert suffers most frequently from the neurosis of hysteria, evident in his exaggerated rapport with persons and adjustment to conditions amounting to imitation Carl Jung, CW 6, Para 566

The demands of the extravert’s unconscious have an essentially primitive, infantile, egocentric character which compensates for his conscious emphasis on things outside himself Carl Jung, CW 6, Para 571

An example of the extraverted type can be seen in Origen, an early Church scholar, whose basic orientation was towards the object Carl Jung, CW 6, Para 24

Since every man, as a relatively stable being, possesses all the basic psychological functions, it would be a psychological necessity with a view to perfect adaptation that he should also employ them in equal measure Carl Jung, CW 6, Para 28

However, there must be a reason why there are different modes of psychological adaptation: evidently one alone is not enough, since the object seems to be only partially comprehended when, for example, it is something that is merely thought or merely felt Carl Jung, CW 6, Para 28

A one-sided ("typical") attitude leaves a deficiency in the adaptive performance which accumulates during the course of life, and sooner or later this will produce a disturbance of adaptation that drives the subject toward some kind of compensation Carl Jung, CW 6, Para 28

The sacrifice that Tertullian and Origen carried out was drastic too drastic for our taste but it was in keeping with the spirit of the age, which was thoroughly concretistic Carl Jung, CW 6, Para 29

Because of this spirit the Gnostics took their visions as absolutely real, or at least as relating directly to reality, and for Tertullian the reality of his feeling was objectively valid Carl Jung, CW 6, Para 29

The Gnostics projected their subjective inner perception of the change of attitude into a cosmogonic system and believed in the reality of its psychological figures Carl Jung, CW 6, Para 29

The doctrine of the transubstantiation asserts that the wine and holy wafer become transformed into the actual blood and body of Christ. As is well known, this view became dogma, according to which the transformation is accomplished vere, realiter, substantialiter (in truth, in reality, in substance) Carl Jung, CW 6, Para 36

In my experience this type [extraverted thinker] is found chiefly among men, since, in general, thinking tends more often to be a dominant function in men than in women. When thinking dominates in a woman it is usually associated with a predominantly intuitive cast of mind Carl Jung, CW 6, Para 591

Extraverted thinking may be characterized as programmatic in contrast to introverted thinking which is rational Carl Jung, CW 6, Para 38

We might take Darwin as an example of the normal extraverted thinking type; this type speaks with facts. Darwin ranges over the wide field of objective reality Carl Jung, CW 6, Para 632

Anatole France says: "What is thinking? And how does one think? We think with words; that in itself is sensual and brings us back to nature. "This is extreme nominalism, as it is when Nietzsche says that reason is "speech metaphysics" Carl Jung, CW 6, Para 40

The concept of reality necessarily coincides with the sensuous reality of things; their individuality represents the real as opposed to the abstract idea. Strict realism, on the contrary, transfers the accent on reality to the abstract, the idea, the universal, which posits ante rem (before the thing) Carl Jung, CW 6, Para 41

God is a datum formulated as the “highest good” signifying the supreme psychic value, i.e., a concept endowed with the highest and most general significance in determining our thoughts and actions Carl Jung, CW 6, Para 67

Fantasy is just as much feeling as thinking, as much intuition as sensation. There is no psychic function that, through fantasy, is not inextricably bound up with other psychic functions. Sometimes it appears in primordial form, sometimes it is the ultimate and boldest product of all our faculties combined Carl Jung, CW 6, Para 78

Fantasy always fashions the bridge between the irreconcilable claims of subject and object, introversion and extraversion. In fantasy alone both mechanisms are united Carl Jung, CW 6, Para 78

How fantasy is assessed by psychology, so long as this remains merely science, is illustrated by the well-known views of Freud and Adler Carl Jung, CW 6, Para 88

The Freudian interpretation reduces fantasy to causal, elementary, instinctive processes. Adler’s conception reduces it to the elementary, final aims of the ego Carl Jung, CW 6, Para 88

Freud’s is a psychology of instinct, Adler’s an ego-psychology Carl Jung, CW 6, Para 88

Instinct is an impersonal biological phenomenon. A psychology founded on instinct must by its very nature neglect the ego, since the ego owes its existence to the principium individuationis, i.e., to individual differentiation, whose isolated character removes it from the realm of general biological phenomena Carl Jung, CW 6, Para 88

Every ego-psychology must necessarily exclude and ignore just the collective element that is bound to a psychology of instinct, since it describes that very process by which the ego becomes differentiated from collective drives Carl Jung, CW 6, Para 88

Freud’s and Adler’s theories reject the principle of imagination (fantasy) since they reduce fantasies to something else and treat them merely as a semiotic expression Carl Jung, CW 6, Para 93

For everyone whose guiding principle is adaptation to external reality, imagination is for these reasons something reprehensible and useless Carl Jung, CW 6, Para 93

The debt we owe to the play of imagination is incalculable. It is therefore short sighted to treat fantasy, on account of its risky or unacceptable nature, as a thing of little worth. It must not be forgotten that in the imagination a man’s highest value may lie Carl Jung, CW 6, Para 93

Freudian psychology is characterized by one central idea, the repression of incompatible wish-tendencies. Man appears as a bundle of wishes which are only partially adaptable to the object Carl Jung, CW 6, Para 90

The basic formula with Freud is therefore sexuality, which expresses the strongest rela-

tion between subject and object; with Adler it is the power of the subject, which secures him most effectively against the object and guarantees him an impregnable isolation that abolishes all relationships Carl Jung, CW 6, Para 91

Freud would like to ensure the undisturbed flow of instinct towards its object; Adler would like to break the baleful spell of the object in order to save the ego from suffocating in its own defensive armor Carl Jung, CW 6, Para 91

Abstraction is a universal image conjuring the welter of impressions of animate objects into a fixed form, having the magical significance of a defense against the chaotic flux of experience Carl Jung, CW 6, Para 499

Abstraction may be equated to thinking, thus putting it in conflict with the poetic spirit Carl Jung, CW 6, Para 117

Intuition, like sensation, is an irrational function of perception. As with sensation, its contents have the character of being "given," in contrast to the "derived" or "produced" character of thinking and feeling contents Carl Jung, CW 6, Para 770

Intuition is the function that mediates perceptions in an unconscious way. Everything, whether outer or inner objects or their relationships, can be the focus of this perception Carl Jung, CW 6, Para 770

The primary function of intuition is simply to transmit images, or perceptions of relations between things, which could not be transmitted by the other functions or only in a very roundabout way Carl Jung, CW 6, Para 611

Intuition may be seen as the perception of one's own unconscious processes, withdrawing one from the object. It mounts above it, ever seeking to rule its material, to shape it, even violently, in accordance with one's own subjective viewpoint, though without being aware of doing so Carl Jung, CW 6, Para 219

The peculiarity of intuition is that it is neither sense perception, nor feeling, nor intellectual inference, although it may also appear in these forms Carl Jung, CW 6, Para 770

In intuition a content presents itself whole and complete, without our being able to explain or discover how this content came into existence. Intuition is a kind of instinctive apprehension, no matter of what contents Carl Jung, CW 6, Para 770

Intuition tries to apprehend the widest range of possibilities, since only through envisioning possibilities is intuition fully satisfied Carl Jung, CW 6, Para 612

Intuition is constantly seeking fresh outlets and new possibilities in external life. In a very short time every existing situation becomes a prison for the intuitive, a chain that has to be broken Carl Jung, CW 6, Para 612

The intuitive does have sensations, of course, but is not guided by them as such; he uses them merely as starting-points for his perceptions. He selects them by unconscious predilections Carl Jung, CW 6, Para 611

The intuitive typically stops at perception; perception being his main problem Carl Jung, CW 6, Para 661

The intuitive function is represented in consciousness by an attitude of expectancy, by vision and penetration; but only from the subsequent result can it be established how much of what was “seen” was actually in the object, and how much was “read into” it Carl Jung, CW 6, Para 610

Affectivity is a state felt as painful by the introvert, but something not to be missed by the extravert Carl Jung, CW 6, Para 138

Affectivity means relatedness to the extravert, being felt by him as more important than his ego since affectivity is where his “person” lies Carl Jung, CW 6, Para 138

Introversion is the opposite attitude of extraversion, where a predilection one way or the other depends on the inborn disposition of the subject, but the inborn disposition is not always the decisive factor since environmental influences can be just as important Carl Jung, CW 6, Para 479

Both introversion and extraversion may appear in the personality so we cannot decide at first to which attitude the superior function belongs, i.e., introversion or extraversion a state which can only be determined by a thorough analysis of the qualities of each function Carl Jung, CW 6, Para 576

The introvert generally has a tense attitude; however, exceptions are frequent even in one and the same individual, e.g., an introvert in a congenial, harmonious milieu relaxes into complete extraversion Carl Jung, CW 6, Para 482

The introvert reveals his “person” exclusively as the ego and shrinks from every change that is at all liable to affect his ego affectivity being something absolutely painful. The introvert discovers himself in the constant Carl Jung, CW 6, Para 138

The introvert holds the same repugnance, fear, or silent contempt for extraversion as the extravert holds for introversion Carl Jung, CW 6, Para 164

Both extraversion and introversion may appear in the personality so we cannot decide at first to which attitude the superior function belongs, i.e., to introversion or extraversion. This can only be determined by a thorough analysis of the qualities of each function Carl Jung, CW 6, Para 576

The extraverted feeling type finds himself through his feeling-relation to the object, whereas the introvert loses himself in the object Carl Jung, CW 6, Para 164

The concept of rta is a stepping-stone to the concept of Tao in Lao-tzu Carl Jung, CW 6, Para 192

Tao is the right way, the reign of law, the middle road between opposites, freed from them and yet uniting them in itself. The purpose of life is to travel this middle road and never to deviate towards the opposites Carl Jung, CW 6, Para 192

Tao contains no ecstatic element, its place being taken by a sublime philosophic lucidity, an intellectual and intuitive wisdom obscured by no mystical haze Carl Jung, CW 6, Para 192

The symbol lives through the restraint imposed upon certain forms of libido, and in turn serves to restrain these forms Carl Jung, CW 6, Para 401

For a certain time the [Holy] Grail symbol clearly fulfilled these requirements, and to this fact it owed its vitality, which, as the example of Wagner shows, is still not exhausted today, even though our age and our psychology strive unceasingly for its dissolution Carl Jung, CW 6, Para 401

Symbol-formation, therefore, must obviously be an extremely important biological function. As the symbol can come alive only through the devaluation of the object, it is evident that the purpose it serves is to deprive the object of its value Carl Jung, CW 6, Para 402

The profundity and pregnant significance of the symbol appeal just as strongly to thinking as to feeling, while its peculiar plastic imagery, when shaped into sensuous form, stimulates sensation as much as intuition Carl Jung, CW 6, Para 823

The symbol has a practical importance in its relation to consciousness and the conscious conduct of life, and great significance as an exponent of the unconscious thus it is of considerable value in the treatment of neurotics Carl Jung, CW 6, Para 204

I say “may” advisedly, because on the other hand fantasies are also valueless, since in the form of raw material they possess no realizable worth. In order to unearth the treasures they contain they must be developed a stage further Carl Jung, CW 6, Para 93

Adler’s psychology, on the other hand, is characterized by the central concept of ego-superiority. Man appears primarily as an ego-point which must not under any circumstances be subordinated to the object Carl Jung, CW 6, Para 90

Freud’s repression of instinct in respect of the object corresponds to the security of the subject in Adler. For Adler the remedy is the removal of the security that isolates the subject; for Freud it is the removal of the repression that makes the object inaccessible Carl Jung, CW 6, Para 90

The basic formula with Freud is therefore sexuality, which expresses the strongest relation between subject and object; with Adler it is the power of the subject, which secures him most effectively against the object and guarantees him an impregnable isolation that abolishes all relationships Carl Jung, CW 6, Para 91

Abstraction may be equated to thinking, thus putting it in conflict with the poetic spirit Carl Jung, CW 6, Para 117

The primary function of intuition is simply to transmit images, or perceptions of relations between things, which could not be transmitted by the other functions or only in a very roundabout way Carl Jung, CW 6, Para 611

Intuition may be seen as the perception of one’s own unconscious processes, withdraw-

ing one from the object. It mounts above it, ever seeking to rule its material, to shape it, even violently, in accordance with one's own subjective viewpoint, though without being aware of doing so Carl Jung, CW 6, Para 219

The peculiarity of intuition is that it is neither sense perception, nor feeling, nor intellectual inference, although it may also appear in these forms Carl Jung, CW 6, Para 770

In intuition a content presents itself whole and complete, without our being able to explain or discover how this content came into existence. Intuition is a kind of instinctive apprehension, no matter of what contents Carl Jung, CW 6, Para 770

Intuition tries to apprehend the widest range of possibilities, since only through envisioning possibilities is intuition fully satisfied Carl Jung, CW 6, Para 612

Intuition is constantly seeking fresh outlets and new possibilities in external life. In a very short time every existing situation becomes a prison for the intuitive, a chain that has to be broken Carl Jung, CW 6, Para 612

A symbol must be the best possible expression of the prevailing world-view, an unsurpassed container of meaning Carl Jung, CW 6, Para 401

A symbol must also be sufficiently remote from comprehension to resist all attempts of the critical intellect to break it down Carl Jung, CW 6, Para 401

Finally, the aesthetic form of the symbol must appeal so convincingly to our feelings that no argument can be raised against it on that score Carl Jung, CW 6, Para 401

The dynamic principle of fantasy is play, a characteristic also of the child, and as such it appears inconsistent with the principle of serious work. But without this playing with fantasy no creative work has ever yet come to birth Carl Jung, CW 6, Para 93

The standpoints of Freud and Adler are equally one-sided and characteristic only of one type Carl Jung, CW 6, Para 92

Consequently, any possibility of an individual differentiation of the soul was lost when it became repressed in the collective worship. Such losses generally have unfortunate consequences, and in this case they soon made themselves felt Carl Jung, CW 6, Para 399

In the end, Hermas' libido, i.e., his erotic desire is directed to his task of the Church. In this way, the transition of the worship of woman into the worship of the soul takes place Carl Jung, CW 6, Para 383

Hermas' mistress appears to him not as an erotic fantasy but in "divine" form, seeming to him like a goddess in heaven Carl Jung, CW 6, Para 383

The Christian principle which unites the opposites in the worship of God. In Buddhism, it is the worship of the Self (self-development), while in Spitteler and Goethe it is the worship of the soul symbolized by the worship of woman Carl Jung, CW 6, Para 375

Implicit in this categorization is the modern individualistic principle on the one hand,

and on the other a primitive poly-daemonism which assigns to every race, every tribe, every family, every individual its specific religious principle Carl Jung, CW 6, Para 375

The dissolution of the symbol means a streaming off of libido along the direct path, or at any rate an almost irresistible urge for its direct application Carl Jung, CW 6, Para 401

The symbol acquires a conscious motive force once we grant it a value, i.e., if it is perceived, its unconscious libido-charge is thereby given an opportunity to make itself felt in the conscious conduct of life Carl Jung, CW 6, Para 204

In order to characterize more closely these two "impulses" [Apollonian and Dionysian], Nietzsche compares the peculiar psychological states they give rise to with those of dreaming and intoxication Carl Jung, CW 6, Para 226

The Apollonian impulse produces the state comparable to dreaming, the Dionysian the state comparable to intoxication Carl Jung, CW 6, Para 226

The Dionysian impulse, on the other hand, means the liberation of unbounded instinct, the breaking loose of the unbridled dynamism of animal and divine nature; hence in the Dionysian rout man appears as a satyr, god above and goat below Carl Jung, CW 6. Para 227

"All the artistry of Nature is revealed in the ecstasies of intoxication." Which means that the creative dynamism, libido in instinctive form, takes possession of the individual as though he were an object and uses him as a tool or as an expression of itself Carl Jung, CW 6. Para 227

Because of this, Nietzsche quite forgets that in the struggle between Apollo and Dionysus and in their ultimate reconciliation the problem for the Greeks was never an aesthetic one, but was essentially religious Carl Jung, CW 6. Para 231

Aestheticism is a modern bias that shows the psychological mysteries of the Dionysus cult in a light in which they were assuredly never seen or experienced by the ancients Carl Jung, CW 6. Para 231

Brahman requires that external opposites, such as heat and cold, first be denied participation in the psyche, and then that it is expressed in the Upanishads by means of symbols I have termed libido symbols Carl Jung, CW 6. Para 330

The concept of rta is a libido symbol like sun, wind, etc. Only rta is less concretistic and contains the abstract element of fixed direction and regularity, the idea of a predetermined, ordered path or process Carl Jung, CW 6. Para 355

Rta is, therefore, a kind of philosophical libido symbol that can be directly compared to the Stoic concept of Heimarmene. For the Stoics heimarmene had the significance of creative, primal heat, and at the same time it was a predetermined, regular process (hence its other meaning: "compulsion of the stars") Carl Jung, CW 6. Para 355

The natural flow of libido, the middle path, means complete obedience to the fundamental laws of human nature, and there can positively be no higher moral principle than harmony with natural laws that guide the libido in the direction of life's optimum Carl Jung, CW 6. Para 356

Tao contains no ecstatic element, its place being taken by a sublime philosophic lucidity, an intellectual and intuitive wisdom obscured by no mystical haze Carl Jung, CW 6. Para 192

Man as a microcosm uniting the world opposites is the equivalent of an irrational symbol that unites the psychological opposites Carl Jung, CW 6. Para 367

As a microcosm, man is a reconciler of the opposites. Heaven, man, and earth form the three chief elements of the world, the san-tsai Carl Jung, CW 6. Para 366

Amfortas' suffering is caused by the tension of opposites represented by the Grail and the power of Klingsor, who has taken possession of the holy spear Carl Jung, CW 6. Para 371

Klingsor holds a spell over Kundry who symbolizes the instinctive life-force or libido that Amfortas lacks Carl Jung, CW 6. Para 371

Parsifal rescues the libido from the state of restless, compulsive instinctuality, in the first place because he does not succumb to Kundry, and in the second place because he does not possess the Grail Carl Jung, CW 6. Para 371

The death of Kundry may be taken as the liberation of libido from its naturalistic, undomesticated form which falls away as a lifeless husk, while the energy bursts forth as a new stream of life in the glowing of the Grail Carl Jung, CW 6. Para 371

By Parsifal's renunciation of the opposites (unwilling though this was, at least in part), Parsifal caused a blockage of libido that created a new potential and thus made a new manifestation of energy possible Carl Jung, CW 6. Para 372

Mystical interpretation, however, has always loved to conceive the bride as Israel and the bridegroom as Jehovah, impelled by a sound instinct to turn even erotic feelings into a relationship between God and the chosen people Carl Jung, CW 6, Para 392

Christianity appropriated the Song of Songs for the same reason, interpreting the bridegroom as Christ and the bride as the Church Carl Jung, CW 6, Para 392

To the psychology of the Middle Ages this analogy had an extraordinary appeal, and it inspired the quite unabashed Christ-eroticism of the Christian mystics, some of the best examples of which are supplied by Mechthild of Magdeburg Carl Jung, CW 6, Para 392

The Litany of Loreto was conceived in this spirit. It derived certain attributes of the Virgin directly from the Song of Songs, as in the case of the tower symbol Carl Jung, CW 6, Para 392

The rose, too, was used as one of her attributes even at the time of the Greek Fathers, together with the lily, which likewise appear in the Song of Songs (2: 1): "I am the rose of Sharon, and the lily of the valleys" Carl Jung, CW 6, Para 392

Images much used in the medieval hymns are the "enclosed garden" and the "sealed fountain," (Song of Songs 4: 12 "a garden enclosed is my sister, my spouse; a spring shut up, a fountain sealed") Carl Jung, CW 6, Para 392

The survival or unconscious revivification of the vessel symbol is indicative of a strengthening of the feminine principle in the masculine psychology of that time. Its symbolization in an enigmatic image must be interpreted as a spiritualization of the eroticism aroused by the worship of woman Carl Jung, CW 6, Para 401

One of the greatest schisms of the Church, having risen from the over-compensated doubt of the Inquisition which came surging up from the unconscious Carl Jung, CW 6, Para 400

The logical consequence of this subjectify process is a splitting up into sects, and its most extreme outcome is individualism, representing a new form of detachment from the world, the immediate danger of which is re-submersion in the unconscious dynamis Carl Jung, CW 6, Para 433

Gnosticism shows man's unconscious psychology in full flower, almost perverse in its luxuriance; it contained the very thing that most strongly resisted the regula fidei [rule of faith] Carl Jung, CW 6, Para 409

Meister Eckhart was the greatest thinker of early medieval times, confronting us with new ideas having the same psychic orientation that impelled Dante to follow Beatrice into the underworld of the unconscious and that inspired the singers who sang the lore of the Grail Carl Jung, CW 6, Para 410

Eckhart rose to a purely psychological and relativistic conception of God and his relation to man and the souled., a psychological understanding of religious phenomena Carl Jung, CW 6, Para 411

Eckhart had a sense of inner affinity with God which must have enhanced the value of his soul, i.e., of his own inner being sharp contrast to the Christian sense of sin Carl Jung, CW 6, Para 411

The soul must be a content in which spontaneity is inherent, and hence also partial unconsciousness, as with every autonomous complex Carl Jung, CW 6, Para 419

This absorption of the soul into consciousness is just as much a characteristic of Eastern as it is of Western culture. In Buddhism everything is dissolved into consciousness; even the samskaras, the unconscious formative forces, must be transformed through religious self-development Carl Jung, CW 6, Para 419

One of the greatest schisms of the Church, having risen from the over-compensated doubt of the Inquisition which came surging up from the unconscious Carl Jung, CW 6, Para 400

The logical consequence of this subjectifying process is a splitting up into sects, and its most extreme outcome is individualism, representing a new form of detachment from the world, the immediate danger of which is re-submersion in the unconscious dynamis Carl Jung, CW 6, Para 433

Prometheus, the artist, the servant of the soul disappears from the world of men; while society itself, in obedience to a soulless moral routine, is delivered over to Behemoth, symbolizing the inimical, the destructive effect of an obsolete ideal Carl Jung, CW 6, Para 434

Pandora, the soul, creates the saving jewel in the unconscious, but it does not benefit mankind because men fail to appreciate it Carl Jung, CW 6, Para 434

Prometheus intervenes and through his insight and understanding brings first a few, and then many, individuals to their senses Carl Jung, CW 6, Para 434

The jewel represents the inferior function, those psychic contents not acknowledged, hence unacceptable Carl Jung, CW 6, Para 453

The soul is a personification of the unconscious, where lies the treasure, the libido which is immersed in introversion and is allegorized as God's kingdom. This amounts to a permanent union with God, a living in his kingdom, in that state where a preponderance of libido lies in the unconscious and determines conscious life Carl Jung, CW 6, Para 424

Human psychology is chameleon-like, as the practising psychologist knows from daily experience. So whenever the object predominates, an assimilation to the object takes place Carl Jung, CW 6, Para 531

On the other hand, we also have to bear in mind the great disadvantage which identification with the directed function entails, namely, the degeneration of the individual Carl Jung, CW 6, Para 502

No doubt man can be mechanized to a very considerable extent, but not to the point of giving himself up completely, or only at the cost of the gravest injury Carl Jung, CW 6, Para 502

Abstraction thus seems to be a function that is at war with the original state of participation mystique. Its purpose is to break the object's hold on the subject. It leads on the one hand to the creation of art-forms, and on the other to knowledge of the object Carl Jung, CW 6, Para 496

All abstraction has the effect of killing the independent activity of the object in so far as this is magically related to the psyche of the subject. The abstracting type does it quite consciously, as a defense against the magical influence of the object Carl Jung, CW 6, Para 497

Abstraction and empathy, introversion and extraversion, are mechanisms of adaptation and defense Carl Jung, CW 6, Para 502

As our daily psychological experience shows, there are very many people who are completely identified with their directed (or "valuable") function, among them the very types we are discussing Carl Jung, CW 6, Para 502

It seems to me that Lévy-Bruhl's participation mystique is more descriptive of this condition [Chinese art], since it aptly formulates the primordial relation of the primitive to the object Carl Jung, CW 6, Para 495

As Worringer says, it is precisely the Oriental art-forms and religions that display this abstracting attitude to the world. To the Oriental, therefore, the world must appear very different from what it does to the Occidental, who animates it with his empathy Carl Jung, CW 6, Para

494

It is easy to see that empathy corresponds to the mechanism of extraversion, and abstraction to that of introversion Carl Jung, CW 6, Para 493

“The great inner uneasiness inspired in man by the phenomena of the external world” is nothing other than the introvert’s fear of all stimuli and change, occasioned by his deeper sensitivity and powers of realization Carl Jung, CW 6, Para 493

The introvert’s abstractions serve the avowed purpose of confining the irregular and changeable within fixed limits. It goes without saying that this essentially magical procedure is found in full flower in the art of primitives, whose geometrical patterns have a magical rather than an aesthetic value Carl Jung, CW 6, Para 493

The unconscious depotentiation that precedes the act of empathy gives the object a permanently lower value, as in the case of abstraction Carl Jung, CW 6, Para 497

Since the unconscious contents of the empathetic type are identical with the object and make it appear inanimate, empathy is needed in order to cognize the nature of the object Carl Jung, CW 6, Para 497

Abstraction presupposes that the object is alive and active, and seeks to withdraw from the influence of the object Carl Jung, CW 6, Para 490

An extraverted consciousness is unable to believe in invisible forces.to the blind eyes of the extravert, the intensive sympathy of the introverted feeling type looks like coldness, because usually it does nothing visible Carl Jung, CW 6, Para 641

Extraversion must be understood as a mechanism, not a trait of character, capable of being switched on or off at will, its corresponding character developing only from its habitual predominance Carl Jung, CW 6, Para 479

The extravert reveals himself simply and solely in his relatedness, i.e., in his affectivity. He discovers himself in what is fluctuating and changeable. His ego is of less importance than his relatedness Carl Jung, CW 6, Para 138

Extraversion becomes less subject to misunderstanding than the introvert because the style of the times works for him.an extraverted overvaluation of the object Carl Jung, CW 6, Para 645

The extravert holds a differing attitude from the introvert. This causes an intrinsically irritating conflict between the two and the most heated and futile scientific discussions Carl Jung, CW 6, Para 521

The extraverted type can barely conceive of the necessity that forces the introverted type to adapt to the world by means of a system Carl Jung, CW 6, Para 420

The idea of ritual murder is a projection, in acute form, of the rejection of the Redeemer, for

one always sees the mote in one's own eye as the beam in one's brother's Carl Jung, CW 6, Para 454

As against this historical evolution of the idea of the soul, analytical psychology opposes the view that the soul does not coincide with the totality of the psychic functions. We define the soul on the one hand as the relation to the unconscious, and on the other as a personification of unconscious contents Carl Jung, CW 6, Para 420

These honorific titles reproduce the essential qualities of the redeeming symbol. Its "divine" effect comes from the irresistible dynamis of the unconscious. The saviour is always a figure endowed with magical power who makes the impossible possible Carl Jung, CW 6, Para 443

The hallmark of classic hysteria is an exaggerated rapport with persons in the immediate environment and an adjustment to surrounding conditions that amounts to imitation Carl Jung, CW 6, Para 566

There is a constant tendency for the hysteric to make himself interesting and to produce an impression Carl Jung, CW 6, Para 566

Another unmistakable sign of the extraverted hysteric is his effusiveness, which occasionally carries him into the realm of fantasy, so that he is accused of the "hysterical lie" Carl Jung, CW 6, Para 566

The hysterical character begins as an exaggeration of the normal attitude; it is then complicated by compensatory reactions from the unconscious, which counteract the exaggerated expression by means of physical symptoms that force the libido to introvert Carl Jung, CW 6, Para 566

The reaction of the unconscious produces another class of symptoms having a more introverted character, one of the most typical being a morbid intensification of fantasy activity Carl Jung, CW 6, Para 566

A purely objective orientation does violence to a multitude of subjective impulses, intentions, needs, and desires and deprives them of the libido that is their natural right Carl Jung, CW 6, Para 570

Man is not a machine that can be remodelled for quite other purposes as occasion demands, in the hope that it will go on functioning as regularly as before but in a quite different way Carl Jung, CW 6, Para 570

Man carries his whole history with him; in his very structure is written the history of mankind. This historical element in man represents a vital need to which a wise psychic economy must respond Carl Jung, CW 6, Para 570

Somehow the past must come alive and participate in the present. Total assimilation to the object will always arouse the protest of the suppressed minority of those elements that belong to the past and have existed from the very beginning Carl Jung, CW 6, Para 570

Feeling restricts the products of sensation and intuition since the choice is made by a rational judgment. It is not the intensity of a sensation that decides action but judgment (feeling) Carl Jung, CW 6, Para 602

One can feel “correctly” only when feeling is not disturbed by anything else. Nothing disturbs feeling so much as thinking. It is therefore understandable that thinking will be kept in abeyance as much as possible Carl Jung, CW 6, Para 598

If feeling is falsified by an egocentric attitude, it at once becomes unsympathetic, because it is then concerned mainly with the ego. It inevitably creates the impression of sentimental self-love, of trying to make itself interesting, and even of morbid self-admiration Carl Jung, CW 6, Para 639

The extraverted feeling type finds himself through his feeling-relation to the object, whereas the introvert loses himself in the object Carl Jung, CW 6, Para 164

Sensation is chiefly conditioned by the object, those objects that excite the strongest sensations will be decisive for the individual’s psychology. The result is a strong sensuous tie to the object. Sensation is therefore a vital function equipped with the strongest vital instinct Carl Jung, CW 6, Para 605

The extraverted sensation type need not be a common voluptuary; he is merely desirous of the strongest sensations, and these, by his very nature, he can receive only from the outside Carl Jung, CW 6, Para 607

The extraverted sensation type sees love as unquestionably rooted in the physical attractions of its object. If normal, he is conspicuously well adjusted to reality. That is his ideal, and it even makes him considerate of others Carl Jung, CW 6, Para 607

Over-extraverted feeling satisfies aesthetic expectations but does not speak to the heart. It appeals merely to the senses or worse still only to reason. It can provide the aesthetic padding for a situation, but there it stops, and beyond that its effect is nil. It has become sterile Carl Jung, CW 6, Para 596

The contrary attitudes [extraversion and introversion], are in themselves no more than correlative mechanisms: a diastolic going out and seizing of the object, and a systolic concentration and detachment of energy from the object seized. Every human being possesses both mechanisms as an expression of his natural life-rhythm, a rhythm which Goethe, surely not by chance, described physiologically in terms of the heart’s activity. A rhythmical alternative of both forms of psychic activity would perhaps correspond to the normal course of life Carl Jung, CW 6, Para 6

One mechanism will naturally predominate, and if this condition becomes in any way chronic a type will be produced: that is, an habitual attitude in which one mechanism predominates permanently, although the other can never be completely suppressed since it is an integral part of the psychic economy. Hence there can never be a pure type in the sense that it possesses only one mechanism with the complete atrophy of the other. A typical attitude always means merely the relative predominance of one mechanism Carl Jung, CW 6, Para 6

Extraversion and introversion are to be distinguished as general basic attitudes from the function-types. These two attitudes may be recognized with the greatest ease, while it requires considerable experience to distinguish the function-type. At times it is uncommonly difficult to find out which function holds prior place Carl Jung, CW 6, Para 248

Generally speaking, a judging observer will tend to seize on the conscious character, while a perceptive observer will be more influenced by the unconscious character, since judgment is chiefly concerned with the conscious motivation of the psychic process, while perception registers the process itself Carl Jung, CW 6, Para 576

But in so far as we apply judgment and perception in equal measure, it may easily happen that a personality appears to us as both introverted and extraverted, so that we cannot decide at first to which attitude the superior function belongs. In such cases only a thorough analysis of the qualities of each function can help us to form a valid judgment Carl Jung, CW 6, Para 576

We must observe which function is completely under conscious control, and which functions have a haphazard and spontaneous character. The former is always more highly differentiated than the latter, which also possess infantile and primitive traits. Occasionally the superior function gives the impression of normality, while the others have something abnormal or pathological about them Carl Jung, CW 6, Para 576

The sort of demons that introversion and extraversion may become is a daily experience for us psychotherapists. We see in our patients and can feel in ourselves with what irresistible force the libido streams inwards or outwards, with what unshakable tenacity an introverted or extraverted attitude can take root Carl Jung, CW 6, Para 347

The two fundamental mechanisms of the psyche, extraversion and introversion, are also to a large extent the normal and appropriate ways of reacting to complexes extraversion as a means of escaping from the complex into reality, introversion as a means of detaching oneself from external reality through the complex Carl Jung, CW 6, Para 259

It is no wonder, therefore, that the earlier all-powerful collective attitude prevented almost completely an objective psychological evaluation of individual differences, or any scientific objectification of individual psychological processes. It was owing to this very lack of psychological thinking that knowledge became “psychologized,” i.e., filled with projected psychology. We find striking examples of this in man’s first attempts at a philosophical explanation of the cosmos Carl Jung, CW 6, Para 12

Tertullian was a pagan, and he abandoned himself to the lascivious life of his city until about his thirty-fifth year, when Tertullian became a Christian. He was the author of numerous writings wherein his character, which is our especial interest, is unmistakably displayed. Most clearly of all we see his unparalleled noble-hearted zeal, his fire, his passionate temperament, and the profundity of his religious understanding Carl Jung, CW 6, Para 17

The self-mutilation performed by Tertullian in the sacrificium intellectus [the sacrifice of the intellect] led him to an unqualified recognition of the irrational inner reality, the true rock of his faith. The necessity of the religious process which he sensed in himself he crystalized in the incomparable formula anima naturaliter christiana (the soul is by nature Christian) Carl Jung, CW 6, Para 19

Tertullian is a classic example of introverted thinking. His very considerable and keenly developed intellect was flanked by an unmistakable sensuality. The psychological process of development which we call specifically Christian led him to the sacrifice, the amputation, of the most valuable function, [i.e., thinking] a mythical idea that is also found in the great and exemplary symbol of the sacrifice of the Son of God Carl Jung, CW 6, Para 20

Tertullian's most valuable organ was the intellect and the clarity of knowledge it made possible. Through the sacrificium intellectus the way of purely intellectual development was closed to him; it forced him to recognize the irrational dynamism of his soul as the foundation of his being. The intellectuality of Gnosis, the specifically rational stamp it gave to the dynamic phenomena of the soul, must have been odious to him, for that was just the way he had to forsake in order to acknowledge the principle of feeling Carl Jung, CW 6, Para 20

The introverted thinker never shrinks from thinking a thought because it might prove to be dangerous, subversive, heretical or wounding to other people's feelings, he is none the less beset by the greatest anxiety if ever he has to make it an objective reality. That goes against the grain. And when he does put his ideas into the world, he never introduces them like a mother solicitous for her children, but simply dumps them there and gets extremely annoyed if they fail to thrive on their own account. His amazing unpracticalness and horror of publicity in any form have a hand in this Carl Jung, CW 6, Para 634

The introverted thinking type is strongly influenced by ideas, though his ideas have their origin not in objective data but in his subjective foundation. He will follow his ideas like the extravert, but in the reverse direction; inwards and not outwards. Intensity is his aim, not extensity. In these fundamental respects he differs quite unmistakable from his extraverted counterpart Carl Jung, CW 6, Para 633

Introverted thinking easily gets lost in the immense truth of the subjective factor. It creates theories for their own sake, apparently with an eye to real or at least possible facts, but always with a tendency to slip over from the world of ideas into mere imagery. Accordingly, visions of numerous possibilities appear on the scene, but none of them ever becomes a reality, until finally images are produced which no longer express anything externally real, being mere symbols of the ineffable and unknowable. It is now merely a mystical thinking and quite as unfruitful as thinking that remains bound to objective data. Whereas the latter sinks to the level of a mere representation of facts, the former evaporates into a representation of the irrepresentable, far beyond anything that could be expressed in an image Carl Jung, CW 6, Para 630

With regard to the establishment of new facts it [introverted thinking] is only indirectly of value, since new views rather than knowledge of new facts are its main concern. It formulates questions and creates theories, it opens up new prospects and insights, but with regard to facts its attitude is one of reserve. They are all very well as illustrative examples, but they must not be allowed to predominate Carl Jung, CW 6, Para 628

However clear the inner structure of this his [introverted thinker] thoughts may be, he is not in the least clear where or how they link up with the world of reality. Only with the greatest difficultly will he bring himself to admit that what is clear to him may not be equally clear to everyone Carl Jung, CW 6, Para 634

Introverted thinking differs from extraverted thinking most visibly when it attempts to bring objective data into connections not warranted by the objection other words, to subordi-

nate them to a subjective idea. Each type of thinking senses the other as an encroachment on its own province, and hence a sort of shadow effect is produced, each revealing to the other its least favourable aspect. Introverted thinking then appears as something quite arbitrary, while extraverted thinking seems dull and banal. Thus the two orientations are incessantly at war Carl Jung, CW 6, Para 581

Extraverted thinking shows a dangerous tendency to force the facts into the shape of its image, or to ignore them altogether in order to give fantasy free play. In that event it will be impossible for the finished product the idea to repudiate its derivation from the dim archaic image. It will have a mythological streak which one is apt to interpret as “originality” or, in more pronounced cases, as mere whimsicality, since its archaic character is not immediately apparent to specialists unfamiliar with mythological motifs Carl Jung, CW 6, Para 629

In the introverted thinker’s pursuit of his ideas he is generally stubborn, headstrong, and quite unamenable to influence. His suggestibility to personal influences is in strange contrast to this. This type tends to vanish behind a cloud of misunderstanding, which gets all the thicker the more he attempts to assume, by way of compensation and with the help of his inferior functions, an air of urbanity which contrasts glaringly with his real nature Carl Jung, CW 6, Para 634

The introverted thinker is well exemplified in the figures of Kant who relied on the subjective factor, restricting himself to a critique of knowledge Carl Jung, Tertullian, an early church father and creator of the Church Latinis a classic example of introverted thinking. His very considerable and keenly developed intellect was flanked by an unmistakable sensuality Gauss, a mathematician who had a strong distaste for teaching because he was obliged to communicate his findings to others without first having checked and polished every word of the text. To be obliged to communicate his findings to others without such verification must have felt to him as though he were exhibiting himself before strangers in his nightshirt Carl Jung, CW 6, Para 553

The detachment of libido from the object transfers it [the libido], into the subject, where it activates the images lying dormant in the unconscious. These images are archaic forms of expression which become symbols, and these appear in their turn as equivalents of the devalued objects Carl Jung, CW 6, Para 402

But this was not the only consequence. The splitting off and repression of a valuable progressive tendency resulted in a quite general activation of the unconscious. This activation could find no satisfying expression in collective Christian symbols, for an adequate expression always takes an individual form Carl Jung, CW 6, Para 400

Thus the way was paved for heresies and schisms, against which the only defense available to the Christian consciousness was fanaticism. The frenzied horror of the Inquisition was the product of over-compensated doubt, which came surging up from the unconscious and finally gave rise to one of the greatest schisms of the Church the Reformation Considered biologically, the sacrifice serves the interests of domestication, but psychologically it opens a door for new possibilities of spiritual development through the dissolution of old ties Carl Jung, CW 6, Para 24

The brahman concept contains the idea of rta, right order, the orderly course of the world. In brahman, the creative universal essence and universal Ground, all things come upon the right way, for in it they are eternally dissolved and recreated; all development in an

orderly way proceeds from brahman Carl Jung, CW 6, Para 192

In his personal relations the introverted thinker appears taciturn or else throws himself on people who cannot understand him, and for him this is one more proof of the abysmal stupidity of man. If for once he is understood, he easily succumbs to a credulous overestimation of his prowess Carl Jung, CW 6, Para 635

Casual acquaintances think him [introverted thinker] inconsiderate and domineering. But the better one knows him, the more favorable one's judgment becomes, and his closest friends value his intimacy very highly. To outsiders he seems prickly, unapproachable, and arrogant, and sometimes soured as a result of his antisocial prejudices. As a personal teacher he has little influence, since the mentality of his students is strange to him. Besides, teaching has at bottom, no interest for him unless it happens to provide him with a theoretical problem. He is a poor teacher, because all the time he is teaching his thought is occupied with the material itself and not with its presentation Carl Jung, CW 6, Para 635

The introverted thinker usually has bad experiences with rivals in his own field because he never understands how to curry their favor; as a rule he only succeeds in showing them how entirely superfluous they are to him. He has only to be convinced of a person's seeming innocuousness to lay himself open to the most undesirable elements. They seize hold of him from the unconscious. He lets himself be brutalized and exploited in the most ignominious way if only he can be left in peace to pursue his ideas Carl Jung, CW 6, Para 634

In the introverted thinker's pursuit of his ideas he is generally stubborn, headstrong, and quite unamenable to influence. His suggestibility to personal influences is in strange contrast to this. This type tends to vanish behind a cloud of misunderstanding, which gets all the thicker the more he attempts to assume, by way of compensation and with the help of his inferior functions, an air of urbanity which contrasts glaringly with his real nature Carl Jung, CW 6, Para 634

With the intensification of his type [introverted thinker], his convictions become all the more rigid and unbending. Outside influences are shut off; as a person, too, he becomes more unsympathetic to his wider circle of acquaintances, and therefore more dependent on his intimates. His tone becomes personal and surly, and though his ideas may gain in profundity they can no longer be adequately expressed in the material at hand. To compensate for this, he falls back on emotionality and touchiness. The outside influences he has brusquely fended off attack him from within, from the unconscious, and in his efforts to defend himself he attacks things that to outsiders seem utterly unimportant. Because of the subjectivization of consciousness resulting from his lack of relationship to the object, what secretly concerns his own person now seems to him of extreme importance Carl Jung, CW 6, Para 636

The introverted thinker begins to confuse his subjective truth with his own personality. Although he will not try to press his convictions on anyone personally, he will burst out with vicious personal retorts against every criticism, however just. Thus his isolation gradually increases. His originally fertilizing ideas become destructive, poisoned by the sediment of bitterness. His struggle against the influences emanating from the unconscious increases with his external isolation, until finally they begin to cripple him. He thinks his withdrawal into ever-increasing solitude will protect him from the unconscious influences, but as a rule it only plunges him deeper into the conflict that is destroying him from within Carl Jung, CW 6, Para 636

Origen grew up in that quite unique mental atmosphere where the ideas of East and West mingled. With an intense yearning for knowledge he eagerly absorbed all that was worth knowing, and accepted everything whether Christian, Jewish, Hellenistic, or Egyptian, that the teeming intellectual world of Alexandria offered him Carl Jung, CW 6, Para 21

Origen's self-castration had taken place sometime before A.D. 211; his inner motives for this may be guessed, but historically they are not known to us. Personally he was of great influence and had a winning speech. He was constantly surrounded by pupils and a whole host of amanuenses who gathered up the precious words that fell from the revered master's lips Carl Jung, CW 6, Para 22

In complete contrast to Tertullian, Origen did not cut himself off from the influence of Gnosticism; on the contrary, he even channelled it, in attenuated form, into the bosom of the Church, or such at least was his aim. Indeed, judging by his thought and fundamental views, he was himself almost a Christian Gnostic Carl Jung, CW 6, Para 22

Origen is a classic example of the extraverted type. His basic orientation was towards the object; this showed itself in his scrupulous regard for objective facts and their conditions, as well as in the formation of that supreme principle: amor et visio Dei. The Christian process of development encountered in Origen a type whose ultimate foundation was the relation to the object a relation that has always symbolically expressed itself in sexuality and accounts for the fact that there are certain theories today which reduce all the essential psychic functions to sexuality too Carl Jung, CW 6, Para 24

Castration was therefore an adequate expression of the sacrifice of the most valuable function. It is entirely characteristic that Tertullian should perform the sacrificium intellectus (sacrifice of the intellect), whereas Origen was led to the sacrificium phalli (castration), because the Christian process demands a complete abolition of the sensual tie to the object; in other words, it demands the sacrifice of the hitherto most valued function, the dearest possession, the strongest instinct Carl Jung, CW 6, Para 24

The natural course of instinct, like everything in nature, follows the line of least resistance. One man is rather more gifted here, another there; or again, adaptation to the early environment of childhood may demand relatively more reserve and reflection or relatively more empathy and participation, according to the nature of the parents and the circumstances Carl Jung, CW 6, Para 28

The adaptive deficiency, which is the causa efficiens of the process of conversion, is subjectively felt as a vague sense of dissatisfaction. Such an atmosphere prevailed at the turning-point of our era. A quite astonishing need of redemption came over mankind, and brought about that unparalleled efflorescence of every sort of possible and impossible cult in ancient Rome Carl Jung, CW 6, Para 28

This type of man elevates objective reality, or an objectively oriented intellectual formula, into the ruling principle not only for himself but for his whole environment. By this formula good and evil are measured, and beauty and ugliness determined. Everything that agrees with this formula is right, everything that contradicts it is wrong, and anything that passes by it indifferently is merely incidental. Because this formula seems to embody the entire meaning of life, it is made into a universal law which must be put into effect everywhere all the time, both individually and collectively Carl Jung, CW 6, Para 585

Just as the extraverted thinking type subordinates himself to his formula, so, for their own good, everybody round him must obey it too, for whoever refuses to obey it is wrong he is resisting the universal law, and is therefore unreasonable, immoral, and without a conscience. His moral code forbids him to tolerate exceptions Carl Jung, CW 6, Para 585

All those activities that are dependent on feeling will become repressed in such a type for instance, aesthetic activities, taste, artistic sense, cultivation of friends, etc. Irrational phenomena such as religious experiences, passions, and suchlike are often repressed to the point of complete unconsciousness Carl Jung, CW 6, Para 587

The thinking of the extraverted type is positive, i.e., productive. It leads to the discovery of new facts or to general conceptions based on disparate empirical material. It is usually synthetic too. Even when it analyses it constructs, because it is always advancing beyond the analysis to a new combination, to a further conception which reunites the analysed material in a different way or adds something to it. One could call this kind of judgment predicative. A characteristic feature, at any rate, is that it is never absolutely depreciative or destructive, since it always substitutes a fresh value for the one destroyed. This is because the thinking of this type is the main channel into which his vital energy flows. The steady flow of life manifests itself in his thinking, so that his thought has a progressive, creative quality Carl Jung, CW 6, Para 592

The conscious altruism of the extraverted thinking type, which is often quite extraordinary, may be thwarted by a secret self-seeking which gives a selfish twist to actions that in themselves are disinterested. Purely ethical intentions may lead him into critical situations which sometimes have more than a semblance of being the outcome of motives far from ethical. There are guardians of public morals who suddenly find themselves in compromising situations, or rescue workers who are themselves in dire need of rescue. Their desire to save others leads them to employ means which are calculated to bring about the very thing they wished to avoid Carl Jung, CW 6, Para 588

There are extraverted idealists so consumed by their desire for the salvation of mankind that they will not shrink from any lie or trickery in pursuit of their ideal. In science there are not a few painful examples of highly respected investigators who are so convinced of the truth and general validity of their formula that they have not scrupled to falsify evidence in its favour. Their sanction is: the end justifies the means. Only an inferior feeling function, operating unconsciously and in secret, could seduce otherwise reputable men into such aberrations Carl Jung, CW 6, Para 588

The extraverted thinker may play a very useful role in social life as a reformer or public prosecutor or purifier of conscience, or as the propagator of important innovations. But the more rigid the formula, the more he develops into a martinet, a quibbler, and a prig, who would like to force himself and others into one mould Carl Jung, CW 6, Para 585

The influence and activities of these personalities [extraverted thinking type] are the more favorable and beneficial the further from the center their radius extends. Their best aspect is to be found at the periphery of their sphere of influence. The deeper we penetrate into their own power province, the more we feel the unfavourable effects of their tyranny. A quite different life pulses at the periphery, where the truth of the formula can be felt as a valuable adjunct to the rest Carl Jung, CW 6, Para 586

But the closer we come to the center of power where the formula operates, the more life withers away from everything that does not conform to its dictates. Usually it is the nearest relatives who have to taste the unpleasant consequences of the extraverted formula, since they are the first to receive its relentless benefits. But in the end it is the subject himself who suffers most Carl Jung, CW 6, Para 586

In keeping with the objective formula, the conscious attitude [of the extraverted thinker] becomes more or less impersonal, often to such a degree that personal interests suffer. If the attitude is extreme, all personal considerations are lost sight of, even those affecting the subject's own person. His health is neglected, his social position deteriorates, the most vital interests of his family health, finances, morals are violated for the sake of the ideal. Personal sympathy with others must in any case suffer unless they too happen to espouse the same ideal Carl Jung, CW 6, Para 589

Often the closest members of his family, his own children know such a father only as a cruel tyrant, while the outside world resounds with the fame of his humanity. Because of the highly impersonal character of the conscious attitude, the unconscious feelings are extremely personal and oversensitive, giving rise to secret prejudices a readiness, for instance, to misconstrue any opposition to his formula as personal ill-will, or a constant tendency to make negative assumptions about other people in order to invalidate their arguments in advance in defence, naturally, of his own touchiness Carl Jung, CW 6, Para 589

The extraverted thinker's unconscious sensitivity makes him sharp in tone, acrimonious, aggressive. Insinuations multiply. His feelings have a sultry and resentful character always a mark of the inferior function. Magnanimous as he may be in sacrificing himself to his intellectual goal, his feelings are petty, mistrustful, crotchety, and conservative. Anything new that is not already contained in his formula is seen through a veil of unconscious hatred and condemned accordingly Carl Jung, CW 6, Para 589

In spite of its ecclesiastical associations, nominalism is a sceptical tendency that denies the separate existence characteristic of abstractions. It is kind of scientific scepticism coupled with the most rigid dogmatism Carl Jung, CW 6, Para 41

Although biological instinctive processes also contribute to the formation of the personality, individuality is nevertheless essentially different from collective instincts; indeed, it stands in the most direct opposition to them, just as the individual as a personality is always distinct from the collective. His essence consists precisely in this distinction Carl Jung, CW 6, Para 88

Freud's view is essentially extraverted, Adler's introverted. The extraverted theory holds good for the extraverted type, the introverted theory for the introverted type. Since a pure type is a product of a wholly one-sided development it is also necessarily unbalanced. Over accentuation of the one function is synonymous with repression of the other Carl Jung, CW 6, Para 91

Psychoanalysis fails to remove this repression just in so far as the method it employs is oriented according to the theory of the patient's own type. Thus the extravert, in accordance with his [Freud's] theory, will reduce the fantasies rising out of his unconscious to their instinctual content, while the introvert [according to Adler], will reduce them to his power aims

Carl Jung, CW 6, Para 92

For a time objects appear to have an exaggerated value, if they should serve to bring about a solution, a deliverance, or lead to the discovery of a new possibility. Yet not sooner have they served their purpose as stepping-stones or bridges than they lose their value altogether and are discarded as burdensome appendages. Facts are acknowledged only if they open new possibilities of advancing beyond them and delivering the individual from their power. Nascent possibilities are compelling motives from which intuition cannot escape and to which all else must be sacrificed Carl Jung, CW 6, Para 612

Affectivity designates and comprises "not only the affects proper, but also the slight feelings or feeling-tones of pain and pleasure." Bleuler distinguishes affectivity from the sense-perceptions and physical sensations as well as from "feelings" that may be regarded as inner perception processes (e.g., the "feeling" of certainty, of probability, etc.) or vague thoughts or discernments Carl Jung, CW 6, Para 682

The introvert is far more subject to misunderstanding than the extravert, not so much because the extravert is a more merciless or critical adversary than he himself might be, but because of the style of the times which he himself imitates works against him. He finds himself in the minority, not in numerical relation to the extravert, but in relation to the general Western view of the world as judged by his feeling Carl Jung, CW 6, Para 645

In so far as he [the introvert] is a convinced participator in the general style, he undermines his own foundations; for the general style, acknowledging as it does only the visible and tangible values, is opposed to his specific principle. Because of its invisibility, he is obliged to depreciate the subjective factor, and must force himself to join in the extraverted overvaluation of the object. He himself sets the subjective factor at too low a value, and his feelings of inferiority are his chastisement for this sin Carl Jung, CW 6, Para 645

If the object had an absolute value, it would be an absolute determining factor for the subject and would abolish his freedom of action absolutely, since even a relative freedom could not coexist with absolute determination by the object. Absolute relation to the object is equivalent to a complete exteriorization of the conscious processes; it amounts to an identity of subject and object which would render all cognition impossible Carl Jung, CW 6, Para 402

By "dreaming" Nietzsche means, as he himself says, essentially an "inward vision," the "lovely semblance of dream-worlds." Apollo "rules over the beautiful illusion of the inner world of fantasy," he is "the god of all shape-shifting powers." He signifies measure, number, limitation, and subjugation of everything wild and untamed. "One might even describe Apollo himself as the glorious divine image of the principium individuationis" [principle of individuality] Carl Jung, CW 6, Para 226

The Dionysian is the horror of the annihilation of the principium individuationis [principle of individuality] and at the same time "rapturous delight" in its destruction. It is therefore comparable to intoxication, which dissolves the individual into his collective instincts and components an explosion of the isolated ego through the world Carl Jung, CW 6. Para 227

Hence, in the Dionysian orgy, man finds man: "alienated Nature, hostile or enslaved, celebrates once more her feast of reconciliation with her prodigal son Man." Each feels himself "not only united, reconciled, merged with his neighbour, but one with him." His individuality

is entirely obliterated. “Man is no longer the artist, he has become the work of art” Carl Jung, CW 6. Para 227

It will have been the same with the Greeks. It was just their living sense of horror that gradually brought about a reconciliation of the Apollinian with the Dionysian “through a metaphysical miracle,” as Nietzsche says. This statement, as well as the other where he says that the antagonism between them is “only seemingly bridged by the common term ‘Art,”’ must constantly be borne in mind, because Nietzsche, like Schiller, had a pronounced tendency to credit art with a mediating and redeeming role Carl Jung, CW 6. Para 230

The problem then remains stuck in aesthetics the ugly is also “beautiful,” even beastliness and evil shine forth enticingly in the false glamour of aesthetic beauty. The artistic nature in both Schiller and Nietzsche claims a redemptive significance for itself and its specific capacity for creation and expression Carl Jung, CW 6. Para 230

The Dionysian satyr festival, to judge by all the analogies, was a kind of totem feast involving a regressive identification with the mythical ancestors or directly with the totem animal. The cult of Dionysus had in many places a mystical and speculative streak, and in any case exercised a very strong religious influence Carl Jung, CW 6. Para 231

The fact that Greek tragedy arose out of an originally religious ceremony is at least as significant as the connection of our modern theatre with the medieval Passion play, which was exclusively religious in origin; we are not permitted, therefore, to judge the problem under its purely aesthetic aspect Carl Jung, CW 6. Para 231

With Nietzsche as with Schiller the religious viewpoint is entirely overlooked and is replaced by the aesthetic. These things obviously have their aesthetic side and it should not be neglected. Nevertheless, if medieval Christianity is understood only aesthetically its true character is falsified and trivialized, just as much as if it were viewed exclusively from the historical standpoint Carl Jung, CW 6. Para 231

This shifting of the problem must doubtless have its psychological cause and purpose. The advantages of such a procedure are not far to seek: the aesthetic approach immediately converts the problem into a picture which the spectator can contemplate at his ease, admiring both its beauty and its ugliness, merely re-experiencing its passions at a safe distance, with no danger of becoming involved in them. The aesthetic attitude guards against any real participation, prevents one from being personally implicated, which is what a religious understanding of the problem would mean Carl Jung, CW 6. Para 232

Fluctuations of emotion are, of course, the constant concomitants of all psychic opposites, and hence of all conflicts of ideas, whether moral or otherwise. We know from experience that the emotions thus aroused increase in proportion as the exciting factor affects the individual as a whole Carl Jung, CW 6. Para 329

Brahman is not only the producer but the produced, the ever-becoming. The epithet “Gracious One” (vena), here bestowed on the sun, is elsewhere applied to the seer who is endowed with the divine light, for, like the Brahman sun, the mind of the seer traverses “earth and heaven contemplating Brahman.” The intimate connection, indeed identity, between the divine being and the Self (Atman) of the man is generally known Carl Jung, CW 6. Para 332

Hence the most one-sided differentiations are found among semi-barbarous people for instance, certain aspects of Christian asceticism that are an affront to good taste, and parallel phenomena among the yogis and Tibetan Buddhists. For the barbarian, this tendency to fall a victim to one-sidedness in one way or another, thus losing sight of his total personality, is a great and constant danger Carl Jung, CW 6. Para 346

The Gilgamesh epic, for example, begins with this conflict. The one-sidedness of the barbarian takes the form of daemonic compulsion; it has something of the character of going berserk or running amok. In all cases it presupposes an atrophy of instinct that is not found in the true primitive, for which reason he is in general still free from the one-sidedness of the cultural barbarian Carl Jung, CW 6. Para 346

The sort of demons that introversion and extraversion may become is a daily experience for us psychotherapists. We see in our patients and can feel in ourselves with what irresistible force the libido streams inwards or outwards, with what unshakable tenacity an introverted or extraverted attitude can take root. The description of manas and vac as “mighty monsters of Brahman” is in complete accord with the psychological fact that at the instant of its appearance the libido divides into two streams, which as a rule alternate periodically but at times may appear simultaneously in the form of a conflict, as an outward stream opposing an inward stream Carl Jung, CW 6. Para 347

The daemonic quality of the two movements lies in their ungovernable nature and overwhelming power. This quality, however, makes itself felt only when the instinct of the primitive is already so stunted as to prevent a natural and purposive counter-movement to one-sidedness, and culture not sufficiently advanced for man to tame his libido to the point where he can follow its introverting or extraverting movement of his own free will and intention Carl Jung, CW 6. Para 347

The vital optimum is not to be found in crude egoism, for fundamentally man is so constituted that the pleasure he gives to his neighbour is something essential to him. Nor can the optimum be reached by an unbridled craving for individualistic supremacy, because the collective element in man is so powerful that his longing for fellowship would destroy all pleasure in naked egoism Carl Jung, CW 6. Para 356

The optimum can be reached only through obedience to the tidal laws of the libido, by which systole alternates with diastole laws which bring pleasure and the necessary limitations of pleasure, and also set us those individual life tasks without whose accomplishment the vital optimum can never be attained Carl Jung, CW 6. Para 356

Amfortas has the Grail and suffers for it, because he lacks libido. Parsifal has nothing of either, he is nirdvandva, free from opposites, and is therefore the redeemer, the bestowed of healing and renewed vitality, who unites the bright, heavenly, feminine symbol of the Grail with the dark, earthy, masculine symbol of the spear Carl Jung, CW 6. Para 371

The undeniable sexual symbolism might easily lead to the one-sided interpretation that the union of spear and Grail merely signifies a release of sexuality. The fate of Amfortas shows, however, that sexuality is not the point. On the contrary, it was his relapse into a nature-bound, brutish attitude that was the cause of his suffering and brought about the loss of his power. His seduction by Kundry was a symbolic act, showing that it was not sexuality that dealt him his wound so much as an attitude of nature-bound compulsion, a supine submission

to the biological urge Carl Jung, CW 6, Para 372

This attitude expresses the supremacy of the animal part of our psyche. The sacrificial wound that is destined for the beast strikes the man who is overcome by the beast all for the sake of man's further development. The fundamental problem, as I have pointed out in Symbols of Transformation, is not sexuality per se, but the domestication of libido, which concerns sexuality only so far as it is one of the most important and most dangerous forms of libidinal expression Carl Jung, CW 6, Para 372

The central religious idea in this legend, of which there are numerous variants, is the holy vessel, which, it must be obvious to everyone, is a thoroughly non-Christian image, whose origin is to be sought in extra-canonical sources. From the material I have cited, it seems to me a genuine relic of Gnosticism, which either survived the extermination of heresies because of a secret tradition, or owed its revival to an unconscious reaction against the domination of official Christianity Carl Jung, CW 6, Para 401

But spiritualization always means the retention of a certain amount of libido, which would otherwise be immediately squandered in sexuality. Experience shows that when the libido is retained, one part of it flows into the spiritualized expression, while the remainder sinks into the unconscious and activates images that correspond to it, in this case the vessel symbol Carl Jung, CW 6. Para 401

As the symbol can come alive only through the devaluation of the object, it is evident that the purpose it serves is to deprive the object of its value. If the object had an absolute value, it would be an absolute determining factor for the subject and would abolish his freedom of action absolutely, since even a relative freedom could not coexist with absolute determination by the object Carl Jung, CW 6. Para 402

An example of the devalued object can be seen in the vision of Hermas, in which he saw a tower being built. The old woman, who at first had declared herself to be the Church, now explains that the tower is a symbol of the Church. Her significance is thus transferred to the tower, and it is with this that the whole remaining part of the text is concerned. For Hermas it is only the tower that matters, and no longer the old woman, let alone Rhoda. The detachment of libido from the real object, its concentration on the symbol and canalization into a symbolic function, is complete. The idea of a universal and undivided Church, expressed in the symbol of a seamless and impregnable tower, has become an unshakable reality in the mind of Hermas Carl Jung, CW 6. Para 402

The medieval background of Faust has quite special significance because there actually was a medieval element that presided over the birth of modern individualism. It began, it seems to me, with the worship of woman, which strengthened the man's soul very considerably as a psychological factor, since the worship of woman meant worship of the soul. This is nowhere more beautifully and perfectly expresses than in Dante's Divine Comedy Carl Jung, CW 6. Para 376

Dante is the spiritual knight of his lady; for her sake he embarks on the adventure of the lower and upper worlds. In this heroic endeavor her image is exalted into the heavenly, mystical figure of the Mother of Goad figure that has detached itself from the object and become the personification of a purely psychological factor, or rather, of those unconscious contents whose personification I have termed the anima. Canto XXXIII of the Paradiso

expresses this culminating point of Dante's psychic development in the prayer of St. Bernard Carl Jung, CW 6. Para 377

The very fact that Dante speaks through the mouth of St. Bernard is an indication of the transformation and exaltation of his own being. The same transformation also happens to Faust, who ascends from Gretchen to Helen and from Helen to the Mother of God; his nature is altered by repeated figurative deaths (Boy Charioteer, homunculus, Euphorion), until finally he attains the highest goal as Doctor Marianus. In that form Faust utters his prayer to the Virgin Mother Carl Jung, CW 6. Para 378

We find this characteristic transition from the worship of woman to the worship of the soul in an early Christian document, The Shepherd of Hermas, which flourished about A.D. 140. This book, written in Greek, consists of a number of visions and revelations describing the consolidation of the new faith. The book, long regarded as canonical, was nevertheless rejected by the Muratori Canon Carl Jung, CW 6, Para 381

The repressed erotic impression has activated the latent primordial image of goddess, i.e., the archetypal soul-image. The erotic impression has evidently become united in the collective unconscious with archaic residues which have preserved from time immemorial the imprint of vivid impressions of the nature of woman as mother and woman as desirable maid Carl Jung, CW 6, Para 383

Official Christianity, therefore, absorbed certain Gnostic elements that manifested themselves in the worship of woman and found a place for them in an intensified worship of Mary. I have selected the Litany of Loreto as an example of this process of assimilation from a wealth of equally interesting material. The assimilation of these elements to the Christian symbol nipped in the bud the psychic culture of the man; for his soul, previously reflected in the image of the chosen mistress, lost its individual form of expression through this absorption Carl Jung, CW 6, Para 399

Since the psychic relation to woman was expressed in the collective worship of Mary, the image of woman lost a value to which human beings had a natural right. This value could find its natural expression only through individual choice, and it sank into the unconscious when the individual form of expression was replaced by a collective one. In the unconscious the image of woman received an energy charge that activated the archaic and infantile dominants Carl Jung, CW 6. Para 399

Vessel symbolism probably contains a pagan relic which proved adaptable to Christianity, and this is all the more likely as the worship of Mary was itself a vestige of paganism which secured for the Christian Church the heritage of the Magna Mater, Isis, and other mother goddesses. The image of the vas Sapientiae, vessel of wisdom, likewise recalls its Gnostic prototype, Sophia Carl Jung, CW 6, Para 398

It elucidates the psychological relations between the worship of woman and the legend of the Grail, which was so essentially characteristic of the early Middle Ages. The central religious idea in this legend, of which there are numerous variants, is the holy vessel, a thoroughly non-Christian image, a genuine relic of Gnosticism Carl Jung, CW 6, Para 401

The symbolism of the vessel has pagan roots in the "magic cauldron" of Celtic mythology. Dagda, one of the benevolent gods of ancient Ireland, possesses such a cauldron, which

supplies everybody with food according to his needs or merits. The Celtic god Bran likewise possesses a cauldron of renewal Carl Jung, CW 6, Para 401

Looked at historically, the soul, that many-faceted and much-interpreted concept, refers to a psychological content that must possess a certain measure of autonomy within the limits of consciousness. If this were not so, man would never have hit on the idea of attributing an independent existence to the soul, as though it were some objectively perceptible thing Carl Jung, CW 6, Para 419

The primitive, as we know, usually has several souls several autonomous complexes with a high degree of spontaneity, so that they appear as having a separate existence (as in certain mental disorders). On a higher level the number of souls decreases, until at the highest level of culture the soul resolves itself into the subject's general awareness of his psychic activities and exists only as a term for the totality of psychic processes Carl Jung, CW 6, Para 419

The libido concentrated in the unconscious was formerly invested in objects, and this made the world seem all-powerful. God was then "outside," but now he works from within, as the hidden treasure conceived as God's kingdom. If then, Meister Eckhart reaches the conclusion that the soul is itself God's kingdom, it is conceived as a function of relation to God, and God would be the power working within the soul and perceived by it. Eckhart even calls the soul the image of God Carl Jung, CW 6, Para 424

It is evident from the ethnological and historical material that the soul is a content that belongs partly to the subject and partly to the world of spirits, i.e., the unconscious. Hence the soul always has an earthly as well as a rather ghostly quality. It is the same with magical power, the divine force of primitives, whereas on the higher levels of culture God is entirely separate from man and is exalted to the heights of pure ideality. But the soul never loses its intermediate position But symbols are shaped energies, determining ideas whose affective power is just as great as their spiritual value Carl Jung, CW 6, Para 425

The organ of perception, the soul, apprehends the contents of the unconscious, and, as the creative function, gives birth to its dynamis in the form of a symbol. The soul gives birth to images that from the rational standpoint of consciousness are assumed to be worthless. And so they are, in the sense that they cannot immediately be turned to account in the objective world Carl Jung, CW 6, Para 426

We hear the voice of the collective psyche in new bold ideas, which with imperturbable assurance and the finality of natural law brings about spiritual transformation and renewal. The unconscious currents reached the surface at the time of the Reformation. The Reformation largely did away with the Church as the dispenser of salvation and established once more the personal relation to God Carl Jung, CW 6, Para 433

The end of the jewel [Pandora's] is mysterious: it falls into the hands of a wandering Jew. "It was not a Jew of this world, and his clothes seemed to us exceedingly strange." (Prometheus and Epimetheus p. 164). This peculiar Jew can only be Ahasuerus, who did not accept the actual Redeemer, and now, as it were, steals his image. Carl Jung, CW 6, Para 454

The story of Ahasuerus is a late Christian legend, which cannot be traced back earlier than the thirteenth century. Psychologically, it sprang from a component of the personality or a charge of libido that could find no outlet in the Christian attitude to life and the world

and was therefore repressed. The Jews were always a symbol for this, hence the persecution mania against the Jews in the Middle Ages Carl Jung, CW 6, Para 454

The ritual murder idea also plays a part in Spitteler's story of Pandora in his Prometheus the Jew steals the wonder-child from heaven. It is a mythologized projection of a dim realization that the workings of the Redeemer are constantly being frustrated by the presence of an unredeemed element in the unconscious Carl Jung, CW 6, Para 454

This unredeemed, untamed, barbarian element, which can only be held on a chain and cannot be allowed to run free, is projected upon those who have never accepted Christianity. There is an unconscious awareness of this intractable element whose existence we don't like to admit hence the projection. In reality it is a part of ourselves that has contrived to escape the Christian process of domestication. The restlessness of the wandering Jew is a concretization of this unredeemed state Carl Jung, CW 6, Para 454

The paranoid idea can be the result, in pathological cases, of a particularly isolated and uninfluenceable complex which has become an "over-valued idea", a dominant that defies all criticism and enjoys complete autonomy, until it finally becomes an all-controlling factor manifesting itself as "spleen." In pathological cases it turns into an obsessive or paranoid idea, absolutely unshakable, that rules the individual's entire life Carl Jung, CW 6, Para 467

The extravert generally has a relaxed attitude. Exceptions, however, are frequent, even in one and the same individual., put an extravert in a dark and silent room, where all his repressed complexes can gnaw at him, and he will get into such a state of tension that he will jump at the slightest stimulus Carl Jung, CW 6, Para 482

Empathy is a kind of perceptive process, characterized by the fact that, through feeling, some essential psychic content is projected into the object, so that the object is assimilated to the subject and coalesces with him to such an extent that the subject feels himself, as it were, in the object Carl Jung, CW 6, Para 486

This happens when the projected content is associated to a higher degree with the subject than with the object. He does not, however, feel himself projected into the object; rather, the "empathized" object appears animated to him [the subject], as though it were speaking to him of its own accord Carl Jung, CW 6, Para 486

It should be noted that in itself projection is usually an unconscious process not under conscious control. On the other hand it is possible to imitate the projection consciously by means of a conditional sentence for instance, "if you were my father "thus bringing about the situation of empathy Carl Jung, CW 6, Para 486

'As a rule, the projection transfers unconscious contents into the object, for which reason empathy is also termed "transference" (Freud) in analytical psychology. Empathy, therefore, is a form of extraversion Carl Jung, CW 6, Para 486

Worringer defines the aesthetic experience of empathy as follows: "Aesthetic enjoyment is objectified self-enjoyment" (Abstraction and Empathy, p. 5). Consequently, only a form one can empathize with is beautiful. Lipps says: "Only so far as this empathy extends are forms beautiful. Their beauty is simply my ideal having free play in them" (Aesthetic, p. 247). According to this, any form one cannot empathize with would be ugly. But here the theory of

empathy reaches its limitations, for, as Worringer points out, there are art forms to which the empathetic attitude cannot be applied Carl Jung, CW 6, Para 487

It is indeed true that empathy presupposes a subjective attitude of confidence, or trustfulness toward the object. It is a readiness to meet the object halfway, a subjective assimilation that brings about a good understanding between subject and object or at least simulates it Carl Jung, CW 6, Para 489

As the essence of empathy is the projection of subjective contents, it follows that the preceding unconscious act must be the opposite a neutralizing of the object that renders it inoperative. In this way the object is emptied, so to speak, robbed of its spontaneous activity, and thus made a suitable receptacle for subjective contents Carl Jung, CW 6, Para 491

The empathizing subject wants to feel his own life in the object; hence the independence of the object and the difference between it and the subject must not be too great. As a result of the unconscious act that preceded empathy, the sovereignty of the object is depotentiated, or rather it is overcompensated, because the subject immediately gains ascendency over the object Carl Jung, CW 6, Para 491

This can only happen unconsciously, through an unconscious fantasy that either devalues and depotentiates the object or enhances the value and importance of the subject. Only in this way can that difference of potential arise which empathy needs in order to convey subjective contents into the object Carl Jung, CW 6, Para 491

Just as abstraction is based on the magical significance and power of the object, the basis of empathy is the magical significance of the subject, who gains power over the object by means of mystical identification. The primitive is in a similar position: he is magically influenced by the power of the fetish, yet at the same time he is the magician and accumulator of magical power who charges the fetish with potency. An example of this is the churinga rite of the Australian aborigines Carl Jung, CW 6, Para 496

The abstracting attitude is centripetal, i.e., introverting. Worringer's conception of abstraction therefore corresponds to the introverted attitude. It is significant that Worringer describes the influence of the object as fear or dread. The abstracting attitude endows the object with a threatening or injurious quality against which it has to defend itself. This seemingly a priori quality is doubtless a projection, but a negative one. We must therefore suppose that abstraction is preceded by an unconscious act of projection which transfers negative contents to the object Carl Jung, CW 6, Para 490

The man with the abstracting attitude finds himself in a frighteningly animated world that seeks to overpower and smother him. He therefore withdraws into himself, in order to think up a saving formula calculated to enhance his subjective value at least to the point where he can hold his own against the influence of the object Carl Jung, CW 6, Para 492

The man with the empathetic attitude finds himself, on the contrary, in a world that needs his subjective feeling to give it life and soul. He animates it with himself, full of trust; but the man with the abstract attitude retreats mistrustfully before the daemonism of objects, and builds up a protective interlude composed of abstractions Carl Jung, CW 6, Para 492

Worringer rightly says of Oriental art: Tormented by the confusion and flux of the phe-

nomenal world, these people were dominated by an immense need for repose. The enjoyment they sought in art consisted not so much in immersing themselves in the things of the outside world and finding pleasure there, as in raising the individual object out of its arbitrary and seemingly fortuitous existence, immortalizing it by approximation to abstract forms, and so finding a point of repose amid the ceaseless flux of appearances (Abstraction and Empathy, p. 16) Carl Jung, CW 6, Para 493

All is on fire. The eye and all the senses are on fire, with the fire of passion, the fire of hate, the fire of delusion; the fire is kindled by birth, old age, and death, by pain and lamentation, by sorrow, suffering, and despair...The whole world is in flames, the whole world is wrapped in smoke, the whole world is consumed by fire, the whole world trembles (Warren, Buddhism in Translations, p. 352) Carl Jung, CW 6, Para 494

It is this fearful and sorrowful vision of the world that forces the Buddhist into his abstracting attitude, just as, according to legend, a similar impression started the Buddha on his life's quest. The dynamic animation of the object as the impelling cause of abstraction is strikingly expressed in the Buddha's symbolic language. This animation does not come from empathy, but from an unconscious projection that actually exists a priori. The term "projection" hardly conveys the real meaning of this phenomenon. Projection is really an act that happens, and not a condition existing a priori, which is what we are obviously dealing with here Carl Jung, CW 6, Para 495

The primitive's objects have a dynamic animation. They are charged with soul-stuff or soul-force (and not always possessed of souls, as the animist theory supposes) so that they have a direct psychic effect upon him, producing what is practically a dynamic identification with the object Carl Jung, CW 6, Para 495

In certain primitive languages articles of personal use have a gender denoting "alive" (the suffix of animation). With the abstracting attitude it is much the same, for here too the object is alive and autonomous from the beginning and in no need of empathy; on the contrary, it has such a powerful effect that the subject is forced into introversion Carl Jung, CW 6, Para 495

Its strong libido investment comes from its participation mystique with the subject's own unconscious. This is clearly expressed in the words of the Buddha: the universal fire is identical with the fire of libido, with the subject's burning passion, which appears to him as an object because it is not differentiated into a disposable function Carl Jung, CW 6, Para 495

Identification with the directed function has an undeniable advantage in that a man can best adapt to collective demands and expectations; moreover, it also enables him to keep out of the way of his inferior, undifferentiated, undirected functions by self-alienation. In addition, "selflessness" is always considered a particular virtue from the standpoint of social morality Carl Jung, CW 6, Para 502

For the more he identifies with one function, the more he invests it with libido, and the more he withdraws libido from the other functions. They can tolerate being deprived of libido for even quite long periods, but in the end they will react. Being drained of libido, they gradually sink below the threshold of consciousness, lose their associative connection with it, and finally lapse into the unconscious Carl Jung, CW 6, Para 502

This is a regressive development, a reversion to the infantile and finally to the archaic level. Since man has spent only a few thousand years in a cultivated state, as opposed to several hundred thousand years in a state of savagery, the archaic modes of functioning are still extraordinarily vigorous and easily reactivated. Hence, when certain functions disintegrate by being deprived of libido, their archaic foundations in the unconscious become operative again Carl Jung, CW 6, Para 502

It is sufficient to note that the peculiar nature of the extravert constantly urges him to expend and propagate himself in every way, while the tendency of the introvert is to defend himself against all demands from outside, to conserve his energy by withdrawing it from objects, thereby consolidating his own position Carl Jung, CW 6, Para 559

Blake's intuition did not err when he described the two classes of men as "prolific" and "devouring." Just as, biologically, the two modes of adaptation work equally well and are successful in their own way, so too with the typical attitudes. The one achieves its end by a multiplicity of relationships, the other by monopoly Carl Jung, CW 6, Para 559

The very adjustment of the normal extraverted type is his limitation. He owes his normality on the one hand to his ability to fit into existing conditions with comparative ease. His requirements are limited to the objectively possible, for instance to the career that holds out good prospects at this particular moment Carl Jung, CW 6, Para 564

The normal extraverted type does what is needed of him, or what is expected of him, and refrains from all innovations that are not entirely self-evident or that in any way exceed the expectations of those around him. On the other hand, his normality must also depend essentially on whether he takes account of his subjective needs and requirements, and this is just his weak point Carl Jung, CW 6, Para 564

The tendency of his type is so outer-directed that even the most obvious of all subjective facts, the condition of his own body, receives scant attention. The body is not sufficiently objective or "outside," so that the satisfaction of elementary needs which are indispensable to physical well-being is no longer given its due. The body accordingly suffers, to say nothing of the psyche Carl Jung, CW 6, Para 564

One can feel "correctly" only when feeling is not disturbed by anything else. Nothing disturbs feeling so much as thinking. It is therefore understandable that in this type [extraverted feeling] thinking will be kept in abeyance as much as possible. This does not mean that the woman does not think at all; on the contrary, she may think a great deal and very cleverly, but her thinking is never sui generis [of its own kind]it is an Epimethean appendage to her feeling. What she cannot feel, she cannot consciously think. "But I can't think what I don't feel," such a type said to me once in indignant tones. So far as her feeling allows, she can think very well, but every conclusion, however logical, that might lead to a disturbance of feeling is rejected at the outset. It is simply not thought. Thus everything that fits in with the objective values is good, and is loved, and everything else seems to her to exist in a world apart Carl Jung, CW 6, Para 598

As feeling is undeniably a more obvious characteristic of feminine psychology than thinking, the most pronounced feeling types are to be found among women. When extraverted feeling predominates we speak of an extraverted feeling type. Examples of this type that I can call

to mind are, almost without exception, women. The woman of this type follows her feeling as a guide throughout life. As a result of upbringing her feeling has developed into an adjusted function subject to conscious control. Except in extreme cases, her feeling has a personal quality, even though she may have repressed the subjective factor to a large extent Carl Jung, CW 6, Para 597

Her [extraverted feeling type] personality appears adjusted in relation to external conditions. Her feelings harmonize with objective situations and general values. This is seen nowhere more clearly than in her love choice: the "suitable" man is loved, and no one else; he is suitable not because he appeals to her hidden subjective nature about which she usually knows nothing but because he comes up to all reasonable expectations in the matter of age, position, income, size and respectability of his family, etc. Carl Jung, CW 6, Para 597

Accordingly the unconscious of this type [extraverted feeling] contains first and foremost a peculiar kind of thinking, a thinking that is infantile, archaic, negative. So long as the conscious feeling preserves its personal quality, or, to put it another way, so long as the personality is not swallowed up in successive states of feeling, this unconscious thinking remains compensatory. But as soon as their personality is dissociated and dissolves into a succession of contradictory feeling states, the identity of the ego is lost and the subject lapses into the unconscious Carl Jung, CW 6, Para 600

When this happens, it [the ego] gets associated with the unconscious thinking processes and occasionally helps them to the surface. The stronger the conscious feeling is and the more ego-less it becomes, the stronger grows the unconscious opposition. The unconscious thoughts gravitate round just the most valued objects and mercilessly strip them of their value Carl Jung, CW 6, Para 600

The "nothing but" type of thinking comes into its own here, since it effectively depotentiates all feelings that are bound to the object. The unconscious thinking reaches the surface in the form of obsessive ideas which are invariably of a negative and depreciatory character Carl Jung, CW 6, Para 600

Women of this type have moments when the most hideous thoughts fasten on the very objects most valued by their feelings. This negative thinking utilizes every infantile prejudice or comparison for the deliberate purpose of casting aspersions on the feeling value and musters every primitive instinct in the attempt to come out with "nothing but" interpretations. Hysteria, with the characteristic infantile sexuality of its unconscious world of ideas, is the principal form of neurosis in this type Carl Jung, CW 6, Para 600

Objects are valued in so far as they excite sensations, and so far as lies within the power of sensation, they are fully accepted into consciousness whether they are compatible with rational judgments or not. The sole criterion of their value is the intensity of the sensation produced by their objective qualities. Accordingly, all objective processes which excite any sensations at all make their appearance in consciousness Carl Jung, CW 6, Para 605

Sensation is strongly developed in children and primitives, since in both cases it predominates over thinking and feeling, though not necessarily over intuition. I [Jung] regard sensation as conscious, and intuition as unconscious, perception. For me sensation and intuition represent a pair of opposites, or two mutually compensating functions, like thinking and feeling Carl Jung, CW 6, Para 795

The extraverted sensation type is the lover of tangible reality, with little inclination for reflection and no desire to dominate. To feel the object, to have sensations and if possible enjoy them that is his constant aim. He is by no means unlovable, on the contrary, his lively capacity for enjoyment makes him very good company. He is usually a jolly fellow, and sometimes a refined aesthete. In the former case the great problems of life hang on a good or indifferent dinner, and in the latter, it's all a question of good taste Carl Jung, CW 6, Para 607

As the extraverted sensation type has no ideals connected with ideas, he has no reason to act in any way contrary to the reality of things as they are. This manifests itself in all the externals of his life. He dresses well, as befits the occasion; he keeps a good table with plenty of drink for his friends, making them feel very grand, or at least giving them to understand that his refined taste entitles him to make a few demands of them. He may even convince them that certain sacrifices are decidedly worthwhile for the sake of style Carl Jung, CW 6, Para 607

The more sensation predominates, the subject disappears behind the sensation, and the less agreeable does this type [extraverted sensation] become. He develops into a crude pleasure-seeker, or else degenerates into an unscrupulous, effete aesthete. Although the object has become quite indispensable to him, yet, as something existing in its own right, it is none the less devalued. It is ruthlessly exploited and squeezed dry, since now its sole use is to stimulate sensation Carl Jung, CW 6, Para 608

What comes from inside seems to the extraverted sensation type as morbid and suspect. He always reduces his thoughts and feelings to objective causes, to influences emanating from objects, quite unperturbed by the most glaring violations of logic. Once he can get back to tangible reality in any form he can breathe again. In this respect he is surprisingly credulous Carl Jung, CW 6, Para 607

The bondage to the object is carried to the extreme limit. In consequence, the unconscious is forced out of its compensatory role into open opposition. Above all, the repressed intuitions begin to assert themselves in the form of projections. The wildest suspicions arise; if the object is a sexual one, jealous fantasies and anxiety states gain the upper hand Carl Jung, CW 6, Para 608

More acute cases develop every sort of phobia, and, in particular, compulsion symptoms. The pathological contents have a markedly unreal character, with a frequent moral or religious streak. A pettifogging captiousness follows, or a grotesquely punctilious morality combined with primitive "magical" superstitions that fall back on abstruse rites Carl Jung, CW 6, Para 608

All these things have their source in the repressed inferior functions which have been driven into harsh opposition to the conscious attitude, and they appear in a guise that is all the more striking because they rest on the most absurd assumptions, in complete contrast to the conscious sense of reality Carl Jung, CW 6, Para 608

The whole structure of thought and feeling seems, in this second personality, to be twisted into a pathological parody: reason turns into hair-splitting pedantry, morality into dreary moralizing and blatant Pharisaism, religion into ridiculous superstition, and intuition, the noblest

gift of man, into meddlesome officiousness, poking into every corner; instead of gazing into the far distance, it descends to the lowest level of human meanness Carl Jung, CW 6, Para 608

No other human type can equal the extraverted sensation type in realism. His sense for objective facts is extraordinarily developed. His life is an accumulation of actual experiences of concrete objects, and the more pronounced his type, the less use does he make of his experience. In certain cases the events in his life hardly deserve the name “experience” at all. What he experiences serves at most as a guide to fresh sensations; anything new that comes within his range of interest is acquired by way of sensation and has to serves its ends Carl Jung, CW 6, Para 606

The subjective factor has, from the earliest times and among all peoples, remained in large measure constant, elementary perceptions and cognitions being almost universally the same, it is a reality that is just as firmly established as the external object. By the subjective factor I understand that psychological action or reaction which merges with the effect produced by the object and so gives rise to a new psychic datum Carl Jung, CW 6, Para 622

How extraordinarily strong the subjective factor can be is shown most clearly in art. Its predominance sometimes amounts to a complete suppression of the object’s influence Carl Jung, CW 6, Para 647

It is precisely in the present epoch, and particularly in those movements which are somewhat ahead of the time, that the subjective factor reveals itself in exaggerated, tasteless forms of expression bordering on caricature. Owing to the extraverted overvaluation of the object e.g., the art of the present day Carl Jung, CW 6, Para 645

The image is called primordial when it possesses an archaic character. I [Jung] speak of its archaic character when the image is in striking accord with familiar mythological motifs. It then expresses material primarily derived from the collective unconscious, and indicates at the same time that the factors influencing the conscious situation of the moment are collective rather than personal Carl Jung, CW 6, Para 746

The primordial image, elsewhere also termed archetype, is always collective, i.e., it is at least common to entire peoples or epochs. In all probability the most important mythological motifs are common to all times and races. I [Jung] have, in fact, been able to demonstrate a whole series of motifs from Greek mythology in the dreams and fantasies of pure-bred Negroes suffering from mental disorders Carl Jung, CW 6, Para 747

The primordial image is related just as much to certain palpable, self-perpetuating, and continually operative natural processes as it is to certain inner determinants of psychic life and of life in general. The primordial image expresses the unique and unconditioned creative power of the psyche Carl Jung, CW 6, Para 748

The primordial image frees psychic energy from its bondage to sheer uncomprehended perception. At the same time, it links the energies released by the perception of stimuli to a definite meaning, which then guides action along paths corresponding to this meaning Carl Jung, CW 6, Para 749

It releases unavailable, dammed-up energy by leading the mind back to nature and canalizing sheer instinct into mental forms Carl Jung, CW 6, Para 749

The primordial image has one great advantage over the clarity of the idea, and that is its vitality. It is a self-activating organism, “endowed with generative power” Carl Jung, CW 6, Para 754

The primordial image is an inherited organization of psychic energy, an ingrained system, which not only gives expression to the energic process but facilitates its operation. It shows how the energic process has run its unvarying course from time immemorial, while simultaneously allowing a perpetual repetition of it by means of an apprehension or psychic grasp of situations so that life can continue into the future Carl Jung, CW 6, Para 754

The primordial images, in their totality, constitute a psychic mirror-world. It is a mirror with the peculiar faculty of reflecting the existing contents of consciousness not in their known and customary form but, as it were, sub specie aeternitatis, somewhat as a million-year-old consciousness might see them. Such a consciousness would see the becoming and passing away of things simultaneously with their momentary existence in the present, and not only that, it would also see what was before their becoming and will be after their passing hence Carl Jung, CW 6, Para 649

The predominance of the subjective factor in consciousness naturally involves a devaluation of the object. The object is not given the importance that belongs to it by right. Just as it plays too great a role in the extraverted attitude, it has too little meaning for the introvert. To the extent that his consciousness is subjectivized and excessive importance attached to the ego, the object is put in a position which in the end becomes untenable. The object is a factor whose power cannot be denied, whereas the ego is a very limited and fragile thing Carl Jung, CW 6, Para 626

It would be a very different matter if the Self opposed the object. Self and world are commensurable factors; hence a normal introverted attitude is as justifiable and valid as a normal extraverted attitude. But if the ego has usurped the claims of the subject, this naturally produces, by way of compensation, an unconscious reinforcement of the influence of the object Carl Jung, CW 6, Para 626

In spite of positively convulsive efforts to ensure the superiority of the ego, the object comes to exert an overwhelming influence, which is all the more invincible because it seizes on the individual unawares and forcibly obtrudes itself on his consciousness Carl Jung, CW 6, Para 626

As a result of the ego’s unadapted relation to the object for a desire to dominate it is not adaptation a compensatory relation arises in the unconscious which makes itself felt as an absolute and irrepressible tie to the object. The more the ego struggles to preserve its independence, freedom from obligation, and superiority, the more it becomes enslaved to the objective data Carl Jung, CW 6, Para 626

The individual’s freedom of mind is fettered by the ignominy of his financial dependence, his freedom of action trembles in the face of public opinion, his moral superiority collapses in a morass of inferior relationships, and his desire to dominate ends in a pitiful craving to be loved Carl Jung, CW 6, Para 626

It is now the unconscious that takes care of the relation to the object, and it does so in a way that is calculated to bring the illusion of power and the fantasy of superiority to utter ruin. The object assumes terrifying proportions in spite of the conscious attempt to degrade it Carl Jung, CW 6, Para 626

In consequence, the ego's efforts to detach itself from the object and get it under control become all the more violent. In the end it surrounds itself with a regular system of defences (aptly described by Adler) for the purpose of preserving at least the illusion of superiority. The introvert's alienation from the object is now complete; he wears himself out with defence measures on the one hand, while on the other he makes fruitless attempts to impose his will on the object and assert himself. These efforts are constantly being frustrated by the overwhelming impressions received from the object Carl Jung, CW 6, Para 626

The object continually imposes itself on him against his will, it arouses in him the most disagreeable and intractable affects and persecutes him at every step. A tremendous inner struggle is needed all the time in order to "keep going." The typical form his neurosis takes is psychasthenia, a malady characterized on the one hand by extreme sensitivity and on the other by great proneness to exhaustion and chronic fatigue Carl Jung, CW 6, Para 626

The introvert's fear of objects develops into a peculiar kind of cowardliness; he shrinks from making himself or his opinions felt, fearing that this will only increase the object's power Carl Jung, CW 6, Para 627

He is terrified of strong affects in others, and is hardly ever free from the dread of falling under hostile influences Carl Jung, CW 6, Para 627

Objects possess puissant and terrifying qualities for him qualities he cannot consciously discern in them, but which he imagines he sees through his unconscious perception Carl Jung, CW 6, Para 627

As the introvert's relation to the object is very largely repressed, it takes place via the unconscious, where it becomes charged with the latter's qualities. These qualities are mostly infantile and archaic, so that the relation to the object becomes primitive too, and the object seems endowed with magical powers Carl Jung, CW 6, Para 627

Anything strange and new arouses fear and mistrust, as though concealing unknown perils; heirlooms and suchlike are attached to the introvert's soul as by invisible threads; any change is upsetting, if not positively dangerous, as it seems to denote a magical animation of the object Carl Jung, CW 6, Para 627

The introvert's ideal is a lonely island where nothing moves except what he permits to move Carl Jung, CW 6, Para 627

Since the introverted feeling type appears rather cold and reserved, it might seem on a superficial view that such women have no feelings at all. But this would be quite wrong. Such a misunderstanding is a common occurrence in the life of this type, and is used as a weighty argument against the possibility of any deeper feeling relation to the object Carl Jung, CW 6, Para 641

It is principally among women that I have found the predominance of introverted feeling. “Still waters run deep” is very true of such women. They are mostly silent, inaccessible, hard to understand; often they hide behind a childish or banal mask, and their temperament is inclined to melancholy Carl Jung, CW 6, Para 640

The introverted feeling type neither shine nor reveal themselves. As they are mainly guided by their subjective feelings, their true motives generally remain hidden. Their outward demeanour is harmonious, inconspicuous, giving an impression of pleasing repose, or of sympathetic response Carl Jung, CW 6, Para 640

Introverted feeling is conditioned subjectively and is only secondarily concerned with the object. It seldom appears on the surface and is generally misunderstood. It is a feeling which seems to devalue the object, and it therefore manifests itself for the most part negatively Carl Jung, CW 6, Para 638

Secret feelings give a woman of this type a mysterious power that may prove terribly fascinating to the extraverted man, for it touches his unconscious Carl Jung, CW 6, Para 642

The existence of positive feeling can be inferred only indirectly. The aim of introverted feeling is not to adjust itself to the object, but to subordinate it in an unconscious effort to realize the underlying images. It is continually seeking an image which has no existence in reality, but which it has seen in a vision. It glides unheedingly over all objects that do not fit in with its aim. It strives after inner intensity, for which the objects serve at most as a stimulus Carl Jung, CW 6, Para 638

The primordial images are, of course, just as much ideas as feelings. Fundamental ideas, ideas like God, freedom, and immortality, are just as much feeling-values as they are significant ideas. Everything, therefore, that we have said about introverted thinking is equally true of introverted feeling, only here everything is felt while there it was thought. But the very fact that thoughts can generally be expressed more intelligibly than feelings demands a more than ordinary descriptive or artistic ability before the real wealth of this feeling can be even approximately presented or communicated to the world. If subjective thinking can be understood only with difficulty because of it unrelatedness, this is true in even higher degree of subjective feeling Carl Jung, CW 6, Para 639

In order to communicate with others, it [feeling] has to find an external form not only acceptable to itself, but capable also of arousing a parallel feeling in them. Thanks to the relatively great inner (as well as outer) uniformity of human beings, it is actually possible to do this, though the form acceptable to feeling is extraordinarily difficult to find so long as it is still mainly oriented to the fathomless store of primordial images Carl Jung, CW 6, Para 639

If, however, feeling is falsified by an egocentric attitude, it at once becomes unsympathetic, because it is then concerned mainly with the ego. It inevitably creates the impression of sentimental self-love, of trying to make itself interesting, and even of morbid self-admiration. The intensification of egocentric feeling only leads to inane transports of feeling for their own sake. This is the mystical, ecstatic stage which opens the way for the extraverted functions that feeling has repressed Carl Jung, CW 6, Para 639

Just as introverted thinking is counterbalanced by a primitive feeling, to which objects attach themselves with a magical force, introverted feeling is counterbalanced by a primitive

thinking, whose concretism and slavery to facts surpass all bounds. Feeling progressively emancipates itself from the object and creates for itself a freedom of action and conscience that is purely subjective and may even renounce all traditional values. But so much the more does unconscious thinking fall a victim to the power of objective reality Carl Jung, CW 6, Para 639

Introverted feeling makes little effort to respond to the real emotions of the other person. They are more often damped down and rebuffed, or cooled off by a negative value judgment Carl Jung, CW 6, Para 640

The introverted feeling type has no desire to affect others, to impress, influence, or change them in any way. If this outward aspect is more pronounced, it arouses a suspicion of indifference and coldness, which may actually turn into a disregard for the comfort and well-being of others. One is distinctly aware then of the movement of feeling away from the object Carl Jung, CW 6, Para 640

The mysterious power of this type comes from the deeply felt, unconscious images, but consciously the introverted feeling type is apt to relate it to the ego, where upon her influence becomes debased into a personal tyranny. Whenever the unconscious subject is identified with the ego, the mysterious power of intensive feeling turns into a banal and overweening desire to dominate, into vanity and despotic bossiness. This produces a type of woman notorious for her unscrupulous ambition and mischievous cruelty. It is a change, however that leads to neurosis Carl Jung, CW 6, Para 642

Although the tendency [of the introverted feeling type] to overpower or coerce the other person with her secret feelings rarely plays a disturbing role in the normal type, some trace of it nevertheless seeps through in the form of a domineering influence often difficult to define. It is sensed as a sort of stifling or oppressive feeling which holds everybody around her under a spell Carl Jung, CW 6, Para 642

Although, with the introverted feeling type, there is a constant readiness for peaceful and harmonious co-existence, strangers are shown no touch of amiability, no gleam of responsive warmth, but are met with apparent indifference or a repelling coldness. Often they are made to feel entirely superfluous. This type observes a benevolent though critical neutrality, coupled with a faint trace of superiority that soon takes the wind out of the sails of a sensitive person. Any stormy emotion, however, will be struck down with murderous coldness Carl Jung, CW 6, Para 640

The introverted feeling type’s feelings are intensive rather than extensive. They develop in depth. While an extensive feeling of sympathy can express itself in appropriate words and deeds, and thus quickly gets back to normal again, an intensive sympathy, being shut off from every means of expression, acquires a passionate depth that comprises a whole world of misery and simple gets benumbed. To the outside world, or to the blind eyes of the extravert, this intensive sympathy looks like coldness, because usually it does nothing visible, and an extraverted consciousness is unable to believe in invisible forces Carl Jung, CW 6, Para 641

Introverted feeling remains normal so long as the ego feels subordinate to the unconscious subject, and feeling is aware of something higher and mightier than the ego, otherwise

it leads to neurosis Carl Jung, CW 6, Para 643

With the introverted intuitive type, a compulsion neurosis expresses itself with hypochondriacal symptoms, hypersensitivity of the sense organs, and compulsive ties to particular persons or objects. A condition occurring through a forced exaggeration of the conscious attitude Carl Jung, CW 6, Para 663

In the introverted sensation type a compulsion neurosis results as soon as the unconscious becomes antagonistic. The archaic intuitions come to the surface and exert their pernicious influence, forcing themselves on the individual and producing compulsive ideas of the most perverse kind. Hysterical features are masked by symptoms of exhaustion Carl Jung, CW 6, Para 654

Since extraverted intuition is directed predominantly to objects, it actually comes very close to sensation; indeed, the expectant attitude to external objects is just as likely to make use of sensation. Hence, if intuition is to function properly, sensation must to a large extent be suppressed Carl Jung, CW 6, Para 611

This type seizes on new objects or situations with great intensity, sometimes with extraordinary enthusiasm, only to abandon them cold-bloodedly, without any compunction and apparently without remembering them, as soon as their range is known and no further developments can be divined. So long as a new possibility is in the offing, the intuitive is bound to it with the shackles of fate. It is as though his whole life vanished in the new situation Carl Jung, CW 6, Para 613

The extraverted intuitive claims a freedom and exemption from restraint, submitting his decisions to no rational judgment and relying entirely on his nose for the possibilities that chance throws in his way Carl Jung, CW 6, Para 615

The extraverted intuitive is continually scenting out new possibilities which he pursues with equal unconcern for his own welfare and for that of others, pressing on quite heedless of human considerations and tearing down what has been built in his everlasting search for change Carl Jung, CW 6, Para 658

The extraverted intuitive type is uncommonly important both economically and culturally. If his intentions are good, i.e., if his attitude is not too egocentric, he can render exceptional service as the initiator or promoter of new enterprises. He is the natural champion of all minorities with a future. Because he is able, when oriented more to people than things, to make an intuitive diagnosis of their abilities and potentialities, he can also “make” men. His capacity to inspire courage or to kindle enthusiasm for anything new is unrivalled, although he may already have dropped it by the morrow Carl Jung, CW 6, Para 614

The stronger his intuition, the more his ego becomes fused with all the possibilities he envisions. He brings his vision to life, he presents it convincingly and with dramatic fire, he embodies it, so to speak. But this is not play-acting, it is a kind of fate Carl Jung, CW 6, Para 614

Since the extraverted intuitive tends to rely most predominantly on his vision, his moral efforts become one-sided; he makes himself and his life symbolic adapted, it is true, to the inner and eternal meaning of events, but unadapted to present-day reality. He thus deprives himself of any influence upon it because he remains uncomprehended. His language is not the

one currently spoken it has become too subjective. His arguments lack the convincing power of reason. He can only profess or proclaim. His is “the voice of one crying in the wilderness” Carl Jung, CW 6, Para 662

Because extraverted intuition is oriented by the object, there is a marked dependence on external situations, but it is altogether different than the dependence of the sensation type Carl Jung, CW 6, Para 613

The extraverted intuitive type would seem to be more common among women than among men. In women the intuitive capacity shows itself not so much in the professional as in the social sphere. Such women understand the art of exploiting every social occasion, they make the right social connections, they seek out men with prospects only to abandon everything again for the sake of a new possibility Carl Jung, CW 6, Para 613

The extraverted intuitive will experience through a forced exaggeration of the conscious attitude, a complete subordination to inner perceptions, the unconscious goes over to the opposition, giving rise to compulsive sensations whose excessive dependence on the object directly contradicts the conscious attitude Carl Jung, CW 6, Para 663

The extraverted intuitive exempts himself from the restrictions of reason only to fall victim to neurotic compulsions in the form of over-subtle ratiocinations, hairsplitting dialectics, and a compulsive tie to the sensation aroused by the object. His conscious attitude towards both sensation and object is one of ruthless superiority. Not that he means to be ruthless or superior he simply does not see the object that everyone else sees and rides roughshod over it, just as the sensation type has no eyes for its soul. But sooner or later the object takes revenge in the form of compulsive hypochondriacal ideas, phobias, and every imaginable kind of absurd bodily sensation Carl Jung, CW 6, Para 615

Thinking and feeling, the indispensable components of conviction, are his [extraverted intuitive] inferior functions, carrying no weight and hence incapable of effectively withstanding the power of intuition. And yet these functions are the only ones that could compensate its supremacy by supplying the judgment which the intuitive type totally lacks. The intuitive’s morality is governed neither by thinking nor by feeling; he has his own characteristic morality, which consists in a loyalty to his vision and in voluntary submission to its authority Carl Jung, CW 6, Para 613

The extraverted intuitive’s consideration for the welfare of others is weak. Their psychic well-being counts as little with him as does his own. He has equally little regard for their convictions and way of life, and on this account he is often put down as an immoral and unscrupulous adventurer Carl Jung, CW 6, Para 613

The extraverted intuitive represses the sensation of the object, giving rise to a compensatory extraverted sensation function of an archaic character. The unconscious personality can best be described as an extraverted sensation type of a rather low and primitive order. Instinctuality and intemperance are the hallmarks of this sensation, combined with an extraordinary dependence on sense-impressions Carl Jung, CW 6, Para 663

The extraverted intuitive’s consideration for the welfare of others is weak. Their psychic well-being counts as little with him as does his own. He has equally little regard for their convictions and way of life, and on this account he is often put down as an immoral and

unscrupulous adventurer Carl Jung, CW 6, Para 613

The extraverted intuitive's remarkable indifference to external objects is shared by the introverted intuitive in relation to inner objects Carl Jung, CW 6, Para 658

Apperception is a psychic process by which a new content is articulated with similar, already existing contents in such a way that it becomes understood, apprehended, or "clear." We distinguish active from passive apperception Carl Jung, CW 6, Para 683

Active apperception is a process by which the subject, of his own accord and from his own motives, consciously apprehends a new content with attention and assimilates it to other contents already constellated Carl Jung, CW 6, Para 683

Passive apperception is a process by which a new content forces itself upon consciousness either from without (through the senses) or from within (from the unconscious) and, as it were, compels attention and enforces apprehension Carl Jung, CW 6, Para 683

Such contents are what Lévy-Bruhl calls the représentations collectives of primitives. Among primitives, the représentations collectives are at the same time collective feelings, as Lévy-Bruhl has shown. Because of this collective feeling-value he calls the représentations collectives "mystical," since they are not merely intellectual but emotional Carl Jung, CW 6, Para 692

Among civilized peoples, too, certain collective ideas God, justice, fatherland, etc. are bound up with collective feelings. This collective quality adheres not only to particular psychic elements or contents but to whole functions (q.v.). Thus the thinking function as a whole can have a collective quality, when it possesses general validity and accords with the laws of logic. Similarly, the feeling function as a whole can be collective, when it is identical with the general feeling and accords with general expectations, the general moral consciousness, etc. In the same way, sensation and intuition are collective when they are at the same time characteristic of a large group of men Carl Jung, CW 6, Para 692

Thinking is oriented by the object and fed from objective data transmitted largely by sense perception, therefore it need not be purely concretistic since it can just as well be purely ideal thinking Carl Jung, CW 6, Para 577

The thinking type restricts the products of sensation and intuition since choice is made by a rational judgment. It is not the intensity of a sensation that decides action but judgment Carl Jung, CW 6, Para 602

The thinking function as a whole can have a collective quality when it possesses general validity and accords with the laws of logic Carl Jung, CW 6, Para 692

Thinking is a directed function, and so is feeling. When these functions are concerned not with a rational choice of objects, or with the qualities and interrelations of objects, but with the perception of accidentals which the actual object never lacks, they at once lose the attribute of directedness and, with it, something of their rational character, because they then accept the rational. They begin to be irrational. Thinking and feeling find fulfillment only when they are in complete harmony with the laws of reason Carl Jung, CW 6, Para 776

Concretism is a concept which falls under the more general concept of participation mystique. Just as the latter represents a fusion of the individual with external objects, concretism represents a fusion of thinking and feeling with sensation, so that the object of one is at the same time the object of the other. This fusion prevents any differentiation of thinking and feeling and keeps them both within the sphere of sensation; they remain its servants and can never be developed into pure functions Carl Jung, CW 6, Para 698

Concretism, therefore, is an archaism. The magical influence of the fetish is not experienced as a subjective state of feeling but sensed as a magical effect. That is concretistic feeling. The primitive does not experience the idea of divinity as a subjective content; for him the sacred tree is the abode of the god, or even the god himself. That is concretistic thinking. In civilized man, concretistic thinking consists in the inability to conceive of anything except immediately obvious facts transmitted by the senses, or in the inability to discriminate between subjective feeling and the sensed object Carl Jung, CW 6, Para 697

Differentiation is a form of mental activity that frees a content from its association with the irrelevant elements by distinguishing it from them or, in other words, differentiating it Carl Jung, CW 6, Para 677

Differentiation means the development of differences, the separation of parts from a whole. It consists in the separation of the function from other functions, and in the separation of its individual parts from each other. Without differentiation direction is impossible, since the direction of a function towards a goal depends on the elimination of anything irrelevant. Fusion with the irrelevant precludes direction; only a differentiated function is capable of being directed Carl Jung, CW 6, Para 705

Feeling is primarily a process that takes place between the ego and a given content, a process, moreover, that imparts to the content a definite value in the sense of acceptance or rejection (“like” or “dislike”). The process can also appear isolated, as it were, in the form of a “mood,” regardless of the momentary contents of consciousness or momentary sensations Carl Jung, CW 6, Para 724

Feeling, therefore, is an entirely subjective process, which may be in every respect independent of external stimuli, though it allies itself with every sensation. Even an “indifferent” sensation possesses a feeling-tone, namely that of indifference, which again expresses some sort of valuation. Hence feeling is a kind of judgment, differing from intellectual judgment in that its aim is not to establish conceptual relations but to set up a subjective criterion of acceptance or rejection. Valuation by feeling extends to every content of consciousness, of whatever kind it may be Carl Jung, CW 6, Para 725

Feeling may be distinguished from affect, in spite of the fact that the dividing line is fluid, since every feeling, after attaining a certain strength, releases physical innervations, thus becoming an affect Carl Jung, CW 6, Para 681

Feeling restricts the products of sensation and intuition since the choice is made by a rational judgment. It is not the intensity of a sensation that decides action but judgment (feeling) Carl Jung, CW 6, Para 602

One can feel “correctly” only when feeling is not disturbed by anything else. Nothing disturbs feeling so much as thinking. It is therefore understandable that thinking will be kept

in abeyance as much as possible Carl Jung, CW 6, Para 598

If feeling is falsified by an egocentric attitude, it at once becomes unsympathetic, because it is then concerned mainly with the ego. It inevitably creates the impression of sentimental self-love, of trying to make itself interesting, and even of morbid self-admiration Carl Jung, CW 6, Para 639

Identification is a psychological process in which the personality is partially or totally dissimilated. Identification is an alienation of the subject from himself for the sake of the object, in which he is, so to speak, disguised Carl Jung, CW 6, Para 738

For example, identification with the father means, in practice, adopting all the father's ways of behaving, as though the son were the same as the father and not a separate individuality Carl Jung, CW 6, Para 738

Identification differs from imitation in that it is an unconscious imitation, whereas imitation is a conscious copying. Imitation is an indispensable aid in developing the youthful personality. It is beneficial so long as it does not serve as a mere convenience and hinder the development of ways and means suited to the individual Carl Jung, CW 6, Para 738

Similarly, identification can be beneficial so long as the individual cannot go his own way. But when a better possibility presents itself, identification shows its morbid character by becoming just as great a hindrance as it was an unconscious help and support before. It now has a dissociative effect, splitting the individual into two mutually estranged personalities Carl Jung, CW 6, Para 738

Identification does not always apply to persons but may also apply to things (e.g., a movement of some kind, a business, etc.) and to psychological functions. The latter kind is, in fact, particularly important Carl Jung, CW 6, Para 739

Identification then leads to the formation of a secondary character, the individual identifying with his best developed function to such an extent that he alienates himself very largely or even entirely from his original character, with the result that his true individuality falls into the unconscious. This is nearly always the rule with people who have one highly differentiated function. It is, in fact, a necessary transitional stage on the way to individuation Carl Jung, CW 6, Para 739

The primordial image, elsewhere also termed archetype, is always collective, i.e., it is at least common to entire peoples or epochs. In all probability the most important mythological motifs are common to all times and races. I [Jung] have, in fact, been able to demonstrate a whole series of motifs from Greek mythology in the dreams and fantasies of pure-bred Negroes suffering from mental disorders Carl Jung, CW 6, Para 747

The primordial image is the precursor of the idea, and its matrix. By detaching it from the concretism peculiar and necessary to the primordial image, reason develops it into a concept i.e., an idea which differs from all other concepts in that it is not a datum of experience but is actually the underlying principle of all experience. The idea derives this quality from the primordial image, which, as an expression of the specific structure of the brain, gives every experience a definite form Carl Jung, CW 6, Para 750

The term introjection was introduced by Avenarius to correspond with projection. The expulsion of a subjective content into an object, which is what Avenarius meant, Ferenczi has now defined introjection as the opposite of projection, namely as an indrawing of the object into the subjective sphere of interest, while projection is an expulsion of subjective contents into the object. Introjection is a sort of "diluting process," an "expansion of the circle of interest" Carl Jung, CW 6, Para 767

Reductive means 'leading back.' The term is used to denote a method of psychological interpretation which regards the unconscious product not as a symbol but semiotically, as a sign or symptom of an underlying process Carl Jung, CW 6, Para 788

The reductive method traces the unconscious product back to its elements, no matter whether these be reminiscences of events that actually took place, or elementary psychic processes. The reductive method is oriented backwards, in contrast to the constructive method, whether in the purely historical sense or in the figurative sense of tracing complex, differentiated factors back to something more general and more elementary Carl Jung, CW 6, Para 788

The interpretive methods of both Freud and Adler are reductive, since in both cases there is a reduction to the elementary processes of wishing or striving, which in the last resort are of an infantile or physiological nature Carl Jung, CW 6, Para 788

Reduction has a disintegrative effect on the real significance of the unconscious product, since this is either traced back to its historical antecedents and thereby annihilated, or integrated once again with the same elementary process whence it arose Carl Jung, CW 6, Para 788

Sensation is chiefly conditioned by the object, those objects that excite the strongest sensations will be decisive for the individual's psychology. The result is a strong sensuous tie to the object. Sensation is therefore a vital function equipped with the strongest vital instinct Carl Jung, CW 6, Para 605

Abstract sensation is a sensation that is abstracted or separated from the other psychic elements. Abstract sensation is a differentiated kind of perception, which might be termed "aesthetic" in so far as, obeying its own principle, it detaches itself from all contamination with the different elements in the perceived object and from all admixtures of thought and feeling, and thus attains a degree of purity beyond the reach of concrete sensation Carl Jung, CW 6, Para 794

Abstract sensation, like every abstraction, is always associated with the will, i.e., with a sense of direction. The will that is directed to abstract sensation is an expression and application of the aesthetic sensation attitude Carl Jung, CW 6, Para 794

Abstract sensation immediately picks out the most salient sensuous attributes, e.g., of a flower and its redness, and by makes this the sole or at least the principal content of consciousness, entirely detached from all other admixtures. Abstract sensation is found chiefly among artists. Like every abstraction, it is a product of functional differentiation Carl Jung, CW 6, Para 794

Concrete sensation is a reactive phenomenon, in contrast to abstract sensation which is always associated with the will, i.e., with a sense of direction Carl Jung, CW 6, Para 794

Concrete sensation conveys a full perception, e.g., in the case of a flower. The perception not only of the flower as such, but also of the stem, leaves, habitat, and so on. It is also instantly mingled with feelings of pleasure or dislike which the sight of the flower evokes, or with simultaneous olfactory perceptions, or with thoughts about its botanical classification, etc. Carl Jung, CW 6, Para 794

Concrete sensation never appears in "pure" form, but is always mixed up with ideas, feelings, thoughts Carl Jung, CW 6, Para 794

With men the anima is usually personified by the unconscious as a woman; with women the animus is personified as a man. In every case where the individuality is unconscious, and therefore associated with the soul, the soul-image has the character of the same sex Carl Jung, CW 6, Para 808

In all cases where there is an identity with the persona, and the soul accordingly is unconscious, the soul-image is transferred to a real person. This person is the object of intense love or equally intense hate (or fear). The influence of such a person is immediate and absolutely compelling, because it always provokes an effective response Carl Jung, CW 6, Para 808

The affect is due to the fact that a real, conscious adaptation to the person representing the soul-image is impossible. Because an objective relationship is non-existent and out of the question, the libido gets dammed up and explodes in an outburst of affect. Affects always occur where there is a failure of adaptation Carl Jung, CW 6, Para 808

Conscious adaptation to the person representing the soul-image is impossible precisely because the subject is unconscious of the soul. Were he conscious of it, it could be distinguished from the object, whose immediate effects might then be mitigated, since the potency of the object depends on the projection of the soul-image. Carl Jung, CW 6, Para 808

Precisely because the new symbol is born of man's highest spiritual aspirations and must at the same time spring from the deepest roots of his being, it cannot be a one-sided product of the most highly differentiated mental functions but must derive equally from the lowest and most primitive levels of the psyche. For this collaboration of opposing states to be possible at all, they must first face one another in the fullest conscious opposition. This necessarily entails a violent disunion with oneself, to the point where thesis and antithesis negate one another, while the ego is forced to acknowledge its absolute participation in both Carl Jung, CW 6, Para 824

The living symbol cannot come to birth in a dull or poorly developed mind, for such a mind will be content with the already existing symbols offered by established tradition. Only the passionate yearning of a highly developed mind, for which the traditional symbol is no longer the unified expression of the rational and the irrational, of the highest and the lowest, can create a new symbol Carl Jung, CW 6, Para 823

The raw material shaped by thesis and antithesis, and in the shaping of which the opposites are united, is the living symbol. Its profundity of meaning is inherent in the raw material itself, the very stuff of the psyche, transcending time and dissolution; and its configurations by the opposites ensures its sovereign power over all the psychic functions Carl Jung, CW 6, Para 828

Hysteria is characterized by a centrifugal movement of libido, while in schizophrenia the movement is more centripetal. The reverse obtains, however, when the illness has fully established its compensatory effects Carl Jung, CW 6, Para 859

In the hysteric the libido is then hampered in its movement of expansion and is forced to regress upon itself. The patients cease to partake in the common life, are wrapped up in their daydreams, keep to their beds, remain shut up in their sickrooms, etc. Carl Jung, CW 6, Para 859

During the incubation of his illness the schizophrenic likewise turns away from the outer world in order to withdraw into himself, but when the period of morbid compensation arrives, he seems constrained to draw attention to himself, to force himself upon the notice of those around him, by his extravagant, insupportable, or directly aggressive behavior Carl Jung, CW 6, Para 859

Of these perhaps the most important was Claudius Galen, the Greek physician who lived in the second century A.D. He distinguished four basic temperaments: the sanguine, the phlegmatic, the choleric, and melancholic Carl Jung, CW 6, Para 883

The underlying idea goes back to the fifth century B.C., to the teachings of Hippocrates, that the human body was composed of the four elements, air, water, fire, and earth. Corresponding to these elements, four substances were to be found in the living body, blood, phlegm, yellow bile, and black bile. It was Galen's idea that, by the varying admixture of these four substances, men could be divided into four classes Carl Jung, CW 6, Para 883

Those in whom there was a preponderance of blood belonged to the sanguine type; a preponderance of phlegm produced the phlegmatic; yellow bile produced the choleric, and black bile the melancholic. As our language shows, these differences of temperament have passed into history, though they have, of course, long since been superseded as a physiological theory Carl Jung, CW 6, Para 883

The earliest sign of extraversion in a child is his quick adaptation to the environment, and the extraordinary attention he gives to objects and especially to the effect he has on them Carl Jung, CW 6, Para 896

Fear of objects is minimal; he lives and moves among them with confidence. His apprehension is quick but imprecise. He appears to develop more rapidly than the introverted child, since he is less reflective and usually without fear Carl Jung, CW 6, Para 896

The extraverted child feels no barrier between himself and objects and can therefore play with them freely and learn through them. He likes to carry his enterprises to the extreme and exposes himself to risks. Everything unknown is alluring Carl Jung, CW 6, Para 896

One of the earliest signs of introversion in a child is a reflective, thoughtful manner, marked shyness and even fear of unknown objects. Very early there appears a tendency to assert himself over familiar objects, and attempts are made to master them. Everything unknown is regarded with mistrust; outside influences are usually met with violent resistance Carl Jung, CW 6, Para 897

The child wants his own way, and under no circumstances will he submit to an alien

rule he cannot understand. When he asks questions, it is not from curiosity or a desire to create a sensation, but because he wants names, meanings, explanation to give him subjective protection against the object Carl Jung, CW 6, Para 897

Thus very early in an introverted child the characteristic defensive attitude can be noted which the adult introvert displays toward the object; just as in an extraverted child one can very early observe a marked assurance and initiative, a happy trustfulness in his dealings with objects Carl Jung, CW 6, Para 897

This is indeed the basic feature of the extraverted attitude: psychic life is, as it were, enacted outside the individual in objects and objective relationships. In extreme cases there is even a sort of blindness for his own individuality Carl Jung, CW 6, Para 897

The introvert, on the contrary, always acts as though the object possessed a superior power over him against which he has to defend himself. His real world is the inner one Carl Jung, CW 6, Para 897

The distinction between mind and body is an artificial dichotomy, an act of discrimination based far more on the peculiarity of intellectual cognition than on the nature of things. In fact, so intimate is the intermingling of bodily and psychic traits that not only can we draw far-reaching inferences as to the constitution of the psyche from the constitution of the body, but we can also infer from psychic peculiarities the corresponding bodily characteristics Carl Jung, CW 6, Para 916

It is true that the latter process is far more difficult, not because the body is less influenced by the psyche than the psyche by the body, but for quite another reason. In taking the psyche as our starting point, we work from the relatively unknown to the known; while in the opposite case we have the advantage of starting from something known, that is, from the visible body Carl Jung, CW 6, Para 916

Despite all the psychology we think we possess today; the psyche is still infinitely more obscure to us than the visible surface of the body. The psyche is still a foreign, barely explored country of which we have only indirect knowledge, mediated by conscious functions that are open to almost endless possibilities of deception Carl Jung, CW 6, Para 916

To the same class of interpretations from outward signs belong palmistry, Gall's phrenology, Lavater's physiognomy, and more recently graphology, Kretschmer's physiological types, and Rorschach's klexographic method. As we can see, there are any number of paths leading from outside inwards, from the physical to the psychic, and it is necessary that research should follow this direction until the elementary psychic facts are established with sufficient certainty 91 Carl Jung, CW 6, Para 7

These characteristics of the complex throw a significant light on its origin. It obviously arises from the clash between a demand of adaptation and the individual's constitutional inability to meet the challenge. Seen in this light, the complex is a valuable symptom which helps us to diagnose an individual disposition Carl Jung, CW 6, Para 926

Experience shows us that complexes are infinitely varied, yet careful comparison reveals a relatively small number of typical primary forms, which are all built upon the first experiences of childhood. This must necessarily be so, because the individual disposition is already

a factor in infancy; it is innate, and not acquired in the course of life Carl Jung, CW 6, Para 927

A study of the complexes leads logically to the problem of their origin, experience shows that complexes always contain something like a conflict, or at least are either the cause or the effect of a conflict. At any rate the characteristics of conflict shock, upheaval, mental agony, inner strife are peculiar to the complexes Carl Jung, CW 6, Para 924

They are the “sore spots,” the bétes noires, the “skeletons in the cupboard” which we do not like to remember and still less to be reminded of by others, but which frequently come back to mind unbidden and in the most unwelcome fashion. They always contain memories, wishes, fears, duties, needs, or insights which somehow we can never really grapple with, and for this reason they constantly interfere with our conscious life in a disturbing and usually a harmful way Carl Jung, CW 6, Para 924

Complexes obviously represent a kind of inferiority in the broadest senseit only means that something discordant, unassimilated, and antagonistic exists, perhaps as an obstacle, but also as an incentive to greater effort, and so, perhaps, to new possibilities of achievement Carl Jung, CW 6, Para 925

Complexes are focal or nodal points of psychic life which we would not wish to do without; indeed, they should not be missing, for otherwise psychic activity would come to a fatal standstill. They point to the unresolved problems in the individual, the places where he has suffered a defeat, at least for the time being, and where there is something he cannot evade or overcome his weak spots in every sense of the word Carl Jung, CW 6, Para 925

I need only mention the whole mythological complex of the dying and resurgent god and its primitive precursors all the way down to the recharging of fetishes and churingas with magical force. It expresses a transformation of attitude by means of which a new potential, a new manifestation of life, a new fruitfulness, is created. Carl Jung, CW 6, Page 325

The inner personality is the way one behaves in relation to one’s inner psychic processes; it is the inner attitude, the characteristic face, that is turned towards the unconscious. I call the outer attitude, the outward face, the persona; the inner attitude, the inward face, I call the anima. Carl Jung, CW 6, Para 803

… in a man the soul, i.e., anima, or inner attitude, is represented in the unconscious by definite persons with the corresponding qualities. Such an image is called a “soul-image.” Sometimes these images are of quite unknown or mythological figures. Carl Jung, CW 6, Para 808

The Christian principle which unites the opposites is the worship of God, in Buddhism it is the worship of the self (self-development), while in Spitteler and Goethe it is the worship of the soul symbolized by the worship of woman. Implicit in this categorization is the modern individualistic principle on the one hand, and on the other a primitive Polydaemonism which assigns to every race, every tribe, every family, every individual its specific religious principle. Carl Jung, CW 6, Para 376

[The patient] … is quite right to treat the anima as an autonomous personality and to address personal questions to her. I mean this as an actual technique … The art of it consists only in allowing our invisible partner to make herself herd … [O]ne should cultivate the art of conversing with oneself in the setting provided by an affect … Carl Jung, CW 6, Para 322

[In the German text the word Anima is used only twice … Everywhere else the word used is Seele (soul). In this translation anima is substituted for "soul" when it refers specifically to the feminine component in a man … "Soul" is retained only when it refers to the psychic factor common to both sexes. The distinction is not always easy to make … Carl Jung, CW 6, Para 803, fn 80.

As to the common human qualities, the character of the anima can be deduced from that of the persona … But as regards its individual qualities, nothing can be deduced … We can only be certain that when a man is identical with his persona, his individual qualities will be associated with the anima. This association frequently gives rise in dreams to the symbol of psychic pregnancy … The child that is to be born signifies the individuality, which, though present, is not yet conscious. Carl Jung, CW 6, Para 806

His mistress appears before him … seeming to him like a goddess in heaven. The re-pressed erotic impression has activated the latent primordial image of the goddess, i.e., the archetypal sol-image. Through insight into the actual existence of his erotic desire, [the shepherd of] Hermas was able to acknowledge this metaphysical reality. The sensual libido … now passed to his soul-image and invested it with the reality which the object had claimed exclusively for itself. Consequently his soul could speak to good effect and successfully enforce her demands. Carl Jung, CW 6, Para 383

Prometheus surrenders himself … to his soul, that is, to the function of relation to the inner world … Prometheus concedes her an absolute significance, as mistress and guide … He sacrifices his individual ego to the soul, to the relation with the unconscious as the matrix of eternal images and meanings … Prometheus loses all connection with the surrounding world, and hence also the very necessary corrective offered by external reality. Carl CW 6, Para 278

I am first and foremost a doctor and practising psychotherapist, and all my psychological formulations are based on the experiences gained in the hard course of my daily professional work. Carl Jung, CW 6, Page 18

Carl Jung: *CW 7 "Two Essays on Analytical Psychology"

[8]The Collected Works of C. G. Jung, Vol. 7: Two Essays on Analytical Psychology

Nature is often obscure or impenetrable, but she is not, like man, deceitful. We must therefore take it that the dream is just what it pretends to be, neither more nor less. If it shows something in a negative light, there is no reason for assuming that it is meant positively. Carl Jung, CW 7, Page 162.

I expose myself to his critical judgment because I feel it is the duty of one who goes his own way to inform society of what he finds on his voyage of discovery, be it cooling water for the thirsty or the sandy wastes of unfruitful error. Carl Jung, CW 7, Para 201

stands in sorry contrast to the dazzling persona … [T] he "nothing but fantasy" attitude will never persuade me to regard my anima manifestations as anything more than fatuous weakness. If, however, I take the line that the world is outside and inside, … I must logically accept the upsets and annoyances that come to me from inside as symptoms of faulty adaptation to the conditions of that inner world. Carl Jung, CW 7, Para 428

When the anima continually thwarts the good intentions of the conscious mind, by contriving a private life that stands in sorry contrast to the dazzling persona, it is exactly the same as when a naïve individual, who has not the ghost of a persona, encounters the most painful difficulties in his passage through the world. … But if we reverse the picture and confront the man who possesses a brilliant persona with the anima, … then we shall see that the latter is just as well informed about the anima and her affairs as the former is about the world. Carl Jung, CW 7, Para 318

Just as the persona is the image of himself which the subject presents to the world, and which is seen by the world, so the anima is the image of the subject in his relation to the collective unconscious … One could also say: the anima is the face of the subject as seen by the collective unconscious … If the ego adopts the standpoint of the anima, adaptation to reality is severely compromised. Carl Jung, CW 7, Para 521

… when anima forfeits the daemonic power of an autonomous complex … she is depotentiated … no longer is the soul to be called "Mistress," but a psychological function of an intuitive nature, akin to what the primitives mean when they say, "He has gone into the forest to talk with the spirits" or "My snake spoke with me …" Carl Jung, CW 7, Para 374

The archaic souls, the ha and ka of the Egyptians, are complexes of this kind. At a still higher level, … this complex is invariably of the feminine gender – anima … Carl Jung, CW 7, Para 295

The dissolution of the anima means that we have gained insight into the driving forces of the unconscious, but not that we have made these forces ineffective. Carl Jung, CW 7, Para 391)

To the degree that the patient takes an active part, the personified figure of anima or animus will disappear. It becomes the function of relationship between conscious and unconscious. Carl Jung, CW 7, Para 370

… the immediate goal has been achieved, namely the conquest of the anima as an autonomous complex, and her transformation into a function of relationship between the conscious and the unconscious. Carl Jung, CW 7, Para 374

The man who is pauper or parasite will never solve the social question. Carl Jung, CW 7, Page 226

A mask of the collective psyche, a mask that feigns individuality, making others and

oneself believe that one is individual, whereas one is simply acting a role through which the collective psyche speaks . . . [it is] a compromise between individual and society as to what a man should appear to be. Carl Jung, CW 7, Page 157

For the purpose of individuation, or self-realization it is essential for a man to distinguish between what he is and how he appears to himself and to others, so it is also necessary for the same purpose that he should become conscious of his invisible system of relations to the unconscious. Carl Jung, CW 7, Page 195

. . . what Freud probably means is the essential fact that every process is a phenomenon of energy, and that all energy can only proceed from the tension of opposites . . . it is sufficiently obvious that life, like any process, has a beginning and an end, and that every beginning is also the beginning of the end. Carl Jung, CW 7, Para 34

For if such a large percentage of the population has an insatiable need for this counter-pole to the scientific spirit, we can be sure that the collective psyche in every individual – be he never so scientific – has this psychological requirement in equally high degree. A certain kind of "scientific" scepticism and criticism in our time is nothing but a misplaced compensation of the powerful and deep-rooted superstitious impulses of the collective psyche. Carl Jung, CW 7, Para 495

Even today, however, astrology is still highly regarded in the East, particularly in Persia, India, and China." One must be smitten with blindness to write such a thing nowadays. The truth is that astrology flourishes as never before. There is a regular library of astrological books and magazines that sell for far better than the best scientific works. The Europeans and Americans who have horoscopes cast for them may be counted not by the hundred thousand but by the million. Astrology is a flourishing industry. Yet the encyclopaedia can say: "The poet Dryden (d. 1701) still had horoscopes cast for his children." Christian Science, too, has swamped Europe and America. Hundreds and thousands of people on both sides of the Atlantic swear by theosophy and anthroposophy, and anyone who believes that the Rosicrucians are a legend of the dim bygone has only to open his eyes to see them as much alive today as they ever were. Folk magic and secret lore have by no means died out. Nor should it be imagined that only the dregs of the populace fall for such superstitions. We have, as we know, to climb very high on the social scale to find the champions of this other principle. Carl Jung, CW 7, Para 494

It is sufficient to know that the human psyche is both individual and collective, and that its well-being depends on the natural co-operation of these two apparently contradictory sides. Their union is essentially an irrational life process that can, at most, be described in individual cases, but can neither be brought about, nor understood, nor explained rationally. Carl Jung, CW 7, Para 487

Every individual needs revolution, inner division, overthrow of the existing order, and renewal, but not by forcing them upon his neighbors under the hypocritical cloak of Christian love or the sense of social responsibility or any of the other beautiful euphemisms for unconscious urges to personal power. Individual self-reflection return of the individual to the ground of human nature, to his own deepest being with its individual and social destiny—here is the beginning of a cure for the blindness which reigns at the present hour. - C.G. Jung, CW 7, Page 5

Individuation . . .. means to become a single, discrete being, and inasmuch as the concept of individuality embraces that innermost, last, and incomparable uniqueness of our

being, it also includes the idea of becoming one's own real self . . . 'coming to selfhood,' or 'self-realization.' Carl Jung, CW 7, Page 240

Something works behind the veil of fantastic images, whether we give this something either a good name or a bad. It is something real, and for this reason its vital manifestations must be taken seriously. Carl Jung, CW 7, Page 240

For Jung, the great benefit of active imagination is to 'distinguish ourselves from the unconscious contents. Carl Jung, CW 7, Para 373

I write about things which actually happen, and am not propounding methods of treatment' Carl Jung, CW 7, Page 22

We should never identify ourselves with reason, for man is not and never will be a creature of reason alone, a fact to be noted by all pedantic culture-mongers. Carl Jung, CW 7, Para III

We know that the wildest and most moving dramas are played not in the theatre but in the hearts of ordinary men and women who pass by without exciting attention, and who betray to the world nothing of the conflicts that rage within them except possibly by a nervous breakdown. Carl Jung, CW 7, Para 425

The old religions with their sublime and ridiculous, their friendly and fiendish symbols did not drop from the blue but were born of this human soul that dwells within us at this moment. Carl Jung, CW 7, Para 326

Failure to adapt to this inner world is a negligence entailing just as serious consequences as ignorance and ineptitude in the outer world. Carl Jung, CW 7, Para 326

Too much of the animal distorts the civilized man, too much civilization makes sick animals. Carl Jung, CW 7, Para 32

Neurosis is self-division. Carl Jung, CW 7, Para 18

True education can only start from naked reality, not from a delusive ideal. Carl Jung, CW 7, Para 93

Now, since the psychic process, like any other life-process, is not just a causal sequence, but is also a process with a teleological orientation, we might expect dreams to give us certain indicia about the objective causality as well as about the objective tendencies, because they are nothing less than self-portraits of the psychic life-process. Carl Jung, CW 7, Para 210

The whole nature of man presupposes woman, both physically and spiritually. His system is tuned into woman from the start, just as it is prepared for a quite definite world where there is water, light, air, salt, carbohydrates etc. Carl Jung, CW 7, Page 188.

Love is of fundamental importance in human life and of far greater significance than the individual suspects. Carl Jung, CW 7, Page 218.

I call every interpretation which equates the dream images with real objects an interpretation on the objective level… Interpretation on the objective level is analytic, because it breaks down the dream content into memory-complexes that refer to external situations. Carl Jung; CW 7, para. 131.

In contrast to this is the interpretation which refers every part of the dream and all the actors in it back to the dreamer himself. This I call interpretation on the subjective level. Interpretation on the subjective level is synthetic, because it detaches the underlying memory-complexes from their external causes, regards them as tendencies or components of the subject, and reunites them with that subject. Carl Jung; CW 7, para. 131.

Only what is really oneself has the power to heal. Carl Jung; CW 7, Page 258

The Self is our life's goal, for it is the completest expression of that fateful combination we call individuality. Carl Jung, CW 7, par. 404.

If there is anything that we wish to change in the child, we should first examine it and see whether it is not something that could better be changed in ourselves. Carl Jung, CW 7, Page 285.

The great problems of life — sexuality, of course, among others — are always related to the primordial images of the collective unconscious. These images are really balancing or compensating factors which correspond with the life presents in actuality. This is not to be marveled at, since these images are deposits representing the accumulated experience of thousands of years of struggle for adaptation and existence. Carl Jung, CW 7, Page 271

Repression is a process that begins in early childhood under the moral influence of the environment and continues through life. Carl Jung, CW 7, para 202.

The idea of angels, archangels, "principalities and powers" in St. Paul, the archons of the Gnostics, the heavenly hierarchy of Dionysius the Areopagite, all come from the perception of the relative autonomy of the archetypes. Carl Jung, CW 7, Para 104.

The idea of transformation and renewal by means of the serpent is a well-substantiated archetype. It is [a] healing [symbol] Carl Jung, CW 7, Par 184.

The afternoon of life is just as full of meaning as the morning; only, its meaning and purpose are different…. Carl Jung, CW 7, Para 114.

Often, indeed, a false ambition survives, in that an old man wants to be a youth again, or at least feels he must behave like one, although in his heart he can no longer make believe. Carl Jung, CW 7, Pages 74-75.

What youth found and must find outside; the man of life's afternoon must find within himself. Carl Jung, CW 7, Pages 74-75.

Everything human is relative, because everything rests on an inner polarity; for every-

thing is a phenomenon of energy. Energy necessarily depends on a pre-existing polarity, without which there could be no energy. Carl Jung, CW 7, Pages 74-75.

The growth of culture consists, as we know, is a progressive subjugation of the animal in man. It is a process of domestication which cannot be accomplished without rebellion on the part of the animal nature that thirsts for freedom. Carl Jung, CW 7, Page 19.

Just as in the early Middle Ages finance was held in contempt because there was as yet no differentiated financial morality to suit each case, but only a mass morality, so today there is only a mass sexual morality. Carl Jung, CW 7, Page 27.

A girl who has an illegitimate baby is condemned and nobody asks whether she is a decent human being or not. Carl Jung, CW 7, Page 27.

Any form of love not sanctioned by law is considered immoral, whether between worthwhile people or bounders. Carl Jung, CW 7, Pages 27.

We are still so hypnotized by what happens that we forget how and to whom it happens, just as for the Middle Ages finance was nothing but glittering gold, fiercely coveted and therefore the devil. Carl Jung, CW 7, Page 27.

Where love reigns, there is no will to power; and where the will to power is paramount, love is lacking. Carl Jung, CW 7, Par. 78.

The idea of transformation and renewal by means of the serpent is a well-substantiated archetype. It is [a] healing [symbol] Carl Jung, CW 7, Par 184

There are things that are not yet true today, perhaps we dare not find them true, but tomorrow they may be. Carl Jung, CW 7, Para 201.

Individualism means deliberately stressing and giving prominence to some supposed peculiarity. Carl Jung, CW 7, Para 267f

[The Self] ...might equally be called the God within us. Carl Jung, CW 7, Par. 399

Could the longing for a god be a passion welling up from our darkest, instinctual nature, a passion unswayed by any outside influences, deeper and stronger perhaps than the love for a human person? Carl Jung, CW 7, para 214.

No one who has undergone the process of assimilating the unconscious will deny that it gripped his very vitals and changed him. Carl Jung, CW 7, Para 361

Disalliance with the unconscious is synonymous with loss of instinct and rootlessness. Carl Jung, CW 7, Para 195

For the important thing is not to interpret and understand the fantasies, but primarily to experience them. Carl Jung, CW 7, Para 342.

Neurosis is nothing less than an individual attempt, however unsuccessful, to solve a universal problem; indeed it cannot be otherwise, for a general problem, a “question,” is not an ens per se [thing in itself] but exists only in the hearts of individuals. Carl Jung, CW 7, Para 438

Even the man whom we think we know best and who assures us himself that we understand him through and through is at bottom a stranger to us. Carl Jung, CW 7, Para 363.

Life is born only of the spark of opposites. Carl Jung, CW 7, Para 78

It should never be forgotten—and of this the Freudian school must be reminded—that morality was not brought down on tables of stone from Sinai and imposed on the people, but is a function of the human soul, as old as humanity itself. Carl Jung, CW 7, Para 30.

The art of it consists only in allowing our invisible partner to make herself heard, in putting the mechanism of expression momentarily at her disposal, without being overcome by the distaste one naturally feels at playing such an apparently ludicrous game with oneself, or by doubts as to the genuineness of the voice of one’s interlocutor. Carl Jung, CW 7, Para 323.

This remarkable capacity of the human psyche for change, expressed in the transcendent function, is the principal object of late medieval alchemistic philosophy, where it was expressed in terms of alchemical symbolism. Carl Jung, CW 7, Para 360

It is only in modern times that the dream, this fleeting and insignificant-looking product of the psyche, has met with such profound contempt. Carl Jung, CW 7, Para 21

A woman possessed by the animus is always in danger of losing her femininity, her adapted feminine persona, just as a man in like circumstances runs the risk of effeminacy. Carl Jung, CW 7, Para 336

Just as a man brings forth his work as a complete creation out of his inner feminine nature, so the inner masculine side of a woman brings forth creative seeds which have the power to fertilize the feminine side of the man. Carl Jung, CW 7, Para 336.

It [Dreams] leads straight to the deepest personal secrets, and is, therefore, an invaluable instrument in the hand of the physician and educator of the soul. Carl Jung, CW 7, Para 25

It is sufficiently obvious that life, like any other process, has a beginning and an end and that every beginning is also the beginning of the end. Carl Jung, CW 7, Para 34.

Individuation is an ineluctable psychological necessity. Carl Jung, CW 7, Para 241.

We could therefore translate individuation as “coming to selfhood” or “self-realization.” Carl Jung, CW 7, Para 266

The aim of individuation is nothing less than to divest the self of the false wrappings of the persona on the one hand, and of the suggestive power of primordial images on the other. Carl Jung, CW 7, Para 269

To find out what is truly individual in ourselves, profound reflection is needed; and suddenly we realize how uncommonly difficult the discovery of individuality is. Carl Jung, CW 7, Para 242.

In other words, in order to undergo a far-reaching psychological development, neither outstanding intelligence nor any other talent is necessary, since in this development moral qualities can make up for intellectual shortcomings. Carl Jung, CW 7, Para 198

Morality is not imposed from outside; we have it in ourselves from the start—not the law, but our moral nature without which the collective life of human society would be impossible. Carl Jung, CW 7, Page 27.

We shall probably get nearest to the truth if we think of the conscious and personal psyche as resting upon the broad basis of an inherited and universal psychic disposition which is as such unconscious, and that our personal psyche bears the same relation to the collective psyche as the individual to society. Carl Jung, CW 7, Para 234

The persona is a complicated system of relations between individual consciousness and society, fittingly enough a kind of mask, designed on the one hand to make a definite impression upon others, and, on the other, to conceal the true nature of the individual. Carl Jung, CW 7, Para 305

A wrong functioning of the psyche can do much to injure the body, just as conversely a bodily illness can affect the psyche; for psyche and body are not separate entities, but one and the same life. Carl Jung, CW 7, Page 115

Nature is often obscure or impenetrable, but she is not, like man, deceitful. We must therefore take it that the dream is just what it pretends to be, neither more nor less. If it shows something in a negative light, there is no reason for assuming that it is meant positively. Carl Jung, CW 7, Para 162

Neurosis is intimately bound up with the problem of our time and really represents an unsuccessful attempt on the part of the individual to solve the general problem in his own person. Neurosis is self-division. Carl Jung, CW 7, Para 18

Unfortunately far too many of us talk about a man only as it would be desirable for him to be, never about the man as he really is. But the doctor has always to do with the real man, who remains obstinately himself until all sides of his reality are recognized. True education can only start from naked reality, not from a delusive ideal. Carl Jung, CW 7, Para 93

In spite of all indignant protestations to the contrary, the fact remains that love (using the word in the wider sense which belongs to it by right and embraces more than sexuality), its problems and its conflicts, is of fundamental importance in human life and, as careful inquiry consistently shows, is of far greater significance than the individual suspects. Carl Jung, CW 7, Para 14

It is the way of moralists not to put the slightest trust in God, as if they thought that the good tree of humanity flourished only by dint of being pruned, tied back, and trained on a trellis; whereas in fact Father Sun and Mother Earth have allowed it to grow for their delight in

accordance with deep, wise laws. Carl Jung, CW 7, Para 427

A little less hypocrisy and a little more tolerance towards oneself can only have good results in respect for our neighbour; for we are all too prone to transfer to our fellows the injustice and violence we inflict upon our own natures. Carl Jung, CW 7, Para 439

If ever there was a time when self-reflection was the absolutely necessary and only right thing, it is now, in our present catastrophic epoch. Yet whoever reflects upon himself is bound to strike upon the frontiers of the unconscious, which contains what above all else he needs to know. Carl Jung, CW 7, Para 4

New ideas, if they are not just a flash in the pan, generally require at least a generation to take root. Psychological innovations probably take much longer, since in this field more than in any other practically everybody sets himself up as an authority. Carl Jung, CW 7, Para 8

The effect of the unconscious images has something fateful about it. Perhaps—who knows—these eternal images are what men mean by fate. Carl Jung, CW 7, Para 183

Now, it is by no means the special prerogative of the Christian Church to try to make it possible for the individual to detach himself from his original, animal-like condition; the Church is simply the latest, and specifically Western, form of an instinctive striving that is probably as old as mankind itself. Carl Jung, CW 7, Para 172

Now, since the psychic process, like any other life-process, is not just a causal sequence, but is also a process with a teleological orientation, we might expect dreams to give us certain indicia about the objective causality as well as about the objective tendencies, because they are nothing less than self-portraits of the psychic life-process. Carl Jung, CW 7, Para 210

The popular saying, "Old so-and-so chose the right time to die," comes from a sure sense of the secret psychological cause. Carl Jung, CW 7, Para 194

All ages before ours believed in gods in some form or other. Only an unparalleled impoverishment in symbolism could enable us to rediscover the gods as psychic factors, which is to say, as archetypes of the unconscious. No doubt this discovery is hardly credible as yet. Carl Jung, CW 7, Page 72

The tragic counter play between inside and outside (depicted in Job and Faust as the wager with God) represents, at bottom, the energetics of the life process, the polar tension that is necessary for self-regulation. Carl Jung, CW 7, Para 311

Love may be effectively used as a means for gaining the upper hand. Love and good behaviour are, from the standpoint of the power-instinct, known to be a choice means to this end. Virtuousness often serves to compel recognition from others Carl Jung, CW 7, Para 50

Love may summon forth unsuspected powers in the soul for which we had better be prepared Carl Jung, CW 7, Para 164

The term persona is really a very appropriate expression for this, for originally it meant the mask once worn by actors to indicate the role they played Carl Jung, CW 7, Para 245

If we endeavour to draw a precise distinction between what psychic material should be considered personal, and what impersonal, we soon find ourselves in the greatest dilemma, for by definition we have to say of the persona's contents what we have said of the impersonal unconscious, namely, that it is collective Carl Jung, CW 7, Para 245

It is only because the persona represents a more or less arbitrary and fortuitous segment of the collective psyche that we can make the mistake of regarding it in toto as something individual. It is, as its name implies, only a mask of the collective psyche, a mask that feigns individuality, making others and oneself believe that one is individual, whereas one is simply acting a role through which the collective psyche speaks Carl Jung, CW 7, Para 245

When we analyse the persona we strip off the mask, and discover that what seemed to be individual is at bottom collective; in other words, that the persona was only a mask for the collective psyche Carl Jung, CW 7, Para 246

Fundamentally the persona is nothing real: it is a compromise between individual and society as to what a man should appear to be. He takes a name, earns a title, exercises a function, he is this or that Carl Jung, CW 7, Para 246

In a certain sense all this is real, yet in relation to the essential individuality of the person concerned it is only a secondary reality, a compromise formation, in making which others often have a greater share than he. The persona is a semblance, a two-dimensional reality, to give it a nickname Carl Jung, CW 7, Para 246

There is, after all, something individual in the peculiar choice and delineation of the persona, and that despite the exclusive identity of the ego-consciousness with the persona the unconscious Self, one's real individuality, is always present and makes itself felt indirectly if not directly Carl Jung, CW 7, Para 247

Although the ego-consciousness is at first identical with the persona that compromise role in which we parade before the community, yet the unconscious Self can never be repressed to the point of extinction. Its influence is chiefly manifest in the special nature of the contrasting and compensating contents of the unconscious Carl Jung, CW 7, Para 247

Through the analysis of the personal unconscious, the conscious mind becomes suffused with collective material which brings with it the elements of individuality Carl Jung, CW 7, Para 247

In the case of a patient of Jung [a philosophy student] her analysis revealed a persona behind which her real and authentic being, her individual Self, lay hidden. Indeed, to the extent that she at first completely identified herself with her role, she was altogether unconscious of her real Self. She was still in her nebulous infantile world and had not yet discovered the real world at all. Carl Jung, CW 7, Para 248

But as, through progressive analysis, she became conscious of the nature of her transference, the dreams began to materialize. They brought up bits of the collective unconscious, and that was the end of her infantile world and of all the heroics. She came to herself and to her own real potentialities Carl Jung, CW 7, Para 248

This is roughly the way things go in most cases, if the analysis is carried far enough.

That the consciousness of her individuality should coincide exactly with the reactivation of an archaic god-image is not just as isolated coincidence, but a very frequent occurrence which, in my view, corresponds to an unconscious law. Carl Jung, CW 7, Para 248

Once the personal repressions are lifted, the individuality and the collective psyche begin to emerge in a coalescent state, thus releasing the hitherto repressed personal fantasies. The fantasies and dreams which now appear assume a somewhat different aspect. An infallible sign of collective images seems to be the appearance of the "cosmic" element, i.e., the images in the dream or fantasy are connected with cosmic qualities, such as:

Temporal and spatial infinity

Enormous speed and extension of movement

"Astrological" associations

Telluric, lunar, and solar analogies

Changes in the proportions of the body, etc.

The obvious occurrence of mythological and religious motifs in a dream also points to the activity of the collective unconscious Carl Jung, CW 7, Para 250

The collective element is very often announced by peculiar symptoms, as for example by dreams where the dreamer is flying through space like a comet, or feels that he is the earth, or the sun, or a star; or else is of immense size, or dwarfishly small; or that he is dead, is in a strange place, is a stranger to himself, confused, mad, etc. Similarly, feelings of disorientation, of dizziness and the like, may appear along with symptoms of inflation. Carl Jung, CW 7, Para 250

The forces that burst out of the collective psyche has a confusing and blinding effect. One result of the dissolution of the persona is a release of involuntary fantasy, which is apparently nothing else than the specific activity of the collective psyche. This activity throws up contents whose existence one had never suspected before. Carl Jung, CW 7, Para 251

But as the influence of the collective unconscious increases, so the conscious mind loses its power of leadership. Imperceptibly it becomes the led, while an unconscious and impersonal process gradually takes control. Thus, without noticing it, the conscious personality is pushed about like a figure on a chess-board by an invisible player. It is this player who decides the game of fate, not the conscious mind and its plans. This is how the resolution of the transference, apparently so impossible to the conscious mind, was brought about [in my patient. Carl Jung, CW 7, Para 251

The plunge into this process [disintegration of the persona] becomes unavoidable, whenever the necessity arises of overcoming an apparently insuperable difficulty. But when this inner adaptation becomes a problem, strange, irresistible attraction proceeds from the unconscious and exerts a powerful influence on the conscious direction of life. Carl Jung, CW 7, Para 252

Every individual needs revolution, inner division, overthrow of the existing order, and re-

newal, but not by forcing them upon his neighbours under the hypocritical cloak of Christian love or the sense of social responsibility or any of the other beautiful euphemisms for unconscious urges to personal power. Individual self-reflection return of the individual to the ground of human nature, to his own deepest being with its individual and social destiny ± here is the beginning of a cure for that blindness which reigns at the present hour. Carl Jung, CW 7, Page 5

I have often been asked where the archetypes or primordial images come from. It seems to me that their origin can only be explained by assuming them to be deposits of the constantly repeated experiences of humanity. One of the commonest and at the same time most impressive experiences is the apparent movement of the sun every day. We certainly cannot discover anything of the kind in the unconscious, so far as the known physical process is concerned. Carl Jung, CW 7, Page 109

[T]he archetypes usually appear in projection; and, because projections are unconscious, they appear on persons in the immediate environment, mostly in the form of abnormal over- or under-evaluations which provoke misunderstandings, quarrels, fanaticisms, and follies of every description. Thus we say,

He makes a god of so-and-so', or

so-and-so is Mr. X's bete noire'. In this way, too, there grow up modern myth formations, i.e., fantastic rumours, suspicions, prejudices. Carl Jung, CW 7, Page 152

[T]he idea of energy and its conservation must be a primordial image that was dormant in the collective unconscious. . .. [T]he most primitive

religions in the most widely separated parts of the earth are founded upon this image. These are the so-called dynamistic religions whose sole and determining thought is that there exists a universal magical power [i.e. mana] about which everything revolves. Tylor, the well-known English investigator, and Frazer likewise, misunderstood this idea as animism. In reality primitive peoples do not mean, by their power concept, souls or spirits at all, but something which the American investigator Lovejoy has appropriately termed 'primitive energetics'. . .. So this idea has been stamped on the human brain for aeons. That is why it lies ready to hand in the unconscious of every man. Only, certain conditions are needed to cause it to appear. Carl Jung, CW 7, Page 108

The predominance of unconscious influences, together with the associated disintegration of the persona and the deposition of the conscious mind from power, constitute a state of psychic disequilibrium which, in analytical treatment, is artificially induced for the therapeutic purpose of resolving a difficulty that might block further development. Carl Jung, CW 7, Para 252

There are of course innumerable obstacles that can be overcome with good advice and a little moral support, aided by goodwill and understanding on the part of the patient. Excellent curative results can be obtained in this way. Cases are not uncommon where there is no need to breathe a word about the unconscious Carl Jung, CW 7, Para 252

But again, there are difficulties to which one can foresee no satisfactory solution. If in these cases the psychic equilibrium is not already disturbed before treatment begins, it will certainly be upset during the analysis, and sometimes without any interference by the doctor. It often seems as though these patients had only been waiting to find a trustworthy person

in order to give up and collapse. Such a loss of balance is similar in principle to a psychotic disturbance; that is, it differs from the initial stages of mental illness only by the fact that it leads in the end to greater health, while the latter leads to yet greater destruction. Carl Jung, CW 7, Para 252

It is a condition of panic; a letting go in face of apparently hopeless complications. Mostly it was preceded by desperate efforts to master the difficulty by force of will; then came the collapse, and the once guiding will crumble completely. The energy thus freed disappears from consciousness and falls into the unconscious. As a matter of fact, it is at these moments that the first signs of unconscious activity appear. Carl Jung, CW 7, Para 252

Hence I regard the loss of balance as purposive, since it replaces a defective consciousness, which is aiming all the time at the creation of a new balance and will moreover achieve this aim, provided that the conscious mind is capable of assimilating the contents produced by the unconscious, i.e., of understanding and digesting them Car Jung, CW 7, Para 253

If I were to attempt to put in a nutshell the difference between man and woman in this respect, i.e., what it is that characterizes the animus as opposed to the anima, I could only say this: as the anima produces moods, so the animus produces opinions; and as the moods of a man issue from a shadowy background, so the opinions of a woman rest on equally unconscious prior assumptions. Carl Jung, CW 7, Para 331

The animus does not appear as one person, but as a plurality of persons. Carl Jung, CW 7, Para 332

This collection of condemnatory judges, a sort of College of Preceptors, corresponds to a personification of the animus. The animus is rather like an assembly of fathers or dignitaries of some kind who lay down incontestable, "rational," ex cathedra judgments. Carl Jung, CW 7, Para 332

It goes without saying that the animus is just as often projected as the anima. Carl Jung, CW 7, Para 333

It would be insufficient to characterize the animus merely as a conservative, collective conscience; he is also a neologist who, in flagrant contradiction to his correct opinions, has an extraordinary weakness for difficult and unfamiliar words which act as a pleasant substitute for the odious task of reflection. Carl Jung, CW 7, Para 333

Like the anima, the animus is a jealous lover. He is an adept at putting, in place of the real man, an opinion about him, the exceedingly disputable grounds for which are never submitted to criticism. Carl Jung, CW 7, Para 334

Men can be pretty venomous here, for it is an inescapable fact that the animus always plays up the anima—and vice versa, of course—so that all further discussion becomes pointless. Carl Jung, CW 7, Para 334

Like the anima, the animus is a jealous lover. He is an adept at putting, in place of the real man, an opinion about him, the exceedingly disputable grounds for which are never submitted to criticism. Carl Jung, CW 7, Para 334

Animus opinions are invariably collective, and they override individuals and individual judgments in exactly the same way as the anima thrusts her emotional anticipations and projections between man and wife. Carl Jung, CW 7, Para 334

In intellectual women the animus encourages a critical disputatiousness and would-be highbrowism, which, however, consists essentially in harping on some irrelevant weak point and nonsensically making it the main one. Carl Jung, CW 7, Para 335

Without knowing it, such women are solely intent upon exasperating the man and are, in consequence, the more completely at the mercy of the animus. "Unfortunately I am always right," one of these creatures once confessed to me. Carl Jung, CW 7, Para 335

The animus does not belong to the function of conscious relationship; his function is rather to facilitate relations with the unconscious. Instead of the woman merely associating opinions with external situations—situations which she ought to think about consciously—the animus, as an associative function, should be directed inwards, where it could associate the contents of the unconscious. Carl Jung, CW 7, Para 336

The technique of coming to terms with the animus is the same in principle as in the case of the anima; only here the woman must learn to criticize and hold her opinions at a distance; not in order to repress them, but, by investigating their origins, to penetrate more deeply into the background, where she will then discover the primordial images, just as the man does in his dealings with the anima. Carl Jung, CW 7, Para 336

The animus is the deposit, as it were, of all woman's ancestral experiences of man—and not only that, he is also a creative and procreative being, not in the sense of masculine creativity, but in the sense that he brings forth something we might call the \6yos ffirepvarixos, the spermatic word. Carl Jung, CW 7, Para 336

This would be the femme inspiratrice who, if falsely cultivated, can turn into the worst kind of dogmatist and high-handed pedagogue—a regular "animus hound," as one of my women patients aptly expressed it. Carl Jung, CW 7, Para 336

A woman possessed by the animus is always in danger of losing her femininity, her adapted feminine persona, just as a man in like circumstances runs the risk of effeminacy. Carl Jung, CW 7, Para 337

In woman the compensating figure is of a masculine character and can therefore appropriately be termed the animus. If it was no easy task to describe what is meant by the anima, the difficulties become almost insuperable when we set out to describe the psychology of the animus. Carl Jung, CW 7, Para 328

A passionate exclusiveness therefore attaches to the man's anima, and an indefinite variety to the woman's animus. Carl Jung, CW 7, Para 338

Whereas the man has, floating before him, in clear outlines, the alluring form of a Circe or a Calypso, the animus is better expressed as a bevy of Flying Dutchmen or unknown wanderers from over the sea, never quite clearly grasped, protean, given to persistent and violent motion. Carl Jung, CW 7, Para 338

I do not expect every reader to grasp right away what is meant by animus and anima. But I hope he will at least have gained the impression that it is not a question of anything "metaphysical," but far rather of empirical facts which could equally well be expressed in rational and abstract language. Carl Jung, CW 7, Para 340

If the unconscious simply rides roughshod over the conscious mind, a psychotic condition develops. If it can neither completely prevail nor yet be understood, the result is a conflict that cripples all further advance. But with this question, namely the understanding of the collective unconscious, we come to a formidable difficulty. Carl Jung, CW 7, Para 253

On paper the interpretation of a dream may look arbitrary, muddled, and spurious; but the same thing in reality can be a little drama of unsurpassed realism. To experience a dream and its interpretation is very different from having a tepid rehash set before you on paper. Everything about this psychology is, in the deepest sense, experience; the entire theory, even where it puts on the most abstract airs, is the direct outcome of something experienced. Carl CW 7: Page 199.

The vast majority of people are quite incapable of putting themselves individually into the mind of another. This is indeed a singularly rare art, and truth to tell, it does not take us very far. Even the man whom we think we know best and who assures us himself that we understand him through and through is at bottom a stranger to us. He is different. The most we can do, and the best, is to have at least some inkling of his otherness, to respect it, and to guard against the outrageous stupidity of wishing to interpret it. Carl Jung, CW 7, Para 363

For the primitive anything strange is hostile and evil. This line of division serves a purpose, which is why the normal person feels under no obligation to make these projections conscious, although they are dangerously illusory. War psychology has made this abundantly clear: everything my country does is good, everything the others do is bad. The centre of all iniquity is invariably found to lie a few miles behind the enemy lines. Because the individual has this same primitive psychology, every attempt to bring these age-old projections to consciousness is felt as irritating. Naturally one would like to have better relations with one's fellows, but only on the condition that they live up to our expectations—in other words, that they become willing carriers of our projections. Yet if we make ourselves conscious of these projections, it may easily act as an impediment to our relations with others, for there is then no bridge of illusion across which love and hate can stream off so relievingly, and no way of disposing so simply and satisfactorily of all those alleged virtues that are intended to edify and improve others. Carl Jung, CW 7, Para 517

What is true of humanity in general is also true of each individual, for humanity consists only of individuals. And as is the psychology of humanity so also is the psychology of the individual. The [first] World War brought a terrible reckoning with the rational intentions of civilization. What is called "will" in the individual is called "imperialism" in nations; for all will is a demonstration of power over fate, i.e., the exclusion of chance. Civilization is the rational, "purposeful" sublimation of free energies, brought about by will and intention. It is the same with the individual; and just as the idea of a world civilization received a fearful correction at the hands of war, so the individual must often learn in his life that so-called "disposable" energies are not his to dispose. Carl Jung, CW 7, Para 74

This war has pitilessly revealed to civilized man that he is still a barbarian and has at the same time shown what an iron scourge lies in store for him if ever again he should be

tempted to make his neighbour responsible for his own evil qualities. The psychology of the individual is reflected in the psychology of the nation. What the nation does is done also by each individual, and so long as the individual continues to do it, the nation will do likewise. Only a change in the attitude of the individual can initiate a change in the psychology of the nation. Carl Jung, CW 7, Para 4

Human beings have one faculty which, though it is of the greatest utility for collective purposes, is most pernicious for individuation, and that is the faculty of imitation. Collective psychology cannot dispense with imitation, for without it all mass organizations, the State and the social order, are impossible. Society is organized, indeed, less by law than by the propensity to imitation, implying equally suggestibility, suggestion, and mental contagion. But we see every day how people use, or rather abuse, the mechanism of imitation for the purpose of personal differentiation: they are content to ape some eminent personality, some striking characteristic or mode of behaviour, thereby achieving an outward distinction from the circle in which they move. We could almost say that as a punishment for this the uniformity of their minds with those of their neighbours, already real enough, is intensified into an unconscious, compulsive bondage to the environment. As a rule these specious attempts at individual differentiation stiffen into a pose, and the imitator remains at the same level as he always was, only several degrees more sterile than before. Carl Jung, CW 7, Para 242

The element of differentiation is the individual. All the highest achievements of virtue, as well as the blackest villainies, are individual. The larger a community is, and the more the sum total of collective factors peculiar to every large community rests on conservative prejudices detrimental to individuality, the more will the individual be morally and spiritually crushed, and, as a result, the one source of moral and spiritual progress for society is choked up. Naturally the only thing that can thrive in such an atmosphere is sociality and whatever is collective in the individual. Everything individual in him goes under, i.e., is doomed to repression. The individual elements lapse into the unconscious, where, by the law of necessity, they are transformed into something essentially baleful, destructive, and anarchical. Socially, this evil principle shows itself in the spectacular crimes—regicide and the like—perpetrated by certain prophetically-inclined individuals; but in the great mass of the community it remains in the background, and only manifests itself indirectly in the inexorable moral degeneration of society. Carl Jung, CW 7, Para 240

It is a notorious fact that the morality of society as a whole is in inverse ratio to its size; for the greater the aggregation of individuals, the more the individual factors are blotted out, and with them morality, which rests entirely on the moral sense of the individual and the freedom necessary for this. Hence every man is, in a certain sense, unconsciously a worse man when he is in society than when acting alone; for he is carried by society and to that extent relieved of his individual responsibility. Carl Jung, CW 7, Para 240

Any large company composed of wholly admirable persons has the morality and intelligence of an unwieldy, stupid, and violent animal. The bigger the organization, the more unavoidable is its immorality and blind stupidity {Senatus bestia, senatores boni viri). Society, by automatically stressing all the collective qualities in its individual representatives, puts a premium on mediocrity, on everything that settles down to vegetate in an easy, irresponsible way. Individuality will inevitably be driven to the wall. This process begins in school, continues at the university, and rules all departments in which the State has a hand. In a small social

body, the individuality of its members is better safeguarded; and the greater is their relative freedom and the possibility of conscious responsibility. Without freedom there can be no morality. Carl Jung, CW 7, Para 240

Our admiration for great organizations dwindles when once we become aware of the other side of the wonder: the tremendous piling up and accentuation of all that is primitive in man, and the unavoidable destruction of his individuality in the interests of the monstrosity that every great organization in fact is. The man of today, who resembles more or less the collective ideal, has made his heart into a den of murderers. Carl Jung, CW 7, Para 240

The importance of personal prestige can hardly be overestimated, because the possibility of regressive dissolution in the collective psyche is a very real danger, not only for the outstanding individual but also for his followers. This possibility is most likely to occur when the goal of prestige —universal recognition—has been reached. The person then becomes a collective truth, and that is always the beginning of the end. To gain prestige is a positive achievement not only for the outstanding individual but also for the clan. The individual distinguishes himself by his deeds, the many by their renunciation of power. So long as this attitude needs to be fought for and defended against hostile influences, the achievement remains positive; but as soon as there are no more obstacles and universal recognition has been attained, prestige loses its positive value and usually becomes a dead letter. A schismatic movement then sets in, and the whole process begins again from the beginning. Carl Jung, CW 7, Para 238

The office I hold is certainly my special activity; but it is also a collective factor that has come into existence historically through the cooperation of many people and whose dignity rests solely on collective approval. When, therefore, I identify myself with my office or title, I behave as though I myself were the whole complex of social factors of which that office consists, or as though I were not only the bearer of the office, but also and at the same time the approval of society. I have made an extraordinary extension of myself and have usurped qualities which are not in me but outside e. Carl Jung, CW 7, Para 227

On closer examination one is always astonished to see how much of our so-called individual psychology is really collective. So much, indeed, that the individual traits are completely overshadowed by it. Since, however, individuation is an ineluctable psychological necessity, we can see from the ascendancy of the collective what very special attention must be paid to this delicate plant "individuality" if it is not to be completely smothered. Carl Jung, CW 7, Para 241

We do not sufficiently distinguish between individualism and individuation. Individualism means deliberately stressing and giving prominence to some supposed peculiarity, rather than to collective considerations and obligations. But individuation means precisely the better and more complete fulfilment of the collective qualities of the human being, since adequate consideration of the peculiarity of the individual is more conducive to better social achievement than when the peculiarity is neglected or suppressed. Carl Jung, CW 7, Para 268

Human imperfection is always a discord in the harmony of our ideals. Unfortunately, no one lives in the world as we desire it, but in the world of actuality where good and evil clash and destroy one another, where no creating or building can be done without dirtying one’s hands. Whenever things get really bad, there is always someone to assure us amid great applause that nothing has happened, and everything is in order. Carl Jung, CW 7, Para 263

Society expects, and indeed must expect every individual to play the part assigned to him as perfectly as possible. so that a man who is a parson must not only carry out his official functions objectively but must at all times and in all circumstances play the role of parson in a flawless manner. Society demands this as a kind of surety; each must stand at his post, here a cobbler, there a poet. Carl Jung, CW 7, Para 305

Every calling or profession has its own characteristic persona. It is easy to study these things nowadays, when the photographs of public personalities so frequently appear in the press. A certain kind of behaviour is forced on them by the world, and professional people endeavour to come up to these expectations. Only, the danger is that they become identical with their personas—the professor with his text-book, the tenor with his voice. Then the damage is done; henceforth he lives exclusively against the background of his own biography. The garment of Deianeira has grown fast to his skin, and a desperate decision like that of Heracles is needed if he is to tear this Nessus shirt from his body and step into the consuming fire of the flame of immortality, in order to transform himself into what he really is. One could say, with a little exaggeration, that the persona is that which in reality one is not, but which oneself. A man cannot get rid of himself in favour of an artificial personality without punishment. Even the attempt to do so brings on, in all ordinary cases, unconscious reactions in the form of bad moods, affects, phobias, compulsive ideas, backslidings, vices, etc. The social "strong man" is in his private life often a mere child where his own states of feeling are concerned; his discipline in public (which he demands quite particularly of others) goes miserably to pieces in private. His "happiness in his work" assumes a woeful countenance at home; his "spotless" public morality looks strange indeed behind the mask—we will not mention deeds, but only fantasies, and the wives of such men would have a pretty tale to tell. As to his selfless altruism, his children have decided views about that. Carl Jung, CW 7, Para 307

I once made the acquaintance of a very venerable personage—in fact, one might easily call him a saint. I stalked round him for three whole days, but never a mortal failing did I find in him. My feeling of inferiority grew ominous, and I was beginning to think seriously of how I might better myself. Then, on the fourth day, his wife came to consult me. Well, nothing of the sort has ever happened to me since. But this I did learn that any man who becomes one with his persona can cheerfully let all disturbances manifest themselves through his wife without her noticing it, though she pays for her self-sacrifice with a bad neurosis. Carl Jung, CW 7, Para 306

It is a frightening thought that man also has a shadow side to him, consisting not just of little weaknesses, and foibles, but of a positively demonic dynamism. The individual seldom knows anything of this; to him, as an individual, it is incredible that he should ever in any circumstances go beyond himself. But let these harmless creatures form a mass, and there emerges a raging monster; and each individual is only one tiny cell in the monster’s body, so that for better or worse he must accompany it on its bloody rampages and even assist it to the utmost. Having a dark suspicion of these grim possibilities, man turns a blind eye to the shadow-side of human nature. Blindly he strives against the salutary dogma of original sin, which is yet so prodigiously true. Yes, he even hesitates to admit the conflict of which he is so painfully aware. Carl Jung, CW 7, Para 35

We know that the wildest and most moving dramas are played not in the theatre but in the hearts of ordinary men and women who pass by without exciting attention, and who betray to the world nothing of the conflicts that rage within them except possibly by a

nervous breakdown. What is so difficult for the layman to grasp is the fact that in most cases the patients themselves have no suspicion whatever of the internecine war raging in their unconscious. If we remember that there are many people who understand nothing at all about themselves, we shall be less surprised at the realization that there are also people who are utterly unaware of their actual conflicts. Carl Jung, CW 7, Para 425

It is of course a fundamental mistake to imagine that when we see the non-value in a value or the untruth in a truth, the value or the truth ceases to exist. It has only become relative. Everything human is relative, because everything rests on an inner polarity; for everything is a phenomenon of energy. Energy necessarily depends on a preexisting polarity, without which there could be no energy. There must always be high and low, hot and cold, etc., so that the equilibrating process—which is energy—can take place. Therefore the tendency to deny all previous values in favour of their opposites is just as much of an exaggeration as the earlier one-sidedness. And in so far as it is a question of rejecting universally accepted and indubitable values, the result is a fatal loss. One who acts in this wav empties himself out with his values, as Nietzsche has already said. Carl Jung, CW 7, Para 115

The dream is often occupied with apparently very silly details, thus producing an impression of absurdity, or else it is on the surface so unintelligible as to leave us thoroughly bewildered. Hence we always have to overcome a certain resistance before we can seriously set about disentangling the intricate web through patient work. But when at last we penetrate to its real meaning, we find ourselves deep in the dreamer's secrets and discover with astonishment that an apparently quite senseless dream is in the highest degree significant, and that in reality it speaks only of important and serious matters. This discovery compels rather more respect for the so-called superstition that dreams have a meaning, to which the rationalistic temper of our age has hitherto given short shrift. Carl Jung, CW 7, Para 24

Dreams contain images and thought associations which we do not create with conscious intent. They arise spontaneously without our assistance and are representatives of a psychic activity withdrawn from our arbitrary will. Therefore the dream is, properly speaking, a highly objective, natural product of the psyche, from which we might expect indications, or at least hints, about certain basic trends in the psychic process. Now, since the psychic process, like any other life-process, is not just a causal sequence, but is also a process with a teleological orientation, we might expect dreams to give us certain indicia about the objective causality as well as about the objective tendencies, because they are nothing less than self-portraits of the psychic life-process. Carl Jung, CW 7, Para 210

On paper the interpretation of a dream may look arbitrary, muddled, and spurious; but the same thing in reality can be a little drama of unsurpassed realism. To experience a dream and its interpretation is very different from having a tepid rehash set before you on paper. Everything about this psychology is, in the deepest sense, experience; the entire theory, even where it puts on the most abstract airs, is the direct outcome of something experienced. Carl Jung, CW 7, Para 199

I call every interpretation which equates the dream images with real objects an interpretation on the objective level. In contrast to this is the interpretation which refers every part of the dream and all the actors in it back to the dreamer himself. This I call interpretation on the subjective level. Interpretation on the objective level is analytic, because it breaks down the dream content into memory complexes that refer to external situations. Interpretation on the subjective level is synthetic, because it detaches the underlying memory-complexes from

their external causes, regards them as tendencies or components of the subject, and reunites them with that subject. In this case, therefore, all the contents of the dream are treated as symbols for subjective contents. Carl Jung, CW 7, Para 130

He would be better advised to put away his scholar's gown, bid farewell to his study, and wander with human heart through the world. There, in the horrors of prisons, lunatic asylums and hospitals, in drab suburban pubs, in brothels and gambling-hells, in the salons of the elegant, the Stock Exchanges, Socialist meetings, churches, revivalist gatherings and ecstatic sects, through love and hate, through the experience of passion in every form in his own body, he would reap richer stores of knowledge than text-books a foot thick could give him, and he will know how to doctor the sick with real knowledge of the human soul. Carl Jung, CW 7 Para 409

It is difficult to gauge the spirit of one's own time; but, if we observe the trend of art, of style, and of public taste, and see what people read and write, what sort of societies they found, what "questions" are the order of the day, what the Philistines fight against, we shall find that in the long catalogue of our present social questions by no means the last is the so-called "sexual question." This is discussed by men and women who challenge the existing sexual morality and who seek to throw off the burden of moral guilt which past centuries have heaped upon Eros. One cannot simply deny the existence of these endeavours nor condemn then as indefensible; they exist, and probably have adequate grounds for their existence. It is more interesting and more useful to examine carefully the underlying causes of these contemporary movements than to join in the lamentations of the professional mourners of morality who prophesy the moral downfall of humanity. Carl Jung, CW 7, Para 427

Eros is a superhuman power which, like nature herself, allows itself to be conquered and exploited as though it were impotent. But triumph over nature is dearly paid for. Nature requires no explanations of principle but asks only for tolerance and wise measure. "Eros is a mighty daemon," as the wise Diotima said to Socrates. We shall never get the better of him, or only to our own hurt. He is not the whole of our inward nature, though he is at least one of its essential aspects. Carl Jung, CW 7, Para note

Eros is a questionable fellow and will always remain so, whatever the legislation of the future may have to say about it. He belongs on one side to man's primordial animal nature which will endure as long as man has an animal body. On the other side he is related to the highest forms of the spirit. But he only thrives when spirit and instinct are in right harmony. If one or the other aspect is lacking to him, the result is injury or at least a lopsidedness that may easily veer towards the pathological. Too much of the animal distorts the civilized man, too much civilization makes sick animals. Carl Jung, CW 7, Para 32

No man is so entirely masculine that he has nothing feminine in him. The fact is, rather, that very masculine men have—carefully guarded and hidden—a very soft emotional life, often incorrectly described as "feminine." A man counts it a virtue to repress his feminine traits as much as possible, just as a woman, at least until recently, considered it unbecoming to be "mannish." The repression of feminine traits and inclinations naturally causes these contrasexual demands to accumulate in the unconscious. No less naturally, the imago of woman (the soul-image) becomes a receptacle for these demands, which is why a man, in his love-choice, is strongly tempted to win the woman who best corresponds to his own unconscious femininity—a woman, in short, who can unhesitatingly receive the projection of his soul. Although such a choice is often regarded and felt as altogether ideal, it may turn out

that the man has manifestly married his own worst weakness. Carl Jung, CW 7, Para 297

The persona, the ideal picture of a man as he should be, is inwardly compensated by feminine weakness, and as the individual outwardly plays the strong man, so he becomes inwardly a woman, i.e., the anima, for it is the anima that reacts to the persona. But because the inner world is dark and invisible to the extraverted consciousness, and because a man is all the less capable of conceiving his weaknesses the more he is identified with the persona, the persona's counterpart, the anima, remains completely in the dark and is at once projected, so that our hero comes under the heel of his wife's slipper. If this results in a considerable increase of her power, she will acquit herself none too well. She becomes inferior, thus providing her husband with the welcome proof that it is not he, the hero, who is inferior in private, but his wife. In return the wife can cherish the illusion, so attractive to many, that at least she has married a hero, unperturbed by her own uselessness. This little game of illusion is often taken to be the whole meaning of life. Carl Jung, CW 7, Para 309

Our life is like the course of the sun. In the morning it gains continually in strength until it reaches the zenith heat of high noon. Then comes the enantiodromia the steady forward movement no longer denotes an increase, but a decrease, in strength. Thus our task in handling a young person is different from the task of handling an older person. In the former case, it is enough to clear away all the obstacles that hinder expansion and ascent; in the latter, we must nurture everything that assists the descent, Carl Jung, CW 7, Para 114

An inexperienced youth thinks one can let the old people go, because not much more can happen to them anyway they have their lives behind them and are no better than petrified pillars of the past. But it is a great mistake to suppose that the meaning of life is exhausted with the period of youth and expansion; that, for example, a woman who has passed the menopause is "finished." The afternoon of life is just as full of meaning as the morning; only, its meaning and purpose are different. Carl Jung, CW 7, Para 114

Man has two aims the first is the natural aim, the begetting of children and the business of protecting the brood; to this belongs the acquisition of money and social position. When this aim has been reached a new phase begins the cultural aim. For the attainment of the former we have the help of nature and, on top of that, education; for the attainment of the latter, little or nothing helps. Often, indeed, a false ambition survives, in that an old man wants to be a youth again, or at least feels he must behave like one, although in his heart he can no longer make believe. This is what makes the transition from the natural to the cultural phase so terribly difficult and bitter for many people; they cling to the illusion of youth or to their children, hoping to salvage in this way a last little scrap of youth. One sees it especially in mothers, who find their sole meaning in their children and imagine they will sink into a bottomless void when they have to give them up. No wonder that so many bad neuroses appear at the onset of life's afternoon. It is a sort of second puberty, another "storm and stress" period, not infrequently accompanied by tempests of passion—the "dangerous age." But the problems that crop up at this age are no longer to be solved by the old recipes the hand of this clock cannot be put back. What youth found and must find outside; the man of life's afternoon must find within himself. Carl Jung, CW 7, Para 114

The rapid development of the towns, with the specialization of work brought about by the extraordinary division of labour, the increasing industrialization of the countryside, and the growing sense of insecurity, deprive men of many opportunities for giving vent to their affective energies. The peasant's alternating rhythm of work secures him unconscious sat-

isfactions through its symbolical content—satisfactions which the factory workers and office employees do not know and can never enjoy. What do these know of his life with nature, of those grand moments when, as lord and fructifier of the earth, he drives his plough through the soil, and with a kingly gesture scatters the seed for the future harvest; of his rightful fear of the destructive power of the elements, of his joy in the fruitfulness of his wife, who bears him the daughters and sons who mean increased working-power and prosperity? From all this we city-dwellers, we modern machine-minders, are far removed. Is not the fairest and most natural of all satisfactions beginning to fail us, when we can no longer regard with unmixed joy the harvest of our own sowing, the "blessing" of children? Carl Jung, CW 7, Para 428

A man is a philosopher of genius only when he succeeds in transforming the primitive and wholly natural vision into an abstract idea belonging to the common stock of consciousness. This achievement, and this alone, constitutes his personal value, for which he may take credit without necessarily succumbing to inflation. The personal value lies entirely in the philosophical achievement, not in the primary vision. To the philosopher this vision comes as so much increment and is simply a part of the common property of mankind, in which, in principle, everyone has a share. The golden apples drop from the same tree, whether they be gathered by an imbecile locksmith's apprentice or by a Schopenhauer. Carl Jung, CW 7, Para 229

Morality was not brought down on tables of stone from Sinai and imposed on the people, but is a function of the human soul, as old as humanity itself. Morality is not imposed from outside; we have it in ourselves from the start —not the law, but our moral nature without which the collective life of human society would be impossible. That is why morality is found at all levels of society. It is the instinctive regulator of action which also governs the collective life of the herd. But moral laws are only valid within a compact human group. Beyond that, they cease. There the old truth runs: Homo homini lupus. With the growth of civilization we have succeeded in subjecting ever larger human groups to the rule of the same morality, without, however, having yet brought the moral code to prevail beyond the social frontiers, that is, in the free space between mutually independent societies. There, as of old, reign lawlessness and license and mad immorality—though of course it is only the enemy who dares to say it out loud. Carl Jung, CW 7, Para 30

The sense of moral inferiority always indicates that the missing element is something which, to judge by his feeling about it, really ought not be missing, or which could be made conscious if only one took sufficient trouble. The moral inferiority does not come from a collision with the generally accepted and, in a sense, arbitrary moral law, but from the conflict with one's own self which, for reasons of psychic equilibrium, demands that the deficit be redressed. Whenever a sense of moral inferiority appears, it indicates not only a need to assimilate an unconscious component, but also the possibility of such assimilation. In the last resort it is a man's moral qualities which force him, either through direct recognition of the need or indirectly through a painful neurosis, to assimilate his unconscious self and to keep himself fully conscious. Carl Jung, CW 7, Para 218

We always start with the naive assumption that we are masters in our own house. Hence we must first accustom ourselves to the thought that, in our most intimate psychic life as well, we live in a kind of house which has doors and windows to the world, but that, although the objects or contents of this world act upon us, they do not belong to us. For many people this

hypothesis is by no means easy to conceive, just as they do not find it at all easy to understand and to accept the fact that their neighbour's psychology is not necessarily identical with their own. Carl Jung, CW 7, Para 329

Every individual needs revolution, inner division, overthrow of the existing order, and renewal, but not by forcing these things upon his neighbours under the hypocritical cloak of Christian love or the sense of social responsibility or any of the other beautiful euphemisms for unconscious urges to personal power. Individual self-reflection return of the individual to the ground of human nature, to his own deepest being with its individual and social destiny here is the beginning of a cure for that blindness which reigns at the present hour. Carl Jung, CW 7, Para 5

Old Heraclitus, who was indeed a very great sage, discovered the most marvellous of all psychological laws: the regulative function of opposites. He called it enantiodromia, a running contrariwise, by which he meant that sooner or later everything runs into its opposite. Thus the rational attitude of culture necessarily runs into its opposite, namely the irrational devastation of culture. We should never identify ourselves with reason, for man is not and never will be a creature of reason alone, a fact to be noted by all pedantic culture-mongers. The irrational cannot be and must not be extirpated. The gods cannot and must not die. Carl Jung, CW 7, Para III

A man is only half understood when we know how everything in him came into being. If that were all, he could just as well have been dead years ago. As a living being he is not understood, for life does not have only a yesterday, nor is it explained by reducing today to yesterday. Life has also a tomorrow, and today is understood only when we can add to our knowledge of what was yesterday the beginnings of tomorrow. This is true of all life's psychological expressions, even of pathological symptoms. Carl Jung, CW 7, Para 67

It is the duty of one who goes his own way to inform society of what he finds on his voyage of discovery, be it cooling water for the thirsty or the sandy wastes of unfruitful error. The one helps, the other warns. Not the criticism of individual contemporaries will decide the truth or falsity of his discoveries, but future generations. There are things that are not yet true today, perhaps we dare not find them true, but tomorrow they may be. So every man whose fate it is to go his individual way must proceed with hopefulness and watchfulness, ever conscious of his loneliness and its dangers. Carl Jung, CW 7, Para 201

Too many still look outwards, some believing in the illusion of victory and of victorious power, others in treaties and laws, and others again in the overthrow of the existing order. But still too few look inwards, to their own selves, and still too few ask themselves whether the ends of human society might not best be served if each man tried to abolish the old order in himself, and to practise in his own person and in his own inward state those precepts and victories which he preaches at every street-corner, instead of always expecting these things of his fellow men. Carl Jung, CW 7, Para 5

From a consideration of the claims of the inner and outer worlds, or rather, from the conflict between them, the possible and the necessary follows. Unfortunately our Western mind, lacking all culture in this respect, has never yet devised a concept, nor even a name, for the union of opposites through the middle path, that most fundamental item of inward experience, which could respectably be set against the Chinese concept of Tao. It is at once the most individual fact and the most universal, the most legitimate fulfilment of the meaning of the individual's life. Carl Jung, CW 7, Para 327

The tragic counter play between inside and outside (depicted in Job and Faust as the wager with God) represents, at bottom, the energetics of the life process, the polar tension that is necessary for self-regulation. However different, to all intents and purposes, these opposing forces may be, their fundamental meaning and desire is the life of the individual they always fluctuate round this centre of balance. Just because they are inseparably related through opposition, they also unite in a mediatory meaning, which, willingly or unwillingly, is born out of the individual and is therefore divined by him. He has a strong feeling of what should be and what could be. To depart from this divination means error, aberration, illness. Carl Jung, CW 7, Para 311

We know that there is no human foresight or wisdom that can prescribe direction to our life, except for small stretches of the way. This is of course true only of the "ordinary" type of life, not of the "heroic" type. The latter kind also exists, though it is much rarer. Here we are certainly not entitled to say that no marked direction can be given to life, or only for short distances. The heroic conduct of life is absolute—that is, it is oriented by fateful decisions, and the decision to go in a certain direction holds, sometimes, to the bitter end. Carl Jung, CW 7, Para 72

Nature is aristocratic, but not in the sense of having reserved the possibility of differentiation exclusively for species high in the scale. So too with the possibility of psychic development: it is not reserved for specially gifted individuals. In other words, in order to undergo a far-reaching psychological development, neither outstanding intelligence nor any other talent is necessary, since in this development moral qualities can make up for intellectual shortcomings. Carl Jung, CW 7, Para 198

Much indeed can be attained by the will, but, in view of the fate of certain markedly strong-willed personalities, it is a fundamental error to try to subject our own fate at all costs to our will. Our will is a function regulated by reflection; hence it is dependent on the quality of that reflection. This, if it really is reflection, is supposed to be rational, i.e., in accord with reason. But has it ever been shown, or will it ever be, that life and fate are in accord with reason, that they too are rational? We have on the contrary good grounds for supposing that they are irrational, or rather that in the last resort they are grounded beyond human reason. Carl Jung, CW 7, Para 72

We know of course that when for one reason or another we feel out of sorts, we are liable to commit not only the minor follies, but something really dangerous which, given the right psychological moment, may well put an end to our lives. The popular saying, "Old so-and-so chose the right time to die," comes from a sure sense of the secret psychological cause. Carl Jung, CW 7, Para 194

Our life is indeed the same as it ever was. At all events, in our sense of the word it is not transitory; for the same physiological and psychological processes that have been man’s for hundreds of thousands of years still endure, instilling into our inmost hearts this profound intuition of the "eternal" continuity of the living. But the self, as an inclusive term that embraces our whole living organism, not only contains the deposit and totality of all past life, but is also a point of departure, the fertile soil from which all future life will spring. This premonition of futurity is as clearly impressed upon our innermost feelings as is the historical aspect. The idea of immortality follows legitimately from these psychological premises. Carl Jung, CW 7, Para 303

The idea of God is an absolutely necessary psychological function of an irrational nature, which has nothing whatever to do with the question of God's existence. The human intellect can never answer this question, still less give any proof of God. Moreover such proof is superfluous, for the idea of an all-powerful divine Being is present everywhere, unconsciously if not consciously, because it is an archetype. Carl Jung, CW 7, Para 110

"The transition from morning to afternoon means a revaluation of the earlier values. There comes the urgent need to appreciate the value of the opposite of our former ideals, to perceive the error in our former convictions, to recognize the untruth in our former truth, and to feel how much antagonism and even hatred lay in what, until now, had passed for love. Not a few of those who are drawn into the conflict of opposites jettison everything that had previously seemed to them good and worth striving for; they try to live in complete opposition to their former ego. Changes of profession, divorces, religious convulsions, apostasies of every description, are the symptoms of this swing over to the opposite. The snag about a radical conversion into one's opposite is that one's former life suffers repression and thus produces just as unbalanced a state as existed before, when the counterparts of the conscious virtues and values were still repressed and unconscious. Just as before, perhaps, neurotic disorders arose because the opposing fantasies were unconscious, so now other disorders arise through the repression of former idols. It is of course a fundamental mistake to imagine that when we see the non-value in a value or the untruth in a truth, the value or the truth ceases to exist. It has only become relative. Everything human is relative, because everything rests on an inner polarity; for everything is a phenomenon of energy. Energy necessarily depends on a pre-existing polarity, without which there could be no energy. There must always be high and low, hot and cold, etc., so that the equilibrating process-which is energy can take place. Therefore the tendency to deny all previous values in favour of their opposites is just as much of an exaggeration as the earlier one-sidedness. And in so far as it is a question of rejecting universally accepted and indubitable values, the result is a fatal loss. One who acts in this way empties himself out with his values, as Nietzsche has already said. Carl Jung, CW 7, Para 115

It seems to me their origin can only be explained by assuming them to be deposits of the constantly repeated experiences of humanity Carl Jung, CW 7, Para 109

…for the contents of the collective unconscious are not only residues of archaic, specifically human modes of functioning, but also the residues of functions from [our] animal ancestry, whose duration in time was infinitely greater than the relatively brief epoch of specifically human existence Carl Jung, CW 7, Para 159.

I [Jung] regard dreams not only as a valuable source of information but as an extraordinarily effective instrument of education Carl Jung, CW 7, Para 174

It is a process of domestication which cannot be accomplished without rebellion on the part of the animal nature [in man] that thirsts for freedom. From time to time there passes as it were a wave of frenzy through the ranks of men too long constrained within the limitations of their culture Carl Jung, CW 7, Para 17

Antiquity experienced it [the frenzy] in the Dionysian orgies that surged over from the East and became an essential and characteristic ingredient of classical culture Carl Jung, CW 7, Para 17

Morality is not imposed from outside; we have it in ourselves from the start not the law, but our moral nature without which the collective life of human society would be impossible.

That is why morality is found at all levels of society Carl Jung, CW 7, Para 30

It is a notorious fact that the morality of a society as a whole is in inverse ratio to its size; for the greater the aggregation of individuals, the more the individual factors are blotted out, and with them morality, which rests entirely on the moral sense of the individual and the freedom necessary for this Carl Jung, CW 7, Para 240

The spirit of these orgies contributed not a little towards the development of the stoic ideal of asceticism in the innumerable sects and philosophical schools of the last century before Christ, which produced from the polytheistic chaos of that epoch the twin ascetic religions of Mithraism and Christianity Carl Jung, CW 7, Para 17

But the most important method of getting at the pathogenic conflicts is, as Freud was the first to show, through the analysis of dreams Carl Jung, CW 7, Para 20

Hence every man is, in a certain sense, unconsciously a worse man when he is in society than when acting alone; for he is carried by society and to that extent relieved of his individual responsibility Carl Jung, CW 7, Para 240

Any large company composed of wholly admirable persons has the morality and intelligence of an unwieldy, stupid, and violent animal. The bigger the organization, the more unavoidable is its immorality and blind stupidity Carl Jung, CW 7, Para 240

Society, by automatically stressing all the collective qualities in its individual representatives, puts a premium on mediocrity, on everything that settles down to vegetate in an easy, irresponsible way Carl Jung, CW 7, Para 240

Individuality will inevitably be driven to the wall. This process begins in school, continues at the university, and rules all departments in which the State has a hand Carl Jung, CW 7, Para 240

The man of today, who resembles more or less the collective ideal, has made his heart into a den of murderers, as can easily be proved by the analysis of his unconscious, even though he himself is not in the least disturbed by it Carl Jung, CW 7, Para 240

In so far as he is normally “adapted” to his environment, it is true that the greatest infamy on the part of his group will not disturb him, so long as the majority of his fellows steadfastly believe in the exalted morality of their social organization Carl Jung, CW 7, Para 240

Morality is not imposed from outside; we have it in ourselves from the start not the law, but our moral nature without which the collective life of human society would be impossible. That is why morality is found at all levels of society Carl Jung, CW 7, Para 30

It is the instinctive regulator of action which also governs the collective life of the herd. But moral laws are only valid within a compact human group. Beyond that, they cease Carl Jung, CW 7, Para 30

In a small social body, the individuality of its members is better safeguarded; and the greater is their relative freedom and the possibility of conscious responsibility Carl Jung, CW

7, Para 240

“Eros is a mighty daemon,” as the wise Diotima said to Socrates. We shall never get the better of him, or only to our own hurt. He is not the whole of our inward nature, though he is at least one of its essential aspects Carl Jung, CW 7, Para 33

Man can suffer only a certain amount of culture without injury. The endless dilemma of culture and nature is always a question of too much or too little, never of either-or. Carl Jung, CW 7, Para 41

Faust shows in Part I what it means to accept instinct, and in Part II what it means to accept the ego and its weird unconscious world Carl Jung, CW 7, Para 43

Love may be effectively used as a means for gaining the upper hand. Love and good behaviour are, from the standpoint of the power-instinct, known to be a choice means to this end. Virtuousness often serves to compel recognition from others Carl Jung, CW 7, Para 50

Chance falls into the category of the irrational not as denoting something contrary to reason, but something beyond reason Carl Jung, CW 7, Para 774

It results from the irrationality of the events of life and fate, reigning everywhere, hence reason and the will that is grounded in reason are valid only up to a point Carl Jung, CW 7, Para 72

It has become abundantly clear to me that life can flow forward only along the path of the gradient. But there is no energy unless there is a tension of opposites; hence it is necessary to discover the opposite to the attitude of the conscious mind Carl Jung, CW 7, Para 78

The conscious mind is on top, the shadow underneath, and just as high always longs for low and hot for cold, so all consciousness, perhaps without being aware of it, seeks its unconscious opposite, lacking which it is doomed to stagnation, congestion, and ossification. Life is born only of the spark of opposites Carl Jung, CW 7, Para 78

The reflective nature of the introvert causes him always to think and consider before acting. This naturally makes him slow to act. His shyness and distrust of things induce hesitation, and so he always has difficulty in adapting to the external world Carl Jung, CW 7, Para 80

The two types therefore seem created for a symbiosis. The ones takes care of reflection [introvert], and the other sees to the initiative and practical action [extravert] Carl Jung, CW 7, Para 80

The essence of the inferior function is autonomy; it is independent, it attacks, it fascinates and so spins us about that we are no longer masters of ourselves and can no longer rightly distinguish between ourselves and others Carl Jung, CW 7, Para 85

The original method was hypnotism: either interrogation in a state of hypnotic concentration or else the spontaneous production of fantasies by the patient while in this state. This method is still occasionally employed, but compared with the present technique it is primitive and often unsatisfactory Carl Jung, CW 7, Para 20

This [identification with the collective psyche] amounts to an acceptance of “godlikeness,” but now exalted into a system. That is to say, one is the fortunate possessor of the great truth, which was only waiting to be discovered, of the eschatological knowledge which spells the healing of the nation’s Carl Jung, CW 7, Para 476

Access to the collective psyche means a renewal of life for the individual, no matter whether this renewal is felt as pleasant or unpleasant. Everybody would like to hold fast to this renewal: one man because it enhances his life-feeling, another because it promises a rich harvest of knowledge Carl Jung, CW 7, Para 476

But he thrives only when spirit and instinct are in right harmony. If one or the other aspect is lacking to him, the result is injury or at least a lopsidedness that may easily veer towards the pathological. Too much of the animal distorts the civilized man, too much civilization makes sick animals Carl Jung, CW 7, Para 32

This dilemma reveals the vast uncertainty that Eros holds for man. For, at the bottom, Eros is a superhuman power which, like nature herself, allows itself to be conquered and exploited as though it were impotent. But triumph over nature is dearly paid for. Nature requires no explanations of principle, but asks only for tolerance and wise measure Carl Jung, CW 7, Para 32

The universal similarity of human brains leads to the universal possibility of a uniform mental functioning. This functioning is the collective psyche. This can be subdivided into the collective mind and the collective soul Carl Jung, CW 7, Para 456

Inasmuch as there are differentiations corresponding to race, tribe, and even family, there is also a collective psyche limited to race, tribe, and family over and above the “universal” collective psyche Carl Jung, CW 7, Para 456

To borrow an expression from Pierre Janet, the collective psyche comprises the parties inférieures of the mental functions, that is to say those deep-rooted, well-nigh automatic portions of the individual psyche which are inherited and are to be found everywhere, and are thus impersonal or suprapersonal Carl Jung, CW 7, Para 456

Consciousness plus the personal unconscious constitutes the parties supérieures of the mental functions, those portions, therefore, that are developed ontogenetically and acquired as a result of personal differentiation Carl Jung, CW 7, Para 456

And that is what matters in practical treatment: that human beings should get a hold on their own lives, not that the principles by which they live should be proved rationally to be “right” Carl Jung, CW 7, Para 493

Sometimes it is enough to leave the unconscious to discover the new line, but this attitude is not to be recommended to the neurotic under all circumstances, although there are indeed cases where this is just what the patient needs to learn how to put his trust in so-called chance Carl Jung, CW 7, Para 501

However, it is not advisable to let oneself drift for any length of time; a watchful eye should at least be kept on the reactions of the unconscious, that is, on dreams, which indicate

like a barometer the one-sidedness of our attitude Carl Jung, CW 7, Para 501

Unlike other psychologists, I therefore consider it necessary for the patient to remain in contact with his unconscious, even after analysis, if he wishes to avoid a relapse Carl Jung, CW 7, Para 501

Often enough I have observed an increase in the liability to physical illness, but only when the patients relish their condition and dwell on it too long Carl Jung, CW 7, Para 467

It is a process of domestication which cannot be accomplished without rebellion on the part of the animal nature that thirsts for freedom Carl Jung, CW 7, Para 427

This step beyond science is an unconditional requirement of the psychological development I have sought to depict, because without this postulate I could give no adequate formulation of the psychic processes that occur empirically Carl Jung, CW 7, Para 405

The Self could be characterized as a kind of compensation for the conflict between inside and outside. This formulation would not be unfitting, since the Self has somewhat the character of a result, of a goal attained, something that has come to pass very gradually and is experienced with much travail Carl Jung, CW 7, Para 404

So too the Self is our life's goal, for it is the completest expression of that fateful combination we call individuality, the full flowering not only of the single individual, but of the group, in which each adds his portion to the whole Carl Jung, CW 7, Para 404

The fact is that th whole symbolism of initiation rises up, clear and unmistakable, in the unconscious contents. The objection that this is antiquated superstition and altogether unscientific is about as intelligent as remarking, in the presence of a cholera epidemic, that it is merely an infectious disease and exceedingly unhygienic Carl Jung, CW 7, Para 385

Hence the "magician" could only take possession of the ego only because the ego dreamed of victory over the anima. That dream was an encroachment, and every encroachment of the ego is followed by an encroachment from the unconscious Carl Jung, CW 7, Para 382

Consequently, if the ego drops its claim to victory, possession by the magician ceases automatically. But what happens to the mana? Carl Jung, CW 7, Para 382

Now when the anima loses her mana, what becomes of it? Clearly the man who has mastered the anima acquires her mana, in accordance with the primitive belief that when a man kills the mana-person he assimilates the other's mana into his own body Carl Jung, CW 7, Para 376

In the case of a real settlement with the unconscious it is not a question of interpretation: it is a question of releasing unconscious processes and letting them come into the conscious mind in the form of fantasies Carl Jung, CW 7, Para 342

Without knowing it, such women are solely intent upon exasperating the man and are, in consequence, the more completely at the mercy of the animus. "Unfortunately I am always right," one of these creatures once confessed to me Carl Jung, CW 7, Para 335

It would be insufficient to characterize the animus merely as a conservative, collective conscience; he is also a neologist who, in flagrant contradiction to his correct opinions, has an extraordinary weakness for difficult and unfamiliar words which act as a pleasant substitute for the odious task of reflection Carl Jung, CW 7, Para 333

The aim of individuation is nothing less than to divest the Self of the false wrappings of the persona on the one hand, and the suggestive power of primordial images on the other Carl Jung, CW 7, Para 269

The moment of irruption can, however, be very sudden, so that consciousness is instantaneously flooded with extremely strange and apparently quite unsuspected contents. That is how it looks to the layman and even to the person concerned, but the experienced observer knows that psychological events are never sudden Carl Jung, CW 7, Para 270

In reality the irruption has been preparing for many years, often for half a lifetime, and already in childhood all sorts of remarkable signs could have been detected which, in more or less symbolic fashion, hinted at abnormal future developments Carl Jung, CW 7, Para 270

We should not, however, labor under the illusion that we have now discovered the real nature of the unconscious processes. We never succeed in getting further than the hypothetical “as if” Carl Jung, CW 7, Para 272

People who go illegitimately mooning after the infinite often have absurdly banal dreams which endeavor to damp down their ebullience. Thus, from the nature of the compensation, we can at once draw conclusions as to the seriousness and rightness of the conscious strivings Carl Jung, CW 7, Para 288

Even with us the collective dream has a feeling of importance about it that impels communication. It springs from a conflict of relationship and must therefore be built into our conscious relations, because it compensates these and not just some inner personal quirk Carl Jung, CW 7, Para 277

It is in fact one of the earliest and most universal acquisitions of humanity: it is nothing less than the conviction as to the concrete existence of a spirit-world Carl Jung, CW 7, Para 293

The spirit-world was certainly never an invention in the sense that fire-boring was an invention; it was far rather the experience, the conscious acceptance of a reality in no way inferior to that of the material world Carl Jung, CW 7, Para 293

The image is unconsciously projected, and when the parents die, the projected image goes on working as though it were a spirit existing on its own. The primitive then speaks of parental spirits who return by night (revenants), while the modern man calls it a father or mother complex Carl Jung, CW 7, Para 294

The more limited a man’s field of consciousness is, the more numerous the psychic contents (imagos) which meet him as quasi-external apparitions, either in the form of spirits, or as magical potencies projected upon living people (magicians, witches, etc.) Carl Jung, CW 7, Para 295

At a rather higher stage of development, where the idea of the soul already exists, not all the imagos continue to be projected (where this happens, even trees and stones talk), but one or the other complex has come near enough to consciousness to be felt as no longer strange, but as somehow “belonging” Carl Jung, CW 7, Para 295

A man counts it a virtue to repress his feminine traits as much as possible, just as a woman, at least until recently, considered it unbecoming to be “mannish.” The repression of feminine traits and inclinations naturally causes these contrasexual demands to accumulate in the unconscious Carl Jung, CW 7, Para 297

The “spotless” man of honor and public benefactor, whose tantrums and explosive moodiness terrify his wife and children. What is the anima doing here? Carl Jung, CW 7, Para 319

Whence does the anima obtain the power to wield such enchantment. On the analogy with the persona there must be values or some other important and influential factors lying in the background like seductive promises. In such matters we must guard against rationalizations Carl Jung, CW 7, Para 320

Thus the whole nature of man presupposes woman, both physically and spiritually. His system is tuned in to woman from the start, just as it is prepared for a quite definite world where there is water, light, air, salt, carbohydrates, etc. Carl Jung, CW 7, Para 300

“High rests on low,” says Lao-tzu. An opposite forces its way up from inside; it is exactly as though the unconscious suppressed the ego with the very same power which drew the ego into the persona Carl Jung, CW 7, Para 308

The absence of resistance outwardly against the lure of the persona means a similar weakness inwardly against the influence of the unconscious Carl Jung, CW 7, Para 308

Outwardly an effective and powerful role is played, while inwardly an effeminate weakness develops in face of every influence coming from the unconscious. Moods, vagaries, timidity, even a limp sexuality (culminating in impotence), gradually gain the upper hand Carl Jung, CW 7, Para 308

In place of the parents, woman takes up her position as the most immediate environmental influence in the life of the adult man. She becomes his companion, she belongs to him in so far as she shares his life and is more or less the same age Carl Jung, CW 7, Para 296

Now, everything that is true of the persona and of all autonomous complexes in general also holds true of the anima. She likewise is a personality, and this is why she is so easily projected upon a woman. So long as the anima is unconscious she is always projected, for everything unconscious is projected Carl Jung, CW 7, Para 314

The first bearer of the soul-image is always the mother; later it is borne by those women who arouse the man’s feelings, whether in a positive or a negative sense. Because the mother is the first bearer of the soul-image, separation from her is a delicate and important matter of the greatest educational significance Carl Jung, CW 7, Para 314

The anima comes between them like a jealous mistress who tries to alienate the man from his family. An official post or any other advantageous social position can do the same

thing, but there we can understand the force of the attraction Carl Jung, CW 7, Para 320

It could therefore be said just as truly that one should cultivate the art of conversing with oneself in the setting provided by an affect, as though the affect itself were speaking without regard to our rational criticism. So long as the affect is speaking, criticism must be withheld Carl Jung, CW 7, Para 323

These two examples of fantasy represent the positive activity of anima and animus. To the degree that the patient takes an active part, the personified figure of anima or animus will disappear. It becomes the function of relationship between conscious and unconscious Carl Jung, CW 7, Para 370

Victory over the collective psyche alone yields the true value the capture of the hoard, the invincible weapon, the magic talisman, or whatever it be that the myth deems most desirable Carl Jung, CW 7, Para 477

Anyone who identifies with the collective psyche or, in mythological terms, lets himself be devoured by the monster and vanishes in it, attains the treasure that the dragon guards, but he does so in spite of himself and to his own greatest harm Carl Jung, CW 7, Para 477

If we reduce this by analysis to something that is generally known, we destroy the true value of the symbol; but to attribute hermeneutic significance to it is consistent with its value and its meaning Carl Jung, CW 7, Para 492

Thus Freud's sexual theory of neurosis is grounded on a true and factual principle. But it makes the mistake of being one-sided and exclusive; also it commits the imprudence of trying to lay hold of unconfinable Eros with the crude terminology of sex. In this respect Freud is a typical representative of the materialistic epoch, whose hope it was to solve the world riddle in a test-tube. Freud himself, with advancing years, admitted this lack of balance in his theory, and he opposed to Eros, whom he called libido, the destructive or death instinct Carl Jung, CW 7, Para 33

But the ecstatic by-passes the law of his own life and behaves, from the point of view of nature, improperly. This impropriety is the exclusive prerogative of man, whose consciousness and free will can occasionally loose themselves contra naturam from their roots in animal nature. It is the indispensable foundation of all culture, but also of spiritual sickness if exaggerated Carl Jung, CW 7, Para 41

I myself have known more than one person who owed his entire usefulness and reason for existence to a neurosis, which prevented all the critical follies in his life and forced him to a mode of living that developed his valuable potentialities. These might have been stifled had not the neurosis, with iron grip, held him to the place where he belonged Carl Jung, CW 7, Para 68

There are actually people who have the whole meaning of their life, their true significance, in the unconscious, while in the conscious mind is nothing but inveiglement and error. With others the case is reversed, and here neurosis has a different meaning. In these cases, but not in the former, a thorough going reduction is indicated Carl Jung, CW 7, Para 68

The question of the gradient is an eminently practical problem which crops up in most

analyses. For instance, when in a favourable case the disposable energy, the so-called libido, does seize hold of a rational object, we think we have brought about the transformation through conscious exertion of the will. But in that we are deluded, because even the most strenuous exertions would not have sufficed had there not been present at the same time a gradient in that direction Carl Jung, CW 7, Para 77

When the man has made enough money, or if a fine legacy should drop from the skies and external necessity no longer presses, then they have time to occupy themselves with one another. Hitherto they stood back-to-back and defended themselves against necessity. But now they turn face to face and look for understanding only to discover that they have never understood one another. Each speaks a different language. Then the conflict between the two types begins Carl Jung, CW 7, Para 80

Let us suppose two youths are rambling in the country. They come to a fine castle; both want to see inside it. The introvert says, “I’d like to know what it’s like inside.” The extravert answers, “Right, let’s go in,” and makes for the gateway. The introvert draws back “Perhaps we aren’t allowed in,” says he, with visions of policemen, fines, and fierce dogs in the background. Whereupon the extravert answers, “Well, we can ask. They’ll let us in all right “with visions of kindly old watchmen, hospitable seigneurs, and the possibility of romantic adventures. On the strength of extraverted optimism they at length find themselves in the castle. But now comes the dénouement Carl Jung, CW 7, Para 81

The castle has been rebuilt inside and contains nothing but a couple of rooms with a collection of old manuscripts. As it happens, old manuscripts are the chief joy of the introverted youth. Hardly has he caught sight of them than he becomes as one transformed. He loses himself in contemplation of the treasures, uttering cries of enthusiasm. He engages the caretaker in conversation so as to extract from him as much information as possible, and when the result is disappointing he asks to see the curator in order to propound his questions to him. His shyness has vanished, objects have taken on a seductive glamour, and the world wears a new face Carl Jung, CW 7, Para 81

But meanwhile the spirits of the extraverted youth are ebbing lower and lower. His face grows longer and he begins to yawn. No kindly watchmen are forthcoming here, no knightly hospitality, not a trace of romantic adventure only a castle made over into a museum. There are manuscripts enough to be seen at home. While the enthusiasm of the one rises, the spirits of the other fall, the castle bores him, the manuscripts remind him of a library, library is associated with university, university with studies and menacing examinations Carl Jung, CW 7, Para 81

Gradually a veil of gloom descends over the once so interesting and enticing castle. The object becomes negative. “Isn’t it marvellous,” cries the introvert, “to have stumbled on this wonderful collection?” “The place bores me to extinction,” replies the other with undisguised ill humour. This annoys the introvert, who secretly vows never again to go rambling with an extravert. The latter is annoyed with the other’s annoyance, and he thinks to himself that he always knew the fellow was an inconsiderate egotist who would, in his own selfish interest, waste all the lovely spring day that could be enjoyed so much better out of doors Carl Jung, CW 7, Para 81

A feeling which the person who has a secret need to be understood and recognized speaks of but does not really believe Carl Jung, CW 7, Para 226

Positive as well as negative occurrences can constellate the inferior counter-function. When this happens, sensitiveness appears. Sensitiveness is a sure sign of the presence of inferiority. This provides the psychological basis for discord and misunderstanding, not only as between two people, but also in ourselves Carl Jung, CW 7, Para 85

We have to distinguish between a personal unconscious and an impersonal or transpersonal unconscious. We speak of the latter also as the collective unconscious, because it is detached from anything personal and is common to all men, since its contents can be found everywhere, which is naturally not the case with the personal contents Carl Jung, CW 7, Para 103

The personal unconscious contains lost memories, painful ideas that are repressed (i.e., forgotten on purpose), subliminal perceptions, by which are meant sense-perceptions that were not strong enough to reach consciousness, and finally, contents that are not yet ripe for consciousness. It corresponds to the figure of the shadow so frequently met with in dreams Carl Jung, CW 7, Para 103

The personal layer ends at the earliest memories of infancy, but the collective layer comprises the pre-infantile period, that is, the residues of ancestral life. Whereas the memory-images of the personal unconscious are, as it were, filled out, because they are images personally experienced by the individual, the archetypes of the collective unconscious are not filled out because they are forms not personally experienced Carl Jung, CW 7, Para 118

When on the other hand, psychic energy regresses, going beyond even the period of early infancy, and breaks into the legacy of ancestral life, the mythological images are awakened: these are the archetypes. An interior spiritual world whose existence we never suspected opens out and displays contents which seem to stand in sharpest contrast to all our former ideas Carl Jung, CW 7, Para 118

These images are so intense that it is quite understandable why millions of cultivated persons should be taken in by theosophy and anthroposophy. This happens simply because such modern gnostic systems meet the need for expressing and formulating the wordless occurrences going on within ourselves better than any of the existing forms of Christianity, not excepting Catholicism Carl Jung, CW 7, Para 118

The primordial images [archetypes] are as much feelings as thoughts; indeed, they lead their own independent life rather in the manner of part-souls, as can easily be seen in those philosophical or Gnostic systems which rely on perception of the unconscious as the source of knowledge Carl Jung, CW 7, Para 104

In the Old Testament the magic power glows in the burning bush and in the countenance of Moses; in the Gospels it descends with the Holy Ghost in the form of fiery tongues from heaven. In Heraclitus it appears as world energy, as “ever-living fire”; among the Persians it is the fiery glow of haoma, divine grace; among the Stoics it is the original heat, the power of fate Carl Jung, CW 7, Para 108

So this idea has been stamped on the human brain for aeons. That is why it lies ready to hand in the unconscious of every man. Only, certain conditions are needed to cause it to appear. These conditions were evidently fulfilled in the case of Robert Mayer. The greatest and best thoughts of man shape themselves upon these primordial images as upon a blueprint

Carl Jung, CW 7, Para 109

His energy, until now laid up in unserviceable and pathological forms, has come into its proper sphere. It is essential, in differentiating the ego from the non-ego, that a man should be firmly rooted in his ego-function; that is, he must fulfil his duty to life, so as to be in every respect a viable member of the community Carl Jung, CW 7, Para 113

As soon as we speak of the collective unconscious we find ourselves in a sphere, and concerned with a problem, which is altogether precluded in the practical analysis of young people or of those who have remained infantile too long Carl Jung, CW 7, Para 113

Wherever the father and mother imagos have still to be overcome, wherever there is a little bit of life still to be conquered, which is the natural possession of the average man, then we had better make no mention of the collective unconscious and the problem of opposites Carl Jung, CW 7, Para 113

But once the parental transferences and the youthful illusions have been mastered, or are at least ripe for mastery, then we must speak of these things. We are here outside the range of Freudian and Adlerian reductions; we are no longer concerned with how to remove the obstacles to a man's profession, or to his marriage, or to anything that means a widening of his life, but are confronted with the task of finding a meaning that will enable him to continue living at allay meaning more than blank resignation and mournful retrospect Carl Jung, CW 7, Para 113

The interpretation of a change of place as a change of attitude is corroborated by forms of speech in certain primitive languages, where, for example, "I am thinking of going" is expressed as "I am at the place of (on the point of) going" Carl Jung, CW 7, Para 132

In so far as through our unconscious we have a share in the historical collective psyche, we live naturally and unconsciously in a world of werewolves, demons, magicians, etc., for these are things which all previous ages have invested with tremendous affectivity. Equally we have a share in gods and devils, saviours and criminals; but it would be absurd to attribute these potentialities of the unconscious to ourselves personally Carl Jung, CW 7, Para 150

It is therefore absolutely essential to make the sharpest possible demarcation between the personal and the impersonal attributes of the psyche. This is not to deny the sometimes very formidable existence of the contents of the collective unconscious, but only to stress that, as contents of the collective psyche, they are opposed to and different from the individual psyche Carl Jung, CW 7, Para 150

Thus the gods were disposed of. But the corresponding psychological function was by no means disposed of; it lapsed into the unconscious, and men were thereupon poisoned by the surplus of libido that had once been laid up in the cult of divine images. The devaluation and repression of so powerful a function as the religious function naturally has serious consequences for the psychology of the individual. The unconscious is prodigiously strengthened by this reflux of libido, and, through its archaic collective contents, begins to exercise a powerful influence on the conscious mind. The period of the Enlightenment closed, as we know, with the horrors of the French Revolution Carl Jung, CW 7, Para 150

On account of their affinity with physical phenomena, the archetypes usually appear in

projection; and, because projections are unconscious, they appear on persons in the immediate environment, mostly in the form of abnormal over- or under-valuations which provoke misunderstandings, quarrels, fanaticisms, and follies of every description Carl Jung, CW 7, Para 152

Thus we say, “He makes a god of so-and-so,” or, “So-and-so is Mr. X’s bête noire.” In this way, too, there grow up modern myth-formations, i.e., fantastic rumours, suspicions, prejudices. The archetypes are therefore exceedingly important things with a powerful effect, meriting our closest attention. They must not be suppressed out of have, but must be very carefully weighed and considered, if only because of the danger of psychic infection they carry with them Carl Jung, CW 7, Para 152

Thus, when somebody projects the devil upon his neighbour, he does so because this person has something about him which makes the attachment of such an image possible. But this is not to say that the man is on that account a devil; on the contrary, he may be a particularly good fellow, but antipathetic to the maker of the projection, so that a “devilish” (i.e., dividing) effect arises between them Carl Jung, CW 7, Para 152

Nor need the projector necessarily be a devil, although he has to recognize that he has something just as devilish in himself and has only stumbled upon it by projecting it. But that does not make him a devil; indeed he may be just as decent as the other man. The appearance of the devil in such a case simply means that the two people are at present incompatible: for which reason the unconscious forces them apart and keeps them away from each other. The devil is a variant of the “shadow” archetype, i.e., of the dangerous aspect of the unrecognized dark half of the personality Carl Jung, CW 7, Para 152

A good example of this is Gustav Meyrink’s Golem, also the Tibetan wizard in the same author’s Fledermäuse, who unleashes world war by magic. Naturally Meyrink learned nothing of this from me; he brought it independently out of his unconscious by clothing in words and imagery a feeling not unlike the one which my patient had projected upon me Carl Jung, CW 7, Para 153

This figure often appears as dark-skinned and of mongoloid type, and then it represents a negative and possibly dangerous aspect. Sometimes it can hardly be distinguished, if at all, from the shadow; but the more the magical note predominates, the easier it is to make the distinction, and this is not without relevance in so far as the demon can also have a very positive aspect as the “wise old man” Carl Jung, CW 7, Para 154

She has too little hold upon life to risk all at once a complete reversal of standpoint. The collective unconscious has fallen upon her and threatens to bear her away from a reality whose demands have not been adequately met. Accordingly, as the dream indicates, the collective unconscious had to be presented to her as something dangerous, otherwise she would have been only too ready to make it a refuge from the demands of life Carl Jung, CW 7, Para 161

He [the patient] had a particularly close tie with his mother. By this we are not to understand a particularly good or intense conscious relationship, but something in the nature of a secret, subterranean tie which expresses itself consciously, perhaps, only in the retarded development of character, i.e., in a relative infantilism Carl Jung, CW 7, Para 171

In the case of this young man the images of the collective unconscious play an entirely

positive role, which comes from the fact that he has no really dangerous tendency to fall back on a fantasy-substitute for reality and to entrench himself behind it against life. The effect of these unconscious images has something fateful about it. Perhaps who knows? These eternal images are what men mean by fate Carl Jung, CW 7, Para 183

Viewed in this light, the homosexuality of adolescence is only a misunderstanding of the otherwise very appropriate need for masculine guidance. One might also say that the fear of incest which is based on the mother-complex extends to women in general; but in my opinion an immature man is quite right to be afraid of women, because his relations with women are generally disastrous Carl Jung, CW 7, Para 173

This natural process of individuation served me both as a model and guiding principle for my method of treatment. The unconscious compensation of a neurotic conscious attitude contains all the elements that could effectively and healthily correct the one-sidedness of the conscious mind, if these elements were made conscious, i.e., understood and integrated into it as realities Carl Jung, CW 7, Para 187

It is only very seldom that a dream achieves such intensity that the shock is enough to throw the conscious mind out of the saddle. As a rule dreams are too feeble and too unintelligible to exercise a radical influence on consciousness. In consequence, the compensation runs underground in the unconscious and has no immediate effect. But it has some effect all the same; only, it is indirect in so far as the unconscious opposition will, if consistently ignored, arrange symptoms and situations which irresistibly thwart our conscious intentions Carl Jung, CW 7, Para 187

The aim of the treatment is therefore to understand and to appreciate, so far as practicable, dreams and all other manifestations of the unconscious, firstly in order to prevent the formation of an unconscious opposition which becomes more dangerous as time goes on, and secondly in order to make the fullest possible use of the healing factor of compensation Carl Jung, CW 7, Para 187

When a case is treated in the manner indicated, the initiative lies with the unconscious, but all criticism, choice, and decision lie with the conscious mind. If the decision is right, it will be confirmed by dreams indicative of progress; in the other event correction will follow from the side of the unconscious Carl Jung, CW 7, Para 189

The course of treatment is thus rather like a running conversation with the unconscious. That the correct interpretation of dreams is of paramount importance should be sufficiently clear from what has been said. But when, you may rightly ask, is one sure of the interpretation? Is there anything approaching a reliable criterion for the correctness of an interpretation? This question, happily, can be answered in the affirmative. If we have made a wrong interpretation, or if it is somehow incomplete, we may be able to see it from the next dream Carl Jung, CW 7, Para 189

Thus, for example, the earlier motif will be repeated in clearer form, or our interpretation may be deflated by some ironic paraphrase, or it may meet with straightforward violent opposition Carl Jung, CW 7, Para 189

Now supposing that these interpretations also go astray, the general inconclusiveness and futility of our procedure will make itself felt soon enough in the bleakness, sterility, and

pointlessness of the undertaking, so that doctor and patient alike will be suffocated either by boredom or by doubt. Just as the reward of a correct interpretation is an uprush of life, so an incorrect one dooms them to deadlock, resistance, doubt, and mutual desiccation Carl Jung, CW 7, Para 189

A very large number of accidents of every description, more than people would ever guess, are of psychic causation, ranging from trivial mishaps like stumbling, banging oneself, burning one's fingers, etc., to car smashes and catastrophes in the mountains: all these may be psychically caused and may sometimes have been preparing for weeks or even months Carl Jung, CW 7, Para 194

I have examined many cases of this kind, and often I could point to dreams which showed signs of a tendency to self-injury weeks beforehand. All those accidents that happen from so-called carelessness should be examined for such determinants Carl Jung, CW 7, Para 194

We know of course that when for one reason or another we feel out of sorts, we are liable to commit not only the minor follies, but something really dangerous which, given the right psychological moment, may well put an end to our lives Carl Jung, CW 7, Para 194

This activity should be thought of as completely autonomous only in pathological cases; normally it is co-ordinated with the conscious mind in a compensatory relationship Carl Jung, CW 7, Para 204

The progress of her life was thus held up, and that inner disunity so characteristic of a neurosis promptly made its appearance. The so-called normal person would probably be able to break the emotional bond in one or the other direction by a powerful act of will, or else and this is perhaps the more usual thing he would come through the difficulty unconsciously, on the smooth path of instinct, without ever being aware of the sort of conflict that lay behind his headaches or other physical discomforts Carl Jung, CW 7, Para 206

But any weakness of instinct (which may have many causes) is enough to hinder a smooth unconscious transition. Then all progress is delayed by conflict, and the resulting stasis of life is equivalent to a neurosis Carl Jung, CW 7, Para 206

In consequence of the standstill, psychic energy flows off in every conceivable direction, apparently quite uselessly. For instance, there are excessive innervations of the sympathetic system, which lead to nervous disorders of the stomach and intestines; or the vagus (and consequently the heart) is stimulated; or fantasies and memories, uninteresting enough in themselves, become overvalued and prey on the conscious mind (mountains out of molehills) Carl Jung, CW 7, Para 206

In this state a new motive is needed to put an end to the morbid suspension. Nature herself paves the way for this, unconsciously and indirectly, through the phenomenon of the transference (Freud). In the course of treatment the patient transfers the father-imago to the doctor, thus making him, in a sense, the father, and in the sense that he is not the father, also making him a substitute for the man she cannot reach. The doctor therefore becomes both a father and a kind of lover in other words, an object of conflict Carl Jung, CW 7, Para 206

In him the opposites are united, and for this reason he stands for a quasi-ideal solution of the conflict. Without in the least wishing it, he draws upon himself an over-valuation that is

almost incredible to the outsider, for to the patient he seems like a saviour or a god Carl Jung, CW 7, Para 206

This way of speaking is not altogether so laughable as it sounds. It is indeed a bit much to be a father and lover at once. Nobody could possibly stand up to it in the long run, precisely because it is too much of a good thing. One would have to be a demigod at least to sustain such a role without a break, for all the time one would have to be the giver Carl Jung, CW 7, Para 206

To the patient in the state of transference, this provisional solution naturally seems ideal, but only at first; in the end she comes to a standstill that is just as bad as the neurotic conflict was. Fundamentally, nothing has yet happened that might lead to a real solution. The conflict has merely been transferred Carl Jung, CW 7, Para 206

Nevertheless a successful transference cant least temporarily cause the whole neurosis to disappear, and for this reason it has been very rightly recognized by Freud as a healing factor of first-rate importance, but, at the same time, as a provisional state only, for although it holds out the possibility of a cure, it is far from being the cure itself Carl Jung, CW 7, Para 206

But the energy of the transference is so strong that it gives one the impression of a vital instinct. That being so, what is the purpose of such fantasies? A careful examination and analysis of the dreams, revealed a very marked tendency in contrast to conscious criticism, which always seeks to reduce things to human proportions to endow the person of the doctor with superhuman attributes Carl Jung, CW 7, Para 214

He had to be gigantic, primordial, huger than the father, like the wind that sweeps over the earth was he then to be made into a god? Or, I said to myself, was it rather the case that the unconscious was trying to create a god out of the person of the doctor, as it were to free a vision of God from the veils of the personal, so that the transference to the person of the doctor was no more than a misunderstanding on the part of the conscious mind, a stupid trick played by “sound common sense”? Carl Jung, CW 7, Para 214

The analysis and conscious realization of unconscious contents engender a certain superior tolerance, thanks to which even relatively indigestible portions of one’s unconscious characterology can be accepted. This tolerance may look very wise and superior, but often it is no more than a grand gesture that brings all sorts of consequences in its train Carl Jung, CW 7, Para 224

Two spheres [the knowledge of good and evil] have been brought together which before were kept anxiously apart. After considerable resistances have been overcome, the union of opposites is successfully achieved, at least to all appearances Carl Jung, CW 7, Para 224

The deeper understanding thus gained, the juxtaposition of what was before separated [good and evil], and hence the apparent overcoming of the moral conflict, give rise to a feeling of superiority that may well be expressed by the term “godlikeness.” But this same juxtaposition of good and evil can have a very different effect on a different kind of temperament. Not everyone will feel himself a superman, holding in his hands the scales of good and evil. It may also seem as though he were a helpless object caught between hammer and anvil; not in the least a Hercules at the parting of the ways, but rather a rudderless ship buffeted between Scylla and Charybdis Carl Jung, CW 7, Para 224

For without knowing it, he is caught up in perhaps the greatest and most ancient of human conflicts, experiencing the throes of eternal principles in collision. Well might he feel himself like a Prometheus chained to the Caucasus, or as one crucified. This would be a "godlikeness" in suffering Carl Jung, CW 7, Para 224

The likeness is certainly not a scientific concept, although it aptly characterizes the psychological state in question. Nor do I imagine that every reader will immediately grasp the peculiar state of mind implied by "godlikeness." The term belongs too exclusively to the sphere of belles-lettres. So I should probably be better advised to give a more circumspect description of this state Carl Jung, CW 7, Para 224

The insight and understanding, then, gained by the analysand usually reveal much to him that was before unconscious. He naturally applies this knowledge to his environment: in consequence he sees, or thinks he sees, many things that before were invisible. Since his knowledge was helpful to him, he readily assumes that it would be useful also to others Carl Jung, CW 7, Para 224

In this way he is liable to become arrogant; it may be well meant, but it is nonetheless annoying to other people. He feels as though he possesses a key that opens many, perhaps even all, doors Carl Jung, CW 7, Para 224

Psychoanalysis itself has this same bland unconsciousness of its limitations, as can clearly be seen from the way it meddles with works of art Carl Jung, CW 7, Para 224

Since human nature is not compounded wholly of light, but also abounds in shadows, the insight gained in practical analysis is often somewhat painful, the more so if, as is generally the case, one has previously neglected the other side. Hence there are people who take their newly won insight very much to heart, far too much in fact, quite forgetting that they are not unique in having a shadow-side. They allow themselves to get unduly depressed and are then inclined to doubt everything, finding nothing right anywhere Carl Jung, CW 7, Para 225

One man's optimism makes him overweening, while another's pessimism makes him over-anxious and despondent. Such are the forms which the great conflict takes when reduced to a smaller scale Carl Jung, CW 7, Para 225

But even in these lesser proportions the essence of the conflict is easily recognized: the arrogance of the one and the despondency of the other share a common uncertainty as to their boundaries. The one is excessively expanded, the other excessively contracted. Their individual boundaries are in some way obliterated Carl Jung, CW 7, Para 225

If we now consider the fact that, as a result of psychic compensation, great humility stands very close to pride, and that "pride goeth before a fall," we can easily discover behind the haughtiness certain traits of an anxious sense of inferiority Carl Jung, CW 7, Para 225

In fact we shall see clearly how his uncertainty forces the enthusiast to puff up his truths, of which he feels none too sure, and to win proselytes to his side in order that his followers may prove to himself the value and trustworthiness of his own convictions Carl Jung, CW 7, Para 225

Nor is he altogether so happy in his fund of knowledge as to be able to hold out alone; at bottom he feels isolated by it, and the secret fear of being left alone with it induces him to

trot out his opinions and interpretations in and out of season, because only when convincing someone else does he feel safe from gnawing doubts Carl Jung, CW 7, Para 225

It is just the reverse with our despondent friend. The more he withdraws and hides himself, the greater becomes his secret need to be understood and recognized. Although he speaks of his inferiority he does not really believe it. There arises within him a defiant conviction of his unrecognized merits, and in consequence he is sensitive to the slightest disapprobation, always wearing the stricken air of one who is misunderstood and deprived of his rightful due. In this way he nurses a morbid pride and an insolent discontent which is the very last thing he wants and for which his environment has to pay all the more dearly Carl Jung, CW 7, Para 226

Both [states] are at once too small and too big; their individual mean, never very secure, now becomes shakier than ever. It sounds almost grotesque to describe such a state as "godlike." But since each in his way steps beyond his human proportions, both of them are a little "superhuman" and therefore, figuratively speaking, godlike Carl Jung, CW 7, Para 227

If we wish to avoid the use of this metaphor [godlike], I would suggest that we speak instead of "psychic inflation." The term seems to me appropriate in so far as the state we are discussing involves an extension of the personality beyond individual limits, in other words, a state of being puffed up. In such a state a man fills a space which normally he cannot fill. He can only fill it by appropriating to himself contents and qualities which properly exist for themselves alone and should therefore remain outside our bounds. What lies outside ourselves belongs either to someone else, or to everyone, or to no one Carl Jung, CW 7, Para 227

Since psychic inflation is by no means a phenomenon induced exclusively by analysis, but occurs just as often in ordinary life, we can investigate it equally well in other cases. A very common instance is the humourless way in which many men identify themselves with their business or their titles. The office I hold is certainly my special activity; but it is also a collective factor that has come into existence historically through the cooperation of many people and whose dignity rests solely on collective approval. When, therefore, I identify myself with my office or title, I behave as though I myself were the whole complex of social factors of which that office consists, or as though I were not only the bearer of the office, but also and at the same time the approval of society. I have made an extraordinary extension of myself and have usurped qualities which are not in me but outside me. L'état c'est moi [I am the state!] is the motto for such people Carl Jung, CW 7, Para 227

Consequently, the individual who annexes the unconscious heritage of the collective psyche to what has accrued to him in the course of his ontogenetic development, as though it were part of the latter, enlarges the scope of his personality in an illegitimate way and suffers the consequences Carl Jung, CW 7, Para 235

In so far as the collective psyche comprises the parties inférieures of the psychic functions and thus forms the basis of every personality, it has the effect of crushing and devaluing the personality. This shows itself either in the aforementioned stifling of self-confidence or else in an unconscious heightening of the ego's importance to the point of a pathological will to power Carl Jung, CW 7, Para 235

This discovery makes him therefore less individually unique, and more collective. His

collectivization is not always a step to the bad; it may sometimes be a step to the good. There are people who repress their good qualities and consciously give free rein to their infantile desires Carl Jung, CW 7, Para 236

The lifting of personal repression at first brings purely personal contents into consciousness; but attached to them are the collective elements of the unconscious, the ever-present instincts, qualities, and ideas (images) as well as all those “statistical” quotas of average virtue and average vice which we recognize when we say, “Everyone has in him something of the criminal, the genius, and the saint” Carl Jung, CW 7, Para 236

If I were more of a therapist than an investigator, I would naturally be unable to check a certain optimism of judgment, because my eyes would then be glued to the number of cures. But my conscience as an investigator is concerned not with quantity but with quality Carl Jung, CW 7, Para 236

Nature is aristocratic, and one person of value outweighs ten lesser ones. My eye followed the valuable people, and from them I learned the dubiousness of the results of a purely personal analysis, and also to understand the reasons for this dubiousness Carl Jung, CW 7, Para 236

In primitives, development of personality, or more accurately, development of the person, is a question of magical prestige. The figure of the medicine-man or chief leads the way: both make themselves conspicuous by the singularity of their ornaments and their mode of life, expressive of their social roles Carl Jung, CW 7, Para 237

The singularity of his [the chief’s] outward tokens marks the individual off from the rest, and the segregation is still further enhanced by the possession of special ritual secrets. By these and similar means the primitive creates around him a shell, which might be called a persona (mask). Masks, as we know, are actually used among primitives in totem ceremoniesfor instance, as a means of enhancing or changing the personality. In this way the outstanding individual is apparently removed from the sphere of the collective psyche, and to the degree that he succeeds in identifying himself with his persona, he actually is removed. This removal means magical prestige Carl Jung, CW 7, Para 237

One could easily assert that the impelling motive in this development is the will to power. But that would be to forget that the building up of prestige is always a product of collective compromise: not only must there be one who wants prestige, there must also be a public seeking somebody on whom to confer prestige Carl Jung, CW 7, Para 237

That being so, it would be incorrect to say that a man creates prestige for himself out of his individual will to power; it is on the contrary an entirely collective affair. Since society as a whole needs the magically effective figure, it uses this need of the will to power in the individual, and the will to submit in the mass, as a vehicle, and thus brings about the creation of personal prestige. The latter is a phenomenon which, as the history of political institutions shows, is of the utmost importance for the comity of nations Carl Jung, CW 7, Para 237

The importance of personal prestige can hardly be overestimated, because the possibility of regressive dissolution in the collective psyche is a very real danger, not only for the

outstanding individual but also for his followers. This possibility is most likely to occur when the goal of prestige universal recognition has been reached. The person then becomes a collective truth, and that is always the beginning of the end Carl Jung, CW 7, Para 238

To gain prestige is a positive achievement not only for the outstanding individual but also for the clan. The individual distinguishes himself by his deeds, the many by their renunciation of power. So long as this attitude needs to be fought for and defended against hostile influences, the achievement remains positive; but as soon as there are no more obstacles and universal recognition has been attained, prestige loses its positive value and usually becomes a dead letter. A schismatic movement then sets in, and the whole process begins again from the beginning Carl Jung, CW 7, Para 238

Because personality is of such paramount importance for the life of the community, everything likely to disturb its development is sensed as a danger. But the greatest danger of all is the premature dissolution of prestige by an invasion of the collective psyche. Absolute secrecy is one of the best-known primitive means of exorcising this danger Carl Jung, CW 7, Para 239

Collective thinking and feeling and collective effort are far less of a strain than individual functioning and effort; hence there is always a great temptation to allow collective functioning to take the place of individual differentiation of the personality Carl Jung, CW 7, Para 239

It is a notorious fact that the morality of a society as a whole is in inverse ratio to its size; for the greater the aggregation of individuals, the more the individual factors are blotted out, and with them morality, which rests entirely on the moral sense of the individual and the freedom necessary for this Carl Jung, CW 7, Para 240

Hence every man is, in a certain sense, unconsciously a worse man when he is in society than when acting alone; for he is carried by society and to that extent relieved of his individual responsibility Carl Jung, CW 7, Para 240

Any large company composed of wholly admirable persons has the morality and intelligence of an unwieldy, stupid, and violent animal. The bigger the organization, the more unavoidable is its immorality and blind stupidity Carl Jung, CW 7, Para 240

Society, by automatically stressing all the collective qualities in its individual representatives, puts a premium on mediocrity, on everything that settles down to vegetate in an easy, irresponsible way Carl Jung, CW 7, Para 240

Individuality will inevitably be driven to the wall. This process begins in school, continues at the university, and rules all departments in which the State has a hand Carl Jung, CW 7, Para 240

In a small social body, the individuality of its members is better safeguarded; and the greater is their relative freedom and the possibility of conscious responsibility Carl Jung, CW 7, Para 240

The man of today, who resembles more or less the collective ideal, has made his heart into a den of murderers, as can easily be proved by the analysis of his unconscious, even

though he himself is not in the least disturbed by it Carl Jung, CW 7, Para 240

In so far as he is normally “adapted” to his environment, it is true that the greatest infamy on the part of his group will not disturb him, so long as the majority of his fellows steadfastly believe in the exalted morality of their social organization Carl Jung, CW 7, Para 240

The collective instincts and fundamental forms of human thought and feeling whose activity is revealed by the analysis of the unconscious constitute, for the conscious personality, an acquisition which it cannot assimilate without considerable disturbance Carl Jung, CW 7, Para 241

It is therefore of the utmost importance in practical treatment to keep the integrity of the personality constantly in mind. For, if the collective psyche is taken to be the personal possession of the individual, it will result in a distortion or an overloading of the personality which is very difficult to deal with Carl Jung, CW 7, Para 241

Hence it is imperative to make a clear distinction between personal contents and those of the collective psyche. This distinction is far from easy, because the personal grows out of the collective psyche and is intimately bound up with it. So it is difficult to say exactly what contents are to be called personal and what collective Carl Jung, CW 7, Para 241

There is no doubt, for instance, that archaic symbolisms such as we frequently find in fantasies and dreams are collective factors. All basic instincts and basic forms of thought and feeling are collective. Everything that all men agree in regarding as universal is collective, likewise everything that is universally understood, universally found, universally said and done Carl Jung, CW 7, Para 241

Human beings have one faculty which, though it is of greatest utility for collective purposes, is most pernicious for individuation, and that is the faculty of imitation. Collective psychology cannot dispense with imitation, for without it all mass organizations, the State and the social order, are impossible Carl Jung, CW 7, Para 242

Society is organized, indeed, less by law than by the propensity to imitation, implying equally suggestibility, suggestion, and mental contagion Carl Jung, CW 7, Para 242

But we see every day how people use, or rather abuse, the mechanism of imitation for the purpose of personal differentiation: they are content to ape some eminent personality, some striking characteristic or mode of behaviour, thereby achieving an outward distinction from the circle in which they move Carl Jung, CW 7, Para 242

We could almost say that as a punishment for this uniformity of their minds with those of their neighbours, already real enough, is intensified into an unconscious, compulsive bondage to the environment. As a rule these specious attempts at individual differentiation stiffen into a pose, and the imitator remains at the same level as he always was, only several degrees more sterile than before Carl Jung, CW 7, Para 242

To find out what is truly individual in ourselves, profound reflection is needed; and suddenly we realize how uncommonly difficult the discovery of individuality is Carl Jung, CW 7, Para 242

I have shown that to annex the deeper layers of the unconscious, which I have called the collective unconscious, produces an enlargement of the personality leading to the state of inflation. This state is reached by simply continuing the analytical work, By continuing the analysis we add to the personal consciousness certain fundamental, general, and impersonal characteristics of humanity, thereby bringing about the inflation which might be regarded as one of the unpleasant consequences of becoming fully conscious Carl Jung, CW 7, Para 243

This phenomenon, which results from the extension of consciousness, is in no sense specific to analytical treatment. It occurs whenever people are overcome by knowledge or by some new realization, “Knowledge puffeth up,” Paul writes to the Corinthians, for the new knowledge had turned the heads of many, as indeed constantly happens Carl Jung, CW 7, Para 243

The inflation has nothing to do with the kind of knowledge, but simply and solely with the fact that any new knowledge can so seize hold of a weak head that he no longer sees and hears anything else. He is hypnotized by it, and instantly believes he has solved the riddle of the universe Carl Jung, CW 7, Para 243

But that is equivalent to almighty self-conceit. This process is such a general reaction that, in Genesis 2: 17, eating of the tree of knowledge is represented as a deadly sin. It may not be immediately apparent why greater consciousness followed by self-conceit should be a dangerous thing Carl Jung, CW 7, Para 243

Genesis represents the act of becoming conscious as a taboo infringement, as though knowledge meant that a sacrosanct barrier had been impiously overstepped. I think that Genesis is right in so far as every step towards greater consciousness is a kind of Promethean guilt: through knowledge, the gods are as it were robbed of their fire, that is, something that was the property of the unconscious powers is torn out of its natural context and subordinated to the whims of the conscious mind Carl Jung, CW 7, Para 243

The man who has usurped the new knowledge suffers, however, a transformation or enlargement of consciousness, which no longer resembles that of his fellow men. He has raised himself above the human level of his age (“ye shall become like unto God”), but in so doing has alienated himself from humanity. The pain of this loneliness is the vengeance of the gods, for never again can he return to mankind. He is, as the myth says, chained to the lonely cliffs of the Caucasus, forsaken of God and man Carl Jung, CW 7, Para 243

The term persona is really a very appropriate expression for this, for originally it meant the mask once worn by actors to indicate the role they played Carl Jung, CW 7, Para 245

If we endeavour to draw a precise distinction between what psychic material should be considered personal, and what impersonal, we soon find ourselves in the greatest dilemma, for by definition we have to say of the persona’s contents what we have said of the impersonal unconscious, namely, that it is collective Carl Jung, CW 7, Para 245

It is only because the persona represents a more or less arbitrary and fortuitous segment of the collective psyche that we can make the mistake of regarding it in toto as something individual. It is, as its name implies, only a mask of the collective psyche, a mask that feigns individuality, making others and oneself believe that one is individual, whereas one is simply acting a role through which the collective psyche speaks Carl Jung, CW 7, Para 245

When we analyse the persona we strip off the mask, and discover that what seemed to be individual is at bottom collective; in other words, that the persona was only a mask for the collective psyche Carl Jung, CW 7, Para 246

Fundamentally the persona is nothing real: it is a compromise between individual and society as to what a man should appear to be. He takes a name, earns a title, exercises a function, he is this or that Carl Jung, CW 7, Para 246

In a certain sense all this is real, yet in relation to the essential individuality of the person concerned it is only a secondary reality, a compromise formation, in making which others often have a greater share than he. The persona is a semblance, a two-dimensional reality, to give it a nickname Carl Jung, CW 7, Para 246

There is, after all, something individual in the peculiar choice and delineation of the persona, and that despite the exclusive identity of the ego-consciousness with the persona the unconscious Self, one's real individuality, is always present and makes itself felt indirectly if not directly Carl Jung, CW 7, Para 247

Although the ego-consciousness is at first identical with the persona that compromise role in which we parade before the community yet the unconscious Self can never be repressed to the point of extinction. Its influence is chiefly manifest in the special nature of the contrasting and compensating contents of the unconscious Carl Jung, CW 7, Para 247

Through the analysis of the personal unconscious, the conscious mind becomes suffused with collective material which brings with it the elements of individuality Carl Jung, CW 7, Para 247

In the case of a patient of Jung [a philosophy student] her analysis revealed a persona behind which her real and authentic being, her individual Self, lay hidden. Indeed, to the extent that she at first completely identified herself with her role, she was altogether unconscious of her real Self. She was still in her nebulous infantile world and had not yet discovered the real world at all Carl Jung, CW 7, Para 248

But as, through progressive analysis, she became conscious of the nature of her transference, the dreams began to materialize. They brought up bits of the collective unconscious, and that was the end of her infantile world and of all the heroics. She came to herself and to her own real potentialities Carl Jung, CW 7, Para 248

This is roughly the way things go in most cases, if the analysis is carried far enough. That the consciousness of her individuality should coincide exactly with the reactivation of an archaic god-image is not just as isolated coincidence, but a very frequent occurrence which, in my view, corresponds to an unconscious law Carl Jung, CW 7, Para 248

Once the personal repressions are lifted, the individuality and the collective psyche begin to emerge in a coalescent state, thus releasing the hitherto repressed personal fantasies. The fantasies and dreams which now appear assume a somewhat different aspect. An infallible sign of collective images seems to be the appearance of the collective element is very often announced by peculiar symptoms, as for example by dreams where the dreamer is flying through space like a comet, or feels that he is the earth, or the sun, or a star; or else is of

immense size, or dwarfishly small; or that he is dead, is in a strange place, is a stranger to himself, confused, mad, etc. Similarly, feelings of disorientation, of dizziness and the like, may appear along with symptoms of inflation Carl Jung, CW 7, Para 250

The forces that burst out of the collective psyche has a confusing and blinding effect. One result of the dissolution of the persona is a release of involuntary fantasy, which is apparently nothing else than the specific activity of the collective psyche. This activity throws up contents whose existence one had never suspected before. Carl Jung, CW 7, 251

But as the influence of the collective unconscious increases, so the conscious mind loses its power of leadership. Imperceptibly it becomes the led, while an unconscious and impersonal process gradually takes control. Thus, without noticing it, the conscious personality is pushed about like a figure on a chess-board by an invisible player. It is this player who decides the game of fate, not the conscious mind and its plans. This is how the resolution of the transference, apparently so impossible to the conscious mind, was brought about [in my patient] Carl Jung, CW 7, Para 251

The plunge into this process [disintegration of the persona] becomes unavoidable, whenever the necessity arises of overcoming an apparently insuperable difficulty. But when this inner adaptation becomes a problem, a strange, irresistible attraction proceeds from the unconscious and exerts a powerful influence on the conscious direction of life Carl Jung, CW 7, Para 252

The predominance of unconscious influences, together with the associated disintegration of the persona and the deposition of the conscious mind from power, constitute a state of psychic disequilibrium which, in analytical treatment, is artificially induced for the therapeutic purpose of resolving a difficulty that might block further development Carl Jung, CW 7, Para 252

There are of course innumerable obstacles that can be overcome with good advice and a little moral support, aided by goodwill and understanding on the part of the patient. Excellent curative results can be obtained in this way. Cases are not uncommon where there is no need to breathe a word about the unconscious Carl Jung, CW 7, Para 252

But again, there are difficulties to which one can foresee no satisfactory solution. If in these cases the psychic equilibrium is not already disturbed before treatment begins, it will certainly be upset during the analysis, and sometimes without any interference by the doctor. It often seems as though these patients had only been waiting to find a trustworthy person in order to give up and collapse. Such a loss of balance is similar in principle to a psychotic disturbance; that is, it differs from the initial stages of mental illness only by the fact that it leads in the end to greater health, while the latter leads to yet greater destruction Carl Jung, CW 7, Para 252

It is a condition of panic; a letting go in face of apparently hopeless complications. Mostly it was preceded by desperate efforts to master the difficulty by force of will; then came the collapse, and the once guiding will crumbles completely. The energy thus freed disappears from consciousness and falls into the unconscious. As a matter of fact, it is at these moments that the first signs of unconscious activity appear Carl Jung, CW 7, Para 252

Hence I regard the loss of balance as purposive, since it replaces a defective conscious-

ness, which is aiming all the time at the creation of a new balance and will moreover achieve this aim, provided that the conscious mind is capable of assimilating the contents produced by the unconscious, i.e., of understanding and digesting them Carl Jung, CW 7, Para 253

If the unconscious simply rides roughshod over the conscious mind, a psychotic condition develops. If it can neither completely prevail nor yet be understood, the result is a conflict that cripples all further advance. But with this question, namely the understanding of the collective unconscious, we come to a formidable difficulty Carl Jung, CW 7, Para 253

Such an intellect is always trying to point out mistakes in others; it is pre-eminently critical, with a disagreeably personal undertone, yet it always wants to be considered objective Carl Jung, CW 7, Para 247

This invariably makes a man bad-tempered, particularly if, as so often happens, the criticism touches on some weak spot which, in the interests of fruitful discussion, were better avoided Carl Jung, CW 7, Para 247

But far from wishing the discussion to be fruitful, it is the unfortunate peculiarity of this feminine intellect to seek out a man's weak spots, fasten on them, and exasperate him Carl Jung, CW 7, Para 247

This is not usually a conscious aim, but rather has the unconscious purpose of forcing a man into a superior position and thus making him an object of admiration. The man does not as a rule notice that he is having the role of the hero thrust upon him; he merely finds her taunts so odious that in future he will go a long way to avoid meeting the lady. In the end the only man who can stand her is the one who gives in at the start, and therefore has nothing wonderful about him Carl Jung, CW 7, Para 247

A collapse of the conscious attitude is no small matter. It always feels like the end of the world, as though everything had tumbled back into original chaos. One feels delivered up, disorientated, like a rudderless ship that is abandoned to the moods of the elements. So at least it seems. In reality, however, one has fallen back upon the collective unconscious, which now takes over the leadership Carl Jung, CW 7, Para 254

We could multiply examples of cases where, at the critical moment, a "saving" thought, a vision, an "inner voice," came with an irresistible power of conviction and gave life a new direction. Probably we could mention just as many cases where the collapse meant a catastrophe that destroyed life, for at such moments morbid ideas are also liable to take root, or ideals wither away, which is no less disastrous Carl Jung, CW 7, Para 254

In the one case some psychic oddity develops, or a psychosis: in the other, a state of disorientation and demoralization. But once the unconscious contents break through into consciousness, filling it with their uncanny power of conviction, the question arises of how the individual will react? Carl Jung, CW 7, Para 254

Will he be overpowered by these contents? If so, it signifies a condition of paranoia or schizophrenia Carl Jung, CW 7, Para 254

Will the subject credulously accept them? If so, he may either become an eccentric with a taste for prophecy, or he may revert to an infantile attitude and be cut off from human society Carl Jung, CW 7, Para 254

Will the subject reject the contents? If so, there is a regressive restoration of the persona Carl Jung, CW 7, Para 254

This formulation sounds very technical, and the reader may justifiably suppose that it has something to do with a complicated psychic reaction such as can be observed in the course of analytical treatment. It would, however, be a mistake to think that cases of this kind make their appearance only in analytical treatment. The process can be observed just as well, and often better, in other situations of life, namely in all those careers where there has been some violent and destructive intervention of fate Carl Jung, CW 7, Para 254

Every one, presumably, has suffered adverse turns of fortune, but mostly they are wounds that heal and leave no crippling mark. But here we are concerned with experiences that are destructive, that can smash a man completely or at least cripple him for good Carl Jung, CW 7, Para 254

Let us take as an example a business man who takes too great a risk and consequently becomes bankrupt. If he does not allow himself to be discouraged by this depressing experience, but undismayed, keeps his former daring, perhaps with a little salutary caution added, his wound will be healed without permanent injury Carl Jung, CW 7, Para Carl Jung, CW 7, Para 254

But if, on the other hand, he goes to pieces, abjures all further risks, and laboriously tries to patch up his social reputation within the confines of a much more limited personality, doing inferior work with the mentality of a scared child, in a post far below him, then, technically speaking, he will have restored his persona in a regressive way. He will as a result of his fright have slipped back to an earlier phase of his personality; he will have demeaned himself, pretending that he is as he was before the crucial experience, though utterly unable even to think of repeating such a risk. Formerly perhaps he wanted more than he could accomplish; now he does not even dare to attempt what he has it in him to do Carl Jung, CW 7, Para 254

Such experiences occur in every walk of life and in every possible form, hence in psychological treatment also. Here again it is a question of widening the personality, of taking a risk on one's circumstances or on one's nature. What the critical experience is in actual treatment can be seen from the case of our philosophy student: it is the transference. As I have already indicated, it is possible for the patient to slip over the reef of the transference unconsciously, in which case it does not become an experience and nothing fundamental happens. The doctor, for the sake of mere convenience, might well wish for such patients. But if they are intelligent, the patients soon discover the existence of this problem for themselves. If then the doctor, as in the above case, is exalted into the father-lover and consequently has a flood of demands let loose against him, he must perforce think out ways and means of parrying the onslaught, without himself getting drawn into the maelstrom and without injury to the patient Carl Jung, CW 7, Para 255

A violent rupture of the transference may bring on a complete relapse, or worse; so the problem must be handled with great tact and foresight. Another possibility is the pious hope that "in time" the "nonsense" will stop of its own accord. Certainly everything stops in time, but it may be an unconscionably long time, and the difficulties may be so unbearable for both

sides that one might as well give up the idea of time as a healing factor at once Carl Jung, CW 7, Para 255

There are indeed patients with whom it is, or seems to be, unrewarding to go to greater lengths; but there are also cases where these procedures cause senseless psychic injury. In the case of my [philosophy] student I dimly felt something of the sort, and I therefore abandoned my rationalistic attempts in order with ill-concealed mistrust to give nature a chance to correct what seemed to me to be her own foolishness. As already mentioned, this taught me something extraordinarily important, namely the existence of an unconscious self-regulation Carl Jung, CW 7, Para 257

Not only can the unconscious "wish," it can also cancel its own wishes. This realization, of such immense importance for the integrity of the personality, must remain sealed to anyone who cannot get over the idea that it is simply a question of infantilism. The meaning and purpose he so eagerly desired he will see only as infantile maunderings. He will understand that his longing was absurd; he learns to be tolerant with himself, resigned Carl Jung, CW 7, Para 257

What can he do? Rather than face the conflict he will turn back and, as best he can, regressively restore his shattered persona, discounting all those hopes and expectations that had blossomed under the transference. He will become smaller, more limited, more rationalistic than he was before Carl Jung, CW 7, Para 257

Experience shows that the unconscious can be deprived of its energy only in part: it remains continually active, for it not only contains but is itself the source of the libido from which the psychic elements flow. It is therefore a delusion to think that by some sort of magical theory or method the unconscious can be finally emptied of libido and thus, as it were, eliminated Carl Jung, CW 7, Para 258

The regressive restoration of the persona is a possible course only for the man who owes the critical failure of his life to his own inflatedness. With diminished personality, he turns back to the measure he can fill. But in every other case resignation and self-belittlement are an evasion, which in the long run can be kept up only at the cost of neurotic sickliness Carl Jung, CW 7, Para 259

The second way [mode of reaction] leads to identification with the collective psyche. This would amount to acceptance of inflation, but now exalted into a system. That is to say, one would be the fortunate possessor of the great truth, which was only waiting to be discovered, of the eschatological knowledge which spells the healing of the nation's Carl Jung, CW 7, Para 260

This attitude is not necessarily megalomania in direct form, but in the milder and more familiar form of prophetic inspiration and desire for martyrdom Carl Jung, CW 7, Para 260

For weak-minded persons, who as often as not possess more than their fair share of ambition, vanity, and misplaced naïveté, the danger of yielding to this temptation is very great Carl Jung, CW 7, Para 260

Access to the collective psyche means a renewal of life for the individual, no matter

whether this renewal is felt as pleasant or unpleasant. Everybody would like to hold fast to this renewal: one man because it enhances his life-feeling, another because it promises a rich harvest of knowledge, a third because he has discovered the key that will transform his whole life. Therefore all those who do not wish to deprive themselves of the great treasures that lie buried in the collective psyche will strive by every means possible to maintain their newly won connection with the primal source of life Carl Jung, CW 7, Para 260

Identification would seem to be the shortest road to this, for the dissolution of the persona in the collective psyche positively invites one to wed oneself with the abyss and blot out all memory in its embrace. This piece of mysticism is innate in all better men as the "longing for the mother," the nostalgia for the source from which we came Carl Jung, CW 7, Para 260

As I have shown in my book on libido, there lie at the root of the regressive longing, which Freud conceives as "infantile fixation" or the "incest wish" a specific value and a specific need which are made explicit in myths. It is precisely the strongest and best among men, the heroes, who give way to their regressive longing and purposely expose themselves to the danger of being devoured by the monster of the maternal abyss. But if a man is a hero, he is a hero because, in the final reckoning, he did not let the monster devour him, but subdued it, not once but many times Carl Jung, CW 7, Para 261

Freud's theory of neurosis offers a way of "combatting" the transference. The dependence of the patient is explained as an infantile sexual demand that takes the place of a rational application of sexuality Carl Jung, CW 7, Para 256

Similar advantages are offered by the Adlerian theory, which explains the transference as an infantile power-aim, and as a "security measure" Carl Jung, CW 7, Para 256

Both theories fit the neurotic mentality so neatly that every case of neurosis can be explained by both theories at once. This highly remarkable fact, which any unprejudiced observer is bound to corroborate, can only rest on the circumstance that Freud's "infantile eroticism" and Adler's "power drive" are one and the same thing, regardless of the clash of opinions between the two schools. It is simply a fragment of uncontrolled, and at first uncontrollable, primordial instinct that comes to light in the phenomenon of transference. The archaic fantasy-forms that gradually reach the surface of consciousness are only a further proof of this Carl Jung, CW 7, Para 256

I would not deny in general the existence of genuine prophets, but in the name of caution I would begin by doubting each individual case; for it is far too serious a matter for us lightly to accept a man as a genuine prophet. Every respectable prophet strives manfully against the unconscious pretensions of his role Carl Jung, CW 7, Para 262

When therefore a prophet appears at a moment's notice, we would be better advised to contemplate a possible psychic disequilibrium Carl Jung, CW 7, Para 262

But besides the possibility of becoming a prophet, there is another alluring joy, subtler and apparently more legitimate: the joy of becoming a prophet's disciple. This, for the vast majority of people, is an altogether ideal technique Carl Jung, CW 7, Para 263

Its advantages are the odium dignitatis, the superhuman responsibility of the prophet, turns into the so much sweeter otium indignitatis Carl Jung, CW 7, Para 263

The disciple is unworthy; modestly he sits at the Master's feet and guards against having ideas of his own. Mental laziness becomes a virtue; one can at least bask in the sun of a semidivine being. He can enjoy the archaism and infantilism of his unconscious fantasies without loss to himself, for all responsibility is laid at the Master's door Carl Jung, CW 7, Para 263

Through his deification of the Master, the disciple, apparently without noticing it, waxes in stature; moreover, does he not possess the great truth not his own discovery, of course, but received straight from the Master's hands? Naturally the disciples always stick together, not out of love, but for the very understandable purpose of effortlessly confirming their own convictions by engendering an air of collective agreement Carl Jung, CW 7, Para 263

Individualism means deliberately stressing and giving prominence to some supposed peculiarity, rather than to collective considerations and obligations Carl Jung, CW 7, Para 267

But individuation means precisely the better and more complete fulfilment of the collective qualities of the human being, since adequate consideration of the peculiarity of the individual is more conducive to better social performance than when the peculiarity is neglected or suppressed Carl Jung, CW 7, Para 267

The idiosyncrasy of an individual is not to be understood as any strangeness in his substance or in his components, but rather as a unique combination, or gradual differentiation, of functions and faculties which in themselves are universal. Every human face has a nose, two eyes, etc., but these universal factors are variable, and it is this variability which makes individual peculiarities possible Carl Jung, CW 7, Para 267

Individuation, therefore, can only mean a process of psychological development that fulfils the individual qualities given; in other words, it is a process by which a man becomes the definite, unique being he in fact is. In so doing he does not become "selfish" in the ordinary sense of the word, but is merely fulfilling the peculiarity of his nature, and this, as we have said, is vastly different from egotism or individualism Carl Jung, CW 7, Para 267

The great question now is: in what do these unconscious processes consist? And how are they constituted? Naturally, so long as they are unconscious, nothing can be said about them. But sometimes they manifest themselves, partly through symptoms, partly through actions, opinions, affects, fantasies, and dreams. Aided by such observational material we can draw indirect conclusions as to the momentary state and constitution of the unconscious processes and their development Carl Jung, CW 7, Para 272

We do know, however, that the unconscious never rests. It seems to be always at work, for even when we are asleep we dream. There are many people who declare that they never dream, but the probability is that they simply do not remember their dreams. It is significant that people who talk in their sleep mostly have no recollection either of the dream which started them talking, or even of the fact that they dreamed at all Carl Jung, CW 7, Para 273

Not a day passes but we make some slip of the tongue, or something slips our memory which at other times we know perfectly well, or we are seized by a mood whose cause we cannot trace, etc. These things are all symptoms of some consistent unconscious activity which becomes directly visible at night in dreams, but only occasionally breaks through the

inhibitions imposed by our daytime consciousness Carl Jung, CW 7, Para 273

So far as our present experience goes, we can lay it down that the unconscious processes stand in a compensatory relation to the conscious mind. I expressly use the word "compensatory" and not the word "contrary," because conscious and unconscious are not necessarily in opposition to one another, but complement one another to form a totality, which is the Self. According to this definition the Self is a quantity that is superordinate to the conscious ego. It embraces not only the conscious but also the unconscious psyche, and is therefore, so to speak, a personality which we also are Carl Jung, CW 7, Para 274

There is little hope of our ever being able to reach even approximate consciousness of the Self, since however much we may make conscious there will always exist an indeterminate and indeterminable amount of unconscious material which belongs to the totality of the Self. Hence the Self will always remain a superordinate quantity Carl Jung, CW 7, Para 274

The unconscious processes that compensate the conscious ego contain all those elements that are necessary for the self-regulation of the psyche as a whole. On the personal level, these are the not consciously recognized personal motives which appear in dreams, or the meaning of daily situations which we have overlooked, or conclusions we have failed to draw, or affects we have not permitted, or criticisms we have spared ourselves Carl Jung, CW 7, Para 275

But the more we become conscious of ourselves through self-knowledge, and act accordingly, the more the layer of the personal unconscious that is superimposed on the collective unconscious will be diminished. In this way there arises a consciousness which is no longer imprisoned in the petty, oversensitive, personal world of ego, but participates freely in the wider world of objective interests. This widened consciousness is no longer that touchy, egotistical bundle of personal wishes, fears, hopes, and ambitions which always has to be compensated or corrected by unconscious counter-tendencies; instead, it is a function of relationship to the world of objects, bringing the individual into absolute, binding, and indissoluble communion with the world at large Carl Jung, CW 7, Para 275

The complications arising at this stage are no longer egotistic wish-conflicts, but difficulties that concern others as much as oneself. At this stage it is fundamentally a question of collective problems, which have activated the collective unconscious because they require collective rather than personal compensation. We can now see that the unconscious produces contents which are valid not only for the person concerned, but for all others as well, in fact for a great many people and possibly for all Carl Jung, CW 7, Para 275

The processes of the collective unconscious are concerned not only with the more or less personal relations of an individual to his family or to a wider social group, but with his relations to society and to the human community in general. The more general and impersonal the condition that releases the unconscious reaction, the more significant, bizarre, and overwhelming will be the compensatory manifestation. It impels not just private communication, but drives people to revelations and confessions, and even to a dramatic representation of their fantasies Carl Jung, CW 7, Para 278

I will explain by an example how the unconscious manages to compensate relationships. A somewhat arrogant gentleman once came to me for treatment. He ran a business in partnership with his younger brother. Relations between the two brothers were very strained, and this was one of the essential causes of my patient's neurosis. From the information

he gave me, the real reason for the tension was not altogether clear. He had all kinds of criticisms to make of his brother, whose gifts he certainly did not show in a very favorable light. The brother frequently came into his dreams, always in the role of a Bismarck, Napoleon, or Julius Caesar. His house looked like the Vatican or Yildiz Kiosk. My patient's unconscious evidently had the need to exalt the rank of the younger brother. From this I concluded that he was setting himself too high and his brother too low. The further course of analysis entirely justified this inference Carl Jung, CW 7, Para 279

The figures employed by the unconscious in our first case are of a definitely collective nature: they are universally recognized heroes. Here there are two possible interpretations: either my patient's younger brother is a man of acknowledged and far-reaching collective importance, or my patient is overestimating his own importance not merely in relation to his brother but in relation to everybody else as well. Since the man's extreme arrogance affected not only himself, but a far wider social group, the compensation availed itself of a collective image Carl Jung, CW 7, Para 283

Another patient, a young woman who clung to her mother in an extremely sentimental way, always had very sinister dreams about her. She appeared in the dreams as a witch, as a ghost, as a pursuing demon. The mother had spoilt her beyond all reason and had so blinded her by tenderness that the daughter had no conscious idea of her mother's harmful influence. Hence the compensatory criticism exercised by the unconscious Carl Jung, CW 7, Para 280

The same is true of the second case. The "witch" is a collective image; hence we must conclude that the blind dependence of the young woman applied as much to the wider social group as it did to her mother personally. This was indeed the case, in so far as she was still living in an exclusively infantile world, where the world was identical with her parents. These examples deal with relations within the personal orbit Carl Jung, CW 7, Para 284

There are, however, impersonal relations which occasionally need unconscious compensation. In such cases collective images appear with a more or less mythological character. Moral, philosophical, and religious problems are, on account of their universal validity, the most likely to call for mythological compensation Carl Jung, CW 7, Para 284

The universal problem of evil and sin is another aspect of our impersonal relations to the world. Almost more than any other, therefore, this problem produces collective compensations. One of my patients, aged sixteen, had as the initial symptom of a severe compulsion neurosis the following dream: Carl Jung, CW 7, Para 285

It is a notorious fact that the compulsion neuroses, by reason of their meticulousness and ceremonial punctilio, not only have the surface appearance of a moral problem but are indeed brimful of inhuman beastliness and ruthless evil, against the integration of which the very delicately organized personality puts up a desperate struggle Carl Jung, CW 7, Para 286

This explains why so many things have to be performed in ceremonially "correct" style, as though to counteract the evil hovering in the background Carl Jung, CW 7, Para 286

After this dream the neurosis started, and its essential feature was that the patient had, as he put it, to keep himself in a "provisional" or "uncontaminated" state of purity. For this purpose he either severed or made "invalid" all contact with the world and with everything that reminded him of the transitoriness of human existence, by means of lunatic formalities,

scrupulous cleansing ceremonies, and the anxious observance of innumerable rules and regulations of an unbelievable complexity. Even before the patient had any suspicion of the hellish existence that lay before him, the dream showed him that if he wanted to come down to earth again there would have to be a pact with evil Carl Jung, CW 7, Para 286

There is what one might call a legitimate and an illegitimate interest in impersonal problems. Excursions of this kind are legitimate only when they arise from the deepest and truest needs of the individual; illegitimate when they are either mere intellectual curiosity or a flight from unpleasant reality. In the latter case the unconscious produces all too human and purely personal compensations, whose manifest aim is to bring the conscious mind back to ordinary reality Carl Jung, CW 7, Para 288

Its mentality [the unconscious] is an instinctive one; it has no differentiated functions, and it does not "think" as we understand "thinking." It simply creates an image that answers to the conscious situation. This image contains as much thought as feeling and is anything rather than a product of rationalistic reflection. Such an image would be better described as an artist's vision Carl Jung, CW 7, Para 289

I have always started from the view that the unconscious simply reacts to the conscious contents, albeit in a very significant way, but that it lacks initiative. It is, however, far from my intention to give the impression that the unconscious is merely reactive in all cases. On the contrary, there is a host of experiences which seem to prove that the unconscious is not only spontaneous but can actually take the lead. There are innumerable cases of people who lingered on in a pettifogging unconsciousness, only to become neurotic in the end. Thanks to the neurosis contrived by the unconscious, they are shaken out of their apathy, and this in spite of their own laziness and often desperate resistance Carl Jung, CW 7, Para 290

Yet it would, in my view, be wrong to suppose that in such cases the unconscious is working to a deliberate and concerted plan and is striving to realize certain definite ends. I have found nothing to support this assumption. The driving force, so far as it is possible for us to grasp it, seems to be in essence only an urge towards self-realization Carl Jung, CW 7, Para 291

The Elgonyi, natives of the Elgon forests, of central Africa, explained to me that there are two kinds of dreams: the ordinary dream of the little man, and the "big vision" that only the great man has, e.g., the medicine-man or chief. Little dreams are of no account, but if a man has a "big dream" he summons the whole tribe in order to tell it to everybody Carl Jung, CW 7, Para 276

How is a man to know whether his dream is a "big" or a "little" one? He knows it by an instinctive feeling of significance. He feels so overwhelmed by the impression it makes that he would never think of keeping the dream to himself. He has to tell it, on the psychologically correct assumption that it is of general significance Carl Jung, CW 7, Para 277

I doubt whether primitives exist anywhere who are not acquainted with magical influence or a magical substance. ("Magical" is simply another word for "psychic.") It would also appear that practically all primitives are aware of the existence of spirits. "Spirit" is a psychic fact. Just as we distinguish our own bodiliness from bodies that are strange to us, so primitives if they have any notion of "souls" at all distinguish between their own souls and the spirits, which are felt as strange and as "not belonging" Carl Jung, CW 7, Para 293

They [spirits] are objects of outward perception, whereas their own soul (or one of several souls where a plurality is assumed), though believed to be essentially akin to the spirits, is not usually an object of so-called sensible perception. After death the soul (or one of the plurality of souls) becomes a spirit which survives the dead man, and often it shows a marked deterioration of character that partly contradicts the notion of personal immortality Carl Jung, CW 7, Para 293

The Bataks, of Sumatra, go so far as to assert that the people who were good in this life turn into malign and dangerous spirits. Nearly everything that the primitives say about the tricks which the spirits play on the living, and the general picture they give of the revenants, corresponds down to the last detail with the phenomena established by spiritualistic experience Carl Jung, CW 7, Para 293

Just as the communications from the "Beyond" can be seen to be the activities of broken-off bits of the psyche, so these primitive spirits are manifestations of unconscious complexes. The importance that modern psychology attaches to the "parental complex" is a direct continuation of primitive man's experience of the dangerous power of the ancestral spirits Carl Jung, CW 7, Para 293

Even the error of judgment which leads him unthinkingly to assume that the spirits are realities of the external world is carried on in our assumption (which is only partially correct) that the real parents are responsible for the parental complex. In the old trauma theory of Freudian psychoanalysis, and in other quarters as well, this assumption even passed for a scientific explanation. (It was in order to avoid this confusion that I advocated the term "parental imago") Carl Jung, CW 7, Para 293

The simple soul is of course quite unaware of the fact that his nearest relations, who exercise immediate influence over him, create in him an image which is only partly a replica of themselves, while its other part is compounded of elements derived from himself. The imago is built up of parental influences plus the specific reactions of the child; it is therefore an image that reflects the object with very considerable qualifications. Naturally, the simple soul believes that his parents are as he sees them Carl Jung, CW 7, Para 294

Nevertheless, the feeling that it "belongs" is not at first sufficiently strong for the complex to be sensed as a subjective content of consciousness. It remains in a sort of no man's land between conscious and unconscious, in the half-shadow, in part belonging or akin to the conscious subject, in part an autonomous being, and meeting consciousness as such Carl Jung, CW 7, Para 295

At all events it is not necessarily obedient to the subject's intentions, it may even be of a higher order, more often than not a source of inspiration or warning, or of "supernatural" information Carl Jung, CW 7, Para 295

Psychologically such a content could be explained as a partly autonomous complex that is not yet fully integrated. The archaic souls, the ba and ka of the Egyptians, are complexes of this kind. At a still higher level, and particularly among the civilized peoples of the West, this complex is invariably of the feminine gender anima and psychea fact for which deeper and cogent reasons are not lacking Carl Jung, CW 7, Para 295

In place of the parents, woman takes up her position as the most immediate environmental influence in the life of the adult man. She becomes his companion, she belongs to him in so far as she shares his life and is more or less the same age Carl Jung, CW 7, Para 296

She is not of a superior order, either by virtue of age, authority, or physical strength. She is, however, a very influential factor and, like the parents, she produces an image of a relatively autonomous nature not an imago to be split off like that of the parents, but one that has to be kept associated with consciousness Carl Jung, CW 7, Para 296

Woman, with her very dissimilar psychology, is and always has been a source of information about things for which a man has no eyes. She can be his inspiration; her intuitive capacity, often superior to man's, can give him timely warning, and her feeling, always directed towards the personal, can show him ways which his own less personally accented feeling would never have discovered Carl Jung, CW 7, Para 296

Here, without a doubt, is one of the main sources for the feminine quality of the soul. But it does not seem to be the only source. No man is so entirely masculine that he has nothing feminine in him. The fact is, rather, that very masculine men have carefully guarded and hidden very soft emotional life, often incorrectly described as "feminine" Carl Jung, CW 7, Para 297

No less naturally, the imago of woman (the soul-image) becomes a receptacle for these demands, which is why a man, in his love-choice, is strongly tempted to win the woman who best corresponds to his own unconscious femininity woman, in short, who can unhesitatingly receive the projection of his soul. Although such a choice is often regarded and felt as altogether ideal, it may turn out that the man has manifestly married his own worse weakness. This would explain some highly remarkable conjunctions Carl Jung, CW 7, Para 297

It is very difficult for a man to distinguish himself from his anima, the more so because she is invisible. Indeed, he has first to contend with the prejudice that everything is coming from inside him springs from the truest depths of his being. The "strong man" will perhaps concede that in private life he is singularly undisciplined, but that, he says, is just his "weakness" with which, as it were, he proclaims his solidarity Carl Jung, CW 7, Para 310

Now there is in this tendency a cultural legacy that is not to be despised; for when a man recognizes that his ideal persona is responsible for his anything but ideal anima, his ideals are shattered, the world becomes ambiguous, he becomes ambiguous even to himself. He is seized by doubts about goodness, and what is worse, he doubts his own good intentions Carl Jung, CW 7, Para 310

Now, everything that is true of the persona and of all autonomous complexes in general also holds true of the anima. She likewise is a personality, and this is why she is so easily projected upon a woman. So long as the anima is unconscious she is always projected, for everything unconscious is projected Carl Jung, CW 7, Para 314

The first bearer of the soul-image is always the mother; later it is borne by those women who arouse the man's feelings, whether in a positive or a negative sense. Because the mother is the first bearer of the soul-image, separation from her is a delicate and important matter of the greatest educational significance Carl Jung, CW 7, Para 314

Accordingly among primitives we find a large number of rites designed to organize this separation. The mere fact of becoming adult, and of outward separation, is not enough; impressive initiations into the “men’s house” and ceremonies of rebirth are still needed in order to make the separation from the mother (and hence from childhood) entirely effective Carl Jung, CW 7, Para 314

Just as the father acts as a protection against the dangers of the external world and thus serves his son as a model persona, so the mother protects him against the dangers that threaten from the darkness of his psyche. In the puberty rites, therefore, the initiate receives instruction about these things of “the other side,” so that he is put in a position to dispense with his mother’s protection Carl Jung, CW 7, Para 315

The modern civilized man has to forego this primitive but nonetheless admirable system of education. The consequence is that the anima, in the form of the mother-imago, is transferred to the wife; and the man, as soon as he marries, becomes childish, sentimental, dependent, and subservient, or else truculent, tyrannical, hypersensitive, always thinking about the prestige of his superior masculinity. The last is of course merely the reverse of the first Carl Jung, CW 7, Para 316

The safeguard against the unconscious, which is what his mother meant to him, is not replaced by anything in the modern man’s education; unconsciously, therefore, his ideal of marriage is so arranged that his wife has to take over the magical role of the mother. Under the cloak of the ideally exclusive marriage he is really seeking his mother’s protection, and thus he plays into the hands of his wife’s possessive instincts. His fear of the dark incalculable power of the unconscious gives his wife an illegitimate authority over him, and forges such a dangerously close union that the marriage is permanently on the brink of explosion from internal tensioner else, out of protest, he flies to the other extreme, with the same results Carl Jung, CW 7, Para 316

If the good spirits have not utterly forsaken him, he will after a time notice his isolation, and in his loneliness he will begin to understand how he caused the estrangement. Perhaps, aghast at himself, he will ask, “What sort of devil has got into me? “without of course seeing the meaning of this metaphor. Then follow remorse, reconciliation, oblivion, repression, and, in next to no time, a new explosion Carl Jung, CW 7, Para 320

Clearly, the anima is trying to enforce a separation. This tendency is in nobody’s interest. The anima comes between them like a jealous mistress who tries to alienate the man from his family. An official post or any other advantageous social position can do the same thing, but there we can understand the force of the attraction Carl Jung, CW 7, Para 320

Our first thought is that the man of honor is on the lookout for another woman [roving eye]. That might Beit might even be arranged by the anima as the most effective means to the desired end. Such an arrangement should not be misconstrued as an end in itself, for the blameless gentlemen who is correctly married according to the law can be just as correctly divorced according to the law, which does not alter his fundamental attitude one iota. The old picture has merely received a new frame Carl Jung, CW 7, Para 320

As a matter of fact, this arrangement is a very common method of implementing a separation and of hampering a final solution. Therefore it is more reason Carl Jung, CW 7, Para

able not to assume that such an obvious possibility is the end-purpose of the separation. We would be better advised to investigate what is behind the tendencies of the anima 321.

The first step is what I would call the objectivation of the anima, that is, the strict refusal to regard the trend towards separation as a weakness of one's own. Only when this has been done can one face the anima with the question, "Why do you want this separation?" To put the question in this personal way has the great advantage of recognizing the anima as a personality, and of making a relationship possible. The more personally she is taken the better Carl Jung, CW 7, Para 321

The form of the world into which he is born is already inborn in him as a virtual image. Likewise parents, wife, children, birth, and death are inborn in him as virtual images, as psychic aptitudes. These a priori categories have by nature a collective character; they are images of parents, wife, and children in general, and are not individual predestinations Carl Jung, CW 7, Para 300

We must therefore think of these virtual images as lacking in solid content, hence as unconscious. They only acquire solidity, influence, and eventual consciousness in the encounter with empirical facts, which touch the unconscious aptitude and quicken it to life. They are in a sense the deposits of all our ancestral experiences, but they are not the experiences themselves Carl Jung, CW 7, Para 300

So at least it seems to us, in the present limited state of our knowledge. (I must confess that I have never yet found infallible evidence for the inheritance of memory images, but I do not regard it as positively precluded that in addition to these collective deposits which contain nothing specifically individual, there may also be inherited memories that are individually determined) Carl Jung, CW 7, Para 300

She is not of a superior order, either by virtue of age, authority, or physical strength. She is, however, a very influential factor and, like the parents, she produces an image of a relatively autonomous nature not an imago to be split off like that of the parents, but one that has to be kept associated with consciousness Carl Jung, CW 7, Para 296

Here, without a doubt, is one of the main sources for the feminine quality of the soul. But it does not seem to be the only source. No man is so entirely masculine that he has nothing feminine in him. The fact is, rather, that very masculine men have carefully guarded and hidden very soft emotional life, often incorrectly described as "feminine" Carl Jung, CW 7, Para 297

A man counts it a virtue to repress his feminine traits as much as possible, just as a woman, at least until recently, considered it unbecoming to be "mannish." The repression of feminine traits and inclinations naturally causes these contrasexual demands to accumulate in the unconscious Carl Jung, CW 7, Para 297

No less naturally, the imago of woman (the soul-image) becomes a receptacle for these demands, which is why a man, in his love-choice, is strongly tempted to win the woman who best corresponds to his own unconscious femininity woman, in short, who can unhesitatingly receive the projection of his soul. Although such a choice is often regarded and felt as altogether ideal, it may turn out that the man has manifestly married his own worse weakness. This would explain some highly remarkable conjunctions Carl Jung, CW 7, Para 297

It is very difficult for a man to distinguish himself from his anima, the more so because she is invisible. Indeed, he has first to contend with the prejudice that everything is coming from inside him springs from the truest depths of his being. The “strong man” will perhaps concede that in private life he is singularly undisciplined, but that, he says, is just his “weakness” with which, as it were, he proclaims his solidarity Carl Jung, CW 7, Para 310

Now there is in this tendency a cultural legacy that is not to be despised; for when a man recognizes that his ideal persona is responsible for his anything but ideal anima, his ideals are shattered, the world becomes ambiguous, he becomes ambiguous even to himself. He is seized by doubts about goodness, and what is worse, he doubts his own good intentions Carl Jung, CW 7, Para 310

Accordingly among primitives we find a large number of rites designed to organize this separation. The mere fact of becoming adult, and of outward separation, is not enough; impressive initiations into the “men’s house” and ceremonies of rebirth are still needed in order to make the separation from the mother (and hence from childhood) entirely effective Carl Jung, CW 7, Para 314

Just as the father acts as a protection against the dangers of the external world and thus serves his son as a model persona, so the mother protects him against the dangers that threaten from the darkness of his psyche. In the puberty rites, therefore, the initiate receives instruction about these things of “the other side,” so that he is put in a position to dispense with his mother’s protection Carl Jung, CW 7, Para 315

The modern civilized man has to forego this primitive but nonetheless admirable system of education. The consequence is that the anima, in the form of the mother-imago, is transferred to the wife; and the man, as soon as he marries, becomes childish, sentimental, dependent, and subservient, or else truculent, tyrannical, hypersensitive, always thinking about the prestige of his superior masculinity. The last is of course merely the reverse of the first Carl Jung, CW 7, Para 316

The “spotless” man of honor and public benefactor, whose tantrums and explosive moodiness terrify his wife and children. What is the anima doing here? Carl Jung, CW 7, Para 319

We can see it at once, if we just allow things to take their natural course. Wife and children will become estranged; a vacuum will form about him. At first he will bewail the hardheartedness of his family and will behave if possible even more vilely than before. That will make the estrangement absolute Carl Jung, CW 7, Para 320

If the good spirits have not utterly forsaken him, he will after a time notice his isolation, and in his loneliness he will begin to understand how he caused the estrangement. Perhaps, aghast at himself, he will ask, “What sort of devil has got into me? “without of course seeing the meaning of this metaphor. Then follow remorse, reconciliation, oblivion, repression, and, in next to no time, a new explosion Carl Jung, CW 7, Para 320

Our first thought is that the man of honor is on the lookout for another woman [roving eye]. That might Be it might even be arranged by the anima as the most effective means to the desired end. Such an arrangement should not be misconstrued as an end in itself, for the blameless gentlemen who is correctly married according to the law can be just as correctly

divorced according to the law, which does not alter his fundamental attitude one iota. The old picture has merely received a new frame Carl Jung, CW 7, Para 320

As a matter of fact, this arrangement is a very common method of implementing a separation and of hampering a final solution. Therefore it is more reasonable not to assume that such an obvious possibility is the end-purpose of the separation. We would be better advised to investigate what is behind the tendencies of the anima Carl Jung, CW 7, Para 321

The first step is what I would call the objectivation of the anima, that is, the strict refusal to regard the trend towards separation as a weakness of one's own. Only when this has been done can one face the anima with the question, "Why do you want this separation?" To put the question in this personal way has the great advantage of recognizing the anima as a personality, and of making a relationship possible. The more personally she is taken the better Carl Jung, CW 7, Para 321

Starting from the fact that in a state of affect one often surrenders involuntarily to the truths of the other side, would it not be far better to make use of an affect so as to give the other side an opportunity to speak? Carl Jung, CW 7, Para 323

But once it has presented its case, we should begin criticizing as conscientiously as though a real person closely connected with us were our interlocutor Carl Jung, CW 7, Para 323

Nor should the matter rest there, but statement and answer must follow one another until a satisfactory end to the discussion is reached. Whether the result is satisfactory or not, only subjective feeling can decide. Any humbug is of course quite useless. Scrupulous honesty with oneself and no rash anticipation of what the other side might conceivably say are the indispensable conditions of this technique for educating the anima Carl Jung, CW 7, Para 323

We must therefore expect the unconscious of woman to show aspects essentially different from those found in man. If I were to attempt to put in a nutshell the difference between man and woman in this respect, i.e., what it is that characterizes the animus as opposed to the anima, I could only say this: as the anima produces moods, so the animus produces opinions: and as the moods of a man issue from a shadowy background, so the opinions of a woman rest on equally unconscious prior assumptions Carl Jung, CW 7, Para 331

Animus opinions very often have the character of solid convictions that are not lightly shaken, or of principles whose validity is seemingly unassailable. If we analyse these opinions, we immediately come upon unconscious assumptions whose existence must first be inferred; that is to say, the opinions are apparently conceived as though such assumptions existed. But in reality the opinions are not thought out at all; they exist readymade, and they are held so positively and with so much conviction that the woman never has the shadow of a doubt about them Carl Jung, CW 7, Para 331

With regard to the plurality of the animus as distinguished from what we might call the "uni-personality" of the anima, this remarkable fact seems to me to be a correlate of the conscious attitude. The conscious attitude of woman is in general far more exclusively personal than that of man. Her world is made up of fathers and mothers, brothers and sisters, husbands and children. The rest of the world consists likewise of families, who nod to each other but are, in the main, interested essentially in themselves Carl Jung, CW 7, Para 338

The man's world is the nation, the state, business concerns, etc. His family is simply a means to an end, one of the foundations of the state, and his wife is not necessarily the woman for him (at any rate not as the woman means it when she says "my man"). The general means more to him than the personal; his world consists of a multitude of co-ordinated factors, whereas her world, outside her husband, terminates in a sort of cosmic mist. A passionate exclusiveness therefore attaches to the man's anima, and an indefinite variety to the woman's animus Carl Jung, CW 7, Para 338

Whereas the man has, floating before him, in clear outlines, the significant form of a Circe or a Calypso, the animus is better expressed as a bevy of Flying Dutchmen or unknown wanderers from over the sea, never quite clearly grasped, protean, given to persistent and violent motion. These personifications appear especially in dreams, though in concrete reality they can be famous tenors, boxing champions, or great men in far-away, unknown cities Carl Jung, CW 7, Para 338

These two crepuscular figures of the dark hinterland of the psyche truly the semi-grotesque "guardians of the threshold," to use the pompous jargon of theosophy can assume an almost inexhaustible number of shapes, enough to fill whole volumes. Their complicated transformations are as rich and strange as the world itself, as manifold as the limitless variety of their conscious correlate, the persona. They inhabit the twilight sphere, and we can just make out that the autonomous complex of anima and animus is essentially a psychological function that has usurped, or rather retained, a "personality" only because this function is itself autonomous and undeveloped Carl Jung, CW 7, Para 339

But already we can see how it is possible to break up the personifications, since by making them conscious we convert them into bridges to the unconscious Carl Jung, CW 7, Para 339

It is because we are not using them purposefully as functions that they remain personified complexes. So long as they are in this state they must be accepted as relatively independent personalities Carl Jung, CW 7, Para 339

They cannot be integrated into consciousness while their contents remain unknown. The purpose of the dialectical process is to bring these contents into the light; and only when this task has been completed, and the conscious mind has become sufficiently familiar with the unconscious processes reflected in the anima, will the anima be felt simply as a function Carl Jung, CW 7, Para 339

Psychic abnormalities then develop, states of possession ranging in degree from ordinary moods and "ideas" to psychoses. All these states are characterized by one and the same fact that an unknown "something" has taken possession of a smaller or greater portion of the psyche and asserts its hateful and harmful existence undeterred by all our insight, reason, and energy, thereby proclaiming the power of the unconscious over the conscious mind, the sovereign power of possession. In this state the possessed part of the psyche generally develops an animus or anima psychology. The woman's incubus consists of a host of masculine demons; the man's succubus is a vampire Carl Jung, CW 7, Para 370

This particular concept of a soul which, according to the conscious attitude, either exists by itself or disappears in a function, has, as anyone can see, not the remotest connection with the Christian concept of the soul Carl Jung, CW 7, Para 371

One would be inclined to suppose that the animus, like the anima, personifies itself in a single figure, But this, as experience shows, is true only up to a point, because another factor unexpectedly makes its appearance, which brings about an essentially different situation from that existing in man Carl Jung, CW 7, Para 332

The animus does not appear as one person, but as a plurality of persons. In H. G. Wells' novel Christina Alberta's Father, the heroine, in all that she does or does not do, is constantly under the surveillance of a supreme moral authority, which tells her with remorseless precision and dry matter-of-factness what she is doing and for what motives Carl Jung, CW 7, Para 332

Wells calls this authority a "Court of Conscience." This collection of condemnatory judges, a sort of College of Preceptors, corresponds to a personification of the animus. The animus is rather like an assembly of fathers or dignitaries of some kind who lay down incontestable, "rational," ex cathedra judgments Carl Jung, CW 7, Para 332

On closer examination these exacting judgments turn out to be largely sayings and opinions scraped together more or less unconsciously from childhood on, and compressed into a canon of average truth, justice, and reasonableness, a compendium of preconceptions which, whenever a conscious and competent judgment is lacking (as not infrequently happens) instantly obliges with an opinion. Sometimes these opinions take the form of so-called sound common sense, sometimes they appear as principles which are like a travesty of education: "People have always done it like this," or "Everybody says it is like that" Carl Jung, CW 7, Para 332

It goes without saying that the animus is just as often projected as the anima. The men who are particularly suited to these projections are either walking replicas of God himself, who know all about everything, or else they are misunderstood word-addicts with a vast and windy vocabulary at their command, who translate common or garden reality into the terminology of the sublime Carl Jung, CW 7, Para 333

Like the anima, the animus is a jealous lover. He is an adept at putting, in place of the real man, an opinion about him, the exceedingly disputable grounds for which are never submitted to criticism. Animus opinions are invariably collective, and they override individuals and individual judgments in exactly the same way as the anima thrusts her emotional anticipations and projections between man and wife Carl Jung, CW 7, Para 334

If the woman happens to be pretty, these animus opinions have for the man something rather touching and childlike about them, which makes him adopt a benevolent, fatherly, professorial manner. But if the woman does not stir his sentimental side, and competence is expected of her rather than appealing helplessness and stupidity, then her animus opinions irritate the man to death, chiefly because they are based on nothing but opinion for opinion's sake, and "everybody has a right to his own opinions." Men can be pretty venomous here, for it is an inescapable fact that the animus always plays up the anima and vice versa, of courses that all further discussion becomes pointless Carl Jung, CW 7, Para 334

In intellectual women the animus encourages a critical disputatiousness and would-be highbrowism, which, however, consists essentially in harping on some irrelevant weak point and nonsensically making it the main one. Or a perfectly lucid discussion gets tangled up in the most maddening way through the introduction of a quite different and if possible perverse

point of view Carl Jung, CW 7, Para 335

However, all these traits, as familiar as they are unsavory, are simply and solely due to the extraversion of the animus. The animus does not belong to the function of conscious relationship; his function is rather to facilitate relations with the unconscious. Instead of the woman merely associating opinions with external situations which she ought to think about consciously the animus, as an associative function, should be directed inwards, where it could associate the contents of the unconscious Carl Jung, CW 7, Para 336

The technique of coming to terms with the animus is the same in principle as in the case of the anima; only here the woman must learn to criticize and hold her opinions at a distance; not in order to repress them, but, by investigating their origins, to penetrate more deeply into the background, where she will then discover the primordial images, just as the man does in his dealings with the anima Carl Jung, CW 7, Para 336

Just as a man brings forth his work as a complete creation out of his inner feminine nature, so the inner masculine side of a woman brings forth creative seeds which have the power to fertilize the feminine side of the man. This would be the femme inspiratrice who, if falsely cultivated, can turn into the worst kind of dogmatist and high-handed pedagogue regular “animus hound,” as one of my women patients aptly expressed it Carl Jung, CW 7, Para 336

A woman possessed by the animus is always in danger of losing her femininity, her adapted feminine persona, just as a man in like circumstances runs the risk of effeminacy. These psychic changes of sex are due entirely to the fact that a function which belongs inside has been turned outside. The reason for this perversion is clearly the failure to give adequate recognition to an inner world which stands autonomously opposed to the outer world, and makes just as serious demands on our capacity for adaptation Carl Jung, CW 7, Para 337

We can try our hand at interpreting these fantasies, if we like. In many cases it may be quite important for the patient to have some idea of the meaning of the fantasies produced. But it is of vital importance that he should experience them to the full and, in so far as intellectual understanding belongs to the totality of experience, also understand them Carl Jung, CW 7, Para 342

Yet I would not give priority to understanding. Naturally the doctor must be able to assist the patient in his understanding, but, since he will not and indeed cannot understand everything, the doctor should assiduously guard against clever feats of interpretation. For the important thing is not to interpret and understand the fantasies, but primarily to experience them Carl Jung, CW 7, Para 342

Alfred Kubin has described what he, as an artist, experienced of the unconscious. It is an artistic experience which, in the deeper meaning of human experience, is incomplete. The vision is experienced artistically, but not humanly. By “human” experience I mean that the person of the author should not just be included passively in the vision, but that he should face the figures of the vision actively and reactively, with full consciousness. But a real settlement with the unconscious demands a firmly opposed conscious standpoint Carl Jung, CW 7, Para 342

Not only is it [individuation] desirable, it is absolutely indispensable because, through his [the individual’s] contamination with others, he falls into situations and commits actions

which bring him into disharmony with himself. From all states of unconscious contamination and non-differentiation there is begotten a compulsion to be and to act in a way contrary to one's own nature Carl Jung, CW 7, Para 373

Accordingly a man can neither be at one with himself nor accept responsibility for himself. He feels himself to be in a degrading, unfree, unethical condition. But the disharmony with himself is precisely the neurotic and intolerable condition from which he seeks to be delivered, and deliverance from this condition will come only when he can be and act as he feels is conformable with his true Self Carl Jung, CW 7, Para 373

People have a feeling for these things, dim and uncertain at first, but growing ever stronger and clearer with progressive development. When a man can say of his states and actions, "As I am, so I act," he can be at one with himself, even though it be difficult, and he can accept responsibility for himself even though he struggles against it. We must recognize that nothing is more difficult to bear with than oneself. ("You sought the heaviest burden, and found yourself," says Nietzsche.) Yet even this most difficult of achievements becomes possible if we can distinguish ourselves from the unconscious contents Carl Jung, CW 7, Para 373

With the attainment of this goal [the conquest of the anima] it becomes possible to disengage the ego from all its entanglements with collectivity and the collective unconscious. Through this process the anima forfeits the daemonic power of an autonomous complex; she can no longer exercise the power of possession, since she is depotentiated. She is no longer the guardian of treasures unknown; no longer Kundry, daemonic Messenger of the Grail, half divine and half animal; no longer is the soul to be called "Mistress," but a psychological function of an intuitive nature, akin to what the primitives mean when they say, "He has gone into the forest to talk with the spirits" or "My snake spoke with me" or, in the mythological language of infancy, "A little bird told me" Carl Jung, CW 7, Para 374

Those of my readers who know Rider Haggard's description of "She-who-must-be-obeyed" will surely recall the magical power of this personality. "She" is a mana-personality, a being full of some occult and bewitching quality (mana), endowed with magical knowledge and power. All these attributes naturally have their source in the naïve projection of an unconscious self-knowledge which, expressed in less poetic terms, would run somewhat as follows: "I recognize that there is some psychic factor active in me which eludes my conscious will in the most incredible manner. It can put extraordinary ideas into my head, induce in me unwanted and unwelcome moods and emotions, lead me to astonishing actions for which I can accept no responsibility, upset my relations with other people in a very irritating way, etc. I feel powerless against this fact and, what is worse, I am in love with it, so that all I can do is marvel," (Poets often call this the "artistic temperament," unpoetical folk excuse themselves in other ways) Carl Jung, CW 7, Para 375

Well then: who is it that has integrated the anima? Obviously the conscious ego, and therefore the ego has taken over the mana. Thus the ego becomes a mana-personality. But the mana-personality is a dominant of the collective unconscious, the well-known archetype of the mighty man in the form of hero, chief, magician, medicine-man, saint, the ruler of men and spirits, the friend of God Carl Jung, CW 7, Para 377

This masculine collective figure who now rises out of the dark background and takes possession of the conscious personality entails a psychic danger of a subtle nature, for by inflating the conscious mind it can destroy everything that was gained by coming to terms

with the anima. It is therefore of no little practical importance to know that in the hierarchy of the unconscious the anima occupies the lowest rank, only one of many possible figures, and that her subjection constellates another collective figure which now takes over her mana Carl Jung, CW 7, Para 378

Actually it is the figure of the magician, as I will call it for short, who attracts the mana to himself, i.e., the autonomous valency of the anima. Only in so far as I unconsciously identify with his figure can I imagine that I myself possess the anima's mana. But I will infallibly do so under these circumstances Carl Jung, CW 7, Para 378

The figure of the magician has a no less dangerous equivalent in women: a sublime, matriarchal figure, the Great Mother, the All-Merciful, who understands everything, forgives everything, who always acts for the best, living only for others and never seeking her own interests, the discoverer of the great love, just as the magician is the mouthpiece of the ultimate truth. And just as the great love is never appreciated, so the great wisdom is never understood. Neither, of course, can stand the sight of the other Carl Jung, CW 7, Para 379

Here is cause for serious misunderstanding, for without a doubt it is a question of inflation. The ego has appropriated something that does not belong to it. But how has it appropriated the mana? If it was really the ego that conquered the anima, then the mana does indeed belong to it, and it would be correct to conclude that one has become important. But why does not this importance, the mana, work upon others? That would surely be an essential criterion! It does not work because one has not in fact become important, but merely become adulterated with an archetype, another unconscious figure Carl Jung, CW 7, Para 380

Hence we must conclude that the ego never conquered the anima at all and therefore has not acquired the mana. All that has happened is a new adulteration, this time with a figure of the same sex corresponding to the father-imago and possessed of even greater power. From the power that binds all creatures none is free. Except the man who wins self-mastery. (Goethe, "Die Geheimnisse: Ein Fragment," lines 191-192). Thus he becomes a superman, superior to all powers, a demigod at the very least. "I and the Father are one "this mighty avowal in all its awful ambiguity is born of just such a psychological moment Carl Jung, CW 7, Para 380

In the face of this, our pitiable limited ego, if it has but a spark of self-knowledge, can only drawback and rapidly drop all pretence of power and importance. It was a delusion: the conscious mind has not become master of the unconscious, and the anima has forfeited her tyrannical power only to the extent that the ego was able to come to terms with the unconscious. This accommodation, however, was not a victory of the conscious over the unconscious, but the establishment of a balance of power between the two worlds Carl Jung, CW 7, Para 381

Who or what becomes mana when even the magician can no longer work magic? So far we only know that neither the conscious nor the unconscious has mana, for it is certain that when the ego makes no claim to power there is no possession, that is to say, the unconscious too loses its ascendency. In this situation the mana must have fallen to something that is both conscious and unconscious, or else neither. This something is the desired "midpoint" of the personality, that ineffable something betwixt the opposites, or else that which unites them, or the result of conflict, or the product of energic tension: the coming to birth of personality, a profoundly individual step forward, the next stage Carl Jung, CW 7, Para 382

All primitive groups and tribes that are in any way organized have their rites of initia-

tion, often very highly developed, which play an extraordinarily important part in their social and religious life. Through these ceremonies boys are made men, and girls women. The Kavirondos stigmatize those who do not submit to circumcision and excision as “animals.” This shows that the initiation ceremonies are a magical means of leading man from the animal state to the human state. They are clearly transformation mysteries of the greatest spiritual significance Carl Jung, CW 7, Para 384

Very often the initiands are subjected to excruciating treatment, and at the same time the tribal mysteries are imparted to them, the laws and hierarchy of the tribe on the one hand, and on the other the cosmogonic and mythical doctrines Carl Jung, CW 7, Para 384

Initiations have survived among all cultures. In Greece the ancient Eleusinian mysteries were preserved, it seems, right into the seventh century of our era. Rome was flooded with mystery religions. Of these Christianity was one, and even in its present form it still preserves the old initiation ceremonies, somewhat faded and degenerated, in the rites of baptism, confirmation, and communion. Hence nobody is in a position to deny the enormous historical importance of initiations Carl Jung, CW 7, Para 384

Modern men have absolutely nothing to compare with this (consider the testimonies of the ancients in regard to the Eleusinian mysteries). Freemasonry, l’Église gnostique de la France, legendary Rosicrucians, theosophy, and so forth are all feeble substitutes for something that were better marked up in red letters on the historical casualty list Carl Jung, CW 7, Para 385

The point is not cannot be too emphatic about this whether the initiation symbols are objective truths, but whether these unconscious contents are or are not the equivalents of initiation practices, and whether they do or do not influence the human psyche. Nor is it a question of whether they are desirable or not. It is enough that they exist and that they work Carl Jung, CW 7, Para 385

I have called this center the Self. Intellectually the Self is no more than a psychological concept, a construct that serves to express an unknowable essence which we cannot grasp as such, since by definition it transcends our powers of comprehension. It might equally well be called the “God within us.” The beginnings of our whole psychic life seem to be inextricably rooted in this point, and all our highest and ultimate purposes seem to be striving towards it. This paradox is unavoidable, as always, when we try to define something that lies beyond the bourn [limit] of our understanding Carl Jung, CW 7, Para 399

The Self, as an inclusive term that embraces our whole living organism, not only contains the deposit and totality of all past life, but is also a point of departure, the fertile soil from which all future life will spring. This premonition of futurity is as clearly impressed upon our innermost feelings as is the historical aspect. The idea of immortality follows legitimately from these psychological premises Carl Jung, CW 7, Para 303

Sensing the Self as something irrational, as an indefinable existent, to which the ego is neither opposed nor subjected, but merely attached, and about which it revolves very much as the earth revolves round the sun thus we come to the goal of individuation. I use the word “sensing” in order to indicate the apperceptive character of the relation between ego and Self. In this relation nothing is knowable, because we can say nothing about the contents of the Self Carl Jung, CW 7, Para 405

The ego is the only content of the Self that we do know. The individuated ego senses itself as the object of an unknown and superordinate subject. It seems to me that our psychological inquiry must come to a stop here, for the idea of a Self is itself a transcendental postulate which, although justifiable psychologically, does not allow of scientific proof Carl Jung, CW 7, Para 405

At the very least, therefore, the Self can claim the value of an hypothesis analogous to that of the structure of the atom. And even though we should once again be enmeshed in an image, it is none the less powerfully alive, and its interpretation quite exceeds my powers. I have no doubt at all that it is an image, but one in which we are contained Carl Jung, CW 7, Para 405

A second wave of Dionysian licentiousness swept over the West at the Renaissance. It is difficult to gauge the spirit of one's own time; but, if we observe the trend of art, of style, and of public taste, and see what people read and write, what sort of societies they found, what "questions" are the order of the day, what the Philistines fight against, we shall find that in the long catalogue of our present social questions by no means the last is the so-called "sexual question" Carl Jung, CW 7, Para 427

These are satisfactions which the factory workers and office employees do not know and can never enjoy. What do these know of his life with nature, of those grand moments when, as lord and fructifier of the earth, he drives his plough through the soil, and with a kingly gesture scatters the seed for the future harvest Carl Jung, CW 7, Para 428

What do they know of his rightful fear of the destructive power of the elements, of his joy in the fruitfulness of his wife who bears him the daughters and sons who mean increased working-power and prosperity? Carl Jung, CW 7, Para 428

From all this we city-dwellers, we modern machine-minders, are far removed. Is not the fairest and most natural of all satisfactions beginning to fail us, when we can no longer regard with unmixed joy the harvest of our own sowing, the "blessing" of children? Can such a state of affairs bring satisfaction? Carl Jung, CW 7, Para 428

Man possesses in the unconscious a fine flair for the spirit of his time; he divines his possibilities and feels in his heart the instability of present-day morality, no longer supported by living religious conviction. Here is the source of most of our [erotic] conflicts. The urge to freedom beats upon the weakening barriers of morality: we are in a state of temptation, we want and do not want. And because we want and yet cannot think out what it is we really want, the [erotic] conflict is largely unconscious, and thence comes neurosis Carl Jung, CW 7, Para 430

Neurosis, therefore is intimately bound up with the problem of our time and really represents an unsuccessful attempt on the part of the individual to solve the general problem in his own person. Neurosis is self-division. In most people the cause of the division is that the conscious mind wants to hang on to its moral ideal, while the unconscious strives after it's in the contemporary sense unmoral ideal which the conscious mind [steadfastly] tries to deny Carl Jung, CW 7, Para 430

Hypnotism: an interrogation in a state of hypnotic concentration or else the spontaneous production of fantasies by the patient while in this state method, however, too primitive and

therefore unsatisfactory Carl Jung, CW 7, Para 432

Word association method: a procedure primarily of theoretical and experimental value, its results giving a comprehensive though superficial grasp of the unconscious conflict or "complex" Carl Jung, CW 7, Para 432

Dream analysis: a third method to discover what is happening in the unconscious more penetrating and effective technique than hypnotism or the association method Carl Jung, CW 7, Para 432

We always find in the patient a conflict which at a certain point is connected with the great problems of society. Hence, when the analysis is pushed to this point, the apparently individual conflict of the patient is revealed as a universal conflict of his environment and epoch Carl Jung, CW 7, Para 438

"The question" that troubles the patient is whether you like it or not the "sexual" question, or more precisely, the problem of present-day sexual morality. His increased demand for life and the joy of life, for glowing reality, can stand the necessary limitations that reality itself imposes, but not the arbitrary, ill-supported prohibitions of present-day morality, which would curb too much the creative spirit rising up from the depths of the animal darkness Carl Jung, CW 7, Para 438

The neurotic has the soul of a child who bears ill with arbitrary restrictions whose meaning he does not see; he tries to make this morality his own, but falls into profound division and disunity with himself: one side of him wants to suppress, the other longs to be freehand this struggle goes by the name of neurosis Carl Jung, CW 7, Para 438

Were the conflict clearly conscious in all its parts, it would never give rise to neurotic symptoms; these occur only when we cannot see the other side of our nature and the urgency of its problems. Only under these conditions does the symptom appear, and it helps to give expression to the unrecognized side of the psyche. The symptom is therefore an indirect expression of unrecognized desires which, when conscious, come into violent conflict with our moral convictions Carl Jung, CW 7, Para 438

This [childish] apprehension shows how little trust we place in the efficacy of our moral principles. People pretend that only morality holds men back from unbridled licence Carl Jung, CW 7, Para 439

But a much more effective regulator is necessity, which sets bounds far more real and persuasive than any moral precepts. It is true that analysis liberates the animal instincts, though not, as many would have it, with a view to giving them unbridled power, but rather to put them to higher uses, so far as this is possible for the individual concerned and so far as he requires such "sublimation" Carl Jung, CW 7, Para 439

It is under all circumstances an advantage to be in full possession of one's personality, otherwise the repressed portions of the personality will only crop up as a hindrance elsewhere, not just at some unimportant point, but at the very spot where we are most sensitive: this worm always rots the core Carl Jung, CW 7, Para 439

It is precisely the strongest and the best among men, the heroes, who give way to their

regressive longing and purposely expose themselves to the danger of being devoured by the monster of the maternal abyss. But if a man is a hero, he is a hero because, in the final reckoning, he did not let the monster devour him, but subdued it, not once but many times Carl Jung, CW 7, Para 477

The essence of hermeneutics, an art widely practised in former times, consists in adding further analogies to the one already supplied by the symbol: in the first place subjective analogies produced at random by the patient, then objective analogies provided by the analyst out of his general knowledge Carl Jung, CW 7, Para 493

This procedure widens and enriches the initial symbol, and the final outcome is an infinitely complex and variegated picture the elements of which can be reduced to their respective tertian comparationis. Certain lines of psychological development then stand out that are at once individual and collective. There is no science on earth by which these lines could be proved "right" Carl Jung, CW 7, Para 493

I am persuaded that the true end of analysis is reached when the patient has gained an adequate knowledge of the methods by which he can maintain contact with the unconscious and has acquired a psychological understanding sufficient for him to discern the direction of his life-line at the moment. Without this his conscious mind will not be able to follow the currents of libido and consciously sustain the individuality he has achieved. A patient who has had any serious neurosis needs to be equipped in this way if he is to persevere in his cure Carl Jung, CW 7, Para 501

I would like to present the reader with another fantasy-fragment from a woman. The difference from the previous example leaps to the eye: here the experience is total, the observer takes an active part and thus makes the process her own. The material in this case is very extensive, culminating in a profound transformation of personality. The fragment comes from a late phase of personal development and is an organic part of a long and continuous series of transformations which have as their goal the attainment of the mid-point of the personality Carl Jung, CW 7, Para 364

It may not be immediately apparent what is meant by a "mid-point of the personality." I will therefore try to outline this problem in a few words. If we picture the conscious mind, with the ego as its center, as being opposed to the unconscious, and if we now add to our mental picture the process of assimilating the unconscious, we can think of this assimilation as a kind of approximation of conscious and unconscious, where the center of the total personality no longer coincides with the ego, but with a point midway between the conscious and the unconscious. This would be the point of new equilibrium, a new centering of the total personality, a virtual center which, on account of its focal position between conscious and unconscious, ensures for the personality a new and more solid foundation Carl Jung, CW 7, Para 365

At all events the unprejudiced reader will recognize at once the idea of a "mid-point" that is reached by a kind of climb (mountaineering, effort, struggle, etc.) Carl Jung, CW 7, Para 367

He will also recognize without difficulty the famous medieval conundrum of the squaring of the circle, which belongs to the field of alchemy. Here it takes its rightful place as a symbol of individuation Carl Jung, CW 7, Para 367

The total personality is indicated by the four cardinal points, the four gods, i.e., the four functions which give bearings in psychic space, and also by the circle enclosing the whole Carl Jung, CW 7, Para 367

Overcoming the four gods who threaten to smother the individual signifies liberation from identification with the four functions, a fourfold nirdvandva ("free from opposites") followed by an approximation to the circle, to undivided wholeness Carl Jung, CW 7, Para 367

Through her active participation the patient merges herself in the unconscious processes, and she gains possession of them by allowing them to possess her. In this way she joins the conscious to the unconscious. The result is ascension in the flame, transmutation in the alchemical heat, the genesis of the "subtle spirit." That is the transcendent function born of the union of opposites Carl Jung, CW 7, Para 368

The dream presents itself to us as a more or less unintelligible jumble of elements not at first conscious and only recognized afterwards through their associations. It should be added that not all parts of the dream have a recognizable quality from which their conscious character can be deduced; they are often, and indeed mostly, unrecognizable at first. Only afterwards does it occur to us that we have consciously experienced this or that part of the dream. From this standpoint alone we may regard the dream as a product of unconscious origin Carl Jung, CW 7, Para 324

A second wave of Dionysian licentiousness swept over the West at the Renaissance. It is difficult to gauge the spirit of one's own time; but in the succession of revolutionary questions to which the last half century gave birth, there was the "sexual question," and this has fathered a whole new species of literature. In this "movement" are rooted the beginnings of psychoanalysis, on whose theories it exerted a very one-sided influence Carl Jung, CW 7, Para 17

No man is so entirely masculine that he has nothing feminine in him ... The repression of feminine traits ...causes these contrasexual demands to accumulate in the unconscious. Carl Jung, CW 7, Para 297

Take, for example, the "spotless" man of honor and public benefactor, whose tantrums and explosive moodiness terrify his wife and children. What is the anima doing here? Carl Jung, CW 7, Para 319

... it is essentially the overvaluation of the material object without that constellates a spiritual and immortal figure within (obviously for the purpose of compensation and self-regulation) ... [A] compensatory relationship exists between persona and anima. Carl Jung, CW 7, Para 303-304

... another fact to which I have already alluded, [is] the characteristically historical aspect of the soul. Carl Jung, CW 7, Para 33

... when anima forfeits the daemonic power of an autonomous complex ... she is depotentiated ... no longer is the soul to be called "Mistress," but a psychological function of an intuitive nature, akin to what the primitives mean when they say, "He has gone into the forest

to talk with the spirits" or "My snake spoke with me …" Carl Jung, CW 7, Para 374

… the autonomous complex of anima and animus is essentially a psychological function that has usurped, or rather retained, a "personality" only because this function is itself autonomous and undeveloped. But already we can see how it is possible to break up the personifications, since by making them conscious we convert them into bridges to the unconscious. It is because we are not using them purposefully as functions that they remain personified complexes. So long as they are in this state they must be accepted as relatively independent personalities. They cannot be integrated into consciousness while their contents remain unknown. The purpose of the dialectical process is to bring these contents into the light; and only when this task has been completed, and the conscious mind has become sufficiently familiar with the unconscious processes reflected in the anima, will the anima be felt simply as a function. Carl Jung, CW 7, Para 339

A girl who has an illegitimate baby is condemned and nobody asks whether she is a decent human being or not. Carl Jung, CW 7, On Eros Theory, Page 27.

Any form of love not sanctioned by law is considered immoral, whether between worthwhile people or bounders. Carl Jung, CW 7, On Eros Theory, Pages 27.

We are still so hypnotized by what happens that we forget how and to whom it happens, just as for the Middle Ages finance was nothing but glittering gold, fiercely coveted and therefore the devil. Carl Jung, CW 7, On Eros Theory, Page 27.

Woman, with her very dissimilar psychology, is and always has been a source of information about things for which a man has no eyes. Carl Jung, CW 7, Para 296

The man we call modern, the man who is aware of the immediate present, is by no means the average man. He is rather the man who stands upon a peak, or at the very edge of the world, the abyss of the future before him, above him the heavens, and below him the whole of mankind with a history that disappears in primeval mists. The modern man—or let us say again, the man of the immediate present—is rarely met with, for he must be conscious to a superlative degree. Since to be wholly of the present means to be fully conscious of one's existence as a man, it requires the most intensive and extensive consciousness, with a minimum of unconsciousness. It must be clearly understood that the mere fact of living in the present does not make a man modern, for in that case everyone at present alive would be so. We always find in the patient a conflict which at a certain point is connected with the great problems of society. Hence, when the analysis is pushed to this point, the apparently individual conflict of the patient is revealed as a universal conflict of his environment and epoch. The old religions with their sublime and ridiculous, their friendly and fiendish symbols did not drop from the blue but were born of this human soul that dwells within us at this moment. All those things, their primal forms, live on in us and may at any time burst in upon us with annihilating force, in the guise of mass-suggestions against which the individual is defenseless. Our fearsome gods have only changed their names: they now rhyme with ism. Or has anyone the nerve to claim that the World War or Bolshevism was an ingenious invention? Just as outwardly we live in a world where a whole continent may be submerged at any moment, or a pole be shifted, or a new pestilence break out, so inwardly we live in a world where at any moment something similar may occur, albeit in the form of an idea, but no less dangerous and untrustworthy for that. Carl Jung, CW 7, Page 204.

Carl Jung: CW 8 “Structure and Dynamics of the Psyche”

[9]The Structure and Dynamics of the Psyche (Collected Works of C.G. Jung, Volume 8)

As against Freud’s view that the dream is essentially a wish-fulfillment, I hold that the dream is a spontaneous self-portrayal, in symbolic form, of the actual situation in the unconscious. Carl Jung, CW 8 Para 505

Deviation from the truth of the blood begets neurotic restlessness … Restlessness begets meaninglessness, and the lack of meaning in life is a soul sickness whose full extent and full import our age has not yet begun to comprehend. Carl Jung, CW 8, Para 815

Every advance in culture is, psychologically, an extension of consciousness, a coming to consciousness that can take place only through discrimination. Therefore an advance always begins with individuation, that is to say with the individual, conscious of his isolation, cutting a new path through hitherto untrodden territory. To do this he must first return to the fundamental facts of his own being, irrespective of all authority and tradition, and allow himself to become conscious of his distinctiveness. "Reflection" should be understood not simply as an act of thought, but rather as an attitude. It is a privilege born of human freedom in contradistinction to the compulsion of natural law. As the word itself testifies ("reflection" means literally "bending back"), reflection is a spiritual act that runs counter to the natural process; an act whereby we stop, call something to mind, form a picture, and take up a relation to and come to terms with what we have seen. It should, therefore, be understood as an act of becoming conscious. Carl Jung, CW 8, Para 111

The dream has for the primitive an incomparably higher value than it has for civilized man. Not only does he talk a great deal about his dreams, he also attributes an extraordinary importance to them, so that it often seems as though he were unable to distinguish between them and reality. To the civilized man dreams as a rule appear valueless, though there are some people who attach great significance to certain dreams on account of their weird and impressive character. As against Freud’s view that the dream is essentially a wish-fulfillment, I hold that the dream is a spontaneous self-portrayal, in symbolic form, of the actual situation in the unconscious. Carl Jung, CW 8, Para 505

The dream rectifies the situation. It contributes the material that was lacking and thereby improves the patient’s attitude. That is the reason we need dream-analysis in our therapy. Carl Jung, CW 8, Para 482.

Psychic processes therefore behave like a scale along which consciousness "slides." At one moment it finds itself in the vicinity of instinct, and falls under its influence; at another, it slides along to the other end where spirit predominates and even assimilates the instinctual processes most opposed to it. Carl Jung, CW 8, Para 408

This is an age-old experience of mankind which is reflected in the universal supposition

of a plurality of souls in one and the same individual. As the plurality of psychic components at the primitive level shows the original state is one in which the psychic processes are very loosely knit and by no means form a self-contained unity. Carl Jung, CW 8, Para 365

It strikes me as significant, particularly in regard to our hypothesis of a multiple consciousness and its phenomena, that the characteristic alchemical vision of sparks scintillating in the blackness of the arcane substance should, for Paracelsus, change into the spectacle of the "interior firmament" and its stars ..... it is in my view not too much to assume that these multiple luminosities correspond to tiny conscious phenomena. Carl Jung, CW 8, Para 392

The transformation of libido through the symbol is a process that has been going on ever since the beginnings of humanity and continues still ... This age-old function of the symbol is still present today, despite the fact that for many centuries the trend of mental development has been towards the suppression of individual symbol-formation ... [A] step in this direction was ... the extermination of polytheism ... Carl Jung, CW 8, Para 92

... the reflective instinct ... Reflexio means 'bending back' ... the fact that the reflex which carries the stimulus over into its instinctive discharge is interfered with by psychization ... Reflexio is a turning inwards, with the result that ... there ensues a succession of derivative contents or states which may be termed reflection or deliberation. Through the reflective instinct, the stimulus is more or less wholly transformed into a psychic content, that is, it becomes an experience ... Carl Jung, CW 8, Para 241

[... there is no consistent equivalent of Seele in English ... in the essay "Spirit and Life," ... "soul" would give entirely the wrong meaning. It has therefore been translated ... either as "psyche" or as "mind" ... [There is] an increasing tendency to replace the concept Seele by Psyche, until, in "The Real and the Surreal" (1933), Psyche alone occupies the field.] Carl Jung, CW 8, Para 300

... the archetypes are not found exclusively in the psychic sphere ... Carl Jung, CW 8, Para 964

Although there is no form of existence that is not mediated to us psychically ... it would hardly do to say that everything is merely psychic. We must apply this argument logically to the archetypes as well. Carl Jung, CW 8, Para 420

We might compare masculinity and femininity and their psychic components to a definite store of substances of which, in the first half of life, unequal use is made. A man consumes his large supply of masculine substance and has left over only the smaller amount of feminine substance, which must now be put to use. Carl Jung, CW 8, Para 782

We might compare masculinity and femininity and their psychic components to a definite store of substances ... Carl Jung, CW 8 Para 782

The richness of the human psyche and its essential character are probably determined by this reflective instinct. Carl Jung, CW 8, Para 242

If the unconscious can contain everything that is known to be a function of consciousness, then we are faced with the possibility that it too, like consciousness, possesses a subject, a sort of ego. Carl Jung, CW 8, Para 369

He who is rooted in the soil endures. Alienation from the unconscious and from its historical conditions spells rootlessness [. . . to the] earth ground of his being' Carl Jung, CW 8, Page 103

'[The] man who thinks he can live without myth, or outside it, like one uprooted, has no true link either with the past, or with the ancestral life which continues within him or yet with contemporary human society' Carl Jung, CW 8, Page xxiv

... aesthetic formulation needs understanding of the meaning and understanding needs aesthetic formulation. The two supplement each other to form the transcendent function. Carl Jung, CW 8, Para 177

... primitives assume the existence of several souls ... I am therefore inclined to think that autonomous complexes are among the normal phenomena of life and that they make up the structure of the unconscious psyche. Carl Jung, CW 8, Para 18 217–18)

... it is frequently supposed that people have two or more souls ... Carl Jung, CW 8, Para 577

The plurality of souls indicates a plurality of relatively autonomous complexes ... Carl Jung, CW 8, Para 587

1. The coincidence of a psychic state in the observer with a simultaneous, objective, external event that corresponds to the psychic state or content (e.g., the scarab), where there is no evidence of a causal connection between the psychic state and the external event, and where, considering the psychic relativity of space and time, such a connection is not even conceivable.
2. The coincidence of a psychic state with a corresponding (more or less simultaneous) external event taking place outside the observer's field of perception, i.e., at a distance, and only verifiable afterward (e.g., the Stockholm fire).
3. The coincidence of a psychic state with a corresponding, not yet existent future event that is distant in time and can likewise only be verified afterward. Carl Jung, CW 8, Para 964

"[Synchronicities] have to do with spontaneous, meaningful coincidences of so high a degree of improbability as to appear flatly unbelievable" Carl Jung, CW 8, Para 981

In contrast to the idea of a preestablished harmony, the synchronistic factor merely stipulates the existence of an intellectually necessary principle which could be added as a fourth to the recognized triad of space, time, and causality. Carl Jung CW 8, Para 958

Whether we like it or not, we find ourselves in this embarrassing position as soon as we begin seriously to reflect on the teleological processes in biology or to investigate the compensatory function of the unconscious, not to speak of trying to explain the phenomenon of synchronicity. Final causes, twist them how we will, postulate a foreknowledge of some kind. It is certainly not a knowledge that could be connected with the ego, and hence not a

conscious knowledge as we know it, but rather a self-subsistent “unconscious” knowledge. Carl Jung, CW 8, Para 931

The activity of the collective unconscious manifests itself not only in compensatory effects in the lives of individuals, but also in the mutation of dominant ideas in the course of the centuries. This can be seen most clearly in religions, and, to a lesser extent, in the various philosophical, social, and political ideologies. Carl Jung, CW 8, Para 161

It not infrequently happens that the archetype appears in the form of a spirit in dreams or fantasy products, or even comports itself like a ghost. There is a mystical aura about its numinosity, and it has a corresponding effect upon the emotions. . .. Often it drives with unexampled passion and remorseless logic towards its goal and draws the subject under its spell, from which despite the most desperate resistance he is unable, and finally no longer even willing, to break free, because the experience brings with it a depth and fullness of meaning that was unthinkable before. Carl Jung, CW 8, Para 405

People live as though they were walking in shoes too small for them. That quality of eternity which is so characteristic of the life of primitive man is entirely lacking. Hemmed round by rationalistic walls, we are cut off from the eternity of nature. Analytical psychology seeks to break through these walls by digging up again the fantasy-images of the unconscious which our rationalism has rejected. These images lie beyond the walls; they are part of the nature in us, which lies buried in our past and against which we have barricaded ourselves behind walls of reason. Analytical psychology tries to resolve the resultant conflict not by going "back to nature" with Rousseau, but by holding on to the level of reason we have successfully reached, and by enriching consciousness with a knowledge of man’s psychic foundations. Carl Jung, CW 8, Para 739

Not for a moment dare we succumb to the illusion that an archetype can be really explained and disposed of. Even the best attempts at explanation are only more or less successful translations into another metaphorical language . . . The most we can do is to dream the myth onwards and give it a modern dress. And whatever explanation or interpretation does to it, we do to our own souls as well, with corresponding results for our own psychic well-being. Carl Jung, CW 8, Page 259

A dark impulse is the ultimate arbiter of the pattern, an unconscious a priori precipitates itself into plastic form . . . Over the whole procedure there seems to reign a dim foreknowledge not only of the pattern but of its meaning. Image and meaning are identical; and as the first takes shape, so the latter becomes clear. Actually the pattern needs no interpretation: it portrays its own meaning. Carl Jung, CW 8, Page 402

An advance always begins with individuation, that is to say with the individual, conscious of his isolation, cutting a new path through hitherto untrodden territory. To do this he must first return to the fundamental facts of his own being, irrespective of all authority and tradition, and allow himself to become conscious of his distinctiveness. If he succeeds in giving collective validity to his widened consciousness, he creates a tension of opposites that provides the stimulation which culture needs for its further progress. Carl Jung, CW 8, Page 59

The idea of synchronicity and of a self-subsistent meaning, which forms the basis of classical Chinese thinking and of the naïve views of the Middle Ages, seems to us an archaic assumption that ought at all costs to be avoided. Though the West has done everything possible to discard

this antiquated hypothesis, it has not quite succeeded. Certain mantic procedures seem to have died out, but astrology, which in our own day has attained an eminence never known before, remains very much alive. Nor has the determinism of a scientific epoch been able to extinguish altogether the persuasive power of the synchronicity principle. For in the last resort it is not so much a question of superstition as of a truth which remained hidden for so long only because it had less to do with the physical side of events than with their psychic aspects. It was modern psychology and parapsychology which proved that causality does not explain a certain class of events and that in this case we have to consider a formal factor, namely synchronicity, as a principle of explanation. Carl Jung, CW 8, Para 944

. . . The three main components of the horoscope . . . [are] the ascendent, or rising degree of a zodiacal sign, which characterizes the moment, the moon, which characterizes the day, and the sun, which characterizes the month of birth. Carl Jung, CW 8, Para 904

The starry vault of heaven is in truth the open book of cosmic projection, in which are reflected the mythologems, i.e., the archetypes. In this vision astrology and alchemy, the two classical functionaries of the psychology of the collective unconscious, join hands. Carl Jung, CW 8, Page 195, Para 392.

. . . The relation of Mars to Venus can reveal a love relation, but a marriage is not always a love relation and a love relation is not always a marriage. Carl Jung, CW 8, Para 879

I have observed a great many people whose unconscious psychic activity I was able to follow into the immediate presence of death. As a rule the approaching end was indicated by those symbols which, in normal life also, proclaim changes of psychological condition—rebirth symbols such as change of locality, journeys and the like. I have frequently been able to trace back for over a year, in a dream series, the indications of approaching death, even in cases where such thoughts were not prompted by the outward situation. Dying, therefore, has its onset long before the actual death. Moreover, this often shows itself in peculiar changes of personality, which may precede death by quite a long time. ’ Carl Jung, CW 8, Para 809

Just as the archetypal is partly a spiritual factor, and partly like a hidden meaning immanent in the instinct, so the spirit, as I have shown, is two-faced and paradoxical: a great help and an equally great danger. It seems as if man were destined to play a decisive role in solving this uncertainty, and to solve it more over by virtue of his consciousness, which once started up like a light in the murk of the primeval world. Carl Jung, CW 8, Para 427

As a doctor I am convinced that it is hygienic to discover in death a goal towards which one can strive, Carl Jung, CW 8, Para 793

Complexes are very much part of the psychic constitution, which is the most absolutely prejudiced thing in every individual. His constitution will therefore inexorably decide what psychological view a given observation to be true or falsified, what one sees invariably incluserver will have. Herein lies the unavoidable limitation of psychological observation: its validity is contingent upon the personal equation of the observer. (…) Carl Jung, CW 8, Para 213

The ‘absolute knowledge’ which is characteristic of synchronistic phenomena, a knowledge not mediated by the sense of organs supports the hypothesis of a self-subsistent meaning, or even express its existence. This quality of knowledge is what I call ‘absolute

knowledge', since it seems to be detached from our consciousness. Carl Jung, CW 8, Para 948

We are therefore fully justified in speaking of an unconscious psyche. It is not directly accessible to observation—otherwise it would not be unconscious—but can only be inferred. Our inferences can never go beyond: "it is as if." Carl Jung, CW 8, Para 297

The daily course of the sun and the regular alternation of the day and night must have imprinted themselves on the psyche in the form of an image from primordial times. Carl Jung, CW 8, Para 326

We cannot demonstrate the existence of this image but find instead more or less fantastic analogies of the physical process. Every morning a divine hero is born from the sea and mounts the chariot of the sun. In the West, a Great Mother awaits him, and he is devoured by her in the evening. In the belly of a dragon he traverses the depths of the midnight sea. After a frightful combat with the serpent of night he is born again in the morning. Carl Jung, CW 8, Para 326

What we can safely say about mythical images is that the physical process imprinted itself on the psyche in this fantastic, distorted form and was preserved there, so that the unconscious still reproduces similar images today. Naturally, the question now arises: why does the psyche not register the actual process, instead of mere fantasies about the physical process? Carl Jung, CW 8, Para 328

If you can put yourself in the mind of the primitive, you will at once understand why this is so. He lives in such "participation mystique" with his world, as Lévy-Bruhl calls it, that there is nothing like that absolute distinction between subject and object which exists in our minds. What happens outside also happens in him, and what happens in him also happens outside. I witnessed a very fine example of this when I was with the Elgonyi, a primitive tribe living on Mount Elgon, in East Africa. Carl Jung, CW 8, Para 329

At sunrise they [the Elgonyi] spit on their hands and then hold the palms towards the sun as it comes over the horizon. "We are happy that the night is past," they say. Since the word for sun, adhista, also means God, I asked: "Is the sun God?" They said "No" to this and laughed, as if I had said something especially stupid. As the sun was just then high in the heavens, I pointed to it and asked: "When the sun is there you say it is not God, but when it is in the east you say it is God. How is that?" There was an embarrassed silence till an old chief began to explain. "It is so," he said. "When the sun is up there it is not God, but when it rises, that is God [or: then it is God]" To the primitive mind it is immaterial which of these two versions is correct. Sunrise and his own feeling of deliverance are for him the same divine experience, just as night and his fear are the same thing. Naturally, his emotions are more important to him than physics; therefore what he registers is his emotional fantasies. For him night means snakes and the cold breath of spirits, whereas morning means the birth of a beautiful god.

There are mythological theories that explain everything as coming from the sun and lunar theories that do the same for the moon. This is due to the simple fact that there are countless myths about the moon, among them a whole host in which the moon is the wife of the sun. Carl Jung, CW 8, Para

The moon is the changing experience of the night, and thus coincides with the primitive's sexual experience of woman, who for him is also the experience of the night. Carl Jung, CW 8, Para 330

But the moon can equally well be the injured brother of the sun, for at night affect-laden and evil thoughts of power and revenge may disturb sleep. Carl Jung, CW 8, Para 330

The moon, too, is a disturber of sleep, and is also the abode of departed souls, for at night the dead return in dreams and the phantoms of the past terrify the sleepless. Carl Jung, CW 8, Para 330

Thus the moon also signifies madness ("lunacy"). It is such experiences as these that have impressed themselves on the mind, rather than the changing image of the moon. Carl Jung, CW 8, Para 330

It is not storms, not thunder and lightning, not rain and cloud that remain as images in the psyche, but the fantasies caused by the affects they arouse. I once experienced a violent earthquake, and my first, immediate feeling was that I no longer stood on the solid and familiar earth, but on the skin of a gigantic animal that was heaving under my feet. It was this image that impressed itself on me, not the physical fact. Carl Jung, CW 8. Para 331

Man's curses against devastating thunderstorms, his terror of the unchained elements these affects anthropomorphize the passion of nature, and the purely physical element becomes an angry god. Carl Jung, CW 8, Para 331

Like the physical conditions of man's environment, the physiological conditions, glandular secretions, etc., also can arouse fantasies charged with affect. Sexuality appears as a god of fertility, as a fiercely sensual, feminine daemon, as the devil himself with Dionysian goat's legs and obscene gestures, or as a terrifying serpent that squeezes its victims to death. Carl Jung, CW 8, Para 332

Hunger makes food into gods. Certain Mexican tribes even give their food-gods an annual holiday to allow them to recuperate, and during this time the staple food is not eaten. Carl Jung, CW 8, Para 333

The ancient Pharaohs were worshipped as eaters of gods. Osiris is the wheat, the son of the earth, and to this day the Host must be made of wheat-meal, i.e., a god to be eaten, as also was Iacchos, the mysterious god of the Eleusinian mysteries. The bull of Mithras is the edible fruitfulness of the earth. Carl Jung, CW 8, Para 333

The psychological conditions of the environment naturally leave similar mythical traces behind them. Dangerous situations, be they dangers to the body or to the soul, arouse affect-laden fantasies, and, in so far as such situations typically repeat themselves, they give rise to archetypes, as I have termed myth-motifs in general. Carl Jung, CW 8, Para 334

How is it then, you may ask, with the most ordinary everyday events, with immediate realities like husband, wife, father, mother, child? These ordinary everyday facts, which are eternally repeated, create the mightiest archetypes of all, whose ceaseless activity is

everywhere apparent even in a rationalistic age like ours. Carl Jung, CW, Para 336

Let us take as an example the Christian dogma. The Trinity consists of Father, Son, and Holy Ghost, who is represented by the bird of Astarte, the dove, and who in early Christian times was called Sophia and thought of as feminine. The worship of Mary in the later Church is an obvious substitute for this. Here we have the archetype of the family 'in a supracelestial place,' as Plato expresses it, enthroned as a formulation of the ultimate mystery. Carl Jung, CW 8, Para 336

Christ is the bridegroom, the Church is the bride, the baptismal font is the womb of the Church, as it is still called in the text of the Benedictio fontis. The holy water has salt put into it, with the idea of making it like the amniotic fluid, or like sea-water. Carl Jung, CW 8, Para 336

A hierosgamos or sacred wedding is performed on Holy Saturday before Easter, which I have just mentioned, and a burning candle as a phallic symbol is plunged three times into the font, in order to fertilize it and lend it the power to bear the baptized child anew (quasimodo genitus) Carl Jung, CW 8, Para 336

The mana personality, the medicine-man, is the pontifex maximus, the Papa; the Church is mater ecclesia, the magna mater of magical power, and mankind are children in need of help and grace. Carl Jung, CW 8, Para 336

The deposit of mankind's whole ancestral experience so rich in emotional imagery of father, mother, child, husband and wife, of the magic personality, of dangers to body and soul, has exalted this group of archetypes into the supreme regulating principles of religious and even of political life, in unconscious recognition of their tremendous psychic power. Carl Jung, CW 8, Para 337

I have found that a rational understanding of these things in no way detracts from their value; on the contrary, it helps us not only to feel but to gain insight into their immense significance. These mighty projections enable the Catholic to experience large tracts of his collective unconscious in tangible reality. He has no need to go in search of authority, superior power, revelation, or something that would link him with the eternal and the timeless. These are always present and available for him: there, in the Holy of Holies on every altar, dwells the presence of God. Carl Jung, CW 8, Para 338

It is the Protestant and the Jew who have to seek, the one because he has, in a manner of speaking, destroyed the earthly body of the Deity, the other because he can never find it. For both of them the archetypes, which to the Catholic world have become a visible and living reality, lie in the unconscious. Carl Jung, CW 8, Para 338

The Trinity consists of Father, Son, and Holy Ghost, who is represented by the bird of Astarte, the dove, and who in early Christian times was called Sophia and thought of as feminine. The worship of Mary in the later Church is an obvious substitute for this. Carl Jung, CW 8, Para 336.

Here we have the archetype of the family 'in a supracelestial place,' as Plato expresses it, enthroned as a formulation of the ultimate mystery Carl Jung, CW 8, Para 336

Christ is the bridegroom, the Church is the bride, the baptismal font is the womb of the Church, as it is still called in the text of the Benedictio fontis. Carl Jung, CW 8, Para 336

The holy water has salt put into it, with the idea of making it like the amniotic fluid, or like sea-water. Carl Jung, CW 8, Para 336

A hierosgamos or sacred wedding, is performed on Holy Saturday before Easter, and a burning candle as a phallic symbol is plunged three times into the font, in order to fertilize it and lend it the power to bear the baptized child anew (quasimodo genitus). Carl Jung, CW 8, Para 336

The mana personality, the medicine-man, is the pontifex maximus, the Papa. Carl Jung, CW 8, Para 336

The Church is mater ecclesia, the magna mater of magical power. Carl Jung, CW 8, Para 336

Mankind are children in need of help and grace Carl Jung, CW 8, Para 336

The discovery of the “higher” man, and also the “ugliest” man, expresses the regulating influence [of the unconscious]. For the “higher” men want to drag Zarathustra down to the collective sphere of average humanity as it always has been. While the “ugliest” man is actually the personification of the counteraction. But the roaring lion of Zarathustra’s moral conviction forces all these influences, above all the feeling of pity, back again into the cave of the unconscious. Thus the regulating influence is suppressed, but not the secret counteraction of the unconscious, which from now on becomes clearly noticeable in Nietzsche’s writings. First he [Nietzsche] seeks his adversary in Wagner, whom he cannot forgive for Parsifal, but soon his whole wrath turns against Christianity and in particular against St. Paul, who in some ways suffered a fate similar to Nietzsche’s. As is well known, Nietzsche’s psychosis first produced an identification with the “Crucified Christ” and then with the dismembered Dionysus. With this catastrophe the counteraction at last broke through to the surface. Carl Jung, CW 8 Para162

We are concerned here, then, with the psychological phenomenon that lies at the root of magic by analogy. We should not think that is an ancient superstition which we have long since outgrown. If you read the Latin text of the Mass carefully, you will constantly come upon the famous “sicut”; this always introduces an analogy by means of which a change is to be produced. Another striking example of analogy is the making fire on Holy Saturday. In former times, the new fire was struck from the stone, and still earlier it was obtained by boring into a piece of wood, which was the prerogative of the Church. Therefore in the prayer of the priest it is said: O God, who through thy Son, who is called the cornerstone, hast brought the fire of thy light to the faithful, make holy for our future use this new fire struck from the firestone. By the analogy of Christ with the cornerstone, the firestone is raised to the level of Christ himself, who again kindles a new fire. Carl Jung, CW 8 Para 314

The rationalist may laugh at this. But something deep in us is stirred, and not in us alone but in millions of Christian men and women, though we may call it only a feeling for beauty. What is stirred in us is that faraway background, those immemorial patterns of the human mind, which we have not acquired, but have inherited from the dim ages of the past. Carl Jung, CW 8 Para 315

Often the hands know how to solve a riddle with which the intellect has wrestled in vain.

Carl Jung, CW 8, Para 180

First I made the observations, and only then did I hammer out my views. And so it is with the hand that guides the crayon or brush, the foot that executes the dance-step, with the eye and the ear, with the word and the thought: a dark impulse is the ultimate arbiter of the pattern, an unconscious a priori precipitates itself into plastic form. Carl Jung, CW 8, Para 402

'Everyone knows nowadays that people "have complexes." What is not so well known, though far more important theoretically, is that complexes can have us' Carl Jung, CW 8, Para 200

A product is created [Through Active Imagination] which is influenced by both conscious and unconscious, embodying the striving of the unconscious for the light and the striving of the conscious for substance' Carl Jung, CW 8, Para 168

A human being would certainly not grow to be seventy or eighty years old if this longevity had no meaning for the species. Carl Jung, CW 8, Pages 399-403.

The afternoon of human life must also have a significance of its own and cannot be merely a pitiful appendage to life's morning. Carl Jung, CW 8, Pages 399-403.

The elusiveness, capriciousness, haziness, and uniqueness that the lay mind always associates with the idea of the psyche applies only to consciousness, and not to the absolute unconscious. Carl Jung, CW 8, Page 230.

It is the psyche which is 'the world's pivot: not only is it the one great condition for the existence of a world at all, it is also an intervention in the existing natural order, and no one can say with certainty where this intervention will final end. Carl Jung, CW 8, para 423.

The reality of the psyche stands over against 'common sense', which tends to blunt the spirit and lull man into security. Carl Jung, Jung, C.W. 8, Page 48.

Culture lies outside the purpose of nature. Could by any chance culture be the meaning and purpose of the second half of life? Carl Jung, CW 8, Pages 399-403.

Life's cessation, that is, death, can only be accepted as a reasonable goal either when existence is so wretched that we are only too glad for it to end, or when we are convinced that the sun strives to its setting "to illuminate distant races" with the same logical consistency it showed in rising to the zenith. Carl Jung, CW 8, Pages 400

To the psychotherapist an old man who cannot bid farewell to life appears as feeble and sickly as a young man who is unable to embrace it. Carl Jung, CW 8, Pages 399-403.

As a doctor I am convinced that it is hygienic—if I may use the word—to discover in death a goal towards which one can strive, and that shrinking away from it is something unhealthy and abnormal which robs the second half of life of its purpose. Carl Jung, CW 8, Pages 399-403.

The archetype as an image of instinct is a spiritual goal toward which the whole nature of man strives; it is the sea to which all rivers wend their way, the prize which the hero wrests from the fight with the dragon. Carl Jung, CW 8, Para 415

In spite of the fact that the majority of people do not know why the body needs salt, everyone demands it nonetheless because of an instinctive need. It is the same with the things of the psyche. That is the working of the intellect. Carl Jung, CW 8, Para 793

But besides that there is a thinking in primordial images, in symbols which are older than the historical man, which are inborn in him from the earliest times, and, eternally living, outlasting all generations, still make up the groundwork of the human psyche. It is only possible to live the fullest life when we are in harmony with these symbols; wisdom is a return to them. Carl Jung, CW 8, Para 794

Before the nineteenth century the thyroid was regarded as a meaningless organ merely because it was not understood. It would be equally shortsighted of us today to call the primordial images senseless. For me these images are something like psychic organs, and I treat them with the very greatest respect. Carl Jung, CW 8, Para 794

It happens sometimes that I must say to an older patient: "Your picture of God or your idea of immortality is atrophied, consequently your psychic metabolism is out of gear." Carl Jung, CW 8, Para 794

For a young person it is almost a sin, or at least a danger, to be too preoccupied with himself; but for the ageing person it is a duty and a necessity to devote serious attention to himself. Carl Jung, CW 8, Para 785.

…many old people prefer to be hypochondriacs, niggards, pedants, applauders of the past or else eternal adolescents—all lamentable substitutes for the illumination of the self, but inevitable consequences of the delusion that the second half of life must be governed by the principles of the first. Carl Jung, CW 8, Para 785.

Spirit, like God, denotes an object of psychic experience which cannot be proved to exist in the external world and cannot be understood rationally. This is its meaning if we use the word "spirit" in its best sense. Carl Jung, CW 8, Page 329, par. 626.

In archetypal conceptions and instinctual perceptions, spirit and matter confront one another on the psychic plane. Carl Jung, CW 8, Para 420.

If so, the position of the archetype would be located beyond the psychic sphere, analogous to the position of physiological instinct, which is immediately rooted in the stuff of the organism and, with its psychoid nature, forms the bridge to matter in general. Carl Jung, CW 8, Para 420.

The scarab is a classical rebirth symbol. According to the description in the ancient Egyptian book Am-Tuat, the dead sun God transforms himself at the tenth station into Khepri, the scarab, and as such mounts the barge at the twelfth station, which raises the rejuvenated sun into the morning sky Carl Jung, CW 8, Para 843.

The psyche as such cannot be explained in terms of physiological chemistry, if only because, together with "life" itself, it is the only "natural factor" capable of converting statistical organizations which are subject to natural law into "higher" or "unnatural" states, in opposition to the rule of entropy that runs throughout the inorganic realm. Carl Jung, CW 8, Para 371-381

How life produces complex organic systems from the inorganic we do not know, though we have direct experience of how the psyche does it. Life therefore has a specific law of its own which cannot be deduced from the known physical laws of nature. Carl Jung, CW 8, Paras 371-381

The psychic condition or quality begins where the function loses its outer and inner determinism and becomes capable of more extensive and freer application, that is, where it begins to show itself accessible to a will motivated from other sources. Carl Jung, CW 8, Paras 371-381

Differentiation of function from compulsive instinctuality, and its voluntary application, are of paramount importance in the maintenance of life. Carl Jung, CW 8, Paras 371-381.

Spirit and instinct are by nature autonomous and both limit in equal measure the applied field of the will. Carl Jung, CW 8, Paras 371-381.

I once experienced a violent earthquake, and my first, immediate feeling was that I no longer stood on solid familiar earth, but on the skin of a gigantic animal that was heaving under my feet. It was this image that impressed itself on me, not the physical fact. Carl Jung, CW 8, par 331.

We are beset by an all-too-human fear that consciousness - our Promethean conquest - may in the end not be able to serve us as well as nature. Carl Jung, CW 8, Par 750.

In the intensity of the emotional disturbance itself lies the value, the energy which he should have at his disposal in order to remedy the state of reduced adaptation. Carl Jung, CW 8, Page 82.

Since the depression was not manufactured by the conscious mind but is an unwelcome intrusion from the unconscious, the elaboration of the mood is, as it were, a picture of the contents and tendencies of the unconscious that were massed together in the depression. Carl Jung, CW 8, Page 82.

“The Red Book is an attempt at an elaboration [of the imaginal events] in the sense of Revelation.” Carl Jung, “The Protocols,” Page 148

Often, however, we find cases where there is no tangible mood or depression at all, but just a general, dull discontent, a feeling of resistance to everything, a sort of boredom or vague disgust, an indefinable but excruciating emptiness. Carl Jung, CW 8, Page 83.

These words belonged to the autonomous complex. When excited by an external stimulus, complexes can produce sudden confusions, or violent affects, depressions, anxiety-states, etc., or they may express themselves in hallucinations. Carl Jung, CW 8, Page 313.

Statistics show a rise in the frequency of mental depressions in men about forty. In women the neurotic difficulties generally begin somewhat earlier. We see that in this phase of life—between thirty-five and forty—an important change in the human psyche is in preparation. Carl Jung, CW 8, Page 395.

Youthful longing for the world and for life, for the attainment of high hopes and distant goals, is life's obvious teleological urge which at once changes into fear of life, neurotic resistances, depressions, and phobias if at some point it remains caught in the past or shrinks from risks without which the unseen goal cannot be attained. Carl Jung, CW 8, Page 406.

Blue is the color of Mary's celestial cloak; she is the earth covered by the blue tent of the sky… Carl Jung, CW 8, Page 87.

The question may be formulated simply as follows: 'What is the purpose of this dream? What effect is it meant to have? These questions are not arbitrary inasmuch as they can be applied to every psychic activity. Carl Jung, CW 8, para. 462.

Numinosity, however, is wholly outside conscious volition, for it transports the subject into the state of rapture, which is a state of will-less surrender. Carl Jung, CW 8, Para 383.

If consciousness had never split off from the unconscious—an eternally repeated event symbolized as the fall of the angels and the disobedience of the first parents—this problem would never have arisen, any more than would the question of environmental adaptation. Carl Jung, CW 8, Para 339.

The archetype as an image of instinct is a spiritual goal toward which the whole nature of man strives; it is the sea to which all rivers wend their way, the prize which the hero wrests from the fight with the dragon. Carl Jung, CW 8, Para 415.

It seems to me probable that the real nature of the archetype is not capable of being made conscious, that it is transcendent, on which account I call it psychoid. Carl Jung, CW 8, Para 417

But besides that [Intellect] there is a thinking in primordial images, in symbols which are older than the historical man, which are inborn in him from the earliest times, and, eternally living, outlasting all generations, still make up the groundwork of the human psyche. Carl Jung, CW 8, Para 794

It is only possible to live the fullest life when we are in harmony with these symbols; wisdom is a return to them. Carl Jung, CW 8, Para 794

Archetypes probably represent typical situations in life. Carl Jung, CW 8, Para 254

The deposit of man's whole ancestral experience—so rich in emotional imagery—of father, mother, child, husband and wife, of the magic personality, of dangers to body and soul, has exalted this group of archetypes into the supreme regulating principles of religious and even of political life, in unconscious recognition of their tremendous psychic power. Carl Jung, CW 8, Para 337

Meaningful coincidences—which are to be distinguished from meaningless chance groupings—therefore seem to rest on an archetypal foundation. Carl Jung, CW 8, Para 846

Complexes are in truth the living units of the unconscious psyche, and it is only through them that we are able to deduce its existence and its constitution. Carl Jung, CW 8, Para 210

That is why Freud became the real discoverer of the unconscious in psychology, because he examined those dark places and did not simply dismiss them, with a disparaging euphemism, as “parapraxes.” Carl Jung, CW 8, Para 210

Where the realm of the complexes begins the freedom of the ego comes to an end, for complexes are psychic agencies whose deepest nature is still unfathomed. Carl Jung, CW 8, Para 216.

What to the causal view is fact to the final view is symbol, and vice versa. Carl Jung, CW 8, Para 45.

But the formation of a symbol cannot take place until the mind has dwelt long enough on the elementary facts, that is to say until the inner or outer necessities of the life-process have brought about a transformation of energy. Carl Jung, CW 8, Para 47.

Apart from the efforts that have been made for centuries to extract a prophetic meaning from dreams, Freud’s discoveries are the first successful attempt in practice to find their real significance. Carl Jung, CW 8, Para 447.

His [Freud’s] work merits the term “scientific” because he has evolved a technique which not only he, but many other investigators assert achieves its object, namely the understanding of the meaning of the dream. Carl Jung, CW 8, Para 447.

It is Freud’s great achievement to have put dream-interpretation on the right track. Carl Jung, CW 8, Para 539

If we want to interpret a dream correctly, we need a thorough knowledge of the conscious situation at that moment, because the dream contains its unconscious complement, that is, the material which the conscious situation has constellated in the unconscious. Carl Jung, CW 8, Para 477

Experience has shown, however, that even professional analysts, who might be expected to have mastered the art of dream interpretation, often capitulate before their own dreams and have to call in the help of a colleague. Carl Jung, CW 8, Para 141

We can therefore never hope for a thorough cure from a treatment restricted to the illness itself, but only from a treatment of the personality as a whole. Carl Jung, CW 8, Para 684.

The greatest mistake an analyst can make is to assume that his patient has a psychology similar to his own. Carl Jung, CW 8, Para 498

Childhood is important not only because various warpings of instinct have their origin there, but because this is the time when, terrifying or encouraging, those far-seeing dreams and images appear before the soul of the child, shaping his whole destiny, as well as those retrospective intuitions which reach back far beyond the range of childhood experience into the life of our ancestors. Carl Jung, CW 8, Para 98

But we cannot live the afternoon of life according to the program of life’s morning; for what was great in the morning will be little at evening, and what in the morning was true will

at evening have become a lie. Carl Jung, CW 8, Para 784

The ego keeps its integrity only if it does not identify with one of the opposites, and if it understands how to hold the balance between them. Carl Jung, CW 8, Para 425.

Not infrequently the dreams show that there is a remarkable inner symbolical connection between an undoubted physical illness and a definite psychic problem, so that the physical disorder appears as a direct mimetic expression of the psychic situation. Carl Jung, CW 8, Para 502

Dreams throw very interesting sidelights on the inter-functioning of body and psyche. Carl Jung, CW 8, Para 502

The symptomatology of an illness is at the same time a natural attempt at healing. Carl Jung, CW 8, Para 312

The “absolute knowledge” which is characteristic of synchronistic phenomena, a knowledge not mediated by the sense organs, supports the hypothesis of a self-subsistent meaning, or even expresses its existence. Carl Jung, CW, Para 948.

The meaning and purpose of a problem seem to lie not in its solution but in our working at it incessantly. Carl Jung, CW 8, Para 771

I have frequently been able to trace back for over a year, in a dream-series, the indications of approaching death, even in cases where such thoughts were not prompted by the outward situation. Carl Jung, CW 8, Para 809

Death, therefore, has its onset long before death. Carl Jung, CW 8, Para 809

Beginning and end are unavoidable aspects of all processes. Carl Jung, CW 8, Para 812.

We are so convinced that death is simply the end of a process that it does not ordinarily occur to us to conceive of death as a goal and a fulfilment, as we do without hesitation the aims and purposes of youthful life in its ascendance. Carl Jung, CW 8, Para 797

A mathematician once remarked that everything in science was man-made except numbers, which had been created by God himself. Carl Jung, CW 8, Para 356, note 24.

… number and synchronicity… were… always brought into connection with one another,… both possess numinosity and mystery as their common characteristics. Number has invariably been used to characterize some numinous object, and all numbers from 1 to 9 are ‘sacred,’ just as 10, 12, 13, 14, 28, 32, and 40 have a special significance. Carl Jung, CW 8, Para 870.

The capacity for inner dialogue is a touchstone for outer objectivity. Carl Jung, CW 8, Para 187

This peculiarity lends plausibility to the view that dreams are inspirations. Carl Jung, CW 8, Para 574

Dream psychology opens the way to a general comparative psychology from which we

may hope to gain the same understanding of the development and structure of the human psyche as comparative anatomy has given us concerning the human body. Carl Jung, CW 8, Para 47

Man's capacity for consciousness alone makes him man. Carl Jung, CW 8, Para 412

Just as, in its lower reaches, the psyche loses itself in the organic-material substrate, so in its upper reaches it resolves itself into a "spiritual" form about which we know as little as we do about the functional basis of instinct. Carl Jung, CW 8, Para 380

Natural life is the nourishing soil of the soul. Anyone who fails to go along with life remains suspended, stiff and rigid in midair. That is why so many people get wooden in old age; they look back and cling to the past with a secret fear of death in their hearts. Carl Jung, CW 8, Para 800.

If we are to do justice to the essence of the thing we call spirit, we should really speak of a "higher" consciousness rather than of the unconscious. Carl Jung, CW 8, Para 643.

Just as we tend to assume that the world is as we see it, we naively suppose that people are as we imagine them to be. Carl Jung, CW 8, Page 507.

Psychologically, however, the archetype as an image of instinct is a spiritual goal toward which the whole nature of man strives; it is the sea to which all rivers wend their way, the prize which the hero wrests from the fight with the dragon. Carl Jung, CW 8, Para 415

You always become the thing you fight the most. Carl Jung, BBC Face to Face Interview, Para 119

We must not forget that only a very few people are artists in life; that the art of life is the most distinguished and rarest of all the arts. Whoever succeeded in draining the whole cup with grace? Carl Jung, CW 8, Para 789

To the psychotherapist an old man who cannot bid farewell to life appears as feeble and sickly as a young man who is unable to embrace it. And as a matter of fact, it is in many cases a question of the selfsame childish greediness, the same fear the same defiance and willfulness, in the one as in the other. Carl Jung, CW 8, Para 792

From the middle of life onward, only he remains vitally alive who is ready to die with life. Carl Jung, CW 8, Para 800

Everything that works from the unconscious appears projected on others. Not that these others are wholly without blame, for even the worst projection is at least hung on a hook, perhaps a very small one, but still a hook offered by the other person. Carl Jung, CW 8, Para 99

What would the spirit be if it had no peer among the instincts to oppose it? It would be nothing but an empty form. Carl Jung, CW 8, Para 107

Reflection is the cultural instinct par excellence, and its strength is shown in the power of culture to maintain itself in the face of untamed nature. Carl Jung, CW 8, Page 115.

The collective unconscious...appears to consist of mythological motifs or primordial images, for which reason the myths of all nations are its real exponents. Carl Jung, CW 8, Par. 325.

Actually the word adhista in Elgonyi means sun as well as God, although they deny that the sun is God. Only the moment when it rises is mungu or adhista. Spittle and breath mean soul-substance. Carl Jung, CW 8, Para 411.

There are many spirits, both light and dark. We should, therefore, be prepared to accept the view that spirit is not absolute, but something relative that needs completing and perfecting through life. Carl Jung, CW 8, Para 645

Everything is mediated through the mind, translated, filtered, allegorized, twisted, even falsified by it. Carl Jung, CW 8, Para 623.

But because of its empirical freedom of choice, the will needs a supraordinate authority, something like a consciousness of itself, in order to modify the function. It must "know" of a goal different from the goal of the function. Carl Jung, CW 8, Para 371.

This living being appears outwardly as the material body, but inwardly as a series of images of the vital activities taking place within it. Carl Jung, CW 8, Para 619.

It seems to me probable that the real nature of the archetype is not capable of being made conscious, that it is transcendent, on which account I call it psychoid. Carl Jung, CW 8, para. 417.

For it is the function of consciousness not only to recognize and assimilate the external world through the gateway of the senses, but to translate into visible reality the world within us. Carl Jung, CW 8, Para 342.

The serious problems in life are never fully solved. If ever they should appear to be, so it is a sure sign that something has been lost. The meaning and purpose of a problem seem to lie not in its solution but in our working at it incessantly. Carl Jung, CW 8, Page 394.

Nature cares nothing whatsoever about a higher level of consciousness; quite the contrary. And then society does not value these feats of the psyche very highly; its prizes are always given for achievement and not for personality, the latter being rewarded for the most part posthumously. Carl Jung, CW 8, Para 768

I said just now that we have no schools for forty-year old’s. That is not quite true. Our religions were always such schools in the past, but how many people regard them like that today? How many of us older ones have been brought up in such a school and really prepared for the second half of life, for old age, death and eternity? Carl Jung, CW 8, Para 786

So difficult is it to understand a dream that for a long time I have made it a rule, when someone tells me a dream and asks for my opinion, to say first of all to myself: "I have no idea what this dream means." After that I can begin to examine the dream. Carl Jung, CW 8, Para 533

It was universally believed in the Middle Ages as well as in the Greco-Roman world that the soul is a substance. Indeed, mankind as a whole has held this belief from its earliest beginnings, and it was left for the second half of the nineteenth century to develop a “psychology without the soul.” Carl Jung; CW 8; Page 338

The real existence of an enemy upon whom one can foist off everything evil is an enormous relief to one’s conscience. You can then at least say, without hesitation, who the devil is; you are quite certain that the cause of your misfortune is outside, and not in your own attitude. Carl Jung, CW 8, Para 518

Just as the body bears the traces of its phylogenetic development, so also does the human mind. Hence there is nothing surprising about the possibility that the figurative language of dreams is a survival from an archaic mode of thought. Carl Jung, CW 8, Para 475

Ageing people should know that their lives are not mounting and expanding, but that an inexorable inner process enforces the contraction of life. For a young person it is almost a sin, or at least a danger, to be too preoccupied with himself; but for the ageing person it is a duty and a necessity to devote serious attention to himself. After having lavished its light upon the world, the sun withdraws its rays in order to illuminate itself. Instead of doing likewise, many old people prefer to be hypochondriacs, niggards, pedants, applauders of the past or else eternal adolescents —all lamentable substitutes for the illumination of the self, but inevitable consequences of the delusion that the second half of life must be governed by the principles of the first. Carl Jung, CW 8, Para 785

The most intense conflicts, if overcome, leave behind a sense of security and calm which is not easily disturbed, or else a brokenness that can hardly be healed. Conversely, it is just these intense conflicts and their conflagration which are needed in order to produce valuable and lasting results. Carl Jung, CW 8, Para 50

Deviation from the truths of the blood begets neurotic restlessness, and we have had about enough of that these days. Restlessness begets meaninglessness, and the lack of meaning in life is a soul-sickness whose full extent and full import our age has not as yet begun to comprehend. Carl Jung, CW 8, Para 815

Where is the wisdom of our old people, where are their precious secrets and their visions? For the most part our old people try to compete with the young. In the United States it is almost an ideal for a father to be the brother of his sons, and for the mother to be if possible the younger sister of her daughter. Carl Jung, CW 8, Para 788.

But we cannot live the afternoon of life according to the programme of life’s morning; for what was great in the morning will be little at evening, and what in the morning was true will at evening have become a lie. Carl Jung, CW 8, Para 784

The method like all divinatory or intuitive techniques is based on an acausal or synchronistic connective principle. Carl Jung, CW 8, Page 452.

As to the ultimate things we can know nothing, and only when we admit this do we return to a state of equilibrium. Carl Jung, CW 8, Para 657

The realization of the shadow is the growing awareness of the inferior part of the per-

sonality. Carl Jung, CW 8, Page 208.

The soul possesses in some degree a historical stratification, whereby the oldest stratum of which would correspond to the unconscious. Carl Jung. CW 8, Para 51.

Man is not a machine in the sense that he can consistently maintain the same output of work. He can meet the demands of outer necessity in an ideal way only if he is also adapted to his own inner world, that is, if he is in harmony with himself. Conversely, he can only adapt to his inner world and achieve harmony with himself when he is adapted to the environmental conditions. Carl Jung; CW 8; par. 75.

Be prepared to accept the view that spirit is not absolute, but something relative that needs completing and perfecting through life. –Carl Jung, CW 8, Page 645.

Every advance, every conceptual achievement of mankind, has been connected with an advance in self-awareness: man differentiated himself from the object and faced Nature as something distinct from her. Any reorientation of psychological attitude will have to follow the same road. Carl Jung, CW 8, Page 523.

Gleaming islands, indeed, whole continents, can still add themselves to our modern consciousness. Carl Jung, CW 8, Para 387

The tendencies of the conscious and the unconscious are the two factors that together make up the transcendent function. It is called "transcendent" because it makes the transition from one attitude to another organically possible. Carl Jung, CW 8, par. 145.

Naturally, every age thinks that all ages before it were prejudiced, and today we think this more than ever and are just as wrong as all previous ages that thought so. How often have we not seen the truth condemned! It is sad but unfortunately true that man learns nothing from history. Carl Jung, CW 8, Para 861.

The archetype or primordial image might suitably be described as the instinct’s perception of itself, or as the self portrait of the instinct, in exactly the same way as consciousness is an inward perception of the objective life-process. Carl Jung, CW 8, Page 277.

The God-image thrown up by a spontaneous act of creation is a living figure, a being that exists in its own right and there-fore confronts its ostensible creator autonomously… As proof of this it may be mentioned that the relation between the creator and the created is a dialectical. Carl Jung; CW 8, para. 95-96.

There are no “purposeless” psychic processes; that is to say, it is a hypothesis of the greatest heuristic value that the psyche is essentially purposive and directed. Carl Jung; CW 8, para. 90.

Anyone sufficiently interested in the dream problem cannot have failed to observe that dreams also have a continuity forwards-if such an expression be permitted-since dreams occasionally exert a remarkable influence on the conscious mental life even of persons who cannot be considered superstitious or particularly abnormal. Carl Jung, CW 8, Page 444

The psychic fact “God” is a typical autonomism, a collective archetype…It is therefore

characteristic not only of all higher forms of religion but appears spontaneously in the dreams of individuals. Carl Jung; CW 8; fn 29.

Just as the body bears the traces of its phylogenetic development, so also does the human mind. Carl Jung, CW 8, Page 475.

Once we have freed ourselves from the prejudice that we have to refer to concepts of external experience or to a priori categories of reason, we can turn our attention and curiosity wholly to that strange and unknown thing we call spirit. Carl Jung, CW 8; Para 626

From the psychological point of view, the phenomenon of spirit, like every autonomous complex, appears as an intention of the unconscious superior to, or at least on a par with, intentions of the ego. If we are to do justice to the essence of the thing we call spirit, we should really speak of a "higher" consciousness rather than of the unconscious. Carl Jung, CW 8, para 643.

Greater than all physical dangers are the tremendous effects of delusional ideas. The world powers that rule over humanity, for good or ill, are unconscious psychic factors, and it is they that bring unconsciousness into being. We are steeped in a world that was created by our own psyche. Carl Jung, CW 8, Para 747

For higher than science or art as an end in itself stands man, the creator of his instruments. Carl Jung, CW 8, Page 737

Every other science has so to speak an outside; not so psychology, whose object is the inside subject of all science. Carl Jung, CW 8, Para 429

Every science is a function of the mind, and all knowledge is rooted in it. The mind is the greatest of all cosmic wonders. Carl Jung; CW 8; Page 357.

Life is teleology par excellence; it is the intrinsic striving towards a goal, and the living organism is a system of directed aims which seek to fulfill themselves. Carl Jung; CW 8; para 798.

Restriction to material reality carves an exceedingly large chunk out of reality as a whole, but it nevertheless remains a fragment only, and all round it is a dark penumbra which one would have to call unreal or surreal. Carl Jung, CW 8, Pages 382-383

Man needs difficulties; they are necessary for health. Carl Jung, CW 8, Para 143

What would the spirit be if it had no peer among the instincts to oppose it? It would be nothing but an empty form. Carl Jung, CW 8, Para 107

The East, on the other hand, took spirit for its own, and by explaining away matter as mere illusion—Maya—continued to dream in Asiatic filth and misery. Carl Jung, CW 8, Para 682

We should, therefore, be prepared to accept the view that spirit is not absolute, but something relative that needs completing and perfecting through life. Carl Jung, CW 8, Para 645

Restlessness begets meaninglessness, and the lack of meaning in life is a soul-sickness whose full extent and full import our age has not as yet begun to comprehend. Carl Jung, CW 8, Para 815

It is really high time academic psychologists came down to earth and wanted to hear about the human psyche as it really is and not merely about laboratory experiments. Carl Jung, CW 8, Para 529

The individual ego could be conceived as the commander of a small army in the struggle with his environment—a war not infrequently on two fronts, before him the struggle for existence, in the rear the struggle against his own rebellious instinctual nature. Carl Jung, CW 8, Para 693

Many—far too many—aspects of life which should also have been experienced lie in the lumber-room among dusty memories; but sometimes, too, they are glowing coals under grey ashes. Carl Jung, CW 8, Para 772

Primitive superstition lies just below the surface of even the most tough-minded individuals, and it is precisely those who most fight against it who are the first to succumb to its suggestive effects. Carl Jung, CW 8, Page 25.

If he succeeds in giving collective validity to his widened consciousness, he creates a tension of opposites that provides the stimulation which culture needs for its further progress. Carl Jung, CW 8, Para iii

Ageing people should know that their lives are not mounting and expanding, but that an inexorable inner process enforces the contraction of life. Carl Jung, CW 8, Para 785

A young man who does not fight and conquer has missed the best part of his youth, and an old man who does not know how to listen to the secrets of the brooks, as they tumbledown from the peaks to the valleys, makes no sense; he is a spiritual mummy who is nothing but a rigid relic of the past. Carl Jung, CW 8, Para 801

Money-making, social achievement, family and posterity are nothing but plain nature, not culture. Culture lies outside the purpose of nature. Could by any chance culture be the meaning and purpose of the second half of life? Carl Jung, CW 8, Para 787

A dream, like every element in the psychic structure, is a product of the total psyche. Carl Jung, CW 8, Para 527

Dreams may contain ineluctable truths, philosophical pronouncements, illusions, wild fantasies, memories, plans, anticipations, irrational experiences, even telepathic visions, and heaven knows what besides. Carl Jung, CW 8, Para 317

Not infrequently the dreams show that there is a remarkable inner symbolical connection between an undoubted physical illness and a definite psychic problem, so that the physical disorder appears as a direct mimetic expression of the psychic situation. Carl Jung, CW 8, Para 502

The occurrence of prospective dreams cannot be denied. It would be wrong to call them prophetic, because at bottom they are no more prophetic than a medical diagnosis or a weather forecast. Carl Jung, CW 8, Para 493

With regard to prognosis, therefore, dreams are often in a much more favourable position than consciousness. Carl Jung, CW 8, Para 493

But as soon as you take the sexual metaphors as symbols for something unknown, your conception of the nature of dreams at once deepens. Carl Jung, CW 8, Para 506

Synchronicity means the simultaneous occurrence of a psychic state with one or more external events, which appear as meaningful parallels to the momentary subjective state. Carl Jung, CW 8, Page 441.

It is just man's turning away from instinct—his opposing himself to instinct—that creates consciousness. Carl Jung, CW 8, Para 750

Instinct is nature and seeks to perpetuate nature, whereas consciousness can only seek culture or its denial. Carl Jung, CW 8, Para 750

It seems that the unconscious is in interested how one dies, that is whether the attitude of consciousness is adjusted to dying or not. Carl Jung, CW 8, Page 223.

The psyche is the greatest of all cosmic wonders and the sine qua non of the world as an object. Carl Jung, CW 8, Par. 357.

We must, however, constantly bear in mind that what we mean by "archetype" is in itself irrepresentable, but has effects which make visualisation of it possible, namely the archetypal images and ideas. Carl Jung, CW 8, Page 214.

The psyche is the greatest of all cosmic wonders and the sine qua non of the world as an object. It is in the highest degree odd that Western man, with but very few and ever fewer exceptions, apparently pays so little regard to this fact.... Swamped by the knowledge of external objects, the subject of all knowledge has been temporarily eclipsed to the point of seeming nonexistence. Carl Jung, CW 8, Para 357

Whoever carries over into the afternoon the law of the morning, or the natural aim, must pay for it with damage to his soul, just as surely as a growing youth who tries to carry over his childish egoism into adult life must pay for this mistake with social failure. Carl Jung, CW 8, Page 787.

As to the ultimate things we can know nothing, and only when we admit this do we return to a state of equilibrium. Carl Jung, CW 8, Para 657

The method like all divinatory or intuitive techniques is based on an acausal or synchronistic connective principle. Carl Jung, CW 8, Page 452.

From the middle of life, only he who is willing to die with life remains living. Since what takes place in the secret hour of life's midday is the reversal of the parabola, the birth of death.

Carl Jung CW 8, §800.

The wine of youth does not always clear with advancing years; sometimes it grows turbid. Carl Jung; CW 8; Para 774.

Since psyche and matter are contained in one and the same world, and moreover are in continuous contact with one another and ultimately rest on irrepresentable, transcendental factors, it is not only possible but fairly probable, even, that psyche and matter are two different aspects of one and the same thing. Carl Jung; CW 8, Para 420.

Nowhere are we closer to the sublime secret of all origination than in the recognition of our own selves, whom we always think we know already. Yet we know the immensities of space better than we know our own depths, where -even though we do not understand it-we can listen directly to the throb of creation itself. Carl Jung, CW 8, Page 737

Just as the "psychic infra-red," the biological instinctual psyche, gradually passes over into the physiology of the organism and thus merges with its chemical and physical conditions, so the "psychic ultra-violet," the archetype, describes a field which exhibits none of the peculiarities of the physiological and yet, in the last analysis, can no longer be regarded as psychic. Carl Jung, CW 8, Page 420.

The unconscious is the source of the instinctual forces of the psyche and of the forms or categories that regulate them, namely the archetypes. Carl Jung, CW 8, par. 342.

Only a life lived in a certain spirit is worth living. It is a remarkable fact that a life lived entirely from the ego is dull not only for the person himself but for all concerned. Carl Jung, CW 8, Page 645.

Give no guarantee of objective knowledge. What we do not understand in ourselves we do not understand in the other person either. So there is plenty to ensure that his image will be for the most part subjective. As we know, even an intimate friendship is no guarantee of objective knowledge. – Carl Jung, CW 8. Page 508

A psychology that treats the mind as an epiphenomenon would better call itself brain-psychology and remain satisfied with the meager results that such a psycho-physiology can yield. The mind deserves to be taken as a phenomenon in its own right; there are no grounds at all for regarding it as a mere epiphenomenon, dependent though it may be on the functioning of the brain. One would be as little justified in regarding life as an epiphenomenon of the chemistry of carbon compounds. Carl Jung, CW 8, Page 10

What I am trying to make clear is the remarkable fact that the will cannot transgress the bounds of the psychic sphere: it cannot coerce the instinct, nor has it power over the spirit, in so far as we understand by this something more than the intellect. Carl Jung, CW 8, Paras 371-381.

They [Scintillae] are germinal luminosities shining forth from the darkness of the unconscious Carl Jung, CW 8, Para 389

The symbol in the dream has more the value of a parable it does not conceal, it teaches. Carl Jung, CW 8, Para 471

Everywhere the question of the "why" and the "wherefore" may be raised, because every organic structure consists of a complicated network of purposive functions, and each of these functions can be resolved into a series of individual facts with a purposive orientation. Carl Jung, CW 8, Para 462

Like a projectile flying to its goal, life ends in death. Even its ascent and its zenith are only steps and means to this goal. Carl Jung, CW 8, Para 803

The birth of a human being is pregnant with meaning, why not death? Carl Jung, CW 8, Para 803

As a doctor I am convinced that it is hygienic—if I may use the word—to discover in death a goal towards which one can strive, and that shrinking away from it is something unhealthy and abnormal which robs the second half of life of its purpose. Carl Jung, CW 8, Para 792

Instinct is nature and seeks to perpetuate nature, whereas consciousness can only seek culture or its denial. Carl Jung, CW 8, Para 750

It is the growth of consciousness which we must thank for the existence of problems; they are the Danaan gift of civilization, Carl Jung, CW 8, Para 750

Every problem, therefore, brings the possibility of a widening of consciousness, but also the necessity of saying goodbye to childlike unconsciousness and trust in nature. Carl Jung, CW 8, Para 751

The biblical fall of man presents the dawn of consciousness as a curse. Carl Jung, CW 8, Para 751

We must constantly bear in mind that what we mean by "archetype" is in itself irrepresentable, but has effects which make visualizations of it possible, namely, the archetypal images and ideas. Carl Jung, CW 8, Para 417

The archetype as an image of instinct is a spiritual goal toward which the whole nature of man strives; it is the sea to which all rivers wend their way, the prize which the hero wrests from the fight with the dragon. Carl Jung, CW 8, Para 415

Individuation does not shut one out from the world but gathers the world to oneself. Carl Jung, CW 8, Para 312.

When a person dies, the feelings and emotions that bound his relatives to him lose their application to reality and sink into the unconscious, where they activate a collective content that has a deleterious effect on consciousness Carl Jung, CW 8 Para, 598

The Bataks and many other primitives therefore say that when a man dies his character deteriorates, so that he is always trying to harm the living in some way Carl Jung, CW 8, Para 598

This view is obviously based on the experience that a persistent attachment to the dead

makes life seem less worth living and may even be the cause of psychic illnesses. The harmful effect shows itself in the form of loss of libido, depression, and physical debility. There are also universal reports of these post-mortem phenomena in the form of ghost and hauntings Carl Jung, CW 8, Para 598

The psychotherapeutic endeavors of the so-called spirits are aimed at the living either directly, or indirectly through the deceased person, in order to make them more conscious Carl Jung, CW 8, Para 599

Spiritualism as a collective phenomenon thus pursues the same goals as medical psychology, and in doing so produces, the same basic ideas and images styling themselves the "teachings of the spirits" which are characteristic of the nature of the collective unconscious Carl Jung, CW 8, Para 599

The body cannot be understood as a mere heaping together of inert matter but must be regarded as a material system ready for life and making life possible, with the proviso that for all its readiness it could not live without the addition of a "living being." For setting aside the possible significance of "living being," there is lacking to the body by itself something that is necessary to its life, namely a psychic factor. Carl Jung, CW 8. Para 605

We know this directly from our own experience of ourselves, and indirectly from our experience of our fellow men. We also know it through our scientific study of the higher vertebrates, and, for total lack of evidence to the contrary, we must suppose that some such factor is present in lower organisms and even in plants Carl Jung, CW 8, Para 605

Mind and body are the expression of a single entity whose essential nature is not knowable either from its outward, material manifestation or from inner, direct perception Carl Jung, CW 8, Para 619

According to an ancient belief, man arose from the coming together of a soul and a body. It would probably be more correct to speak of an unknowable living being, concerning the ultimate nature of which nothing can be said except that it vaguely expresses the quintessence of "life" Carl Jung, CW 8, Para 619

This living being appears outwardly as the material body, but inwardly as a series of images of the vital activities taking place within it. They are two sides of the same coin, and we cannot rid ourselves of the doubt that perhaps this whole separation of mind and body may finally prove to be merely a device of reason for the purpose of conscious discrimination Carl Jung, CW 8, Para 619

Spirit, in Old High German Geist, and in Anglo Saxon gast, meant a supernatural being in contradistinction to the body Carl Jung, CW 8, Para 627

According to Kluge, the fundamental meaning of the word [spirit] is not quite certain, though there seem to be connections with the Old Norse geisa,

to rage,' with the Gothic us-gaisyan,

to be beside oneself,' with the Swiss-German üf-gaistä, 'to fly into a passion,' and with the English aghast Carl Jung, CW 8, Para 627

These connections are substantiated by other figures of speech. For a person “to be seized with rage” means that something falls on him, sits on him, rides him, he is ridden by the devil, he is possessed, something has got into him, etc. When we are “beside ourselves with rage” we are obviously no longer identical with ourselves, but are possessed by a daemon or spirit Carl Jung, CW 8, Para 627

The primitive atmosphere in which the word “spirit” came to birth exists in us still, though of course on a psychic level somewhere below consciousness. But as modern spiritualism shows, it needs very little to bring that bit of primitive mentality to the surface Carl Jung, CW 8, Para 628

If the etymological derivation (which in itself is quite plausible) holds good, the “spirit” in this sense would be the image of a personified affect. For instance, when a person lets himself be carried away by impudent talk, we say, his tongue has run away with him, which is the equivalent to saying that his talk has become an independent being that has snatched him up and run off with him Carl Jung, CW 8, Para 628

Psychologically we would say: every affect tends to become an autonomous complex, to break away from the hierarchy of consciousness and, if possible, to drag the ego after it Carl Jung, CW 8, Para 628

No wonder, then, that the primitive mind sees in this the activity of a strange invisible being, a spirit. Spirit in this case is the reflection of an autonomous affect, which is why the ancients, very appropriately, called the spirits imagines, ‘images’ Carl Jung, CW 8, Para 628

Let us now turn to other usages of the concept of the “spirit”. The phrase “he acts in the spirit of his dead father” still has a double meaning, for here the word “spirit” refers as much to the spirit of the dead as to an attitude of mind. Other idioms are “doing something in a new spirit,” or, “a new spirit is growing up,” meaning a renewal of mental attitude Carl Jung, CW 8, Para 629

The basic idea is again that of possession by a spirit, which has become, say, the “guiding spirit” of a group. A more sombre note is struck when we say: “An evil spirit reigns in that family” Carl Jung, CW 8, Para 629

Here we are dealing not with personifications of affects but with visualizations of a whole frame of mind or to put it psychologically an attitude. A bad attitude expressed as an evil spirit therefore has, if naïvely conceived, nearly the same psychological function as a personified affect Carl Jung, CW 8, Para 630

The concept of “spirit” goes far beyond the animistic frame of reference. Aphorisms and proverbs are as a rule the result of much experience and individual effort, a summing up of insights and conclusions in a few pregnant words. Those sayings or ideals that store up the richest experience of life and the deepest reflection constitute what we call ‘spirit’ in the best sense of the word Carl Jung, CW 8, Para 633

The more absolute and compelling the ruling idea, the more it has the nature of an autonomous complex that confronts the ego-consciousness as an unshakable fact Carl Jung, CW 8, Para 633

Spirit that can be translated into a definite concept is a psychic complex lying within the orbit of our ego-consciousness. It will not bring forth anything, nor will it achieve anything more than we have put into it Carl Jung, CW 8, Para 644

But spirit that demands a symbol for its expression is a psychic complex that contains the seeds of incalculable possibilities. The most obvious and best example of this is the effectiveness of the Christian symbols, whose power changed the face of history. If one looks without prejudice at the way the spirit of early Christianity worked on the mind of the average man of the second century, one can only be amazed. But then, no spirit was ever as creative as this. No wonder it was felt to be of godlike superiority Carl Jung, CW 8, Para 644

Life is a touchstone for the truth of the spirit. Spirit that drags a man away from life, seeking fulfillment only in itself, is a false spirit though the man too is to blame, since he can choose whether he will give himself up to this spirit or not Carl Jung, CW 8, Para 647

Life and spirit are two powers or necessities between which man is placed. Spirit gives meaning to his life, and the possibility of its greatest development. But life is essential to spirit, since its truth is nothing if it cannot live Carl Jung, CW 8, Para 648

Spirits are complexes of the collective unconscious which appear when the individual loses his adaptation to reality, or which seek to replace the inadequate attitude of a whole people by a new one. They are therefore either pathological fantasies or new but as yet unknown ideas Carl Jung, CW 8, Para 597

Spirits are not under all circumstances dangerous and harmful. They can, when translated into ideas, also have beneficial effects. A well-known example of this transformation of a content of the collective unconscious into communicable language is the miracle of the Pentecost. From the point of view of the onlookers, the apostles were in a state of ecstatic intoxication (“These men are full of new wine”: Acts 2:13). But it was just when they were in this state that they communicated the new teaching which gave expression to the unconscious expectations of the people and spread with astonishing rapidity through the whole Roman Empire Carl Jung, CW 8, Para 596

The data of the senses. According to this view, everything is "real" which comes, or seems to come, directly or indirectly from the world revealed by the senses. This limited picture of the world is a reflection of the one-sidedness of Western man. Carl Jung, CW 8, Para 742

But life is essential to spirit, since its truth is nothing if it cannot live. Carl Jung, CW 8, Para 647

Just as there is a passion that strives for blind unrestricted life, so there is a passion that would like to sacrifice all life to the spirit because of its superior creative power. This passion turns the spirit into a malignant growth that senselessly destroys human life. Carl Jung, CW 8, Para 646

The greatest mistake an analyst can make is to assume that his patient has a psychology similar to his own. Carl Jung, CW 8, Para 498.

And just as the material of the body that is ready for life has need of the psyche in order to be capable of life, so the psyche presupposes the living body in order that its images may live. Carl Jung, CW 8, Page 325

Far from being a material world, this is a psychic world, which allows us to make only indirect and hypothetical inferences about the real nature of matter. Carl Jung CW 8, Para 747

We are steeped in a world that was created by our own psyche. Carl Jung CW 8, Para 747

Far from being a material world, this is a psychic world, which allows us to make only indirect and hypothetical inferences about the real nature of matter. The psychic all forms of the psychic, even "unreal" ideas and thoughts which refer to nothing "external." We may call them "imagination" or "delusion," but that does not detract in any way from their effectiveness. Indeed, there is no "real" thought that cannot, at times, be thrust aside by an "unreal" one, thus proving that the latter is stronger and more effective than the former. Greater than all physical dangers are the tremendous effects of delusional ideas, which are yet denied all reality by our world-blinded consciousness. Our much-vaunted reason and our boundlessly overestimated will are sometimes utterly powerless in the face of "unreal" thoughts. The world powers that rule over all mankind, for good or ill, are unconscious psychic factors, and it is they that bring consciousness into being and hence create the sine qua non for the existence of any world at all. We are steeped in a world that was created by our own psyche. Carl Jung CW 8, Para 747

It even seems as if young people who have had a hard struggle for existence are spared inner problems, while those who for some reason or other have no difficulty with adaptation run into problems of sex or conflicts arising from a sense of inferiority. Carl Jung, CW 8, Para 762

And just as the material of the body that is ready for life has need of the psyche in order to be capable of life, so the psyche presupposes the living body in order that its images may live. Carl Jung, CW 8, Page 325

Far from being a material world, this is a psychic world, which allows us to make only indirect and hypothetical inferences about the real nature of matter. Carl Jung CW 8, Para 747

The scintillae radiate or gleam as white sparks from the world-soul, which is identical with the spirit of God Carl Jung, CW 8, Para 388

They [scintillae] were the seeds of light broadcast in the chaos, or “the seed plot of a world to come” Carl Jung, CW 8, Para 388

In alchemy, the world-soul is the anima catholica, an idea identical with the spirit of God Carl Jung, CW 8, Para 388

The soul has substance, is of a divine nature and therefore immortal Carl Jung, CW 8, Para 654

That there is a power inherent within it which builds up the body, sustains its life, heals its ills, and enables the soul to live independently of the body Carl Jung, CW 8, Para 654

According to a primitive view the soul is a fire or flame, because warmth is likewise a sign of life. Carl Jung, CW 8, Para 665

The ancient view held that the soul was essentially the life of the body, the life-breath, or a kind of life force which assumed spatial and corporeal form at the moment of conception,

or during pregnancy, or at birth, and left the dying body again after the final breath Carl Jung, CW 8, Para 662

The soul in itself was a being without extension, and because it existed before taking corporeal form and afterwards as well, it was considered timeless and hence, immortal Carl Jung, CW 8, Para 662

The standpoint of past ages, which, knowing the untold treasures of experience lying hidden beneath the threshold of the ephemeral individual consciousness, always held the individual soul to be dependent on a spiritual world-system. Not only did they make this hypothesis, they assumed without question that this system was a being with a will and consciousness was even a person and they called this being God, the quintessence of reality Carl Jung, CW 8, Para 677

He [God] was for them the most real of beings, the first cause, through whom alone the soul could be explained Carl Jung, CW 8, Para 677

That beyond our empirical present there is a spiritual world from which the soul receives knowledge of spiritual things whose origins cannot be discovered in this visible world Carl Jung, CW 8, Para 654

It is hygienic to discover in death a goal towards which one can strive, and that shrinking away from it is something unhealthy and abnormal which robs the second half of life of its purpose Carl Jung, CW 8, Para 792

From the standpoint of psychotherapy it would therefore be desirable to think of death as only a transition, as part of a life process whose extent and duration are beyond our knowledge Carl Jung, CW 8, Para 792

The majority of religions are complicated systems of preparation for death, so much so that life actually has no significance except as a preparation for the ultimate goal of death. In both the greatest living religions, Christianity and Buddhism, the meaning of existence is consummated in its end Carl Jung, CW 8. Para 804

It would seem to be more in accord with the collective psyche of humanity to regard death as the fulfillment of life's meaning and as its goal in the truest sense, instead of a mere meaningless cessation Carl Jung, CW 8, Para 807

Thoughts of death pile up to an astonishing degree as the years increase willynilly, the ageing person prepares himself for death Carl Jung, CW 8, Para 808

As a rule the approaching end is indicated by those symbols which, in normal life also, proclaim changes of psychological condition rebirth symbols such as changes of locality, journeys, and the like Carl Jung, CW 8, Para 809

I have frequently been able to trace back for over a year, in a dream-series, the indications of approaching death, Moreover, this often shows itself in peculiar changes of personality which may precede death by quite a long time Carl Jung, CW 8, Para 809

On the whole, I was astonished to see how little ado the unconscious psyche makes of

death. It would seem as though death were something relatively unimportant, or perhaps our psyche does not bother about what happens to the individual Carl Jung, CW 8, Para 809

But it seems that the unconscious is all the more interested in how one dies; that is, whether the attitude of consciousness is adjusted to dying or not Carl Jung, CW 8, Para 809

In the Saint-Graal (III, pp. 219 and 224), it is related that Christ sometimes appeared to the disciples as a white stag with four lions (= four evangelists) Carl Jung, CW 8, Para 559

In alchemy Mercurius is allegorized as the stag because the stag can renew itself. Carl Jung, CW 8, Para 559

Dreams that form logically, morally, or aesthetically satisfying wholes are exceptional. Usually a dream is a strange and disconcerting product distinguished by many "bad" qualities, such as lack of logic, questionable morality, uncouth form, and apparent absurdity or nonsense. People are therefore only too glad to dismiss it as stupid, meaningless, and worthless. Carl Jung, CW 8, Para 532

The psyche is a self-regulating system that maintains its equilibrium just as the body does. Every process that goes too far immediately and inevitably calls forth compensations, and without these there would be neither a normal metabolism nor a normal psyche. In this sense we can take the theory of compensation as a basic law of psychic behaviour. Too little on one side results in too much on the other. Carl Jung, CW 8, Para 330

The more one-sided his conscious attitude is, and the further it deviates from the optimum, the greater becomes the possibility that vivid dreams with a strongly contrasting but purposive content will appear as an expression of the self-regulation of the psyche. Carl Jung, CW 8, Para 488

The view that dreams are merely the imaginary fulfilments of repressed wishes is hopelessly out of date. There are, it is true, dreams which Dreams may contain ineluctable truths, philosophical pronouncements, illusions, wild fantasies, memories, plans, anticipations, irrational experiences, even telepathic visions, and heaven knows what besides. Carl Jung, CW 8, Para 317

Under the influence of scientific materialism, everything that could not be seen with the eyes or touched with the hands was held in doubt; such things were even laughed at because of their supposed affinity with metaphysics. Nothing was considered “scientific” or admitted to be true unless it could be perceived by the senses or traced back to physical causes. Carl Jung; CW 8. para. 649.

The intellect is only one among several fundamental psychic functions and therefore does not suffice to give a complete picture of the world. For this another function —feeling—is needed too. Feeling often arrives at convictions that are different from those of the intellect, and we cannot always prove that the convictions of feeling are necessarily inferior. Carl Jung, CW 8, Para 600

The fatal error of every Weltanschauung so far has been that it claims to be an objectively valid truth, and ultimately a kind of scientific evidence of this truth. This would lead to the insufferable conclusion that, for instance, the same God must help the Germans, the

French, the English, the Turks, and the heathen—in short, everybody against everybody else. Carl Jung, CW 8, Para 734

If the picture we create of the world did not have a retroactive effect on us, we could be content with any sort of beautiful or diverting sham. But self-deception recoils on us, making us unreal, foolish, and ineffectual. Because we are tilting at a false picture of the world, we are overcome by the superior power of reality. Carl Jung, CW 8, Para 699

Anyone who is conscious of his guiding principle knows with what indisputable authority it rules his life. But generally consciousness is too preoccupied with the attainment of some beckoning goal to consider the nature of the spirit that determines its course. Carl Jung, CW 8, Para 642

Whenever contents of the collective unconscious become activated, they have a disturbing effect on the conscious mind, and contusion ensues. If the activation is due to the collapse of the individual's hopes and expectations, there is a danger that the collective unconscious may take the place of reality. This state would be pathological. If, on the other hand, the activation is the result of psychological processes in the unconscious of the people, the individual may feel threatened or at any rate disoriented, but the resultant state is not pathological, at least so far as the individual is concerned. Nevertheless, the mental state of the people as a whole might well be compared to a psychosis. Carl Jung; CW 8, Page 595

Take for comparison the daily course of the sun—but a sun that is endowed with human feeling and man's limited consciousness. In the morning it rises from the nocturnal sea of unconsciousness and looks upon the wide, bright world which lies before it in an expanse that steadily widens the higher it climbs in the firmament. In this extension of its field of action caused by its own rising, the sun will discover its significance; it will see the attainment of the greatest possible height, and the widest possible dissemination of its blessings, as its goal. In this conviction the sun pursues its course to the unforeseen zenith—unforeseen, because its career is unique and individual, and the culminating point could not be calculated in advance. At the stroke of noon the descent begins. And the descent means the reversal of all the ideals and values that were cherished in the morning, Carl Jung, CW 8, Para 778

Wholly unprepared, we embark upon the second half of life. Or are there perhaps colleges for forty-year-olds which prepare them for their coming life and its demands as the ordinary colleges introduce our young people to a knowledge of the world? No, thoroughly unprepared we take the step into the afternoon of life; worse still, we take this step with the false assumption that our truths and ideals will serve us as hitherto. But we cannot live the afternoon of life according to the programme of life's morning; for what was great in the morning will be little at evening, and what in the morning was true will at evening have become a lie. Carl Jung, CW 8, Para 784

The very frequent neurotic disturbances of adult years all have one thing in common they want to carry the psychology of the youthful phase over the threshold of the so-called years of discretion. Who does not know those touching old gentlemen who must always warm up the dish of their student days, who can fan the flame of life only by reminiscences of their heroic youth, but who, for the rest, are stuck in a hopelessly wooden Philistinism? As a rule, to be sure, they have this one merit which it would be wrong to undervalue they are not neurotic, but only boring and stereotyped. The neurotic is rather a person who can never have things as he would like them in the present, and who can therefore never enjoy the past either. Carl

Jung, CW 8, Para 776

In my naturally limited experience there are, among people of maturer age, very many for whom the development of individuality is an indispensable requirement. Hence I am privately of the opinion that it is just the mature person who, in our times, has the greatest need of some further education in individual culture after his youthful education in school or university has moulded him on exclusively collective lines and thoroughly imbued him with the collective mentality. Carl Jung, CW 8, Para 112

Being old is highly unpopular. Nobody seems to consider that not being able to grow old is just as absurd as not being able to outgrow child's-size shoes. A still infantile man of thirty is surely to be deplored, but a youthful septuagenarian—isn't that delightful? And yet both are perverse, lacking in style, psychological monstrosities. A young man who does not fight and conquer has missed the best part of his youth, and an old man who does not know how to listen to the secrets of the brooks, as they tumble down from the peaks to the valleys, makes no sense; he is a spiritual mummy who is nothing but a rigid relic of the past. He stands apart from life, mechanically repeating himself to the last triviality! Carl Jung, CW 8, Para 801

A human being would certainly not grow to be seventy or eighty years old if this longevity had no meaning for the species. The afternoon of human life must also have a significance of its own and cannot be merely a pitiful appendage to life's morning. The significance of the morning undoubtedly lies in the development of the individual, our entrenchment in the outer world, the propagation of our kind, and the care of our children. This is the obvious purpose of nature. But when this purpose has been attained —and more than attained—shall the earning of money, the extension of conquests, and the expansion of life go steadily on beyond the bounds of all reason and sense? Whoever carries over into the afternoon the law of the morning, or the natural aim, must pay for it with damage to his soul, just as surely as a growing youth who tries to carry over his childish egoism into adult life must pay for this mistake with social failure. Carl Jung, CW 8, Para 787

Just as the childish person shrinks back from the unknown in the world and in human existence, so the grown man shrinks back from the second half of life. It is as if unknown and dangerous tasks awaited him, or as if he were threatened with sacrifices and losses which he does not wish to accept, or as if his life up to now seemed to him so fair and precious that he could not relinquish it. Is it perhaps at bottom the fear of death? That does not seem to me very probable, because as a rule death is still far in the distance and therefore somewhat abstract. Experience shows us, rather, that the basic cause of all the difficulties of this transition is to be found in a deep-seated and peculiar change within the psyche. Carl Jung, CW 8, Para 777

The tragic thing is that psychology has no self-consistent mathematics at its disposal, but only a calculus of subjective prejudices. Also, it lacks the immense advantage of an Archimedean point such as physics enjoys. The latter observes the physical world from the psychic standpoint and can translate it into psychic terms. The psyche, on the other hand, observes itself and can only translate the psychic back into the psychic. Carl Jung, CW 8, Para 421

It is really high time academic psychologists came down to earth and wanted to hear about the human psyche as it really is and not merely about laboratory experiments. It is insufferable that professors should forbid their students to have anything to do with analytical psychology, that they should prohibit the use of analytical concepts and accuse our psychology

of taking account, in an unscientific manner, of "everyday experiences." I know that psychology in general could derive the greatest benefit from a serious study of the dream problem once it could rid itself of the unjustified lay prejudice that dreams are caused solely by somatic stimuli. This overrating of the somatic factor in psychiatry is one of the basic reasons why psychopathology has made no advances unless directly fertilized by analytical procedures. The dogma that "mental diseases are diseases of the brain" is a hangover from the materialism of the 1870's. It has become a prejudice which hinders all progress. Carl Jung, CW 8, Para 529

However indignant people may get about "metaphysical phantoms" when cell-processes are explained vitalistically, they nevertheless continue to regard the physical hypothesis as "scientific," although it is no less fantastic. But it fits in with the materialistic prejudice, and therefore every bit of nonsense, provided only that it turns the psychic into the physical, becomes scientifically sacrosanct. Let us hope that the time is not far off when this antiquated relic of ingrained and thoughtless materialism will be eradicated from the minds of our scientists. Carl Jung, CW 8, Para 529

Until recently psychology was a special branch of philosophy, but now we are coming to something which Nietzsche foresaw—the rise of psychology in its own right, so much so that it is even threatening to swallow philosophy. The inner resemblance between the two disciplines consists in this, that both are systems of opinion about objects which cannot be fully experienced and therefore cannot be adequately comprehended by a purely empirical approach. Both fields of study thus encourage speculation, with the result that opinions are formed in such variety and profusion that many heavy volumes are needed to contain them all. Neither discipline can do without the other, and the one invariably furnishes the unspoken—and generally unconscious—assumptions of the other. Carl Jung, CW 8, Para 659

There is not one modern psychology—there are dozens of them. This is curious enough when we remember that there is only one science of mathematics, of geology, zoology, botany, and so forth. But there are so many psychologies that an American university was able to publish a thick volume under the title Psychologies of 1930. I believe there are as many psychologies as philosophies, for there is also no single philosophy, but many. I mention this for the reason that philosophy and psychology are linked by indissoluble bonds which are kept in being by the interrelation of their subject-matters. Psychology takes the psyche for its subject, and philosophy—to put it briefly —takes the world. Carl Jung, CW 8, Para 659

When we allow ourselves to be irritated out of our wits by something, let us not suppose that the cause of our irritation lies simply and solely outside us, in the irritating thing or person. In that way we simply endow them with the power to put us into the state of irritation, and possibly into one of insomnia or indigestion. We then turn around and unhesitatingly condemn the object of offence, while all the time we are raging against an unconscious part of ourselves which is projected into the exasperating object. Carl Jung, CW 8, Para 516

We could call sexuality the spokesman of the instincts, which is why from the spiritual standpoint sex is the chief antagonist, not because sexual indulgence is in itself more immoral than excessive eating and drinking, avarice, tyranny, and other extravagances, but because the spirit senses in sexuality a counterpart equal and indeed akin to itself. For just as the spirit would press sexuality, like every other instinct, into its service, so sexuality has an ancient claim upon the spirit, which it once—in procreation, pregnancy, birth, and childhood—contained within itself, and whose passion the spirit can never dispense with in its creations. Carl Jung, CW 8, Para 107

The spiritual principle does not, strictly speaking, conflict with instinct as such but only with blind instinctuality, which really amounts to an unjustified preponderance of the instinctual nature over the spiritual. The spiritual appears in the psyche also as an instinct, indeed as a real passion, a "consuming fire," as Nietzsche once expressed it. It is not derived from any other instinct, as the psychologists of instinct would have us believe, but is a principle siti generis, a specific and necessary form of instinctual power. Carl Jung, CW 8, Para 108

Man living in the state of nature is in no sense merely "natural" like an animal, but sees, believes, fears, worships things whose meaning is not at all discoverable from the conditions of his natural environment. Their underlying meaning leads us in fact far away from all that is natural, obvious, and easily intelligible, and quite often contrasts most sharply with the natural instincts. We have only to think of all those gruesome rites and customs against which every natural feeling rises in revolt, or of all those beliefs and ideas which stand in insuperable contradiction to the evidence of the facts. All this drives us to the assumption that the spiritual principle (whatever that may be) asserts itself against the merely natural conditions with incredible strength. One can say that this too is "natural," and that both have their origin in one and the same "nature." I do not in the least doubt this origin but must point out that this "natural" something consists of a conflict between two principles, to which you can give this or that name according to taste, and that this opposition is the expression, and perhaps also the basis, of the tension we call psychic energy. Carl Jung, CW 8, Para 98

The fact that all immediate experience is psychic, and that immediate reality can only be psychic explains why it is that primitive man puts spirits and magical influences on the same plane as physical events. He has not yet torn his original experience into antithetical parts. In his world, spirit and matter still interpenetrate each other, and his gods still wander through forest and field. He is like a child, only half born, still enclosed in his own psyche as in a dream, in a world not yet distorted by the difficulties of understanding that beset a dawning intelligence. When this aboriginal world fell apart into spirit and nature, the West rescued nature for itself. It was prone by temperament to a belief in nature, and only became the more entangled in it with every painful effort to make itself spiritual. The East, on the other hand, took spirit for its own, and by explaining away matter as mere illusion—Maya—continued to dream in Asiatic filth and misery. But since there is only one earth and one mankind. East and West cannot rend humanity into two different halves. Psychic reality still exists in its original oneness and awaits man’s advance to a level of consciousness where he no longer believes in the one part and denies the other but recognizes both as constituent elements of one psyche. Carl Jung, CW 8, Para 682

Through scientific understanding, our world has become dehumanized. Man feels himself isolated in the cosmos. He is no longer involved in nature and has lost his emotional participation in natural events, which hitherto had a symbolic meaning for him. Thunder is no longer the voice of a god, nor is lightning his avenging missile. No river contains a spirit, no tree means a man’s life, no snake is the embodiment of wisdom, and no mountain still harbours a great demon. Neither do things speak to him nor can he speak to things, like stones, springs, plants, and animals. He no longer has a bush-soul identifying him with a wild animal. His immediate communication with nature is gone forever. Carl Jung, CW 8, Para 95

The conflict between nature and spirit is itself a reflection of the paradox of psychic life. This reveals a physical and a spiritual aspect which appear a contradiction because, ultimately, we do not understand the nature of psychic life itself. Whenever, with our human understand-

ing, we want to make a statement about something which in the last analysis we have not grasped and cannot grasp, then we must, if we are honest, be willing to contradict ourselves, we must pull this something into its antithetical parts in order to be able to deal with it at all. The conflict between the physical and the spiritual aspects only shows that psychic life is in the last analysis an incomprehensible "something." Carl Jung, CW 8, Para 680

Consciousness determines Weltanschauung. All conscious awareness of motives and intentions is a Weltanschauung in the bud; every increase in experience and knowledge is a step in the development of a Weltanschauung. And with the picture that the thinking man fashions of the world he also changes himself. The man whose sun still moves round the earth is essentially different from the man whose earth is a satellite of the sun. Giordano Bruno's reflections on infinity were not in vain they represent one of the most important beginnings of modern consciousness. The man whose cosmos hangs in the empyrean is different from one whose mind is illuminated by Kepler's vision. The man who is still dubious about the sum of twice two is different from the thinker for whom nothing is less doubtful than the a priori truths of mathematics. In short, it is not a matter of indifference what sort of Weltanschauung we possess, since not only do we create a picture of the world, but this picture retroactively changes us. Carl Jung, CW 8, Para 696

A science can never be a Weltanschauung but merely the tool with which to make one. Whether we take this tool in hand or not depends on the sort of Weltanschauung we already have. For no one is without a Weltanschauung of some sort. Even in an extreme case, he will at least have the Weltanschauung that education and environment have forced on him. If this tells him, to quote Goethe, that "the highest joy of man should be the growth of personality," he will unhesitatingly seize upon science and its conclusions, and with this as a tool will build himself a Weltanschauung—to his own edification. But if his hereditary convictions tell him that science is not a tool but an end in itself, he will follow the watchword that has become more and more prevalent during the last one hundred and fifty years and has proved to be the decisive one in practice. Here and there single individuals have desperately resisted it, for to their way of thinking the meaning of life culminates in the perfection of the human personality and not in the differentiation of techniques, which inevitably leads to an extremely one-sided development of a single instinct, for instance the instinct for knowledge. If science is an end in itself, man's raison d'etre lies in being a mere intellect. If art is an end in itself, then his sole value lies in the imaginative faculty, and the intellect is consigned to the lumber-room. If making money is an end in itself, both science and art can quietly shut up shop. No one can deny that our modern consciousness, in pursuing these mutually exclusive ends, has become hopelessly fragmented. The consequence is that people are trained to develop one quality only; they become tools themselves. Carl Jung, CW 8, Para 696

To have a Weltanschauung means to create a picture of the world and of oneself, to know what the world is and who I am. Taken literally, this would be too much. No one can know what the world is, just as little as can he know himself. But, cum grano salts, it means the best possible knowledge—a knowledge that esteems wisdom and abhors unfounded assumptions, arbitrary assertions, and didactic opinions. Such knowledge seeks the well-founded hypothesis, without forgetting that all knowledge is limited and subject to error. Carl Jung, CW 8, Para 698

If we were conscious of the spirit of the age, we should know why we are so inclined to account for everything on physical grounds; we should know that it is because, up till now, too much was accounted for in terms of spirit. This realization would at once make us critical of our bias. We would say most likely we are now making exactly the same mistake on the

other side. We delude ourselves with the thought that we know much more about matter than about a "metaphysical" mind or spirit, and so we overestimate material causation and believe that it alone affords us a true explanation of life. But matter is just as inscrutable as mind. As to the ultimate things we can know nothing, and only when we admit this do we return to a state of equilibrium. Carl Jung, CW 8, Para 657

I know nothing of a "super-reality." Reality contains everything I can know, for everything that acts upon me is real and actual. If it does not act upon me, then I notice nothing and can, therefore, know nothing about it. Hence I can make statements only about real things, but not about things that are unreal, or surreal, or subreal. Unless, of course, it should occur to someone to limit the concept of reality in such a way that the attribute "real" applied only to a particular segment of the world's reality. This restriction to the so-called material or concrete reality of objects perceived by the senses is a product of a particular way of thinking—the thinking that underlies "sound common sense" and our ordinary use of language. It operates on the celebrated principle "Nihil est in intellectu quod non antea fuerit in sensu," regardless of the fact that there are very many things in the mind which did not derive from the data of the senses. According to this view, everything is "real" which comes, or seems to come, directly or indirectly from the world revealed by the senses. This limited picture of the world is a reflection of the one-sidedness of Western man. Carl Jung, CW 8, Para 742

A dream, like every element in the psychic structure, is a product of the total psyche. Hence we may expect to find in dreams everything that has ever been of significance in the life of humanity. Just as human life is not limited to this or that fundamental instinct, but builds itself up from a multiplicity of instincts, needs, desires, and physical and psychic conditions, etc., so the dream cannot be explained by this or that element in it, however beguilingly simple such an explanation may appear to be. We can be certain that it is incorrect, because no simple theory of instinct will ever be capable of grasping the human psyche, that mighty and mysterious thing, nor, consequently, its exponent, the dream. In order to do anything like justice to dreams, we need an interpretive equipment that must be laboriously fitted together from all branches of the humane sciences. Carl Jung, CW 8, Para 527

To speak of the morning and spring, of the evening and the autumn of life is not mere sentimental jargon. We thus give expression to psychological truths, and even more to physiological facts. Carl Jung, CW 8, Para 780

Many people who know something, but not enough, about dreams and their meaning, and who are impressed by their subtle and apparently intentional compensation, are liable to succumb to the prejudice that the dream actually has a moral purpose, that it warns, rebukes, comforts, foretells the future, etc. If one believes that the unconscious always knows best, one can easily be betrayed into leaving the dreams to take the necessary decisions and is then disappointed when the dreams become more and more trivial and meaningless. Experience has shown me that a slight knowledge of dream psychology is apt to lead to an overrating of the unconscious which impairs the power of conscious decision. The unconscious functions satisfactorily only when the conscious mind fulfils its tasks to the very limit. A dream may perhaps supply what is then lacking, or it may help us forward where our best conscious efforts have failed. Carl Jung, CW 8, Para 568

Everyone who analyses the dreams of others should constantly bear in mind that there is no simple and generally known theory of psychic phenomena, neither with regard to their nature, nor to their causes, nor to their purpose. We therefore possess no general criterion

of judgment. We know that there are all kinds of psychic phenomena, but we know nothing certain about their essential nature. We know only that, though the observation of the psyche from any one isolated standpoint can yield very valuable results, it can never produce a satisfactory theory from which one could make deductions. The sexual theory and the wish theory, like the power theory, are valuable points of view without, however, doing anything like justice to the profundity and richness of the human psyche. Had we a theory that did, we could then content ourselves with learning a method mechanically. It would then be simply a matter of reading certain signs that stood for fixed contents, and for this it would only be necessary to learn a few semiotic rules by heart. Knowledge and correct assessment of the conscious situation would then be as superfluous as in the performance of a lumbar puncture. Carl Jung, CW 8, Para 498

It is characteristic that dreams never express themselves in a logical, abstract way but always in the language of parable or simile. This is also a characteristic of primitive languages; whose flowery turns of phrase are very striking. If we remember the monuments of ancient literature, we find that what nowadays is expressed by means of abstractions was then expressed mostly by similes. Even a philosopher like Plato did not disdain to express certain fundamental ideas in this way. Carl Jung, CW 8, Para 474

As regards the much-discussed symbolism of dreams, its evaluation varies according to whether it is considered from the causal or from the final standpoint. The causal approach of Freud starts from a desire or craving, that is, from the repressed dream-wish. This craving is always something comparatively simple and elementary, which can hide itself under manifold disguises. Hence it is that the more rigorous adherents of the Freudian school have come to the point of interpreting—to give a gross example—pretty well all oblong objects in dreams as phallic symbols and all round or hollow objects as feminine symbols. Carl Jung, CW 8, Para 470

Further researches, expressly referred to by Maeder, have shown that the sexual language of dreams is not always to be interpreted in a concretistic way—that it is, in fact, an archaic language which naturally uses all the analogies readiest to hand without their necessarily coinciding with a real sexual content. It is therefore unjustifiable to take the sexual language of dreams literally under all circumstances, while other contents are explained as symbolical. But as soon as you take the sexual metaphors as symbols for something unknown, your conception of the nature of dreams at once deepens. Carl Jung, CW 8, Para 506

If, as happens in long and difficult treatments, the analyst observes a series of dreams often running into hundreds, there gradually forces itself upon him a phenomenon which, in an isolated dream, would remain hidden behind the compensation of the moment. This phenomenon is a kind of developmental process in the personality itself. At first it seems that each compensation is a momentary adjustment of one-sidedness or an equalization of disturbed balance. But with deeper insight and experience, these apparently separate acts of compensation arrange themselves into a kind of plan. They seem to hang together and in the deepest sense to be subordinated to a common goal, so that a long dream-series no longer appears as a senseless string of incoherent and isolated happenings but resembles the successive steps in a planned and orderly process of development. I have called this unconscious process spontaneously expressing itself in the symbolism of a long dream-series the individuation process. Carl Jung, CW 8, Para 550

If our dreams reproduce certain ideas these ideas are primarily our ideas, in the structure of which our whole being is interwoven. They are subjective factors, grouping themselves

as they do in the dream, and expressing this or that meaning, not for extraneous reasons but from the most intimate promptings of our psyche. The whole dream work is essentially subjective, and a dream is a theatre in which the dreamer is himself the scene, the player, the prompter, the producer, the author, the public, and the critic. Carl Jung, CW 8, Para 509

If we want to interpret a dream correctly, we need a thorough knowledge of the conscious situation at that moment, because the dream contains its unconscious complement, that is, the material which the conscious situation has constellated in the unconscious. Without this knowledge it is impossible to interpret a dream correctly, except by a lucky fluke. Carl Jung, CW 8, Para 477

As in our waking state, real people and things enter our field of vision, so the dream-images enter like another kind of reality into the field of consciousness of the dream-ego. We do not feel as if we were producing the dreams, it is rather as if the dreams came to us. They are not subject to our control but obey their own laws. They are obviously autonomous psychic complexes which form themselves out of their own material. We do not know the source of their motives, and we therefore say that dreams come from the unconscious. In saying this, we assume that there are independent psychic complexes which elude our conscious control and come and go according to their own laws. Carl Jung, CW 8, Para 580

The unconscious is the unknown at any given moment, so it is not surprising that dreams add to the conscious psychological situation of the moment all those aspects which are essential for a totally different point of view. It is evident that this function of dreams amounts to a psychological adjustment, a compensation absolutely necessary for properly balanced action. In a conscious process of reflection it is essential that, so far as possible, we should realize all the aspects and consequences of a problem in order to find the right solution. This process is continued automatically in the more or less unconscious state of sleep, where, as experience seems to show, all those aspects occur to the dreamer (at least by way of allusion) that during the day were insufficiently appreciated or even totally ignored in other words, were comparatively unconscious. Carl Jung, CW 8, Para 469

Emptiness is a great feminine secret. It is something absolutely alien to man, the chasm, the unplumbed depths, the yin. The pitifulness of this vacuous nonentity goes to his heart (I speak here as a man), and one is tempted to say that this constitutes the whole "mystery" of woman. Such a female is fate itself. A man may say what he likes about it; be for it or against it, or both at once; in the end he falls, absurdly happy, into this pit, or, if he does not, he has missed and bungled his only chance of making a man of himself. In the first case one cannot disprove his foolish good luck to him, and in the second one cannot make his misfortune seem plausible. "The Mothers, the Mothers, how eerily it sounds!" Carl Jung, CW 8, Page 183

The causal point of view tends by its very nature towards uniformity of meaning, that is, towards a fixed significance of symbols. The final point of view, on the other hand, perceives in the altered dream-image the expression of an altered psychological situation. It recognizes no fixed meaning of symbols. From this standpoint, all the dream images are important in themselves, each one having a special significance of its own, to which, indeed, it owes its inclusion in the dream. The symbol in the dream has more the value of a parable it does not conceal, it teaches. Carl Jung, CW 8, Para 471

It is only in exceptional cases that somatic stimuli are the determining factor. Usually they coalesce completely with the symbolical expression of the unconscious dream content;

in other words, they are used as a means of expression. Not infrequently the dreams show that there is a remarkable inner symbolical connection between an undoubted physical illness and a definite psychic problem, so that the physical disorder appears as a direct mimetic expression of the psychic situation. Carl Jung, CW 8, Para 502

Considering a dream from the standpoint of finality, which I contrast with the causal standpoint of Freud, does not—as I would expressly like to emphasize—involve a denial of the dream's causes, but rather a different interpretation of the associative material gathered round the dream. The material facts remain the same, but the criterion by which they are judged is different. The question may be formulated simply as follows: What is the purpose of this dream? What effect is it meant to have? These questions are not arbitrary inasmuch as they can be applied to every psychic activity. Everywhere the question of the "why" and the "wherefore" may be raised, because every organic structure consists of a complicated network of purposive functions, and each of these functions can be resolved into a series of individual facts with a purposive orientation. Carl Jung, CW 8, Para 462

The prospective function, on the other hand, is an anticipation in the unconscious of future conscious achievements, something like a preliminary exercise or sketch, or a plan roughed out in advance. The occurrence of prospective dreams cannot be denied. It would be wrong to call them prophetic, because at bottom they are no more prophetic than a medical diagnosis or a weather forecast. They are merely an anticipatory combination of probabilities which may coincide with the actual behaviour of things but need not necessarily agree in every detail. Only in the latter case can we speak of "prophecy." That the prospective function of dreams is sometimes greatly superior to the combinations we can consciously foresee is not surprising, since a dream results from the fusion of subliminal elements and is thus a combination of all the perceptions, thoughts, and feelings which consciousness has not registered because of their feeble accentuation. In addition, dreams can rely on subliminal memory traces that are no longer able to influence consciousness effectively. With regard to prognosis, therefore, dreams are often in a much more favourable position than consciousness. Carl Jung, CW 8, Para 493

Even the well-nigh unconscious primitive can adapt and assert himself, but only in his primitive world, and that is why under other conditions he falls victim to countless dangers which we on a higher level of consciousness can avoid without effort. True, a higher consciousness is exposed to dangers undreamt of by the primitive, but the fact remains that the conscious man has conquered the earth and not the unconscious one. Whether in the last analysis, and from a superhuman point of view, this is an advantage or a calamity we are not in a position to decide. Carl Jung, CW 8, Para 695

The strong and natural love that binds the child to the father turns away, during the years when the child is outgrowing the family circle, to the higher forms of the father, to authority, to the "Fathers" of the Church and to the father-god visibly represented by them. Nevertheless, mythology is not lacking in consolations. Did not the Word become flesh? And did not the divine pneuma enter into the Virgin's womb? The whirlwind of Anaxagoras was that same divine nous that produced the world out of itself. Why do we cherish the image of the Immaculate Mother even to this day?" Carl Jung; CW 8, para. 76.

In this latter case, unfortunately, there is no scientific test that would prove the discrepancy between perception and reality. Although the possibility of gross deception is infinitely greater here than in our perception of the physical world, we still go on naively projecting

our own psychology into our fellow human beings. In this way everyone creates for himself a series of more or less imaginary relationships based essentially on projection. Carl Jung, CW 8, Para 50

Incisive changes in history are generally attributed exclusively to external causes. It seems to me, however, that external circumstances often serve merely as occasions for a new attitude to life and the world, long prepared in the unconscious, to become manifest. Social, political, and religious conditions affect the collective unconscious in the sense that all those factors which are suppressed by the prevailing views or attitudes in the life of a society gradually accumulate in the collective unconscious and activate its contents. Certain individuals gifted with particularly strong intuition then become aware of the changes going on in it and translate these changes into communicable ideas. The new ideas spread rapidly because parallel changes have been taking place in the unconscious of other people. There is a general readiness to accept the new ideas, although on the other hand they often meet with violent resistance. New ideas are not just the enemies of the old; they also appear as a rule in an extremely unacceptable form. Carl Jung, CW 8, Para 594

Whenever contents of the collective unconscious become activated, they have a disturbing effect on the conscious mind, and confusion ensues. If the activation is due to the collapse of the individual's hopes and expectations, there is a danger that the collective unconscious may take the place of reality. This state would be pathological. If, on the other hand, the activation is the result of psychological processes in the unconscious of the people, the individual may feel threatened or at any rate disoriented, but the resultant state is not pathological, at least so far as the individual is concerned. Nevertheless, the mental state of the people as a whole might well be compared to a psychosis. Carl Jung, CW 8, Para 595

The "common man," who is predominantly a mass man, acts on the principle of realizing nothing, nor does he need to, because for him the only thing that commits mistakes is that vast anonymity conventionally known as the "State" or "Society." But once a man knows that he is, or should be, responsible, he feels responsible also for his psychic constitution, the more so the more clearly he sees what he would have to be in order to become healthier, more stable, and more efficient. Once he is on the way to assimilating the unconscious he can be certain that he will escape no difficulty that is an integral part of his nature. Carl Jung, CW 8, Para 410

If we want to interpret a dream correctly, we need a thorough knowledge of the conscious situation at that moment, because the dream contains its unconscious complement, that is, the material which the conscious situation has constellated in the unconscious. Without this knowledge it is impossible to interpret a dream correctly, except by a lucky fluke. Carl Jung; CW 8; Page 477.

How are we to explain religious processes, for instance, whose nature is essentially symbolical? In abstract form, symbols are religious ideas; in the form of action, they are rites or ceremonies. They are the manifestation and expression of excess libido. At the same time they are stepping-stones to new activities, which must be called cultural in order to distinguish them from the instinctual functions that run their regular course according to natural law. Carl Jung, CW 8, para 91.

The individual ego could be conceived as the commander of a small army in the struggle with his environment—a war not infrequently on two fronts, before him the struggle for

existence, in the rear the struggle against his own rebellious instinctual nature. Even to those of us who are not pessimists our existence feels more like a struggle than anything else. The state of peace is a desideratum, and when a man has found peace with himself and the world it is indeed a noteworthy event, Carl Jung, CW 8, Para 693

The archetypal representations (images and ideas) mediated to us by the unconscious should not be confused with the archetype as such. They are very varied structures which all point back to one essentially "irrepresentable" basic form. The latter is characterized by certain formal elements and by certain fundamental meanings, although these can be grasped only approximately. The archetype as such is a psychoid factor that belongs, as it were, to the invisible, ultra-violet end of the psychic spectrum. It seems to me probable that the real nature of the archetype is not capable of being made conscious, that it is transcendent, on which account I call it psychoid [quasi-psychic]. Carl Jung, CW 8, Para 417

In spite or perhaps because of its affinity with instinct, the archetype represents the authentic element of spirit, but a spirit which is not to be identified with the human intellect, since it is the latter's spiritus rector. The essential content of all mythologies and all religions and all isms is archetypal. The archetype is spirit or anti-spirit what it ultimately proves to be depends on the attitude of the human mind. Archetype and instinct are the most polar opposites imaginable, as can easily be seen when one compares a man who is ruled by his instinctual drives with a man who is seized by the spirit. But, just as between all opposites there obtains so close a bond that no position can be established or even thought of without its corresponding negation, so in this case also "les extremes se touchent." Carl Jung, CW 8, Para 406

Restriction to material reality carves an exceedingly large chunk out of reality as a whole, but it nevertheless remains a fragment only, and all round it is a dark penumbra which one would have to call unreal or surreal. This narrow perspective is alien to the Eastern view of the world, which therefore has no need of any philosophical conception of super-reality. Our arbitrarily delimited reality is continually menaced by the "supersensual," the "supernatural," the "superhuman," and a whole lot more besides. Eastern reality includes all this as a matter of course. For us the zone of disturbance already begins with the concept of the "psychic." In our reality the psychic cannot be anything except an effect at third hand, produced originally by physical causes; a "secretion of the brain," or something equally savoury. At the same time, this appendage of the material world is credited with the power to pull itself up by its own bootstraps, so to speak; and not only to fathom the secrets of the physical world, but also, in the form of "mind," to know itself. All this, without its being granted anything more than an indirect reality. Carl Jung, CW 8, Pages 382-383

It does not surprise me that psychology debouches into philosophy, for the thinking that underlies philosophy is after all a psychic activity which, as such, is the proper study of psychology. I always think of psychology as encompassing the whole of the psyche, and that includes philosophy and theology and many other things besides. For underlying all philosophies and all religions are the facts of the human soul, which may ultimately be the arbiters of truth and error. Carl Jung, CW 8, Para 535

It is just man's turning away from instinct—his opposing himself to instinct—that creates consciousness. Instinct is nature and seeks to perpetuate nature, whereas consciousness can only seek culture or its denial. Even when we turn back to nature, inspired by a Rousseauesque longing, we "cultivate" nature. As long as we are still submerged in nature we are unconscious, and we live in the security of instinct which knows no problems. Everything in us that still be-

longs to nature shrinks away from a problem, for its name is doubt, and wherever doubt holds sway there is uncertainty and the possibility of divergent ways. And where several ways seem possible, there we have turned away from the certain guidance of instinct and are handed over to fear. For consciousness is now called upon to do that which nature has always done for her children namely, to give a certain, unquestionable, and unequivocal decision. And here we are beset by an all-too-human fear that consciousness—our Promethean conquest—may in the end not be able to serve us as well as nature. Carl Jung, CW 8, Para 750

The nature of the psyche reaches into obscurities far beyond the scope of our understanding. It contains as many riddles as the universe with its galactic systems, before whose majestic configurations only a mind lacking in imagination can fail to admit its own insufficiency. This extreme uncertainty of human comprehension makes the intellectualistic hubbub not only ridiculous, but also deplorably dull. Carl Jung, CW 8, Para 815

When we must deal with problems, we instinctively resist trying the way that leads through obscurity and darkness. We wish to hear only of unequivocal results, and completely forget that these results can only be brought about when we have ventured into and emerged again from the darkness. But to penetrate the darkness we must summon all the powers of enlightenment that consciousness can offer. Carl Jung, CW 8, Para 752

If psychic life consisted only of self-evident matters of fact—which on a primitive level is still the case—we could content ourselves with a sturdy empiricism. The psychic life of civilized man, however, is full of problems; we cannot even think of it except in terms of problems. Our psychic processes are made up to a large extent of reflections, doubts, experiments, all of which are almost completely foreign to the unconscious, instinctive mind of primitive man. It is the growth of consciousness which we must thank for the existence of problems; they are the Danaan gift of civilization, Carl Jung, CW 8, Para 750

There is no other way open to us; we are forced to resort to conscious decisions and solutions where formerly we trusted ourselves to natural happenings. Every problem, therefore, brings the possibility of a widening of consciousness, but also the necessity of saying goodbye to childlike unconsciousness and trust in nature. This necessity is a psychic fact of such importance that it constitutes one of the most essential symbolic teachings of the Christian religion. It is the sacrifice of the merely natural man, of the unconscious, ingenuous being whose tragic career began with the eating of the apple in Paradise. The biblical fall of man presents the dawn of consciousness as a curse. And as a matter of fact it is in this light that we first look upon every problem that forces us to greater consciousness and separates us even further from the paradise of unconscious childhood. Carl Jung, CW 8, Para 751

We must constantly bear in mind that what we mean by "archetype" is in itself irrepresentable, but has effects which make visualizations of it possible, namely, the archetypal images and ideas. We meet with a similar situation in physics there the smallest particles are themselves irrepresentable but have effects from the nature of which we can build up a model. The archetypal image, the motif or mythologem, is a construction of this kind. Carl Jung, CW 8, Para 417

Just as the "psychic infra-red," the biological instinctual psyche, gradually passes over into the physiology of the organism and thus merges with its chemical and physical conditions, so the "psychic ultra-violet," the archetype, describes a field which exhibits none of the peculiarities of the physiological and yet, in the last analysis, can no longer be regarded as

psychic. Carl Jung, CW 8, Para 420

To the extent that the archetypes intervene in the shaping of conscious contents by regulating, modifying, and motivating them, they act like instincts. It is therefore very natural to suppose that these factors are connected with the instincts and to enquire whether the typical situational patterns which these collective form-principles apparently represent are not in the end identical with the instinctual patterns, namely, with the patterns of behaviour. Carl Jung, CW 8, Para 104

While we are all agreed that murder, stealing, and ruthlessness of any kind are obviously inadmissible, there is nevertheless what we call a "sexual question." We hear nothing of a murder question or a rage question; social reform is never invoked against those who wreak their bad tempers on their fellow men. Yet these things are all examples of instinctual behaviour, and the necessity for their suppression seems to us self-evident. Only in regard to sex do we feel the need of a question mark. This points to a doubt —the doubt whether our existing moral concepts and the legal institutions founded on them are really adequate and suited to their purpose. No intelligent person will deny that in this field opinion is sharply divided. Indeed, there would be no problem at all if public opinion were united about it. It is obviously a reaction against a too rigorous morality. It is not simply an outbreak of primitive instinctually; such outbreaks, as we know, have never yet bothered themselves with moral laws and moral problems. There are, rather, serious misgivings as to whether our existing moral views have dealt fairly with the nature of sex. From this doubt there naturally arises a legitimate interest in any attempt to understand the nature of sex more truly and deeply. Carl Jung, CW 8, Para 105

If we try to extract the common and essential factors from the almost inexhaustible variety of individual problems found in the period of youth, we meet in all cases with one particular feature a more or less patent clinging to the childhood level of consciousness, a resistance to the fateful forces in and around us which would involve us in the world. Something in us wishes to remain a child, to be unconscious or, at most, conscious only of the ego; to reject everything strange, or else subject it to our will; to do nothing, or else indulge our own craving for pleasure or power. In all this there is something of the inertia of matter; it is a persistence in the previous state whose range of consciousness is smaller, narrower, and more egoistic than that of the dualistic phase. For here the individual is faced with the necessity of recognizing and accepting what is different and strange as a part of his own life, as a kind of "also-I." Carl Jung, CW 8, Para 764

The solution of the problems of youth by restricting ourselves to the attainable is only temporarily valid and not lasting in a deeper sense. Of course, to win for oneself a place in society and to transform one’s nature so that it is more or less fitted to this kind of existence is in all cases a considerable achievement. It is a fight waged within oneself as well as outside, comparable to the struggle of the child for an ego. That struggle is for the most part unobserved because it happens in the dark; but when we see how stubbornly childish illusions and assumptions and egoistic habits are still clung to in later years we can gain some idea of the energies that were needed to form them. And so it is with the ideals, convictions, guiding ideas and attitudes which in the period of youth lead us out into life, for which we struggle, suffer, and win victories they grow together with our own being, we apparently change into them, we seek to perpetuate them indefinitely and as a matter of course, just as the young person asserts his ego in spite of the world and often in spite of himself. Carl Jung, CW 8, Para 771

The name’s people give to their experiences are often very revealing. What is the ori-

gin of the word Seele? Like the English word soul, it comes from the Gothic saiwalu and the old German saiwalô, and these can be connected etymologically with the Greek aiolos, 'quick-moving, twinkling, iridescent'. The Greek word psyche also means 'butterfly'. Saiwalô is related on the other side in the Old Slavonic sila, 'strength'. These connections throw light on the original meaning of the word soul; it is moving force, that is, life-force. The- Latin words animus, 'spirit', and anima, 'soul', arc the same as the Greek anemos, 'wind'. The other Greek word for 'wind', pneuma, also means 'spirit'. In Gothic we find the same word in us-anan, 'to breathe out', and in Latin it is anhelare, 'to pant'. In Old High German, spiritus sanctus was rendered by atum, 'breath'. In Arabic, 'wind' is rih, and rüh is 'soul, spirit'. The Greek word psyche has similar connections; it is related to psychein, 'to breathe', psychos, 'cool', psychros, 'cold, chill', and physa, 'bellows'. These connections show clearly how in Latin, Greek, and Arabic the names given to the soul are related to the notion of moving air, the "cold breath of the spirits." And this is probably the reason why the primitive view also endows the soul with an invisible breath-body. Carl Jung, CW 8, Paras 663-664)

Obviously it is in the youthful period of life that we have most to gain from a thorough recognition of the instinctual side. A timely recognition of sexuality, for instance, can prevent that neurotic suppression of it which keeps a man unduly withdrawn from life, or else forces him into a wretched and unsuitable way of living with which he is bound to come into conflict. Proper recognition and appreciation of normal instincts leads the young person into life and entangles him with fate, thus involving him in life's necessities and the consequent sacrifices and efforts through which his character is developed and his experience matured. For the mature person, however, the continued expansion of life is obviously not the right principle, because the descent towards life's afternoon demands simplification, limitation, and intensification-in other words, individual culture. A man in the first half of life with its biological orientation can usually, thanks to the youthfulness of his whole organism, afford to expand his life and make something of value out of it. But the man in the second half of life is oriented towards culture, the diminishing powers of his organism allowing him to subordinate his instincts to cultural goals. Not a few are wrecked during the transition from the biological to the cultural sphere. Our collective education makes practically no provision for this transitional period. Concerned solely with the education of the young, we disregard the education of the adult, of whom it is always assumed-on what grounds who can say? -that he needs no more education. There is an almost total lack of guidance for this extraordinarily important transition from the biological to the cultural attitude, for the transformation of energy from the biological form into the cultural form. This transformation process is an individual one and cannot be enforced by general rules and maxims. It is achieved by means of the symbol. Symbol-formation is a fundamental problem that cannot be discussed here. I must refer the reader to Chapter V in my Psychological Types, where I have dealt with this question in detail." Carl Jung, CW 8, Para 113

Although the actual moment of conversion often seems quite sudden and unexpected, we know from experience that such a fundamental upheaval always requires a long period of incubation. It is only when this preparation is complete, that is to say when the individual is ripe for conversion, that the new insight breaks through with violent emotion. Saul, as he was then called, had unconsciously been a Christian for a long time, and this would explain his fanatical hatred of the Christians, because fanaticism is always found in those who have to stifle a secret doubt. That is why converts are always the worst fanatics. Carl Jung, CW 8, Para 582

The ideas of the moral order and of God belong to the ineradicable substrate of the human soul. That is why any honest psychology, which is not blinded by the garish conceits of

enlightenment, must come to terms with these facts. They cannot be explained away and killed with irony. In physics we can do without a God-image, but in psychology it is a definite fact that has got to be reckoned with, just as we have to reckon with "affect," "instinct," "mother," etc. It is the fault of the everlasting contamination of object and image that people can make no conceptual distinction between "God" and "God-image," and therefore think that when one speaks of the "God-image" one is speaking of God and offering "theological" explanations. It is not for psychology, as a science, to demand a hypostatization of the God-image. But the facts being what they are, it does have to reckon with the existence of a God-image. Carl Jung, CW 8, Para 528

It would all be so much simpler if only we could deny the existence of the psyche. But here we are with our immediate experiences of something that is—something that has taken root in the midst of our measurable, ponderable, three-dimensional reality, that differs mysteriously from this in every respect and in all its parts, and yet reflects it. The psyche could be regarded as a mathematical point and at the same time as a universe of fixed stars. It is small wonder, then, if, to the unsophisticated mind, such a paradoxical being borders on the divine. If it occupies no space, it has no body. Bodies die, but can something invisible and incorporeal disappear? What is more, life and psyche existed for me before I could say "I," and when this "I" disappears, as in sleep or unconsciousness, life and psyche still go on, as our observation of other people and our own dreams inform us. Why should the simple mind deny, in the face of such experiences, that the "soul" lives in a realm beyond the body? Carl Jung, CW 8, Para 671

For the man of today the expansion of life and its culmination are plausible goals, but the idea of life after death seems to him questionable or beyond belief. Life's cessation, that is, death, can only be accepted as a reasonable goal either when existence is so wretched that we are only too glad for it to end, or when we are convinced that the sun strives to its setting "to illuminate distant races" with the same logical consistency it showed in rising to the zenith. But to believe has become such a difficult art today that it is beyond the capacity of most people, particularly the educated part of humanity. They have become too accustomed to the thought that, with regard to immortality and such questions, there are innumerable contradictory opinions and no convincing proofs. And since "science" is the catchword that seems to carry the weight of absolute conviction in the temporary world, we ask for "scientific" proofs. But educated people who can think know very well that proof of this kind is a philosophical impossibility. We simply cannot know anything whatever about such things. Carl Jung, CW 8, Para 790

The ego-conscious personality is only a part of the whole man, and its life does not yet represent his total life. The more he is merely "I," the more he splits himself off from the collective man, of whom he is also a part, and may even find himself in opposition to him. But since everything living strives for wholeness, the inevitable one-sidedness of our conscious life is continually being corrected and compensated by the universal human being in us, whose goal is the ultimate integration of conscious and unconscious, or better, the assimilation of the ego to a wider personality. Carl Jung, CW 8, Para 557

To think otherwise than as our contemporaries think is somehow illegitimate and disturbing; it is even indecent, morbid or blasphemous, and therefore socially dangerous for the individual. He is stupidly swimming against the social current. Carl Jung, CW 8, Para 653

Psychology teaches us that, in a certain sense, there is nothing in the psyche that is old; nothing that can really, finally die away. Even Paul was left with a thorn in the flesh.

Whoever protects himself against what is new and strange and regresses to the past falls into the same neurotic condition as the man who identifies himself with the new and runs away from the past. The only difference is that the one has estranged himself from the past and the other from the future. In principle both are doing the same thing: they are reinforcing their narrow range of consciousness instead of shattering it in the tension of opposites and building up a state of wider and higher consciousness. Carl Jung, CW 8, Para 767

The spirit of the age will not let itself be trifled with. It is a religion, or, better, a creed which has absolutely no connection with reason, but whose significance lies in the unpleasant fact that it is taken as the absolute measure of all truth and is supposed always to have common sense upon its side. Carl Jung, CW 8, Para 652

Man finds himself simultaneously driven to act and free to reflect. This contrariety in his nature has no moral significance, for instinct is not in itself bad any more than spirit is good. Both can be both. Negative electricity is as good as positive electricity first and foremost it is electricity. Carl Jung, CW 8, Para 406

Nowhere are we closer to the sublime secret of all origination than in the recognition of our own selves, whom we always think we know already. Yet we know the immensities of space better than we know our own depths, where —even though we do not understand it—we can listen directly to the throb of creation itself. Carl Jung, CW 8, Para 737

Instead of waging war on himself it is surely better for a man to learn to tolerate himself, and to convert his inner difficulties into real experiences instead of expending them in useless fantasies. Then at least he lives and does not waste his life in fruitless struggles. If people can be educated to see the lowly side of their own natures, it may be hoped that they will also learn to understand and to love their fellow men better. We understand another person in the same way as we understand, or seek to understand, ourselves. What we do not understand in ourselves we do not understand in the other person either. So there is plenty to ensure that his image will be for the most part subjective. As we know, even an intimate friendship is no guarantee of objective knowledge. Carl Jung, CW 8, Para 508

Every one of us gladly turns away from his problems; if possible, they must not be mentioned, or, better still, their existence is denied. We wish to make our lives simple, certain, and smooth, and for that reason problems are taboo. We want to have certainties and no doubts—results and no experiments—without even seeing that certainties can arise only through doubt and results only through experiment. The artful denial of a problem will not produce conviction on the contrary, a wider and higher consciousness is required to give us the certainty and clarity we need. Carl Jung, CW 8, Para 751

One of the greatest obstacles to psychological understanding is the inquisitive desire to know whether the psychological factor adduced is "true" or "correct." If the description of it is not erroneous or false, then the factor is valid in itself and proves its validity by its very existence. One might just as well ask if the duck-billed platypus is a "true" or "correct" invention of the Creator’s will. Carl Jung, CW 8, Para 192

What to the causal view is fact to the final view is symbol, and vice versa. Everything that is real and essential to the one is unreal and inessential to the other. We are therefore forced to resort to the antinomian postulate and must view the world, too, as a psychic phenomenon. Certainly it is necessary for science to know how things are "in themselves,"

but even science cannot escape the psychological conditions of knowledge, and psychology must be peculiarly alive to these conditions. Carl Jung, CW 8, Paras 54-45

When Nature is left to herself, energy is transformed along the line of its natural "gradient." In this way natural phenomena are produced, but not "work." So also man when left to himself lives as a natural phenomenon, and, in the proper meaning of the word, produces no work. It is culture that provides the machine whereby the natural gradient is exploited for the performance of work. That man should ever have invented this machine must be due to something rooted deep in his nature, indeed in the nature of the living organism as such. For living matter is itself a transformer of energy, and in some way as yet unknown life participates in the transformation process. Life proceeds, as it were, by making use of natural physical and chemical conditions as a means to its own existence. Carl Jung, CW 8, Para 80

Achievement, usefulness and so forth are the ideals that seem to point the way out of the confusions of the problematical state. They are the lodestars that guide us in the adventure of broadening and consolidating our physical existence; they help us to strike our roots in the world, but they cannot guide us in the development of that wider consciousness to which we give the name of culture. In the period of youth, however, this course is the normal one and in all circumstances preferable to merely tossing about in a welter of problems. Carl Jung, CW 8, Para 769

The nearer we approach to the middle of life, and the better we have succeeded in entrenching ourselves in our personal attitudes and social positions, the more it appears as if we had discovered the right course and the right ideals and principles of behaviour. For this reason we suppose them to be eternally valid and make a virtue of unchangeably clinging to them. We overlook the essential fact that the social goal is attained only at the cost of a diminution of personality. Many—far too many—aspects of life which should also have been experienced lie in the lumber-room among dusty memories; but sometimes, too, they are glowing coals under grey ashes. Carl Jung, CW 8, Para 772

Reduction to the natural condition is neither an ideal state nor a panacea. I£ the natural state were really the ideal one, then the primitive would be leading an enviable existence. But that is by no means so, for aside from all the other sorrows and hardships of human life the primitive is tormented by superstitions, fears, and compulsions to such a degree that, if he lived in our civilization, he could not be described as other than profoundly neurotic, if not mad. Carl Jung, CW 8, Para 94

It is undoubtedly true that instinctually conflicts with our moral views most frequently and most conspicuously in the realm of sex. The conflict between infantile instinctuality and ethics can never be avoided. It is, it seems to me, the sine qua non of psychic energy. Carl Jung, CW 8, Para 105

The conflict between ethics and sex today is not just a collision between instinctuality and morality, but a struggle to give an instinct its rightful place in our lives, and to recognize in this instinct a power which seeks expression and evidently may not be trifled with, and therefore cannot be made to fit in with our well-meaning moral laws. Sexuality is not mere instinctuality; it is an indisputably creative power that is not only the basic cause of our individual lives, but a very serious factor in our psychic life as well. Today we know only too well the grave consequences that sexual disturbances can bring in their train. Carl Jung, CW 8, Para 107

People whose own temperaments offer problems are often neurotic, but it would be a serious misunderstanding to confuse the existence of problems with neurosis. There is a marked difference between the two in that the neurotic is ill because he is unconscious of his problems, while the person with a difficult temperament suffers from his conscious problems without being ill. Carl Jung, CW 8, Para 763

A man consumes his large supply of masculine substance and has left over only the smaller amount of feminine substance, which must now be put to use Carl Jung, CW 8, Para 782

Conversely, the woman allows her hitherto unused supply of masculinity to become active Carl Jung, CW 8, Para 782

Especially among southern races one can observe that older women develop deep, rough voices, incipient moustaches, rather hard features and other masculine traits. On the other hand the masculine physique is toned down by feminine features, such as adiposity and softer facial expressions Carl Jung, CW 8, Para 780

This change is even more noticeable in the psychic realm than in the physical. How often it happens that a man of forty-five or fifty winds up his business, and the wife then dons the trousers and opens a little shop where he perhaps performs the duties of a handyman Carl Jung, CW 8, Para 783

There are many women who only awaken to social responsibility and to social consciousness after their fortieth year Carl Jung, CW 8, Para 783

In modern business life, especially in America, nervous breakdowns in the forties are a very common occurrence Carl Jung, CW 8, Para 783

If one examines the victims one finds that what has broken down is the masculine style of life which held the field up to now, and that what is left over is an effeminate man Carl Jung, CW 8, Para 783

Contrariwise, one can observe women in these self-same business spheres who have developed in the second half of life an uncommonly masculine tough-mindedness which thrusts the feelings and the heart aside CW 8 Para 783

Very often these changes are accompanied by all sorts of catastrophes in marriage, for it is not hard to imagine what will happen when the husband discovers his tender feelings and the wife her sharpness of mind Carl Jung, CW 8, Para 783

The worst of it all is that intelligent and cultivated people live their lives without even knowing of the possibilities of such transformations. Wholly unprepared, they embark upon the second half of life Carl Jung, CW 8, Para 784

We cannot live the afternoon of life according to the program of life's morning; for what was great in the morning will be little at evening, and what in the morning was true will at evening have become a lie Carl Jung, CW 8, Para 784

… it would seem to be more in accord with the collective psyche of humanity to regard death as the fulfillment of life's meaning and as its goal in the truest sense, instead of a mere meaningless cessation. Anyone who cherishes a rationalistic opinion on this score has isolated himself psychologically and stands opposed to his own basic nature. Carl Jung, CW 8, Para 807.

In the secret hour of life's midday the parabola is reversed, death is born. The second half of life does not signify ascent, unfolding, increase, exuberance, but death, since the end is its goal. The negation of life's fulfilment is synonymous with the refusal to accept it ending. Both mean not wanting to live, and not wanting to live is identical with not wanting to die. Waxing and waning make one curve. Carl Jung, CW 8, Para 800.

In Chinese philosophy one of the oldest and most central ideas is that of Tao, which the Jesuits translated as "God." But that is correct only for the Western way of thinking. Carl Jung, CW 8, Para, 917

The [great German Sinologue] Richard Wilhelm brilliantly interprets it [Tao] as "meaning" Carl Jung, CW 8, Para 917

The concept of Tao pervades the whole philosophical thought of China. Carl Jung, CW 8, Para 917

Tao-tzu gives the following description of Tao in his celebrated Tao Te Ching:

There is something formless yet complete That existed before heaven and earth.

How still! how empty!

Dependent on nothing, unchanging

All-pervading, unfailing

One may think of it as the mother of all things under heaven.

I do not know its name.

But I call it "Meaning"

If I had to give it a name, I should call it "The Great" [Ch. XXV] Carl Jung, CW 8, Para 918.

Tao "covers the ten thousand things like a garment but does not claim to be master over them" (Ch. XXXIV) Carl Jung, CW 8, Para 919

We solemnly lay a foundation-stone with the blessing of the Church Carl Jung, CW 8, Para 87

We “christen” a ship as she slips from the docks Carl Jung, CW 8, Para 87

In time of war we assure ourselves of the help of a patriotic God, the sweat of fear forcing a fervent prayer from the lips of the stoutest Carl Jung, CW 8, Para 87

This [mana] is what works to effect everything which is beyond the power of the ordinary man, outside the common processes of nature Carl Jung, CW 8, Para 123

It is present in the atmosphere of life, attaches itself to persons and things, and is manifested by results which can only be ascribed to its operation Carl Jung, CW 8, Para 123

It is a power or influence, not physical, and in a way supernatural; but shows itself in physical force, or any kind of power or influence which a man possesses Carl Jung, CW 8. Para 123

This man is not fixed in anything, and can be conveyed in almost anything; but spirits, whether disembodied souls or supernatural beings, have it and can impart it Carl Jung, CW 8, Para 123

In his classic study of mana Lehmann defines it as something “extraordinarily effective. We cannot escape the impression that the primitive view of mana is a forerunner of our concept of psychic energy and, most probably, of energy in general Carl Jung, CW 8, Para 128

The basic conception of mana crops up again on the animistic level in personified form. Here it is souls, demons, gods, who produce the extraordinary effect. Nothing “divine” attaches to mana, so that one cannot see in mana the original form of an idea of God. Nonetheless, it cannot be denied that mana is a necessary or at least a very important precondition for the development of an idea of God Carl Jung, CW 8. Para 129

We are concerned here, then, with the psychological phenomenon that lies at the root of magic by analogy. We should not think that is an ancient superstition which we have long since outgrown. Carl Jung, CW 8, Para 314

If you read the Latin text of the Mass carefully, you will constantly come upon the famous “sicut”; this always introduces an analogy by means of which a change is to be produced Carl Jung, CW 8, Para 314

Another striking example of analogy is the making fire on Holy Saturday. In former times, the new fire was struck from the stone, and still earlier it was obtained by boring into a piece of wood, which was the prerogative of the Church Carl Jung, CW 8, Para 314

Therefore in the prayer of the priest it is said: O God, who through thy Son, who is called the cornerstone, hast brought the fire of thy light to the faithful, make holy for our future use this new fire struck from the firestone Carl Jung, CW 8, Para 314

By the analogy of Christ with the cornerstone, the firestone is raised to the level of Christ himself, who again kindles a new fire Carl Jung, CW 8, Para 314

The rationalist may laugh at this. But something deep in us is stirred, and not in us alone but in millions of Christian men and women, though we may call it only a feeling for beauty. What is stirred in us is that faraway background, those immemorial patterns of the human mind, which we have not acquired, but have inherited from the dim ages of the past Carl Jung, CW 8, Para 315

All the most powerful ideas in history go back to archetypes. This is particularly true of religious ideas, but the central concepts of science, philosophy, and ethics are no exception to this rule. In their present form they are variants of archetypal ideas created by consciously applying and adapting these ideas to reality. For it is the function of consciousness not only to recognize and assimilate the external world through the gateway of the senses, but to translate into visible reality the world within us Carl Jung, CW 8, Para 342.

Qualities that are not individually acquired but are inherited…inborn forms of "intuition," namely the archetypes of perception and apprehension, which are the necessary a priori determinants of all psychic processes Carl Jung, CW 8, Para 270.

…besides [the intellect] there is a thinking in primordial images—in symbols which are older than historic man, which are inborn in him from the earliest times, and, eternally living, outlasting all generations, still make up the groundwork of the human psyche. Carl Jung, CW 8, Para 794

The collective unconscious comprises in itself the psychic life of our ancestors right back to the earliest beginnings. It is the matrix of all conscious psychic occurrences… Carl Jung, CW 8, Para 230.

I have repeatedly observed the telepathic effects of unconscious complexes, and also a number of parapsychic phenomena, but in all this I see no proof whatever of the existence of real spirits, and until such proof is forthcoming I must regard this whole territory as an appendix of psychology. Carl Jung, CW 8, Para 600

It is only possible to live the fullest life when we are in harmony with these symbols; wisdom is a return to them Carl Jung, CW 8, Para 794.

[For the alchemists] they were seeds of light broadcast in the chaos…the seed plot of a world to come…One would have to conclude from these alchemical visions that the archetypes have about them a certain effulgence or quasi-consciousness, and that numinosity entails luminosity Carl Jung, CW 8, Para 388.

With more foreboding than real knowledge, most people feel afraid of the menacing power that lies fettered in each of us, only waiting for the magic word to release it from the spell. This magic word, which always ends in ‘ism,’ works most successfully with those who have the least access to their interior selves and have strayed the furthest from their instinctual roots into the truly chaotic world of collective consciousness. Carl Jung, CW 8, Para 405,

Carl Jung: CW 9i “The Archetypes and the Collective Unconscious”

In the case of the individual, the problem constellated by the shadow is answered on the plane of the anima, that is, through relatedness. Carl Jung, CW 9i, Para 487

The spirit may legitimately claim the patria potestas over the soul; not so the earth-born intellect, which is man's sword or hammer, and not a creator of spiritual worlds, a father of the soul. Carl Jung, CW 9i, Para 32

Of Synesius, Bishop of Ptolemais, Jung said: "In his book De Insomniio, he assigns the spiritus fhantasticus practically the same psychological role as Schiller to the play instinct and creative fury." Jung means here the reconciliation of opposites. Participation mystique is a phrase of Levy-Bruhl. See Primitive Mentality (London, 192;)), passim. It was much used by Jung to designate the failure, especially but not exclusively among primitive people, to distinguish oneself from various important objects in the environment. See CW 9i. par. 226.

Anima means soul and should designate something very wonderful and immortal. Carl Jung, CW 9i, para. 55

On the one hand, emotion is the alchemical fire whose warmth brings everything into existence and whose heat burns all superfluities to ashes. But on the other hand, emotion is the moment when steel meets flint and a spark is struck forth, for emotion is the chief source of consciousness. There is no change from darkness to light or from inertia to movement without emotion". Carl Jung, CW 9i, Page 96.

True, the archetype of the spirit is capable of working for good as well as for evil, but it depends upon man's free-i.e., conscious-decision whether the good also will be perverted into something satanic. Carl Jung, CW 9i, Para 454

We are all meant to be mothers of God, for God is always needing to be born. - Meister Eckhart Cited in Carl Jung's CW 9i, Para 286

Either sex is inhabited by the opposite sex up to a point, for, biologically speaking, it is simply the greater number of masculine genes that tips the scales in favour of masculinity. The smaller number of feminine genes seems to form a feminine character, which usually remains unconscious because of its subordinate position. Carl Jung, CW 9i, Para 58

In such cases it is impossible to dismiss the hypothesis of the spontaneous activity of the unconscious. Another example is intuition, which is chiefly dependent on unconscious processes of a very complex nature. Because of this peculiarity, I have defined intuition as "perception via the unconscious." Carl Jung, CW 9i, Para 505

The archetype of spirit in the shape of a man, hobgoblin, or animal always appears in a situation where insight, understanding, good advice, determination, planning, etc., are needed but cannot be mustered on one's own resources. The archetype compensates this state of spiritual deficiency by contents designed to fill the gap. Carl Jung, CW 9i, par. 398.

I have always been greatly impressed by the character of dissociated fragments as personalities … [I]f such fragments have personality, the whole from which they were broken off must have personality to an even higher degree … Personality need not imply consciousness. It can just as easily be dormant or dreaming. … It may be that all of the [hidden] personality to be found in the unconscious is contained in the fragmentary personifications mentioned before … … in the unconscious of every man there is hidden a feminine personality … Carl Jung, CW 9i, Para 508.

Being that has soul is living being. Soul is the living thing in man, that which lives of itself and causes life … With her cunning play of illusions the soul lures into life the inertness of matter that does not want to live. She makes us believe incredible things, that life may be lived. She is full of snares and traps, in order that man should fall, should reach the earth, entangle himself there, and stay caught … Carl Jung, CW 9i, Para 56.

In the case of an animal-possession, for instance, the patient will want to change himself into a woman through self-castration, or he is afraid that something of the sort will be done to him by force. The best-known example of this is Schreber's Memoirs of My Nervous Illness. Patients often discover a whole anima mythology with numerous archaic motifs. Carl Jung, CW 9i, Para 82

… the feminine figure of the anima … requires a different evaluation and position … [A] personalistic interpretation always reduces her to the personal mother or some other female person. The real meaning of the figure naturally gets lost in the process … She is more or less immortal, because outside time … [T]he archetypes … are unconsciously projected upon more or less suitable human personalities. Carl Jung, CW 9i, Para 356-357

If a mother-complex in a woman does not produce an overdeveloped Eros, it leads to identification with the mother and to paralysis of the daughter's feminine initiative … These bloodless maidens … are so empty that a man is free to impute to them anything he fancies. In addition, they are so unconscious that the unconscious puts out countless invisible feelers, veritable octopus tentacle, that suck up all masculine projections; and this pleases men enormously. Carl Jung, CW 9i, Para 169

If we examine their content, … we find countless archaic and "historical" associations … They [the anima and animus] evidently live and function … especially in that phylogenetic substratum which I have called the collective unconscious … [T]hey bring into our ephemeral consciousness an unknown psychic life belonging to a remote past. It is the mind of our unknown ancestor … Carl Jung, CW 9i, Para 518.

But how do we dare to call this elfin being the "anima"? Anima means soul and should designate something very wonderful and immortal. Yet this was not always so. We should not forget that this kind of soul is a dogmatic conception whose purpose it is to pin down and capture something uncannily alive and active. The German word Seele is closely related, via the Gothic form saiwalô to the Greek word αίολος, which means 'quick-moving,' 'changeful of hue,' 'twinkling,' something like a butterfly – ψυχή in Greek – which reels drunkenly from flower to flower and lives on honey and love. Carl Jung, CW 9i, Para 55

The ground principles, the archai, of the unconscious are indescribable because of their wealth of reference … The discriminating intellect naturally keeps on trying to establish their singleness of meaning and thus misses the essential point; for what we can above all establish

as the one thing consistent with their nature is their manifold meaning, their almost limitless wealth of reference, which makes any unilateral formulation impossible. Carl Jung, CW 9i, Para 80.

… a man in trying to attain his ideal of manhood represses all feminine traits – which are really part of him, just as masculine traits are part of a woman's psychology … If we carefully examine the uncontrolled emotions of a man …we soon arrive at a feminine figure which I call … the anima. On the same ground the ancients conceived of a feminine soul, a "psyche" or "anima" … … An alluring nixie … is today called an "erotic fantasy," and she may complicate our psychic life in a most painful way. She comes upon us just as a nixie might; she sits on top of us like a succubus; she changes into all sorts of shapes like a witch … [and] causes states of fascination that rival the best bewitchment … She is a mischievous being who crosses our path in numerous transformations and disguises, playing all kinds of tricks on us, causing happy and unhappy delusions, depressions and ecstasies, outbursts of affect, etc. … the nixie has not laid aside her roguery. The witch has not ceased to mix her vile potions of love and death; her magic poison has been refined into intrigue and self-deception, unseen though none the less dangerous for that. Carl Jung, CW 9i, Para 53-54

… I have noticed that people usually have not much difficulty in picturing to themselves what is meant by the shadow … But it costs them enormous difficulties to understand what the anima is. They accept her easily enough when she appears in novels or as a film star, but she is not understood at all when it comes to seeing the role she plays in their own lives, because she sums up everything that a man can never get the better of and never finishes coping with. Therefore it remains in a perpetual state of emotionality which must not be touched. The degree of unconsciousness one meets with in this connection is, to put it mildly, astounding. Carl Jung, CW 9i, Para 485

… sex is determined by a majority of male or female genes, as the case may be. But the minority of genes belonging to the other sex does not simply disappear. A man therefore has in him a feminine side, an unconscious feminine figure – a fact of which he is generally quite unaware. I may take it as known that I have called this figure the "anima" … Carl Jung, CW 9i, Para 512

After the middle of life, however, permanent loss of the anima means a diminution of vitality, of flexibility, and of human kindness. The result, as a rule, is premature rigidity, crustiness, stereotypy, fanatical one-sidedness, obstinacy, pedantry, or else resignation, weariness, sloppiness, irresponsibility, and finally a childish ramollissement with a tendency to alcohol. After middle life, therefore, the connection with the archetypal sphere of experience should if possible be re-established. Carl Jung, CW 9i, Para 147

The growing youth must be able to free himself from the anima fascination of his mother. There are exceptions, notably artists, where the problem often takes a different turn; also homosexuality, which is usually characterized by identity with the anima … Such a disposition should not be adjudged negative in all circumstances, in so far as it preserves the archetype of the Original Man, which a one-sided sexual being has, up to a point, lost. Carl Jung, CW 9i, Para 146

Being that has soul is living being. Soul is the living thing in man, that which lives of itself and causes life … With her cunning play of illusions the soul lures into life the inertness of matter that does not want to live. She makes us believe incredible things, that life may be

lived. She is full of snares and traps, in order that man should fall, should reach the earth, entangle himself there, and stay caught … Carl Jung, CW 9i, Para 56.

In the case of an animal-possession, for instance, the patient will want to change himself into a woman through self-castration, or he is afraid that something of the sort will be done to him by force. The best-known example of this is Schreber's Memoirs of My Nervous Illness. Patients often discover a whole anima mythology with numerous archaic motifs. Carl Jung, CW 9i, Para 82

After the middle of life, however, permanent loss of the anima means a diminution of vitality, of flexibility, and of human kindness. The result, as a rule, is premature rigidity, crustiness, stereotypy, fanatical one-sidedness, obstinacy, pedantry, or else resignation, weariness, sloppiness, irresponsibility, and finally a childish ramollissement with a tendency to alcohol. Carl Jung, CW 9i, Para 147

The anima is … a natural archetype that satisfactorily sums up all the statements of the unconscious, of the primitive mind of the history of language and religion … [I]t is always the a priori element in his moods, reactions, impulses, and whatever else is spontaneous in psychic life. It is something that lives of itself, that makes us live; It is a life behind consciousness that cannot be completely integrated with it, but from which, on the contrary, consciousness arises. Carl Jung, CW 9i, Para 57

The anima no longer crosses our path as a goddess, but, it may be as an intimately personal misadventure, or perhaps as our best venture. When, for instance, a highly esteemed professor in his seventies abandons his family and runs off with a young red-headed actress … This is how daemonic power reveals itself to us. Carl Jung, CW 9i, Para 62

… the first encounter with her usually leads one to infer anything rather than wisdom. This aspect appears only to the person who gets to grips with her seriously. Only then … does he come to realize more and more that behind all her cruel sporting with human fate there lies something like a hidden purpose which seems to reflect a superior knowledge of life's laws. It is just the most unexpected, the most terrifyingly chaotic things which reveal a deeper meaning. And the more this meaning is recognized, the more the anima loses her impetuous and compulsive character. Carl Jung, CW 9i, Para 64

Everything the anima touches becomes numinous – unconditional, dangerous, taboo, magical … She affords the most convincing reasons for not prying into the unconscious, an occupation that would break down our moral inhibitions and unleash forces that had better been left unconscious and undisturbed. Carl Jung, CW 9i, Para 59

Originally this archetype played its part entirely in the field of fertility magic and thus remained … a purely biological phenomenon … But even in early antiquity the symbolical meaning of the act seems to have increased …and natural philosophy turned it into an abstract theoria. These developments meant the gradual transformation of the archetype into a psychological process which, in theory, we can call a combination of conscious and unconscious processes. Carl Jung, CW 9i, Para 296

… it is readily understandable that the primordial image of the hermaphrodite should

reappear in modern psychology in the guise of the male-female antithesis, in other words as male consciousness and personified female unconsciousness …You rightly emphasize that man in my view is enclosed in the psyche (not in his psyche). Carl Jung, CW 9i, Para 296

… the Kore often appears in woman as an unknown young girl, not infrequently as Gretchen or the unmarried mother … [or] the dancer, … the corybant, maenad, or nymph. Carl Jung, CW 9i, Para 422

When projected, the anima always has a feminine form with definite characteristics. This empirical finding does not mean that the archetype is constituted like that in itself. Carl Jung, CW 9i, Para 142

… [in] classical Chinese philosophy … the anima (p'o or kuei) is regarded as the feminine and chthonic part of the soul. Carl Jung, CW 9i, Para 119

Anima means soul … The soul is the magic breath of life (hence the term "anima") … Carl Jung, CW 9i, Para 55.

Anima means soul and should designate something very wonderful and immortal. Yet this was not always so. We should not forget that this kind of soul is a dogmatic conception whose purpose it is to pin down and capture something uncannily alive and active. Carl Jung, CW 9i, Para 55

… Prakṛti dancing before Purusha in order to remind him of "discriminating knowledge" does not belong to the mother archetype but to the archetype of the anima … Carl Jung, CW 9i, Para 158.

… the anima appears equally as maiden and mother, which is why a personalistic interpretation always reduces her to the personal mother or some other female person. The real meaning of the figure naturally gets lost in the process … Carl Jung, CW 9i, Para 356.

Soul, from Old German saiwalô, may be cognate with αἰόλος, 'quick-moving, changeful of hue, shifting.' It also has the meaning of 'wily' or 'shifty'; hence an air of probability attaches to the alchemical definition of anima as Mercurius. Carl Jung, CW 9i, Para 381, fn 5

The "maiden" corresponds to the anima of the man … But as long as a woman is content to be a femme à homme, she has no feminine individuality. She is empty and merely glitters – a welcome vessel for masculine projections. Carl Jung, CW 9i, Para 355.

… to the degree in which the shadow is recognized and integrated, the problem of the anima, i.e., of relationship, is constellated. Carl Jung, CW 9i, Para 485, fn 18

When projected, the anima always has a feminine form with definite characteristics. This empirical finding does not mean that the archetype is constituted like that in itself. Carl Jung, CW 9i, Para 120

To the young boy a clearly discernible anima-form appears in his mother … An infantile man generally has a maternal anima, an adult man, the figure of a younger woman. The senile man finds compensation in a very young girl, or even a child. Carl Jung, CW 9i, Para 357

... the soul, that glancing, Aeolian thing, elusive as a butterfly (anima, ψυχή). Carl Jung, CW 9i, Para 391

Everything the anima touches becomes numinous – unconditional, dangerous, taboo, magical. Carl Jung, CW 9i, Para 59

... the anima is bipolar and can therefore appear positive one moment and negative the next; now young, now old; now mother, now maiden; now a good fairy, now a witch; now a saint, now a whore. Carl Jung, CW 9i, Para 356

When projected, the anima always has a feminine form with definite characteristics. This empirical finding does not mean that the archetype is constituted like that in itself. Carl Jung, CW 9i, Para 142

In elfin nature wisdom and folly appear as one and the same; and they are one and the same as long as they are acted out by the anima. Life is crazy and meaningful at once. Carl Jung, CW 9i, Para 65

Consciousness can only exist through continual recognition of the unconscious ... Carl Jung, CW 9i, Para 178.

Being that has soul is living being. Soul is the living thing in man, that which lives of itself and causes life. Therefore God breathed into Adam a living breath, that he might live. Carl Jung, CW 9i, Para 56

... the archetypes appear as active personalities in dreams and fantasies. Carl Jung, CW 9i, Para 80

... the Kore as observable in man, the anima. Carl Jung, CW 9i, Para 357

Were it not for the leaping and twinkling of the soul, man would rot away in his greatest passion, idleness. Carl Jung, CW 9i, Para 56

... the motif of polyophthalmia ... point[s] to the peculiar nature of the unconscious, which can be regarded as a “multiple consciousness.” Carl Jung, CW 9i, Para 614

Since all mythical figures correspond to inner psychic experience and originally sprang from them, it is not surprising to find certain phenomena in the field of parapsychology which remind us of the trickster .... His universality is co-extensive, so to speak, with that of shamanism, to which the whole phenomenology of spiritualism belongs. There is something of the trickster in the character of the shaman and medicine-man, for he, too, often plays malicious jokes on people, only to fall victim in his turn to the vengeance of those whom he has injured. For this reason, his profession sometimes puts him in peril for his life. Besides that, the shamanistic techniques in themselves often cause the medicine-man a good deal of discomfort, if not actual pain. At all events, the "making of a medicine-man" involves, in many parts of the world, so much agony of body and soul that permanent psychic injuries may result. His "approximation to the savior" is an obvious consequence of this, in confirmation of the mythological truth that the wounded is the agent of healing, and that the sufferer takes away suffering. Carl Jung, CW 9i, Para 457.

I would hazard that we have to do here with a tetrameria (as in Greek alchemy), a transformation process divided into four stages of three parts each, analogous to the twelve transformations of the zodiac and its division into four. As not infrequently happens, the number 12 would then have a not merely individual significance (as the patient's birth number, for instance), but a time-conditioned one too, since the present Aeon of the Fishes is drawing to its end and is at the same time the twelfth house of the zodiac. Carl Jung, CW 9i, Para 552

In Picture 10, begun in Zurich but only completed when Miss X again visited her motherland, we find the same division as before into above and below. The "soul-flower" in the centre is the same, but it is surrounded on all sides by a dark blue night sky, in which we see the four phases of the moon, the new moon coinciding with the world of darkness below. The three birds have become two. Their plumage has darkened, but on the other hand the goat has turned into two semi-human creatures with horns and light faces, and only two of the four snakes remain. A notable innovation is the appearance of two crabs in the lower, chthonic hemisphere that also represents the body. The crab has essentially the same meaning as the astrological sign Cancer. 6 Unfortunately Miss X gave no context here. In such cases it is usually worth investigating what use has been made in the past of the object in question. In earlier, prescientific ages hardly any distinction was drawn between long-tailed crabs (Macrura, crayfish) and short-tailed crabs (Brachyura). As a zodiacal sign Cancer signifies resurrection, because the crab sheds its shell. Carl Jung, CW 9i, Para 604

The ancients had in mind chiefly Pagurus bernhardus, the hermit crab. It hides in its shell and cannot be attacked. Therefore it signifies caution and foresight, knowledge of coming events. 8 It "depends on the moon, and waxes with it." 9 It is worth noting that the crab appears just in the mandala in which we see the phases of the moon for the first time. Astrologically, Cancer is the house of the moon. Because of its backwards and sideways movement, it plays the role of an unlucky animal in superstition and colloquial speech ("crabbed," "catch a crab," etc.). Since ancient times cancer (καρκίνος) has been the name for a malignant tumour of the glands. Cancer is the zodiacal sign in which the sun begins to retreat, when the days grow shorter. Pseudo-Kallisthenes relates that crabs dragged Alexander's ships down into the sea. "Karkinos" was the name of the crab that bit Heracles in the foot in his fight with the Lernaean monster. In gratitude, Hera set her accomplice among the stars. In astrology, Cancer is a feminine and watery sign, and the summer solstice takes place in it. In the melothesiae it is correlated with the breast. It rules over the Western sea. In Propertius it makes a sinister appearance: "OctipedisCancri terga sinistra time" (Fear thou the ill-omened back of the eight-footed crab). De Gubernatis says: "The crab . . . causes now the death of the solar hero and now that of the monster." The Panchatantra (V, 2) relates how a crab, which the mother gave to her son as apotropaic magic, saved his life by killing a black snake. As De Gubernatis thinks, the crab stands now for the sun and now for the moon, according to whether it goes forwards or backwards. Carl Jung CW 9i, Para 605

Miss X was born in the first degrees of Cancer (actually about 3°). She knew her horoscope and was well aware of the significance of the moment of birth; that is, she realized that the degree of the rising sign (the ascendent) conditions the individuality of the horoscope. Since she obviously guessed the horoscope's affinity with the mandala, she introduced her individual sign into the painting that was meant to express her psychic self. Carl Jung, CW 9i, Para 606

The essential conclusion to be drawn from Picture 10 is that the dualities which run through it are always inwardly balanced, so that they lose their sharpness and incompatibility. As

Multatuli says: “Nothing is quite true, and even that is not quite true.” But this loss of strength is counterbalanced by the unity of the centre, where the lamp shines, sending out coloured rays to the eight points of the compass. Carl Jung, CW 9i, Para 607

Since the stars have fallen from heaven and our highest symbols have paled, a secret life holds sway in the unconscious. That is why we have a psychology today, and why we speak of the unconscious. All this would be quite superfluous in an age or culture that possessed symbols. . .. Heaven has become for us the cosmic space of the physicists, and the divine empyrean a fair memory of things that once were. But the “heart glows,” and a secret unrest gnaws at the roots of our being. Carl Jung, CW 9i, Para 50

“The stars of thine own fate lie in thy breast,” says Seni to Wallenstein – a dictum that should satisfy all astrologers if we knew even a little about the secrets of the heart. But for this, so far, men have had little understanding. Nor would I dare to assert that things are any better today. Carl Jung, CW 9i, Para 9

Primitive man is not much interested in objective explanations of the obvious, but he has an imperative need ± or, rather, his unconscious psyche has an irresistible urge ± to assimilate all outer sense experiences to inner, psychic events. It is not enough for the primitive to see the sun rise and set; this external observation must at the same time be a psychic happening: the sun in its course must represent the fate of a god or hero who, in the last analysis, dwells nowhere except in the soul of man. Carl Jung, CW 9i, Page 7

It is possible to describe [the anima] in rational, scientific language, but in this way one entirely fails to express its living character. Therefore, in describing the living processes of the psyche, I deliberately and consciously give preference to a dramatic, mythological way of thinking and speaking, because this is not only more expressive but also more exact than an abstract scientific terminology. Carl Jung, CW 9i, Page 25

Outwardly people are more or less civilized, but inwardly they are still primitives . . . This contradiction was once brought home to me in the most drastic manner when I was watching a ‘strudel’ (a sort of local witch-doctor) taking the spell off a stable. The stable was situated immediately beside the Gotthard railway line, and several international expresses sped past during the ceremony. Carl Jung, CW 9i, Page 482

‘Since the stars have fallen from heaven and our highest symbols have paled, a secret life holds sway in the unconscious. Our unconscious hides living water, spirit that has become nature, and that is why it is disturbed’ Carl Jung, CW 9i, Page 50.

With her (Soul) cunning play of illusions the soul lures into life the inertness of matter that does not want to live. She makes us believe incredible things, that life may be lived. Carl Jung, CW 9i, Para 56

She [Soul] is full of snares and traps, in order that man should fall, should reach the earth, entangle himself there, and stay caught, so that life should be lived as Eve in the garden of Eden could not rest content until she had convinced Adam of the goodness of the forbidden apple. Carl Jung, CW 9i, Para 56

Were it not for the leaping and twinkling of the soul, man would rot away in his greatest passion, idleness. Carl Jung, CW 9i, Para 56

But to have soul is the whole venture of life, for soul is a life-giving daemon who plays his elfin game above and below human existence, for which reason—in the realm of dogma—he is threatened and propitiated with superhuman punishments and blessings that go far beyond the possible deserts of human beings. Carl Jung, CW 9i, Para 56

Heaven and hell are the fates meted out to the soul and not to civilized man, who in his nakedness and timidity would have no idea of what to do with himself in a heavenly Jerusalem. Carl Jung, CW 9i, Para 56

But this personal unconscious rests upon a deeper layer, which does not derive from personal experience and is not a personal acquisition but is inborn Carl Jung, CW 9i, Para 3.

In the Corpus Hermeticum, God is called “archetypal light”. The term occurs several times in Dionysius the Areopagite Carl Jung, CW 9i, Para 5.

The term “archetype” is not found in St. Augustine, but the idea of it is. Thus he speaks of “ideae principales, ‘which are themselves not formed but are contained in the divine understanding’ Jung, CW 9i, Para 5.

“Archetype” is an explanatory paraphrase of the Platonic eidos. Carl Jung, CW 9i, Para 5

The term “représentations collectives,” used by Lévy-Bruhl to denote the symbolic figures in the primitive view of the world, could easily be applied to unconscious contents as well, since it means practically the same thing Carl Jung, CW 9i, Para 5.

Another well-known expression of the archetypes is myth and fairy tale. But here too we are dealing with forms that have received a specific stamp and have been handed down through long periods of time Carl Jung, CW 9i, Para 6.

Almost the entire life of the collective unconscious has been channelled into the dogmatic archetypal ideas and flows along like a well-controlled stream in the symbolism of creed and ritual. It manifests itself in the inwardness of the Catholic psyche. Carl Jung, CW 9i, Para 21

The collective unconscious, as we understand it today, was never a matter of “psychology,” for before the Christian Church existed there were the antique mysteries, and these reach back into the grey mists of Neolithic prehistory. Carl Jung, CW 9i, Para 21

It is not enough for the primitive to see the sun rise and set; this external observation must at the same time be a psychic happening: the sun in its course must represent the fate of a god or hero who, in the last analysis, dwells nowhere except in the soul of man. Carl Jung CW 9i, Para 7

Visions like the one he had often cause mental confusion and disintegration (witness the heart bursting “into little pieces”). We know from experience that the protective circle, the mandala, is the traditional antidote for chaotic states of mind. Carl Jung, CW 9i, Para 16

The iconoclasm of the Reformation, however, quite literally made a breach in the protective wall of sacred images, and since then one image after another has crumbled away. Carl

Jung, CW 9i, Para 22

A hymn, ascribed to Bardesanes, dates from an age that resembled ours in more than one respect. Mankind looked and waited, and it was a fish “levatus de profundo” (drawn from the deep) that became the symbol of the saviour, the bringer of healing. Carl Jung, CW 9i, Para 38

So the dream of the theologian is quite right in telling him that down by the water he could experience the working of the living spirit like a miracle of healing in the pool of Bethesda. The descent into the depths always seems to precede the ascent Carl Jung, CW 9i, Para 40.

For people who think in this way, spirit means highest freedom, a soaring over the depths, deliverance from the prison of the chthonic world, and hence a refuge for all those timorous souls who do not want to become anything different. Carl Jung, CW 9i, Para 41

But water is earthy and tangible, it is also the fluid of the instinct-driven body, blood and the flowing of blood, the odour of the beast, carnality heavy with passion. Carl Jung, CW 9i, Para 41

The shadow is a tight passage, a narrow door, whose painful constriction no one is spared who goes down to the deep well. But one must learn to know oneself in order to know who one is. Carl Jung, CW 9i, Para 45

That is the age-old danger, instinctively known and feared by primitive man, who himself stands so very close to this pleroma Carl Jung, CW 9i, Para 45.

Hence primitives are afraid of uncontrolled emotions, because consciousness breaks down under them and gives way to possession Carl Jung, CW 9i, Para 47.

They are water-beings of a peculiar sort. Sometimes a nixie gets into the fisherman’s net, a female, half-human fish Carl Jung, CW 9i, Para 52.

Among primitives, the soul is the magic breath of life (hence the term “anima”), or a flame Carl Jung, CW 9i, Para 55.

She [Anima] is the serpent in the paradise of the harmless man with good resolutions and still better intentions Carl Jung, CW 9i, Para 59.

She [Anima] affords the most convincing reasons for not prying into the unconscious, an occupation that would break down our moral inhibitions and unleash forces that had better been left unconscious and undisturbed Carl Jung, CW 9i, Para 59.

As usual, there is something in what the anima says; for life in itself is not good only, it is also bad. Because the anima wants life, she wants both good and bad Carl Jung, CW 9i, Para 59.

Bodily life as well as psychic life have the impudence to get along much better without conventional morality, and they often remain the healthier for it Carl Jung, CW 9i, Para 59.

It took more than a thousand years of Christian differentiation to make it clear that the good is not always the beautiful and the beautiful not necessarily good. Carl Jung, CW 9i, Para

60

If the soul were uniformly dark it would be a simple matter. Unfortunately this is not so, for the anima can appear also as an angel of light, a psychopomp who points the way to the highest meaning, as we know from Faust Carl Jung, CW 9i, Para 60.

To the men of antiquity the anima appeared as a goddess or a witch, while for medieval man the goddess was replaced by the Queen of Heaven and Mother Church. Carl Jung, CW 9i, Para 61

The American divorce rate has been reached, if not exceeded, in many European countries, which proves that the anima projects herself by preference on the opposite sex, thus giving rise to magically complicated relationships. Carl Jung, CW 9i, Para 61

In dealing with the shadow or anima it is not sufficient just to know about these concepts and to reflect on them. Nor can we ever experience their content by feeling our way into them or by appropriating other people's feelings. Carl Jung, CW 9i, Para 62

It is no use at all to learn a list of archetypes by heart. Archetypes are complexes of experience that come upon us like fate, and their effects are felt in our most personal life Carl Jung, CW 9i, Para 62.

Or the Heraclitean (ever-living fire) which borders on the primitive notion of an all-pervading vital force, a power of growth and magic healing that is generally called mana. Carl Jung, CW 9i, Para 68

If one wants to form a picture of the symbolic process, the series of pictures found in alchemy are good examples, though the symbols they contain are for the most part traditional despite their often obscure origin and significance. Carl Jung, CW 9i, Para 81

In all cases of dissociation it is therefore necessary to integrate the unconscious into consciousness. This is a synthetic process which I have termed the "individuation process" Carl Jung, CW 9i, Para 83.

Whereas the personal unconscious consists for the most part of complexes, the content of the collective unconscious is made up essentially of archetypes Carl Jung, CW 9i, Para 88.

To the extent a neurosis is really only a private affair, having its roots exclusively in personal causes, archetypes play no role at all. Carl Jung, CW 9i, Para 98

But if is a question of a general incompatibility or an otherwise injurious condition productive of neuroses in relatively large numbers of individuals, then we must assume the presence of constellated archetypes Carl Jung, CW 9i, Para 98.

Since neuroses are in most cases not just private concerns, but social phenomena, we must assume that archetypes are constellated in these cases. Carl Jung, CW 9i, Para 98.

From this I have drawn the conclusion that dreams often contain fantasies which "want"

to become conscious. Carl Jung, CW 9i, Para 101

Till then, we must for better or worse content ourselves with the assumption that the psyche supplies those images and forms which alone make knowledge of objects possible Carl Jung, CW 9i, Para 116.

This notion had its origin in archetypal ideas, that is, in primordial images which were never reflections of physical events but are spontaneous products of the psychic factor Carl Jung, CW 9i, Para 117.

I have often observed that in such cases meaningful but unconscious contents are still bound up with the projection carrier. It is these contents that keep up the effect of the projection, although it has apparently been seen through Carl Jung, CW 9i, Para 121.

Thus the polytheistic heaven of the ancients owes its depotentiation not least to the view first propounded by Euhemeros [4th c. B.C.], who maintained that the gods were nothing but reflections of human character. Carl Jung, CW 9i, Para 121

Projection always contains something of which the subject is not conscious and which seems not to belong to him Carl Jung, CW 9i, Para 121.

Religious ideas, as history shows, are charged with an extremely suggestive, emotional power. Carl Jung, CW 9i, Para 127

Among them I naturally reckon all représentations collectives, everything that we learn from the history of religion, and anything that has an “-ism” attached to it. The latter is only a modern variant of the denominational religions Carl Jung, CW 9i, Para 125.

When it is a case of morbid predispositions already present in the parents, we infer hereditary transmission through the germ-plasm Carl Jung, CW 9i, Para 151.

It [the anima image] is ready to spring out and project itself at the first opportunity, the moment a woman makes an impression that is out of the ordinary Carl Jung, CW 9i, Para 141.

Actually, nobody can stand the total loss of the archetype. When that happens, it gives rise to that frightful “discontent in our culture,” where nobody feels at home because a “father” and “mother” are missing Carl Jung, CW 9i, Para 141.

Younger people who have not yet reached the middle of life (around the age of 35), can bear even the total loss of the anima without injury Carl Jung, CW 9i, Para 146.

Such a [the homosexual’s] disposition should not be adjudged negative in all circumstances, in so far as it preserves the archetype of the Original Man, which a one-sided sexual being has, up to a point, lost Carl Jung, CW 9i, Para 146.

After the middle of life, however, permanent loss of the anima means a diminution of vitality, of flexibility, and of human kindness Carl Jung, CW 9i, Para 147.

It is necessary to point out once more that archetypes are not determined as regards their content, but only as regards their form and then only to a very limited degree Carl Jung, CW 9i, Para 155.

The archetype in itself is empty and purely formal, nothing but a facultas praeformandi, a possibility of representation which is given a priori Carl Jung, CW 9i, Para 155.

The representations [Of Archetypes] themselves are not inherited, only the forms, and in that respect they correspond in every way to the instincts, which are also determined in form only Carl Jung, CW 9i, Para 155.

The existence of the instincts can no more be proved than the existence of the archetypes, so long as they do not manifest themselves concretely Carl Jung, CW 9i, Para 155.

They [archetypes] form the “treasure in the realm of shadowy thoughts” of which Kant spoke, and of which we have ample evidence in the countless treasure motifs of mythology Carl Jung, CW 9i, Para 160.

An archetype is in no sense just an annoying prejudice; it becomes so only when it is in the wrong place Carl Jung, CW 9i, Para 160.

In themselves, archetypal images are among the highest values of the human psyche; they have peopled the heavens of all races from time immemorial. To discard them as valueless would be a distinct loss Carl Jung, CW 9i, Para 160.

Our task is not, therefore, to deny the archetype, but to dissolve the projections, in order to restore their contents to the individual who has involuntarily lost them by projecting them outside himself Carl Jung, CW 9i, Para 160.

It is an open question whether a mother-complex can develop without the mother having taken part in its formation as a demonstrable causal factor Carl Jung, CW 9i, Para 161.

My own experience leads me to believe that the mother always plays an active part in the origin of the disturbance, especially in infantile neuroses or in neuroses whose aetiology undoubtedly dates back to early childhood Carl Jung, CW 9i, Para 161.

In homosexuality, the son’s entire heterosexuality is tied to the mother in an unconscious form Carl Jung, CW 9i, Para 162.

In Don Juanism, the son unconsciously seeks his mother in every woman he meets Carl Jung, CW 9i, Para 162.

The effects of a mother-complex on the son may be seen in the ideology of the Cybele-Attis type self-castration, madness, and early death Carl Jung, CW 9i, Para 162.

Thus a man with a mother-complex may have a finely differentiated Eros instead of, or in addition to, homosexuality. (Something of this sort is suggested by Plato in his Symposium) Carl Jung, CW 9i, Para 164.

The less conscious such a mother is of her own personality, the greater and the more vi-

olent is her unconscious will to power Carl Jung, CW 9i, Para 167.

For many such women Baubo rather than Demeter would be the appropriate symbol Carl Jung, CW 9i, Para 167.

The mind is not cultivated for its own sake but usually remains in its original condition, altogether primitive, unrelated, and ruthless, but also as true, and sometimes as profound as Nature herself Carl Jung, CW 9i, Para 167.

This instinct [maternal] may be wiped out altogether. As a substitute, an overdeveloped Eros results, and this almost invariably leads to an unconscious incestuous relationship with the father Carl Jung, CW 9i, Para 168.

The intensified Eros places an abnormal emphasis on the personality of others Carl Jung, CW 9i, Para 168.

Jealousy [the daughter's] of the mother and the desire to outdo her become the leitmotifs of subsequent undertakings, which are often disastrous Carl Jung, CW 9i, Para 168.

A woman of this type directs the burning ray of her Eros upon a man whose life is stifled by maternal solicitude, and by doing so she arouses a moral conflict. Yet without this there can be no consciousness of personality Carl Jung, CW 9i, Para 177.

This instinct [maternal] may be wiped out altogether. As a substitute, an overdeveloped Eros results, and this almost invariably leads to an unconscious incestuous relationship with the father Carl Jung, CW 9i, Para 168.

The intensified Eros places an abnormal emphasis on the personality of others Carl Jung, CW 9i, Para 168.

Jealousy [the daughter's] of the mother and the desire to outdo her become the leitmotifs of subsequent undertakings, which are often disastrous Carl Jung, CW 9i, Para 168.

I believe that, after thousands and millions of years, someone had to realize that this wonderful world of mountains and oceans, suns and moons, galaxies and nebulae, plants and animals, exists Carl Jung, CW 9i, Para 177.

All Nature seeks this goal and finds it fulfilled in man, but only in the most highly developed and most fully conscious man. Every advance, even the smallest, along this path of conscious realization adds that much to the world Carl Jung, CW 9i, Para 177.

Divine curiosity yearns to be born and does not shrink from conflict, suffering, or sin. Unconsciousness is the primal sin, evil itself, for the Logos Carl Jung, CW 9i, Para 178.

Consciousness can only exist through continual recognition of the unconscious, just as everything that lives must pass through many deaths. Carl Jung, CW 9i, Para 178

Conflict engenders fire, the fire of affects and emotions, and like every other fire it has two aspects, that of combustion and that of creating light Carl Jung, CW 9i, Para 179

On the one hand, emotion is the alchemical fire whose warmth brings everything into existence and whose heat burns all superfluities to ashes (omnes superfluitates comburit) Carl Jung, CW 9i, Para 179.

If a mother-complex in a woman does not produce an overdeveloped Eros, it leads to identification with the mother and to paralysis of the daughter's feminine initiative Carl Jung, CW 9i, Para 169.

But on the other hand, emotion is the moment when steel meets flint and a spark is struck forth, for emotion is the chief source of consciousness. There is no change from darkness to light or from inertia to movement without emotion Carl Jung, CW 9i, Para 179.

As a sort of superwoman (admired involuntarily by the daughter), the mother lives out for her [the daughter] beforehand all that the girl might have lived for herself Carl Jung, CW 9i, Para 169.

These bloodless maidens are by no means immune to marriage. On the contrary, despite their shadowiness and passivity, they command a high price on the marriage market Carl Jung, CW 9i, Para 169.

She [the mother] is the psychic as well as the physical precondition of the child Carl Jung, CW 9i, Para 188.

The transition from mother to grandmother means that the archetype is elevated to a higher rank. This is clearly demonstrated in a notion held by the Bataks Carl Jung, CW 9i, Para 188.

In Western antiquity and especially in Eastern cultures the opposites often remain united in the same figure, though this paradox does not disturb the primitive mind in the least Carl Jung, CW 9i, Para 189.

The morally ambiguous Yahweh became an exclusively good God, while everything evil was united in the devil Carl Jung, CW 9i, Para 189.

It seems as if the development of the feeling function in Western man forced a choice on him which led to the moral splitting of the divinity into two halves Carl Jung, CW 9i, Para 189.

Thanks to the development of feeling-values, the splendor of the "light" god has been enhanced beyond measure, but the darkness supposedly represented by the devil has localized itself in man Carl Jung, CW 9i, Para 189.

The richly varied allegories of the Mother of God have nevertheless retained some connection with her pagan prefiguration in Isis (Io) and Semele Carl Jung, CW 9i, Para 195.

Not only are Isis and the Horus-child iconological exemplars [the Virgin Mary and her child], but the ascension of Semele, the originally mortal mother of Dionysus, likewise anticipates the Assumption of the Blessed Virgin Carl Jung, CW 9i, Para 195.

Further, this son of Semele [Dionysus] is a dying and resurgent god and the youngest of

the Olympians. Semele herself seems to have been an earth-goddess, just as the Virgin Mary is the earth from which Christ was born Carl Jung, CW 9i, Para 195.

Her Assumption has actually been interpreted as a deliberate counterstroke to the materialistic doctrinairism that provoked the chthonic powers into revolt Carl Jung, CW 9i, Para 195.

Understood symbolically, however, the Assumption of the body is a recognition and acknowledgement of matter, which in the last resort was identified with evil only because of an overwhelmingly "pneumatic" tendency in man Carl Jung, CW 9i, Para 197.

In themselves, spirit and matter are neutral, or rather, "utriusque capax" that is, capable of what man calls good or evil Carl Jung, CW 9i, Para 197.

The dogma of the Assumption, proclaimed in an age suffering from the greatest political schism history has ever known [1950], is a compensating symptom that reflects the strivings of science for a uniform world-picture Carl Jung, CW 9i, Para 197.

There must be psychic events underlying these affirmations which it is the business of psychology to discuss without entering into all the metaphysical and philosophical assumptions regarding their significance Carl Jung, CW 9i, Para 207.

By the "transcendence of life" I mean those experiences of the initiate who takes part in a sacred rite which reveals to him the perpetual continuation of life through transformation and renewal Carl Jung, CW 9i, Para 208.

In these mystery-dramas the transcendence of life, as distinct from its momentary concrete manifestations, is usually represented by the fateful transformations death and rebirth of a god or a godlike hero Carl Jung, CW 9i, Para 208.

The experience of the Mass is therefore a participate on in the transcendence of life, which overcomes all bounds of space and time. It is a moment of eternity in time Carl Jung, CW 9i, Para 209.

All that the mystery drama represents and brings about in the spectator may also occur in the form of a spontaneous, ecstatic, or visionary experience, without any ritual Carl Jung, CW 9i, Para 210.

Nietzsche's Noontide Vision is a classic example of this kind. Nietzsche, as we know, substitutes for the Christian mystery the myth of Dionysus-Zagreus, who was dismembered and came to life again Carl Jung, CW 9i, Para 210.

Even the "golden ring," the "ring of return," appears to him as a promise of resurrection and life. It is just as if Nietzsche had been present at a performance of the mysteries Carl Jung, CW 9i, Para 210.

Many mystic experiences have a similar character: they represent an action in which the spectator becomes involved though his nature is not necessarily changed Carl Jung, CW 9i, Para 211.

Abaissement is a slackening of the intensity of consciousness, which might be compared to a low barometric reading, presaging bad weather Carl Jung, CW 9i, Para 213.

One of the most important forms is the phenomenon of possession: some content, an idea or a part of the personality, obtains mastery of the individual for one reason or another Carl Jung, CW 9i, Para 220.

In Christianity the development was carried still further when the outer God or Christ gradually became the inner Christ of the individual believer, remaining one and the same though dwelling in many Carl Jung, CW 9i, Para 229.

Instead of the transformation experience coming to one through participation in the rite, the rite is used for the express purpose of effecting the transformation. It thus becomes a sort of technique to which one submits oneself Carl Jung, CW 9i, Para 229.

It is a transformation experience induced by technical means. The exercises known in the East as yoga and in the West as exercitia spiritualia come into this category Carl Jung, CW 9i, Para 232.

This is true both of Eastern yoga and of the methods practised in the West. They are, therefore, technical procedures in the fullest sense of the word; elaborations of the originally natural processes of transformation Carl Jung, CW 9i, Para 232.

Nature herself demands a death and a rebirth. As the alchemist Democritus says: “Nature rejoices in nature, nature subdues nature, nature rules over nature” Carl Jung, CW 9i, Para 234.

Our attitude towards this inner voice alternates between two extremes: it is regarded either as undiluted nonsense or as the voice of God. It does not seem to occur to any one that there might be something valuable in between Carl Jung, CW 9i, Para 237.

The “other” may be just as one-sided in one way as the ego is in another. And yet the conflict between them may give rise to truth and meaning but only if the ego is willing to grant the other its rightful personality Carl Jung, CW 9i, Para 237.

It [the ‘other’] has, of course, a personality anyway, just as have the voices of insane people; but a real colloquy becomes possible only when the ego acknowledges the existence of a partner to the discussion Carl Jung, CW 9i, Para 237.

The cave is the place of rebirth, that secret cavity in which one is shut up in order to be incubated and renewed Carl Jung, CW 9i, Para 240.

The Koran says of it: “You might have seen the rising sun decline to the right of their cavern, and as it set, go past them on the left, while they [the Seven Sleepers] stayed in the middle” The “middle” is the center where the jewel reposes, where the incubation or sacrificial rite or the transformation takes place. Carl Jung, CW 9i, Para 240

The most beautiful development of this symbolism [‘middle’] is to be found on Mithraic altar-pieces and in alchemical pictures of the transformative substance, which is always shown between the sun and the moon Carl Jung, CW 9i, Para 240.

Representations of the crucifixion frequently follow the same type, and a similar symbolical arrangement is also found in the transformation or healing ceremonies of the Navahos Carl Jung, CW 9i, Para 240.

The Koran commentaries state that on the island thus formed Khidr was sitting, in the place of the middle. A mystical interpretation says that he [Khidr] was sitting "on a throne consisting of light, between the upper and the lower sea," again in the middle position. Carl Jung, CW 9i, Para 246

Khidr symbolizes not only the higher wisdom but also a way of acting which is in accord with this wisdom and transcends reason. Moses accepts him [Khidr] as a higher consciousness and looks up to him for instruction. Carl Jung, CW 9i, Para 247

Khidr symbolizes not only the higher wisdom but also a way of acting which is in accord with this wisdom and transcends reason. Carl Jung, CW 9i, Para 247

The tale shows how the immortality-bringing rebirth comes about. Characteristically, it is neither Moses nor Joshua who is transformed, but the forgotten fish. Where the fish disappears, there is the birthplace of Khidr Carl Jung, CW 9i, Para 248.

The nourishing character of the transformative substance or deity is borne out by numerous cult-legends: Christ is the bread, Osiris the wheat, Mondamin the maize Carl Jung, CW 9i, Para 248.

But religion is a vital link with psychic processes independent of and beyond consciousness, in the dark hinterland of the psyche Carl Jung, CW 9i, Para 261.

The child archetype is an excellent example of mythological components which, because of their typical nature, we can call "motifs," "primordial images," types, or as I have named them archetypes Carl Jung, CW 9i, Para 260.

The archetype of the "child god" is extremely widespread and intimately bound up with all other mythological aspects of the child motif Carl Jung, CW 9i, Para 268.

The mystical character of the experience is also confirmed in Part II of Goethe's Faust, where Faust himself is transformed into a boy and admitted into the "choir of blessed youths," this being the "larval stage" of Dr. Marianus Carl Jung, CW 9i, Para 268.

The child motif not infrequently occurs in the field of psychopathology. The "imaginary" child is common among women with mental disorders and is usually interpreted in a Christian sense Carl Jung, CW 9i, Para 270.

But the clearest and most significant manifestation of the child motif in the therapy of neuroses is in the maturation process of personality induced by the analysis of the unconscious, which I have termed the process of individuation Carl Jung, CW 9i, Para 270.

Often the child is formed after the Christian model; more often, though, it develops from earlier, altogether non-Christian levels that is to say, out of chthonic animals such as crocodiles, dragons, serpents, or monkeys. Carl Jung, CW 9i, Para 270

Sometimes the child appears in the cup of a flower, or out of a golden egg, or as the center of a mandala Carl Jung, CW 9i, Para 270.

Moreover, they [archetypes] are the unfailing causes of neurotic and even psychotic disorders, behaving exactly like neglected or maltreated physical organs or organic functional systems. Carl Jung, CW 9i, Para 266

In reality we can never legitimately cut loose from our archetypal foundations unless we are prepared to pay the price of a neurosis, any more than we can rid ourselves of our body and its organs without committing suicide Carl Jung, CW 9i, Para 267.

With the loss of the past, now become “insignificant,” devalued, and incapable of revaluation, the saviour is lost too, for the saviour is either the insignificant thing itself or else arises out of it Carl Jung, CW 9i, Para 267.

These women remind me if I may be forgiven the impolite comparison of hefty great bitches who turn tail before the smallest cur simply because he is a terrible male and it never occurs to them to bite him Carl Jung, CW 9i, Para 182.

Understood concretely, the Assumption is the absolute opposite of materialism. Taken in this sense, is a counterstroke that does nothing to diminish the tension between the opposites, but drives it to extremes Carl Jung, CW 9i, Para 196.

I am not prepared to lay down any hard and fast line of demarcation between possession and paranoia. Possession can be formulated as identity of the ego-personality with a complex Carl Jung, CW 9i, Para 220.

If it is a very large group, the collective psyche will be more like the psyche of an animal, which is the reason why the ethical attitude of large organizations is always doubtful Carl Jung, CW 9i, Para 225.

Thus identification with the group is a simple and easy path to follow, but the group experience goes no deeper than the level of one’s own mind in that state. It does work a change in you, but the change does not last Carl Jung, CW 9i, Para 226.

This truth had already been anticipated by the psychology of totemism: many exemplars of the totem animal are killed and consumed during the totem meals, and yet it is only the One who is being eaten, just as there is only one Christ-child and one Santa Claus Carl Jung, CW 9i, Para 229.

Here the first form, the dromenon, is characteristic of the richly developed ritual of the Catholic Church; the second form, the recitation, the “Word” or “gospel,” is practised in the “preaching of the Word” in Protestantism. Carl Jung, CW 9i, Para 230

We should prefer to be always “I” and nothing else. But we are confronted with that inner friend or foe, and whether he is our friend or our foe depends on ourselves Carl Jung, CW 9i, Para 235.

The alchemists saw it in the transformation of the chemical substance. So if one of them

sought transformation, he discovered it outside in matter, whose transformation cried out to him, as it were, “I am the transformation!” Carl Jung, CW 9i, Para 238

The character of the Self as a personality comes out very plainly in the Khidr legend Carl Jung, CW 9i, Para 250.

The 18th Sura gives an almost perfect picture of a psychic transformation or rebirth which today, with our greater psychological insight, we would recognize as an individuation process. Carl Jung, CW 9i, Para 258

Because of the great age of the [Khidr] legend and the Islamic prophet’s primitive cast of mind, the process takes place entirely outside the sphere of consciousness and is projected in the form of a mystery legend of a friend or a pair of friends and the deeds they perform Carl Jung, CW 9i, Para 258.

A tribe’s mythology is its living religion, whose loss is always and everywhere, even among the civilized, a moral catastrophe Carl Jung, CW 9i, Para 261.

Even the best attempts at explanation are only more or less successful translations into another metaphorical language. (Indeed, language itself is only an image.) The most we can do is to dream the myth onwards and give it a modern dress. Carl Jung, CW 9i, Para 271

The archetype let us never forget this is a psychic organ present in all of us. A bad explanation means a correspondingly bad attitude to this organ, which may thus be injured. But the ultimate sufferer is the bad interpreter himself. Carl Jung, CW 9i, Para 271

Hence the “explanation” should always be such that the functional significance of the archetype remains unimpaired, so that an adequate and meaningful connection between the conscious mind and the archetype is assured Carl Jung, CW 9i, Para 271.

For the archetype is an element of our psychic structure and thus a vital and necessary component in our psychic economy. It represents or personifies certain instinctive data of the dark, primitive psyche, the real but invisible roots of consciousness Carl Jung, CW 9i, Para 271.

But inasmuch as man has, in high degree, the capacity for cutting himself off from his own roots, he may also be swept uncritically to catastrophe by his dangerous one-sidedness Carl Jung, CW 9i, Para 277.

The retarding ideal is always more primitive, more natural (in the good sense as in the bad) and more “moral” in that it keeps faith with law and tradition Carl Jung, CW 9i, Para 277.

The progressive ideal is always more abstract, more unnatural, and less “moral” in that it demands disloyalty to tradition. Progress enforced by will is always convulsive Carl Jung, CW 9i, Para 277.

Backwardness may be closer to naturalness, but in its turn it is always menaced by painful

awakenings Carl Jung, CW 9i, Para 277.

The child is potential future. Hence the occurrence of the child motif in the psychology of the individual signifies as a rule an anticipation of future developments, even though at first sight it may seem like a retrospective configuration Carl Jung, CW 9i, Para 278.

But in so far as the individuation process occurs, empirically speaking, as a synthesis, it looks, paradoxically enough, as if something already existent were being put together. From this point of view, the term “synthesis” is also applicable Carl Jung, CW 9i, Para 278.

If, however, the child motif appears in the form of a unity, we are dealing with an unconscious and provisionally complete synthesis of the personality, which in practice, like everything unconscious, signifies no more than a possibility Carl Jung, CW 9i, Para 280.

More especially the threat to one’s inmost Self from dragons and serpents points to the danger of the newly acquired consciousness being swallowed up again by the instinctive psyche, the unconscious Carl Jung, CW 9i, Para 282.

The lower vertebrates have from earliest times been favourite symbols of the collective psychic substratum, which is localized anatomically in the subcortical centres, the cerebellum and the spinal cord. These organs constitute the snake. Carl Jung, CW 9i, Para 282

Higher vertebrates symbolize mainly affects Carl Jung, CW 9i, Para 282.

Snake-dreams usually occur, therefore, when the conscious mind is deviating from its instinctual basis Carl Jung, CW 9i, Para 282.

The coming of consciousness was probably the most tremendous experience of primeval times, for with it a world came into being whose existence no one had suspected before Carl Jung, CW 9i, Para 284.

“And God said: ‘Let there be light!”’ is the projection of that immemorial experience of the separation of the conscious from the unconscious. Carl Jung, CW 9i, Para 284

Even among primitives today the possession of a soul is a precarious thing, and the “loss of soul” a typical psychic malady which drives primitive medicine to all sorts of psychotherapeutic measures Carl Jung, CW 9i, Para 284.

Higher consciousness, or knowledge going beyond our present-day consciousness, is equivalent to being all alone in the world. This loneliness expresses the conflict between the bearer or symbol of higher consciousness and his surroundings Carl Jung, CW 9i, Para 288.

The size and invincibility of the “child” are bound up in Hindu speculation with the nature of the atman, which corresponds to the “smaller than small yet bigger than big” motif Carl Jung, CW 9i, Para 289.

To the twilight consciousness of primitive man it seems as if the egg came out of the womb of the wide world and were, accordingly, a cosmic, objective, external occurrence Carl Jung, CW 9i, Para 290.

Present-day medical psychology, however, thinks somewhat differently about these “phantasms.” It knows only too well what dire disturbances of the bodily functions and what devastating psychic consequences can flow from “mere” fantasies Carl Jung, CW 9i, Para 290.

“Fantasies” are the natural expressions of the life of the unconscious. But since the unconscious is the psyche of all the body’s autonomous functional complexes, its “fantasies” have an aetiological significance that is not to be despised Carl Jung, CW 9i, Para 290.

From the psychopathology of the individuation process we know that the formation of symbols is frequently associated with physical disorders of a psychic origin, which in some cases are felt as decidedly “real” Carl Jung, CW 9i, Para 290.

In medicine, fantasies are real things with which the psychotherapist has to reckon very seriously indeed. He cannot therefore deprive of all justification those primitive phantasms whose content is so real that it is projected upon the external world Carl Jung, CW 9i, Para 290.

The symbol is thus a living body, corpus et anima; hence the “child” is such an apt formula for the symbol Carl Jung, CW 9i, Para 291.

The uniqueness of the psyche can never enter wholly into reality, it can only be realized approximately, though it still remains the absolute basis of all consciousness Carl Jung, CW 9i, Para 291.

The hermaphrodite means nothing less than a union of the strongest and most striking opposites Carl Jung, CW 9i, Para 292.

The hermaphroditic Rebis has an important part to play in the natural philosophy of the Middle Ages. And in our own day we hear of Christ’s androgyny in Catholic mysticism Carl Jung, CW 9i, Para 292.

As we have seen, Gnosticism, too, endeavored in all seriousness to subordinate the physiological to the metaphysical Carl Jung, CW 9i, Para 297.

The figure of the cucullatus points to the hooded, that is, the invisible one, the genius of the departed, who reappears in the child-like frolics of a new life, surrounded by the sea-forms of dolphins and tritons Carl Jung, CW 9i, Para 298.

Wholeness is never comprised within the compass of the conscious mind it includes the indefinite and indefinable extent of the unconscious as well Carl Jung, CW 9i, Para 299.

Consciousness hedged about by psychic powers, sustained or threatened or deluded by them, is the age-old experience of mankind. This experience has projected itself into the archetype of the child, which expresses man’s wholeness Carl Jung, CW 9i, Para 300.

The initial stage of personal infantilism presents the picture of an “abandoned” or “misunderstood” and unjustly treated child with overweening pretensions Carl Jung, CW 9i, Para 304.

It is an essential characteristic of psychic figures that they are duplex or at least capa-

ble of duplication; at all events they are bipolar and oscillate between their positive and negative meanings Carl Jung, CW 9i, Para 310.

I understand the unconscious rather as an impersonal psyche common to all men, even though it expresses itself through a personal consciousness. When anyone breathes, his breathing is not a phenomenon to be interpreted personally Carl Jung, CW 9i, Para 314.

The mythological images belong to the structure of the unconscious and are an impersonal possession; in fact, the great majority of men are far more possessed by them than possessing them Carl Jung, CW 9i, Para 314.

Images give rise under certain conditions to corresponding disturbances and symptoms, and it is then the task of medical therapy to find out. Carl Jung, CW 9i, Para 314

From ancient times any relationship to the stars has always symbolized eternity. The soul comes “from the stars” and returns to the stellar regions. “Ursanna’s” relation to the moon is indicated by the “moon-bowl” Carl Jung, CW 9i, Para 343.

Just as in other cases the sacrifice of a child or a sheep played a part, so here the sacrifice of the maiden hanging on the “cross” Carl Jung, CW 9i, Para 355.

The “maiden” corresponds to the anima of the man and makes use of it to gain her natural ends, in which illusion plays the greatest role imaginable Carl Jung, CW 9i, Para 355.

But as long as a woman is content to be a femme à homme, she has no feminine individuality. She is empty and merely glitters welcome vessel for masculine projections Carl Jung, CW 9i, Para 355.

In the products of unconscious activity, the anima appears equally as maiden and mother, which is why a personalistic interpretation always reduces her to the personal mother or some other female person Carl Jung, CW 9i, Para 356.

The real meaning of the figure naturally gets lost in the process, as is inevitably the case with all these reductive interpretations whether in the sphere of the psychology of the unconscious or of mythology Carl Jung, CW 9i, Para 356.

Besides this ambivalence, the anima also has “occult” connections with “mysteries,” with the world of darkness in general, and for that reason she often has a religious tinge Carl Jung, CW 9i, Para 356.

To the young boy a clearly discernible anima-form appears in his mother, and this lends her the radiance of power and superiority or else a daemonic aura of even greater fascination Carl Jung, CW 9i, Para 357.

In men, a positive father-complex very often produces a certain credulity with regard to authority and a distinct willingness to bow down before all spiritual dogmas and values Carl Jung, CW 9i, Para 396.

In both sexes the spirit can also take the form of a boy or a youth. Carl Jung, CW 9i, Para 396

The figure of the wise old man can appear so plastically, not only in dreams but also in visionary meditation (or what we call “active imagination”), that, as is sometimes apparently the case in India, it takes over the role of a guru Carl Jung, CW 9i, Para 398.

The wise old man appears in dreams in the guise of a magician, doctor, priest, teacher, professor, grandfather, or any other person possessing authority Carl Jung, CW 9i, Para 398.

I have often encountered motifs which made me think that the unconscious must be the world of the infinitesimally small. Carl Jung, CW 9i, Para 408

In the same way, the archetype of the wise old man is quite tiny, almost imperceptible, and yet it possesses a fateful potency, as anyone can see when he gets down to fundamentals Carl Jung, CW 9i, Para 408.

Apart from his cleverness, wisdom, and insight, the old man, as we have already mentioned, is also notable for his moral qualities; what is more, he even tests the moral qualities of others and makes his gifts dependent on this test Carl Jung, CW 9i, Para 410.

The figure of the superior and helpful old man tempts one to connect him somehow or other with God Carl Jung, CW 9i, Para 412.

The description of our archetype of the spirit would not be complete if we omitted to consider one special form of its manifestation, namely its animal form Carl Jung, CW 9i, Para 419.

Something of this contradictoriness also inheres in the medieval description of the devil as simia dei (the ape of God), and in his characterization in folklore as the “simpleton” who is “fooled” or “cheated” Carl Jung, CW 9i, Para 456.

A curious combination of typical trickster motifs can be found in the alchemical figure of Mercurius; for instance Carl Jung, CW 9i, Para 456.

In picaresque tales, in carnivals and revels, in magic rites of healing, in man’s religious fears and exaltations, this phantom of the trickster haunts the mythology of all ages, sometimes in quite unmistakable form, sometimes in strangely modulated guise Carl Jung, CW 9i, Para 465.

As Radin points out, the civilizing process [of the trickster] begins within the framework of the trickster cycle itself, and this is a clear indication that the original state has been overcome Carl Jung, CW 9i, Para 477.

If we take the trickster as a parallel of the individual shadow, then the question arises whether that trend towards meaning, which we saw in the trickster myth, can also be observed in the subjective and personal shadow Carl Jung, CW 9i, Para 485.

The egg is a germ of life with a lofty symbolical significance. It is not just a cosmogonic symbol it is also a “philosophical” one Carl Jung, CW 9i, Para 529.

Associations to the tree led to its maternal significance. The tree would explain the plant motif in the mandala, and its sudden growth represents the higher level or freeing of consciousness

induced by the movement to the right Carl Jung, CW 9i, Para 570.

For the same reason the “philosophical” tree is a symbol of the alchemical opus, which as we know is an individuation process Carl Jung, CW 9i, Para 570.

The Heracles myth has in fact all the characteristic features of an individuation process: the journeys to the four directions, four sons, submission to the feminine principle (Omphale) that symbolizes the unconscious, and the self-sacrifice and rebirth caused by Deianeira’s robe Carl Jung, CW 9i, Para 571.

A leftward or backward movement, on the other hand, means the “rising” movement of life. A “deliverance from outward things” occurs and the spirit obtains control over the anima Carl Jung, CW 9i, Para 564.

This idea agrees with my findings, but it does not take account of the fact that a person can easily have the spirit outside and the anima inside Carl Jung, CW 9i, Para 564.

In Tibet, the leftward-moving swastika is a sign of the Bön religion, of black magic. Stupas and chörtens must therefore be circumambulated clockwise. The leftward-spinning eddies spin into the unconscious Carl Jung, CW 9i, Para 564.

The rightward-spinning ones spin out of the unconscious chaos. The rightward-moving swastika in Tibet is therefore a Buddhist emblem Carl Jung, CW 9i, Para 564.

This dream describes the change: the patient is no longer identical with her animus. The animus has, so to speak, become her patient, since he has eye trouble. As a matter of fact the animus usually sees things “cock-eyed” and often very unclearly Carl Jung, CW 9i, Para 592.

The eye is also a well-known symbol for God. Hence Böhme calls his “Philosophique Globe” the “Eye of Eternity,” the “Essence of all Essences,” the “Eye of God” Carl Jung, CW 9i, Para 594.

As a zodiacal sign Cancer signifies resurrection, because the crab sheds its shell. The ancients had in mind chiefly Pagurus bernhardus, the hermit crab. It hides in its shell and cannot be attacked. Therefore it signifies caution and foresight, knowledge of coming events Carl Jung, CW 9i, Para 604.

Foreseeing the flooding of the Nile, the crabs (like the tortoises and crocodiles) bring their eggs in safety to a higher place. “They foresee the future in their mind long before it comes” (Caussin, Polyhistor symbolicus (1618), p. 442) Carl Jung, CW 9i, Para 604.

It “depends on the moon, and waxes with it.” It is worth noting that the crab appears just in the mandala in which we see the phases of the moon for the first time Carl Jung, CW 9i, Para 604.

In astrology, Cancer is a feminine and watery sign, and the summer solstice takes place in it. In the melothesiae it is correlated with the breast. It rules over the Western sea Carl

Jung, CW 9i, Para 605.

Here the many animals are affective states to which man is prone. The individuation process, clearly alluded to in this passage, subordinates the many to the One. But the One is God, and that which corresponds to him in us is the imago dei, the God-image Carl Jung, CW 9i, Para 626.

Elaborate mandalas, executed in red chalk, can also be found on the whitewashed walls of many huts. The best and most significant mandalas are found in the sphere of Tibetan Buddhism. I shall use as an example a Tibetan mandala, to which my attention was drawn by Richard Wilhelm Carl Jung, CW 9i, Para 629.

The wheel is held by the god of death, Yama. It is understandable that the sorrowful world of old age, sickness, and death should be held in the claws of the death-demon Carl Jung, CW 9i, Para 644.

Usually the mandalas express religious, i.e., numinous, thoughts and ideas, or, in their stead, philosophical ones Carl Jung, CW 9i, Para 645.

They [mandala figures] therefore possess a “magical” significance, like icons, whose possible efficacy was never consciously felt by the patient. In fact, it is from the effect of their own pictures that patients discover what icons can mean Carl Jung, CW 9i, Para 645.

Over and over again in the "metamorphosis of the gods," he rises up as the prophet or first-born of a new generation and appears unexpectedly in the unlikeliest places (sprung from a stone, tree, furrow, water, etc.) and in ambiguous form (Tom Thumb, dwarf, child, animal, and so on). Carl Jung, CW 9i, Para 267

You have probably read Freud’s discussion of a certain picture by Leonardo da Vinci: St. Anne with the Virgin Mary and the Christ-child. Freud interprets this remarkable picture in terms of the fact that Leonardo himself had two mothers. This causality is personal. We shall not linger over the fact that this picture is far from unique, nor over the minor inaccuracy that St. Anne happens to be the grandmother of Christ and not, as required by Freud’s interpretation, the mother, but shall simply point out that interwoven with the apparently personal psychology there is an impersonal motif well known to us from other fields. This is the motif of the dual mother, an archetype to be found in many variants in the field of mythology and comparative religion and forming the basis of numerous “représentations collectives.” Carl Jung, CW 9i, Para 93

I might mention, for instance, the motif of the dual descent, that is, descent from human and divine parents, as in the case of Heracles, who received immortality through being unwittingly adopted by Hera. What was a myth in Greece was actually a ritual in Egypt: Pharaoh was both human and divine by nature. Carl Jung, CW 9i, Para 93

In the birth chambers of the Egyptian temples Pharaoh’s second, divine conception and birth is depicted on the walls; he is “twice-born.” It is an idea that underlies all rebirth mysteries, Christianity included. Christ himself is “twice-born:” through his baptism in the Jordan he was regenerated and reborn from water and spirit. Carl Jung, CW 9i, Para 93

Consequently, in the Roman liturgy the font is designated the “uterus ecclesiae,” and,

as you can read in the Roman missal, it is called this even today, in the “benediction of the font” on Holy Saturday before Easter. Carl Jung, CW 9i, Para 93

Further, according to an early Christian-Gnostic idea, the spirit which appeared in the form of a dove was interpreted as Sophia-Sapientia Wisdom and the Mother of Christ. Thanks to this motif of the dual birth, children today, instead of having good and evil fairies who magically “adopt” them at birth with blessings or curses, are given sponsorsa “godfather” and a “godmother.” Carl Jung, CW 9i, Para 93

The idea of a second birth is found at all times and in all places. In the earliest beginnings of medicine it was a magical means of healing; in many religions it is the central mystical experience; it is the key idea in medieval, occult philosophy, and, last but not least, it is an infantile fantasy occurring in numberless children, large and small, who believe that their parents are not their real parents but merely foster-parents to whom they were handed over. Benvenuto Cellini also had this idea, as he himself relates in his autobiography. Carl Jung, CW 9i, Para 94

The vulture symbol (which Freud also discusses in the work mentioned) makes this view all the more plausible. With some justification he quotes as the source of the symbol the Hieroglyphica of Horapollo (Cf. the trans. by George Boas, pp. 63ff., and Freud, Leonardo, sec. II. Editors), a book much in use in Leonardo’s time. There you read that vultures are female only and symbolize the mother. They conceive through the wind (pneuma). This word took on the meaning of “spirit” chiefly under the influence of Christianity. Even in the account of the miracle at Pentecost the pneuma still has the double meaning of wind and spirit. Carl Jung, CW 9i, Para 95

We are all meant to be mothers of God, for God is always needing to be born. - Meister Eckhart Cited in Carl Jung’s CW 9i, Para 286

This fact, in my opinion, points without doubt to Mary, who, a virgin by nature, conceived through the pneuma, like a vulture. Furthermore, according to Horapollo, the vulture also symbolizes Athene, who sprang, unbegotten, directly from the head of Zeus, was a virgin, and knew only spiritual motherhood. All this is really an allusion to Mary and the rebirth motif. Carl Jung, CW 9.1, Para 95

There is not a shadow of evidence that Leonardo meant anything else by his picture. Even if it is correct to assume that he identified himself with the Christ-child, he was in all probability representing the mythological dual-mother motif and by no means his own personal prehistory. And what about all the other artists who painted the same theme? Surely not all of them had two mothers. Carl Jung, CW 9.1, Para 95

Unlike the mandalas so far discussed, these are not based on any tradition or model, seeming to be free creations of fantasy, but determined by certain archetypal ideas unknown to their creators. For this reason the fundamental motifs are repeated so often that marked similarities occur in drawings done by the most diverse patients. Carl Jung, CW 9.1, Para 645

The pictures come as a rule from educated persons who were unacquainted with the ethnic parallels. The pictures differ widely, according to the stage of the therapeutic process; but certain important stages correspond to definite motifs. Carl Jung, CW 9.1, Para 645

Without going into therapeutic details, I would only like to say that a rearranging of the personality is involved, a kind of new centering. That is why mandalas mostly appear in connection with chaotic psychic states of disorientation or panic. They then have the purpose of reducing the confusion to order, though this is never the conscious intention of the patient. At all events they express order, balance, and wholeness. Patients themselves often emphasize the beneficial or soothing effect of such pictures. Carl Jung, CW 9.1, 645

I must preface the pictures that now follow with a few remarks on the formal elements of mandala symbolism. These are primarily:

Circular, spherical, or egg-shaped formation

The circle is elaborated into a flower (rose, lotus) or a wheel.

A centre expressed by a sun, star, or cross, usually with four, eight, or twelve rays.

The circles, spheres, and cruciform figures are often represented in rotation (swastika)

The circle is represented by a snake coiled about a centre, either ring-shaped (uroboros) or spiral (Orphic egg)

Squaring of the circle, taking the form of a circle in a square or vice versa

Castle, city, and courtyard (temenos) motifs, quadratic or circular

Eye (pupil and iris) Besides the tetradic figures (and multiples of four), there are also triadic and pentadic ones, though these are much rarer. They should be regarded as “disturbed” totality pictures. Carl Jung, CW 9.1, Para 646

They [mandala figures] therefore possess a “magical” significance, like icons, whose possible efficacy was never consciously felt by the patient. In fact, it is from the effect of their own pictures that patients discover what icons can mean Carl Jung, CW 9.1, Para 645

Their pictures work not because they spring from the patients’ own fantasy but because they are impressed by the fact that their subjective imagination produces motifs and symbols of the most unexpected kind that conform to law and express an idea or situation which their conscious mind can grasp only with difficulty. Confronted with these pictures, many patients suddenly realize for the first time the reality of the collective unconscious as an autonomous entity. Carl Jung, CW 9.1, Para 645

An example of a mandala was painted by a middle-aged woman of schizoid disposition. She had several times drawn mandalas spontaneously, because they always had an ordering effect on her chaotic psychic states. The picture shows a rose, the Western equivalent of the lotus. In India the lotus-flower (padma) is interpreted by the Tantrists as the womb. We know this symbol from the numerous pictures of the Buddha (and other Indian deities) in the lotus-flower. It corresponds to the “Golden Flower” of Chinese alchemy, the rose of the Rosicrucians, and the mystic rose in Dante’s Paradiso. Rose and lotus are usually arranged in groups of four petals, indicating the squaring of the circle or the united opposites. Carl Jung, CW 9.1, Para 652

In a painting, done by a young woman patient, we see at the cardinal points four creatures: a bird, a sheep, a snake, and a lion with a human face. Together with the four colours in which the four regions are painted, they embody four principles. Carl Jung, CW 9.1, Para 660

The interior of the mandala is empty. Or rather, it contains a “Nothing” that is expressed by a quaternity. This is in accord with the overwhelming majority of individual mandalas: as a rule the centre contains the motif of the rotundum, known to us from alchemy, or the four-fold emanation or the squaring of the circle, or more rarely the figure of the patient in a universal human sense, representing the Anthropos. Carl Jung, CW 9.1 Para 660.

We find this motif, too, in alchemy. The four animals remind us of the cherubim in Ezekiel’s vision, and also of the four symbols of the evangelists and the four sons of Horus, which are sometimes depicted in the same way, three with animal heads and one with a human head. Animals generally signify the instinctive forces of the unconscious, which are brought into unity within the mandala. This integration of the instincts is a prerequisite for individuation. Carl Jung, CW 9.1 Para 660.

A painting by an older patient. Here the flower is seen not in the basic pattern of the mandala, but in elevation. The circular form [of the mandala] has been preserved inside the square, so that despite its different execution this picture can still be regarded as a mandala. The plant stands for growth and development, like the green shoot in the diaphragm chakra of the kundalini yoga system. The shoot symbolizes Shiva and represents the centre and the male, whereas the calyx represents the female, the place of germination and birth. Carl Jung, CW 9.1 Para, 661

Thus the Buddha sitting in the lotus is shown as the germinating god. It is the god in his rising, the same symbol as Ra the falcon, or the phoenix rising from the nest, or Mithras in the tree-top, or the Horus-child in the lotus. They are all symbolizations of the status nascendi in the seeding-place of the matrix. Carl Jung, CW 9.1, Para 661

In medieval hymns Mary [Virgin] too is praised as the cup of the flower in which Christ, coming down as a bird, makes his nest. Psychologically Christ means unity, which clothes itself in the corpus mysticum of the Church or in the body of the Mother of God (“mystic rose”), surrounded as with flower-petals, and thus reveals itself in reality. Christ as an image is a symbol of the Self. Just as the plant stands for growth, so the flower depicts the unfolding from a centre. Carl Jung, CW 9.1, Para 661

As a rule the snake personifies the unconscious, whereas the fish usually represents one of its contents. These subtle distinctions must be borne in mind when interpreting a mandala, because the two symbols very probably correspond to two different stages of development, the snake representing a more primitive and more instinctual state than the fish, which in history as well was endowed with higher authority than the snake (cf. the Ichthys-symbol). Carl Jung, CW 9.1, Para 672

The golden ball corresponds to the golden germ (Hiranyagarbha). It is rotating, and the Kundalini [serpent] winding round it has doubled. This indicates conscious realization, since a content rising out of the unconscious splits at a certain moment into two halves, a conscious and an unconscious one. The doubling is not made by the conscious mind but appears spontaneously in the products of the unconscious. The rightwards rotation, expressed by the wings (swastika-motif), likewise indicates conscious realization. The stars show that the centre

has a cosmic structure. It has four rays, and thus behaves like a heavenly body. Carl Jung, CW 9.1, Para 674

This picture [as mandala] was done by a seven-year-old boy, offspring of a problem marriage. He had done a whole series of these drawings of circles and hung them up round his bed. He called them his “loves” and would not go to sleep without them. This shows that the “magical” pictures still functioned for him in their original sense, as a protective magic circle. Carl Jung, CW 9.1, Para 687

This painting is especially interesting because it shows us very clearly in what relationship the picture stands to the painter. The patient has a shadow problem. The female figure in the picture represents her dark, chthonic side. She is standing in front of a wheel with four spokes, the two together forming an eight-rayed mandala. From her head spring four snakes, expressing the tetradic nature of consciousness, but in accordance with the demonic character of the picture they do this in an evil and nefarious way, since they represent evil and destructive thoughts. The entire figure is wrapped in flames, emitting a dazzling light. She is like a fiery demon, a salamander, the medieval conception of a fire spirit. Carl Jung, CW 9.1, Para 705

Fire expresses an intense transformation process. Hence the prima materia in alchemy was symbolized by the salamander in the fire, as the next picture shows. The spear- or arrow-head expresses “direction”: it is pointing upwards from the middle of the head. Everything that the fire consumes rises up to the seat of the gods. The dragon glowing in the fire becomes volatilized; illumination comes through the fiery torment. Carl Jung, CW 9.1, Para 705

The contents of the collective unconscious…are known as archetypes. Carl Jung, CW 9i, Para 4

We are dealing with archaic or–I would say—primordial types, that is, with universal images that have existed since the remotest times. Carl Jung, CW 9i, Para 5.

[Tribal] lore is concerned with archetypes that have been modified in a special way. Another well-known expression of the archetypes is myth and fairytale. Carl Jung, CW 9i, Para 5

The archetype is essentially an unconscious content that is altered by becoming conscious and by being perceived, and it takes its color from the individual consciousness in which it happens to appear Carl Jung, CW 9i, Para 6.

Nothing can exist without its opposite; the two were one in the beginning and will be one again in the end. Consciousness can only exist through continual recognition of the unconscious. Carl Jung, CW 9i, para. 158.

In India, “the loving and mother” is the paradoxical Kali. Carl Jung, CW 9i, para 158

The hero’s main feat is to overcome the monster of darkness: it is the long-hoped-for and expected triumph of consciousness over the unconscious. Carl Jung, CW 9i, para. 283.

The paternal principle, the Logos,… eternally struggles to extricate itself from the primal warmth and primal darkness of the maternal womb, in a word, from unconsciousness. Carl

Jung, CW 9i, Para 283.

The Church severed the coniunctio from the physical realm altogether, and natural philosophy turned it into an abstract theoria. These developments meant the gradual transformation of the archetype into a psychological process which, in theory, we can call a combination of conscious and unconscious processes. Carl Jung, CW 9i, para. 295.

Myths are miracle tales in the everyday world of consciousness such things hardly exist; that is to say, until 1933. Carl Jung, CW 9i, Page 66.

Christ... "An historical personage is uni-temporal and unique; is God, universal and eternal." Carl Jung, CW 9i, para. 116.

The man's Eros does not lead upward only but downward into that uncanny dark world of Hecate and Kali. Carl Jung, CW 9i, Para 186.

How else could it have occurred to man to divide the cosmos, on the analogy of day and night, summer and winter, into a bright day-world and a dark night-world peopled with fabulous monsters, unless he had the prototype of such a division in himself, in the polarity between the conscious and the invisible and unknowable unconscious? Carl Jung, CW 9i, Page 187.

More especially the threat to one's inmost self from dragons and serpents' points to the danger of the newly acquired consciousness being swallowed up again by the instinctive psyche, the unconscious. Carl Jung; CW 9i; para. 282.

A man who is possessed by his shadow is always standing in his own light and falling into his own traps. Whenever possible, he prefers to make an unfavorable impression on others. Carl Jung, CW 9i, Para 222f.

Turned towards the world, the anima is fickle, capricious, moody, uncontrolled and emotional, sometimes gifted with daemonic intuitions, ruthless, malicious, untruthful, bitchy, double-faced, and mystical. Carl Jung, CW 9i, Para 222f.

Masses are always breeding grounds of psychic epidemics. Carl Jung; CW 9i; Par. 227.

The anima also has affinities with animals, which symbolize her characteristics. Thus she can appear as a snake or a tiger or a bird. Carl Jung, CW 9i, para. 358

Myths are original revelations of the preconscious psyche. Many of these unconscious processes may be indirectly occasioned by consciousness, but never by conscious choice. Carl Jung, CW 9i, Par 261.

The animus is obstinate, harping on principles, laying down the law, dogmatic, world-reforming, theoretic, word-mongering, argumentative, and domineering. Both alike have bad taste: the anima surrounds herself with inferior people, and the animus lets himself be taken in by second-rate thinking. Carl Jung, CW 9i, Para 222f.

Myths are original revelations of the preconscious psyche, involuntary statements about

unconscious psychic happenings, and anything but allegories of physical processes. Carl Jung, CW 9i, Para 261.

The primitive mentality does not invent myths, it experiences them. Carl Jung, CW 9i, Para 261.

One could say, with a little exaggeration, that the persona is that which in reality one is not, but which oneself as well as others think one is. Carl Jung, CW 9i, para 221.

Divine curiosity yearns to be born and does not shrink from conflict, suffering, or sin. Carl Jung, CW 9i, Para 283.

The darkness which clings to every personality is the door into the unconscious and the gateway of dreams, from which those two twilight figures, the shadow and the anima, step into our nightly visions or, remaining invisible, take possession of our ego-consciousness. Carl Jung, CW 9i, Para 222.

Genesis represents the act of becoming conscious as a taboo infringement, as though knowledge meant that a sacrosanct barrier had been impiously overstepped. Carl Jung, CW 9i, Para 243

These fantasy-images undoubtedly have their closest analogues in mythological types. We must therefore assume that they correspond to certain collective (and not personal) structural elements of the human psyche.... These cases are so numerous that we are obliged to assume the existence of a collective psychic substratum. I have called this the collective unconscious. Carl Jung, CW 9I, para. 262.

Common is the view that spirit and psyche are essentially the same and can be separated only arbitrarily. Wundt takes spirit as “the inner being, regardless of any connection with an outer being. Carl Jung, CW 9i, para. 386

Spirit has the further connotation of sprightliness, when we say that a person is “spirited,” meaning that he is versatile and full of ideas, with a brilliant, witty, and surprising turn of mind. Carl Jung, CW 9i, para. 386.

A very widespread view conceives spirit as a higher and psyche as a lower principle of activity, and conversely the alchemists thought of spirit as the ligamentum animae et corporis, regarding it as a spiritus vegetativus (the later life-spirit or nerve-spirit). Carl Jung, CW 9i, para. 386.

Myths are original revelations of the preconscious psyche, involuntary statements about unconscious psychic happenings... But religion is a vital link with psychic processes independent of and beyond consciousness, in the dark hinterland of the psyche. Carl Jung CW 9i, para. 261.

Possession caused by the anima or animus presents a different picture. In the state of possession both figures lose their charm and their values; they retain them only when they are turned away from the world, in the introverted state, when they serve as bridges to the unconscious. Carl Jung, CW 9i, Para 222f.

Others restrict spirit to certain psychic capacities or functions or qualities, such as the capacity to think and reason in contradistinction to the more “soulful” sentiments. Here spirit means the sum-total of all the phenomena of rational thought, or of the intellect, including the will, memory, imagination, creative power, and aspirations motivated by ideals. Carl Jung, CW 9i, para. 386.

The word “spirit” possesses such a wide range of application that it requires considerable effort to make clear to oneself all the things it can mean. Carl Jung, CW 9i, para. 385.

There is no consciousness without discrimination of opposites. Carl Jung, CW 9i, Para 178.

Because of its unconscious component the self is so far removed from the conscious mind that it can only be partially expressed by human figures; the other part of it has to be expressed by objective, abstract symbols. The human figures are father and son, mother and daughter, king and queen, god and goddess.... Carl Jung, CW 9i, para. 314-315.

The goal of the individuation process is the synthesis of the self. Carl Jung; CW 9i, Page 278.

The arcane substance is one and the same, whether it is found within man or outside him. Carl Jung [citing Gerhard Dorn] CW 9i, Para 249.

The symbols of the self-arise in the depths of the body and they express its materiality every bit as much as the structure of the perceiving consciousness. The symbol is thus a living body, corpus et anima. Carl Jung; CW 9i; para 291.

[The trickster] is a forerunner of the savior. He is both subhuman and superhuman, a bestial and divine being, whose chief and most alarming characteristic is his unconsciousness. Carl Jung, CW 9i, para 472.

Children are educated by what the grownup is and not by what he says. Carl Jung, CW 9i, Page 174.

In the dream, ... there are numberless inter-connections to which one can find parallels only in mythological associations of ideas (or perhaps in certain poetic creations which are often characterized by a borrowing, not always conscious, from myths. Carl Jung; CW 9I; para. 259.

A symbol of the unity of personality, a symbol of the self, where the war of opposites finds peace. In this way the primordial being becomes the distant goal of man’s self-development. Carl Jung; CW 9i, para. 292-4.

In keeping with its original wind-nature, spirit is always an active, winged, swift-moving being as well as that which vivifies, stimulates, incites, fires, and inspires. Carl Jung; CW 9i; para. 390.

The anima is bipolar and can therefore appear positive one moment and negative the next; now young, now old; now mother, now maiden; now a good fairy, now a witch; now a saint, now a whore. Carl Jung; CW 9i, Page 356.

To put it in modern language, spirit is the dynamic principle, forming for that very rea-

son the classical antithesis of matter-the antithesis, that is, of its stasis and inertia. Basically it is the contrast between life and death. The subsequent differentiation of this contrast leads to the actually very remarkable opposition of spirit and nature. Carl Jung; CW 9i; Para 390.

Even though spirit is regarded as essentially alive and enlivening, one cannot really feel nature as unspiritual and dead. We must therefore be dealing here with the (Christian) postulate of a spirit whose life is so vastly superior to the life of nature that in comparison with it the latter is no better than death. Carl Jung; CW 9i; Para 390.

A symbol of the unity of personality, a symbol of the self, where the war of opposites finds peace. In this way the primordial being becomes the distant goal of man's self-development. Carl Jung; CW 9i; Para 293.

The hermaphrodite means nothing less than a union of the strongest and most striking opposites... The primordial idea has become a symbol of the creative union of opposites, "uniting symbol" in the literal sense. Carl Jung; CW 9i; Para 293.

The alchemists projected the inner event into an outer figure, so for them the inner friend appeared in the form of the "Stone," of which the Tractatus aureus: "Understand, ye sons of the wise, what this exceeding precious Stone crieth out to you: Protect me and I will protect thee. Give me what is mine that I may help thee." To this a scholiast adds: "The seeker after truth hears both the Stone and the Philosopher speaking as if out of one mouth." The Philosopher is Hermes, and the Stone is identical with Mercurius, the Latin Hermes. Carl Jung; CW 9i; Para 283

From the earliest times, Hermes was the mystagogue and psycho pomp of the alchemists, their friend and counselor, who leads them to the goal of their work. He is "like a teacher mediating between the stone and the disciple." To others the friend appears in the shape of Christ or Khidr or a visible or invisible guru, or some other personal guide or leader figure. Carl Jung, CW 9I, para. 283

One clings to possessions that have once meant wealth; and the more ineffective, incomprehensible, and lifeless they become the more obstinately people cling to them. (Naturally it is only sterile ideas that they cling to; living ideas have content and riches enough, so there is no need to cling to them.) Thus in the course of time the meaningful turns into the meaningless. This is unfortunately the fate of metaphysical ideas. Carl Jung, CW 9i, Para 65.

Our unconscious, on the other hand, hides living water, spirit that has become nature, and that is why it is disturbed. Heaven has become for us the cosmic space of the physicists, and the divine empyrean a fair memory of things that once were. But 'the heart glows,' and a secret unrest gnaws at the roots of our being. Dealing with the Unconscious has become a question of life for us. Carl Jung, CW, 9i, Para 50.

Unconsciousness is the primal sin, evil itself, for the Logos. Carl Jung, CW 9i, Para 178.

Notwithstanding its monstrosity, the hermaphrodite has gradually turned into a subduer of conflicts and a bringer of healing, ... its power to unite opposites, mediates between the unconscious substratum and the conscious mind. It throws a bridge between present-day consciousness, always in danger of losing its roots, and the natural, unconscious, instinctive

wholeness of primeval times. Carl Jung; CW 9i, para. 292-4

First, fantasies (including dreams) of a personal character, which go back unquestionably to personal experiences, things forgotten or repressed, and can thus be completely explained by individual anamnesis. Second, fantasies (including dreams) of an impersonal character, which cannot be reduced to experiences in the individual's past, and thus cannot be explained as something individually acquired. Carl Jung; CW 9i

What comes to us from outside, and, for that matter, everything that rises up from within, can only be made our own if we are capable of an inner amplitude equal to that of the incoming content. Carl Jung, CW 9i, Para 215

The psychological rule says that when an inner situation is not made conscious, it happens outside, as fate. That is to say, when the individual remains undivided and does not become conscious of his inner opposite, the world must perforce act out the conflict and be torn into opposing halves. Carl Jung, CW 9ii, Para 126.

The urge and compulsion to self-realization is a law of nature and thus of invincible power, even though its effect, at the outset, is insignificant and improbable. Carl Jung, CW 9i, Para 289

Because the anima wants life, she wants both good and bad. Carl Jung, CW 9i, Para 59.

Psychology does not know what good and evil are in themselves; it knows them only as judgments about relationships. Carl Jung, CW 9i, Page 53.

The God-image in man was not destroyed by the Fall but was only damaged and corrupted ('deformed') and can be restored through God's grace. The scope of the integration is suggested by the descent of Christ's soul to hell, its work of redemption embracing even the dead. The psychological equivalent of this is the integration of the collective unconscious which forms an essential part of the individuation process. Carl Jung, CW 9i, Para 72.

But the man who is inwardly great will know that the long-expected friend of his soul, the immortal one, has now really come, "to lead captivity captive" [Ephesians 4:8]; that is, to seize hold of him by whom this immortal had always been confined and held prisoner, and to make his life flow into that greater life—a moment of deadliest peril! Carl Jung, CW 9i, Para 217

Rebirth is an affirmation that must be counted among the primordial affirmations of mankind. Carl Jung, CW 9i, Para 207

In its psychological meaning, individuation is an opus contra naturam, which creates a horror vacui in the collective layer and is only too likely to collapse under the impact of the collective forces of the psyche. Carl Jung, CW 9i, Page 147

It is not storms, not thunder and lightning, not rain and cloud that remain as images in the psyche, but the fantasies caused by the affects they arouse. Carl Jung, CW 9i, Para 331

Being that has soul is living being. Soul is the living thing in man, that which lives of itself and causes life. Therefore God breathed into Adam a living breath, that he might live. Carl Jung, CW 9i, Para 56

All ages before us have believed in gods in some form or other. Only an unparalleled impoverishment of symbolism could enable us to rediscover the gods as psychic factors, that is, as archetypes of the unconscious. Carl Jung, CW 9i, Para 50

Shall we be able to put on, like a new suit of clothes, ready-made symbols grown on foreign soil, saturated with foreign blood, spoken in a foreign tongue, nourished by a foreign culture, interwoven with foreign history, and so resemble a beggar who wraps himself in kingly raiment, a king who disguises himself as a beggar? Carl Jung, CW 9i, Para 26.

The mere fact that people talk about rebirth, and that there is such a concept at all, means that a store of psychic experiences designated by that term must actually exist. What these experiences are like we can only infer from the statements that have been made about them. So, if we want to find out what rebirth really is, we must turn to history in order to ascertain what "rebirth" has been understood to mean. Carl Jung, CW 9i, Para 206

Rebirth is an affirmation that must be counted among the primordial affirmations of mankind. Carl Jung, CW 9i, Para 207

Taking it in its deepest sense, the shadow is the invisible saurian tail that man still drags behind him. Carefully amputated, it becomes the healing serpent of the mysteries. Carl Jung, CW 9i, Para 93

For the artificial sundering of true and false wisdom creates a tension in the psyche, and from this there arises a loneliness and a craving like that of the morphine addict, who always hopes to find companions in his vice. Carl Jung, CW 9i, Para 31

There is thus no ground at all for regarding the psyche as something secondary or as an epiphenomenon; on the contrary, there is every reason to regard it, at least hypothetically, as a factor sui generis, and to go on doing so until it has been sufficiently proved that psychic processes can be fabricated in a retort. Carl Jung, CW 9i, Pages 7-8

As soon as people get together in masses and submerge the individual, the shadow is mobilized, and, as history shows, may even be personified and incarnated. Carl Jung, CW 9i, Para 478.

In all chaos there is a cosmos, in all disorder a secret order. Carl Jung, CW 9i, Para 66.

The spirit may legitimately claim the patria potestas over the soul; not so the earth-born intellect, which is man’s sword or hammer, and not a creator of spiritual worlds, a father of the soul. Carl Jung, CW 9i, Para 32

It [Shadow] is the world of water, where all life floats in suspension; where the realm of the sympathetic system, the soul of everything living, begins; where I am indivisibly this and that; where I experience the other in myself and the other-than-myself experiences me. Carl Jung, CW 9i, Para 45

Can it be possible that a man only thinks or says or does what he himself is? Carl Jung, CW 9i, Para 150

Children are educated by what the grown-up is and not by what he says. Carl Jung, CW 9i, Para 293

Through the Christ crucified between the two thieves, man gradually attained knowledge of his shadow and its duality. This duality had already been anticipated by the double meaning of the serpent. Just as the serpent stands for the power that heals as well as corrupts, so one of the thieves is destined upwards, the other downwards, and so likewise the shadow is on one side regrettable and reprehensible weakness, on the other side healthy instinctively and the prerequisite for higher consciousness. Carl Jung, CW 9i, Para 402.

The "other" may be just as one-sided in one way as the ego is in another. And yet the conflict between them may give rise to truth and meaning—but only if the ego is willing to grant the other its rightful personality. Carl Jung, CW 9i, Para 237

Life is a flux, a flowing into the future, and not a stoppage or a backwash. It is therefore not surprising that so many of the mythological saviours are child gods. Carl Jung, CW 9i, Para 278

But the man who is inwardly great will know that the long-expected friend of his soul, the immortal one, has now really come, "to lead captivity captive" [Ephesians 4:8]; that is, to seize hold of him by whom this immortal had always been confined and held prisoner, and to make his life flow into that greater life—a moment of deadliest peril! Carl Jung, CW 9i, Para 217

What comes to us from outside, and, for that matter, everything that rises up from within, can only be made our own if we are capable of an inner amplitude equal to that of the incoming content. Carl Jung, CW 9i, Para 215

It is quite impossible to conceive how "experience" in the widest sense, or, for that matter, anything psychic, could originate exclusively in the outside world. Carl Jung, CW 9i, Pages 101-102

More especially the threat to one’s inmost self from dragons and serpents points to the danger of the newly acquired consciousness being swallowed up again by the instinctive psyche, the unconscious. Carl Jung; CW 9i; para. 282.

The pain of this loneliness is the vengeance of the gods, for never again can he return to mankind. He is, as the myth says, chained to the lonely cliffs of the Caucasus, forsaken of God and man. Carl Jung, CW 9i, Para 243

Emptiness is a great feminine secret. It is something absolutely alien to man, the chasm, the unplumbed depths, the yin. Carl Jung, CW 9i, Para 183

Spirit and matter may well be forms of one and the same transcendental being. Carl Jung; CW 9i; Para 392.

Symbols are spirit from above, and under those conditions the spirit is above too. Carl Jung, CW 9i, Para 50

But this “inside,” which modern rationalism is so eager to derive from “outside,” has an a priori structure of its own that antedates all conscious experience. Carl Jung, CW 9i, Para 187.

It is quite impossible to conceive how “experience” in the widest sense, or, for that matter, anything psychic, could originate exclusively in the outside world. Carl Jung, CW 9i, Para 187.

The psyche is part of the inmost mystery of life, and it has its own peculiar structure and form like every other organism. Carl Jung, CW 9i, Para 187.

I am of the opinion that the psyche is the most tremendous fact of human life. Indeed, it is the mother of all human facts, of civilization and of its destroyer, war. Carl Jung, CW 9i, Para 206.

Emotions are instinctive, involuntary reactions which upset the rational order of consciousness by their elemental outbursts. Carl Jung, CW 9i, Para 497.

One thinks here of a Noah’s Ark that crosses over the waters of death and leads to a rebirth of all life. Carl Jung, CW 9i, Page 353, FN 178

The archetype—let us never forget this—is a psychic organ present in all of us. Carl Jung, CW 9i, Para 271

I am in a church made of grey sandstone. The apse is built rather high. Near the tabernacle a girl in a red dress is hanging on the stone cross of the window. (Suicide?) Carl Jung, CW 9i, Par 354

Just as in other cases the sacrifice of a child or a sheep played a part, so here the sacrifice of the maiden hanging on the “cross” Carl Jung, CW 9i, Par 355.

The death of the dancer is also to be understood in this sense, for these maidens are always doomed to die, because their exclusive domination of the feminine psyche hinders the individuation process, that is, the maturation of personality Carl Jung, CW 9i, Para 355.

The “maiden” corresponds to the anima of the man and makes use of it to gain her natural ends, in which illusion plays the greatest role imaginable Carl Jung, CW 9i, Par 355.

But as long as a woman is content to be a femme à homme, she has no feminine individuality. She is empty and merely glitters a welcome vessel for masculine projections Carl Jung, CW 9i, Para 355.

Here I would like to refer to the authors already cited. Rider Haggard calls She “Wisdom’s Daughter”; Benoît’s Queen of Atlantis has an excellent library that even contains a lost book of Plato. Helen of Troy, in her reincarnation, is rescued from a Tyrian brothel by the wise Simon Magus and accompanies him on his travels Carl Jung, CW 9i, Para 64.

It is just the most unexpected, the most terrifyingly chaotic things which reveal a deeper meaning. And the more this meaning is recognized, the more the anima loses her impetuous and compulsive character Carl Jung, CW 9i, Para 64.

Gradually breakwaters are built against the surging of chaos, and the meaningful divides itself from the meaningless. When sense and nonsense are no longer identical, the force of chaos

is weakened by their subtraction Carl Jung, CW 9i, Para 64.

In this way a new cosmos arises. This is not a new discovery in the realm of medical psychology, but the age-old truth that out of the richness of a man's experience there comes a teaching which the father can pass on to the son. Carl Jung, CW 9i, Para 64

In elfin nature wisdom and folly appear as one and the same; and they are one and the same as long as they are acted out by the anima. Life is crazy and meaningful at once. And when we do not laugh over the one aspect and speculate about the other, life is exceedingly drab, and everything is reduced to the littlest scale. There is then little sense and little nonsense either. Carl Jung, CW 9i, Para 65

When you come to think about it, nothing has any meaning, for when there was nobody to think, there was nobody to interpret what happened. Interpretations are only for those who don't understand; it is only the things we don't understand that have any meaning. Man woke up in a world he did not understand, and that is why he tries to interpret it. Carl Jung, CW 9i, Para 65

Thus the anima and life itself are meaningless in so far as they offer no interpretation. Yet they have a nature that can be interpreted, for in all chaos there is a cosmos, in all disorder a secret order, in all caprice a fixed law, for everything that works is grounded on its opposite. It takes man's discriminating understanding, which breaks everything down, into antimonial judgments, to recognize this. Carl Jung, CW 9i, Para 66

Once he comes to grips with the anima, her chaotic capriciousness will give him cause to suspect a secret order, to sense a plan, a meaning, a purpose over and above her nature, or even we might almost be tempted to say to "postulate" such a thing, though this would not be in accord with the truth Carl Jung, CW 9i, Para 66.

For in actual reality we do not have at our command any power of cool reflection, nor does any science or philosophy help us, and the traditional teachings of religion do so only to a limited degree. We are caught and entangled in aimless experience, and the judging intellect with its categories proves itself powerless. Human interpretation fails, for a turbulent life-situation has arisen that refuses to fit any of the traditional meanings assigned to it. It is a moment of collapse Carl Jung, CW 9i, Para 66.

We sink into a final depth Apuleius calls it "a kind of voluntary death." It is a surrender of our own powers, not artificially willed but forced upon us by nature; not a voluntary submission and humiliation decked in moral garb, but an utter and unmistakable defeat crowned with the panic fear of demoralization. Only when all props and crutches are broken, and no cover from the rear offers even the slightest hope of security, does it become possible for us to experience an archetype that up till then had lain hidden behind the meaningful nonsense played out by the anima. This is the archetype of meaning, just as the anima is the archetype of life itself. Carl Jung, CW 9i, Para 66

I purposely refrained from mentioning this thoroughly characteristic aspect of the anima earlier, because the first encounter with her usually leads one to infer anything rather than wisdom. This aspect appears only to the person who gets to grips with her seriously. Only then, when this hard task has been faced, does he come to realize more and more that behind all her cruel sporting with human fate there lies something like a hidden purpose which seems

to reflect a superior knowledge of life's laws Carl Jung, CW 9i, Para 64.

All ideas of rebirth are founded on this fact. Nature herself demands a death and a rebirth. As the alchemist Democritus says: "Nature rejoices in nature, nature subdues nature, nature rules over nature" Carl Jung, CW 9i, Para 234.

There are natural transformation processes which simply happen to us, whether we like it or not, and whether we know it or not. These processes develop considerable psychic effects, which would be sufficient in themselves to make any thoughtful person ask himself what really happened to him Carl Jung, CW 9i, Para 234.

Mandalas are birth-places, vessels of birth in the most literal sense, lotus-flowers in which a Buddha comes to life. Sitting in the lotus-seat, the yogi sees himself transfigured into an immortal Carl Jung, CW 9i, Para 234.

Natural transformation processes announce themselves mainly in dreams. Elsewhere I have presented a series of dream-symbols of the process of individuation. They were dreams which without exception exhibited rebirth symbolism. In this particular case there was a long-drawn-out process of inner transformation and rebirth into another being Carl Jung, CW 9i, Para 235.

This "other being" is the other person in ourselves that larger and greater personality maturing within us, whom we have already met as the inner friend of the soul. That is why we take comfort whenever we find the friend and companion depicted in a ritual, an example being the friendship between Mithras and the sun-god Carl Jung, CW 9i, Para 235.

This relationship is a mystery to the scientific intellect, because the intellect is accustomed to regard these things unsympathetically. But if it made allowance for feeling, we would discover that it is the friend whom the sun-god takes with him on his chariot, as shown in the monuments Carl Jung, CW 9i, Para 235.

It is the representation of a friendship between two men which is simply the outer reflection of an inner fact: it reveals our relationship to that inner friend of the soul into whom Nature herself would like to change us that other person who we also are and yet can never attain to completely. We are that pair of Dioscuri, one of whom is mortal and the other immortal, and who, though always together, can never be made completely one Carl Jung, CW 9i, Para 235.

The transformation processes strive to approximate them to one another, but our consciousness is aware of resistances, because the other person seems strange and uncanny, and because we cannot get accustomed to the idea that we are not absolute master in our own house Carl Jung, CW 9i, Para 235.

We should prefer to be always "I" and nothing else. But we are confronted with that inner friend or foe, and whether he is our friend, or our foe depends on ourselves Carl Jung, CW 9i, Para 235.

You need not be insane to hear his voice [of the

inner being']. On the contrary, it is the simplest and most natural thing

imaginable. For instance, you can ask yourself a question to which ``he'' gives answer. The discussion is then carried on as in any other conversation. You can describe it as mere ``associating'' or ``talking to oneself,'' or as a ``meditation'' in the sense used by the old alchemists, who referred to their interlocutor as aliquem alium internum,

a certain other one, within’ Carl Jung, CW 9i, Para 36.

This form of colloquy with the friend of the soul was even admitted by Ignatius Loyola into the technique of his Exercitia spiritualia, but with the limiting condition that only the person meditating is allowed to speak, whereas the inner responses are passed over as being merely human and therefore to be repudiated Carl Jung, CW 9i, Para 236.

This state of things has continued down to the present day. It is no longer a moral or metaphysical prejudice, but what is much worse an intellectual one Carl Jung, CW 9i, Para 236.

The “voice” is explained as nothing but “associating,” pursued in a witless way and running on and on without sense of purpose, like the works of a clock that has no dial. Or we say, “It is only my own thoughts!” even if, on closer inspection, it should turn out that they are thoughts which we either reject or had never consciously thought at all as if everything psychic that is glimpsed by the ego had always formed part of it! Carl Jung, CW 9i, Para 236

Naturally this hybris serves the useful purpose of maintaining the supremacy of ego-consciousness, which must be safeguarded against dissolution into the unconscious. But it breaks down ignominiously if ever the unconscious should choose to let some nonsensical idea become an obsession or to produce other psychogenic symptoms, for which we would not like to accept responsibility on any account Carl Jung, CW 9i, Para 236.

Our attitude towards this inner voice alternates between two extremes: it is regarded either as undiluted nonsense or as the voice of God. It does not seem to occur to any one that there might be something valuable in between Carl Jung, CW 9i, Para 237.

The “other” may be just as one-sided in one way as the ego is in another. And yet the conflict between them may give rise to truth and meaning but only if the ego is willing to grant the other its rightful personality Carl Jung, CW 9i, Para 237.

It [the ‘other’] has, of course, a personality anyway, just as have the voices of insane people; but a real colloquy becomes possible only when the ego acknowledges the existence of a partner to the discussion Carl Jung, CW 9i, Para 237.

The alchemists projected the inner event into an outer figure, so for them the inner friend appeared in the form of the “Stone,” of which the Tractatus aureus says: “Understand, ye sons of the wise, what this exceeding precious Stone crieth out to you: Protect me and I will protect thee. Give me what is mine that I may help thee.” To this a scholiast adds: “The seeker after truth hears both the Stone and the Philosopher speaking as if out of one mouth.” The Philosopher is Hermes, and the Stone is identical with Mercurius, the Latin Hermes Carl Jung, CW 9i, Para 238.

From the earliest times, Hermes was the mystagogue and psychopomp of the alchemists,

their friend and counsellor, who leads them to the goal of their work. He is “like a teacher mediating between the stone and the disciple” Carl Jung, CW 9i, Para 238.

To others the friend appears in the shape of Christ or Khidr or a visible or invisible guru, or some other personal guide or leader figure Carl Jung, CW 9i, Para 238.

In this case the colloquy is distinctly one-sided: there is no inner dialogue, but instead the response appears as the action of the other, i.e., as an outward event Carl Jung, CW 9i, Para 238

The alchemists saw it in the transformation of the chemical substance. So if one of them sought transformation, he discovered it outside in matter, whose transformation cried out to him, as it were, “I am the transformation!” Carl Jung, CW 9i, Para 238

But some were clever enough to know, “It is my own transformation not a personal transformation, but the transformation of what is mortal in me into what is immortal. It shakes off the mortal husk that I am and awakens to a life of its own; it mounts the sun-barge and may take me with it” Carl Jung, CW 9i, Para 238.

We go through a door into a tower-like room, where we climb a long flight of steps. On one of the topmost steps I read an inscription:

Vis ut sis.' The steps end in a temple situated on the crest of a wooded mountain, and there is no other approach. It is the shrine of Ursanna, the bear-goddess and Mother of God in one. The temple is of red stone. Bloody sacrifices are offered there. Animals are standing about the altar. In order to enter the temple precincts one has to be transformed into an animal a beast of the forest. The temple has the form of a cross with equal arms and a circular space in the middle, which is not roofed, so that one can look straight up at the sky and the constellation of the Bear. On the altar in the middle of the open space there stands the moon-bowl, from which smoke or vapour continually rises. There is also a huge image of the goddess, but it cannot be seen clearly. The worshippers, who have been changed into animals and to whom I also belong, have to touch the goddess's foot with their own foot, whereupon the image gives them a sign or an oracular utterance like

Vis ut sis’ Carl Jung, CW 9i, Para 343.

In this dream the bear-goddess emerges plainly, although her statue “cannot be seen clearly” Carl Jung, CW 9i, Para 343.

The relationship to the Self, the supraordinate personality, is indicated not only by the oracle “Vis ut sis” but by the quaternity and the circular central precinct of the temple Carl Jung, CW 9i, Para 343.

The indefinite extent of the unconscious component makes a comprehensive description of the human personality impossible. Accordingly, the unconscious supplements the picture with living figures ranging from the animal to the divine, as the two extremes outside man, and rounds out the animal extreme, through the addition of and inorganic abstractions, into a microcosm. These addenda have a high frequency in anthropomorphic divinities, where they appear as “attributes.” Carl Jung; Carl Jung, CW 9i, para. 314-315

A living example of the mystery drama representing the permanence as well as the transformation of life is the Mass. If we observe the congregation during this sacred rite we note all degrees of participation, from mere indifferent attendance to the profoundest emotion. The groups of men standing about near the exit, who are obviously engaged in every sort of worldly conversation, crossing themselves and genuflecting in a purely mechanical way—even they, despite their inattention, participate in the sacral action by their mere presence in this place where grace abounds. The Mass is an extramundane and extratemporal act in which Christ is sacrificed and then resurrected in the transformed substances; and this rite of his sacrificial death is not a repetition of the historical event but the original, unique, and eternal act. The experience of the Mass is therefore a participation in the transcendence of life, which overcomes all bounds of space and time. It is a moment of eternity in time. Carl Jung, CW 9i, Para 209

When a summit of life is reached, when the bud unfolds and from the lesser the greater emerges, then, as Nietzsche says, "One becomes Two," and the greater figure, which one always was but which remained invisible, appears to the lesser personality with the force of a revelation. He who is truly and hopelessly little will always drag the revelation of the greater down to the level of his littleness and will never understand that the day of judgment for his littleness has dawned. But the man who is inwardly great will know that the long-expected friend of his soul, the immortal one, has now really come, "to lead captivity captive" [Ephesians 4:8]; that is, to seize hold of him by whom this immortal had always been confined and held prisoner, and to make his life flow into that greater life—a moment of deadliest peril! Carl Jung, CW 9i, Para 217

This leads to a restoration or apocatastasis of the lives of her ancestors, who now, through the bridge of the momentary individual, pass down into the generations of the future. An experience of this kind gives the individual a place and a meaning in the life of the generations, so that all unnecessary obstacles are cleared out of the way of the life stream that is to flow through her. At the same time the individual is rescued from her isolation and restored to wholeness. Carl Jung, CW 9i, Para 316

The "supraordinate personality" is the total man, i.e., man as he really is, not as he appears to himself. I usually describe the supraordinate personality as the "self," thus making a sharp distinction between the ego, which, as is well known, extends only as far as the conscious mind, and the whole of the personality, which includes the unconscious as well as the conscious component. The ego is thus related to the self as part to whole. To that extent the self is supraordinate. Carl Jung, CW 9i, para. 314f.

Our dreams are continually saying things beyond our conscious comprehension. We have intimations and intuitions from unknown sources. Fears, moods, plans, and hopes come to us with no visible causation. These concrete experiences are at the bottom of our feeling that we know ourselves very little; at the bottom, too, of the painful conjecture that we might have surprises in store for ourselves. Carl Jung, CW 9i para. 299.

Water is the commonest symbol for the unconscious. The lake in the valley is the unconscious, which lies, as it were, underneath consciousness, so that it is often referred to as the ‘subconscious,’ usually with the pejorative connotation of an inferior consciousness. Water is the ‘valley spirit,’ the water dragon of Tao, whose nature resembles water- a yang in the yin, therefore, water means spirit that has become unconscious.” Carl Jung, CW 9i, Para 40

There is no position without its negation. In or just because of their extreme opposition, neither can exist without the other. It is exactly as formulated in classical Chinese philosophy: yang (the light, warm, dry, masculine principle) contains within it the seed of yin (the dark, cold, moist, feminine principle), and vice versa. Matter therefore would contain the seed of spirit and spirit the seed of matter.... Nevertheless, the symbol has the great advantage of being able to unite heterogeneous or even incommensurable factors in a single image. Carl Jung, CW 9i; para. 197.

The mystery of the Virgin Birth, or the homoousia of the Son with the Father, or the Trinity which is nevertheless not a triad—these no longer lend wings to any philosophical fancy. They have stiffened into mere objects of belief. So it is not surprising if the religious need, the believing mind, and the philosophical speculations of the educated European are attracted by the symbols of the East—those grandiose conceptions of divinity in India and the abysms of Taoist philosophy in China—just as once before the heart and mind of the men of antiquity were gripped by Christian ideas. There are many Europeans who began by surrendering completely to the influence of the Christian symbol until they landed themselves in a Kierkegaardian neurosis, or whose relation to God, owing to the progressive impoverishment of symbolism, developed into an unbearably sophisticated I-You relationship—only to fall victims in their turn to the magic and novelty of Eastern symbols. This surrender is not necessarily a defeat; rather it proves the receptiveness and vitality of the religious sense. We can observe much the same thing in the educated Oriental, who not infrequently feels drawn to the Christian symbol or to the science that is so unsuited to the Oriental mind, and even develops an enviable understanding of them. That people should succumb to these eternal images is entirely normal, in fact it is what these images are for. They are meant to attract, to convince, to fascinate, and to overpower. They are created out of the primal stuff of revelation and reflect the ever-unique experience of divinity. Carl Jung, CW 9i, Para II

The primitive mentality does not invent myths, it experiences them. Myths are original revelations of the preconscious psyche, involuntary statements about unconscious psychic happenings, and anything but allegories of physical processes. Such allegories would be an idle amusement for an unscientific intellect. Myths, on the contrary, have a vital meaning. Not merely do they represent, they are the mental life of the primitive tribe, which immediately falls to pieces and decays when it loses its mythological heritage, like a man who has lost his soul. A tribe's mythology is its living religion, whose loss is always and everywhere, even among the civilized, a moral catastrophe. But religion is a vital link with psychic processes independent of and beyond consciousness, in the dark hinterland of the psyche. Carl Jung, CW 9i, Para 261

The history of Protestantism has been one of chronic iconoclasm. One wall after another fell. And the work of destruction was not too difficult once the authority of the Church had been shattered. We all know how, in large things as in small, in general as well as in particular, piece after piece collapsed, and how the alarming poverty of symbols that is now the condition of our life came about. With that the power of the Church has vanished too—a fortress robbed of its bastions and casemates, a house whose walls have been plucked away, exposed to all the winds of the world and to all dangers. Although this is, properly speaking, a lamentable collapse that offends our sense of history, the disintegration of Protestantism into nearly four hundred denominations is yet a sure sign that the restlessness continues. The Protestant is cast out into a state of defencelessness that might well make the natural man shudder. His enlightened consciousness, of course, refuses to take cognizance of this fact, and is quietly

looking elsewhere for what has been lost to Europe. We seek the effective images, the thought-forms that satisfy the restlessness of heart and mind, and we find the treasures of the East. Carl Jung, CW 9i, Para 31

I am convinced that the growing impoverishment of symbols has a meaning. It is a development that has an inner consistency. Everything that we have not thought about, and that has therefore been deprived of a meaningful connection with our developing consciousness, has got lost. If we now try to cover our nakedness with the gorgeous trappings of the East, as the theosophists do, we would be playing our own history false. A man does not sink down to beggary only to pose afterwards as an Indian potentate. It seems to me that it would be far better stoutly to avow our spiritual poverty, our symbol-lessness, instead of feigning a legacy to which we are not the legitimate heirs at all. We are, surely, the rightful heirs of Christian symbolism, but somehow we have squandered this heritage. We have let the house our fathers-built fall into decay, and now we try to break into Oriental palaces that our fathers never knew. Carl Jung, CW 9i, Para 28

The fact is that archetypal images are so packed with meaning in themselves that people never think of asking what they really do mean. That the gods die from time to time is due to man's sudden discovery that they do not mean anything, that they are made by human hands, useless idols of wood and stone. In reality, however, he has merely discovered that up till then he has never thought about his images at all. Carl Jung, CW 9i, Para 22

Man must remain conscious of the world of the archetypes, because in it he is still a part of Nature and is connected with his own roots. Carl Jung, CW 9i, Para 174

It is a vessel which we can never empty, and never fill. It has a potential existence only, and when it takes shape in matter it is no longer what it was. Carl Jung, CW 9i, Para 301

The archetypes are imperishable elements of the unconscious, but they change their shape continually. Carl Jung, CW 9i, Para 301

A complex can be really overcome only if it is lived out to the full. Carl Jung, CW 9i, Para 184

The shadow is a living part of the personality and therefore wants to live with it in some form. Carl Jung, CW 9i, Para 44.

For a woman, the typical danger emanating from the unconscious comes from above, from the "spiritual" sphere personified by the animus, whereas for a man it comes from the chthonic realm of the "world and woman," i.e., the anima projected on to the world. Carl Jung, CW 9i, Para 559

The "child" is born out of the womb of the unconscious, begotten out of the depths of human nature, or rather out of living Nature herself. Carl Jung, CW 9i, Para 289

An unconscious Eros always expresses itself as will to power. Carl Jung, CW 9i, Para 167

The urge and compulsion to self-realization is a law of nature and thus of invincible power, even though its effect, at the start, is insignificant and improbable. Carl Jung, CW 9i, Para 289

The “eternal” child in man is an indescribable experience, an incongruity, a handicap, and a divine prerogative; an imponderable that determines the ultimate worth or worthlessness of a personality. Carl Jung, CW 9i, Para 300

For the conscious mind knows nothing beyond the opposites and, as a result, has no knowledge of the thing that unites them. Carl Jung, CW 9i, Para 285

The grand plan on which the unconscious life of the psyche is constructed is so inaccessible to our understanding that we can never know what evil may not be necessary in order to produce good by enantiodromia, and what good may very possibly lead to evil. Carl Jung, CW 9i, Para 397

In the history of symbols this tree is described as the way of life itself, a growing into that which eternally is and does not change, which springs from the union of opposites and, by its eternal presence, also makes that union possible. Carl Jung, CW 9i, Para 198

It seems as if it were only through an experience of symbolic reality that man, vainly seeking his own “existence” and making a philosophy out of it, can find his way back to a world in which he is no longer a stranger. Carl Jung, CW 9i, Para 198

For the alchemists the process of individuation represented by the opus was an analogy of the creation of the world, and the opus itself an analogy of God’s work of creation. Carl Jung, CW 9i, Para 550

How often in the critical moments of life everything hangs on what appears to be a mere nothing! Carl Jung, CW 9i, Para 408

The feeling of immortality, it seems to me, has its origin in a peculiar feeling of extension in space and time, and I am inclined to regard the deification rites in the mysteries as a projection of this same psychic phenomenon. Carl Jung, CW 9i, Para 248-249

The souls or spirits of the dead are identical with the psychic activity of the living; they merely continue it. Carl Jung, CW 9i, Para 38

Masses are always breeding grounds of psychic epidemics. Carl Jung, CW 9i, Para 227

I think I am not mistaken in regarding it as probable that, in general, a leftward movement [counter-clockwise] indicates movement towards the unconscious, while a rightward movement (clockwise) goes towards consciousness Carl Jung, CW 9i, Para 564.

In Taoist philosophy, movement to the right means a “falling” life-process, as the spirit is then under the influence of the feminine p’o-soul, which embodies the yin principle and is by nature passionate. Its designation as the animal is psychologically correct, although this touches only one aspect of it. The p’o-soul entangles hun, the spirit, in the world-process and in reproduction Carl Jung, CW 9i, Para 564.

A leftward or backward movement, on the other hand, means the “rising” movement of

life. A “deliverance from outward things” occurs and the spirit obtains control over the anima. Carl Jung, CW 9i, Para 564

This idea agrees with my findings, but it does not take account of the fact that a person can easily have the spirit outside and the anima inside Carl Jung, CW 9i, Para 564.

In Tibet, the leftward-moving swastika is a sign of the Bön religion, of black magic. Stupas and chörtens must therefore be circumambulated clockwise. The leftward-spinning eddies spin into the unconscious Carl Jung, CW 9i, Para 564.

The rightward-spinning ones spin out of the unconscious chaos. The rightward-moving swastika in Tibet is therefore a Buddhist emblem Carl Jung, CW 9i, Para 564.

The mass is swayed by participation mystique, which is nothing other than an unconscious identity. Supposing, for example, you go to the theatre glance meets glance, everybody observes everybody else, so that all those who are present are caught up in an invisible web of mutual unconscious relationship. If this condition increases, one literally feels borne along by the universal wave of identity with others. It may be a pleasant feeling—one sheep among ten thousand! Again, if I feel that this crowd is a great and wonderful unity, I am a hero, exalted along with the group. When I am myself again, I discover that I am Mr. So-and-So, and that I live in such and such a street, on the third floor. I also find that the whole affair was really most delightful, and I hope it will take place again tomorrow so that I may once more feel myself to be a whole nation, which is much better than being just plain Mr. X. Since this is such an easy and convenient way of raising one’s personality to a more exalted rank, mankind has always formed groups which made collective experiences of transformation—often of an ecstatic nature—possible. The regressive identification with lower and more primitive states of consciousness is invariably accompanied by a heightened sense of life. Carl Jung, CW 9i, Para 226

What depths of despair are still needed to open the eyes of the world’s responsible leaders, so that at least they can refrain from leading themselves into temptation? Carl Jung, CW 9i, Para 455

We are in reality unable to borrow or absorb anything from outside, from the world, or from history. What is essential to us can only grow out of ourselves. When the white man is true to his instincts, he reacts defensively against any advice that one might give him. What he has already swallowed he is forced to reject again as if it were a foreign body, for his blood refuses to assimilate anything sprung from foreign soil. Carl Jung, CW 9i, Para 31

The meeting with ourselves is one of the more unpleasant things that may be avoided as long as we possess living symbolic figures into which everything unknown in ourselves is projected. The figure of the devil, in particular, is a most valuable possession and a great convenience, for as long as he goes about outside in the form of a roaring lion we know where the evil lurks in that incarnate Old Harry where it has been in this or that form since primeval times. With the rise of consciousness since the Middle Ages he has been considerably reduced in stature, but in his stead there are human beings to whom we gratefully surrender our shadows. With what pleasure, for instance, we read newspaper reports of crime! A bona fide criminal becomes a popular figure because he unburdens in no small degree the conscience of his fellow men, for now they know once more where the evil is to be found. Carl Jung, CW 9i, Para 69

Whoever looks into the mirror of the water will see first of all his own face. Whoever

goes to himself risks a confrontation with himself. The mirror does not flatter, it faithfully shows whatever looks into it; namely, the face we never show to the world because we cover it with the persona, the mask of the actor. But the mirror lies behind the mask and shows the true face. Carl Jung, CW 9i, Para 43

Taking it in its deepest sense, the shadow is the invisible saurian tail that man still drags behind him. Carefully amputated, it becomes the healing serpent of the mysteries. Only monkeys' parade with it. Carl Jung, CW 9i, Para 93

The shadow is a tight passage, a narrow door, whose painful constriction no one is spared who goes down to the deep well. But one must learn to know oneself in order to know who one is. For what comes after the door is, surprisingly enough, a boundless expanse full of unprecedented uncertainty, with apparently no inside and no outside, no above and no below, no here and no there, no mine and no thine, no good and no bad. It is the world of water, here all life floats in suspension; where the realm of the sympathetic system, the soul of everything living, begins; where I am indivisibly this and that; where I experience the other in myself and the other-than-myself experiences me. Carl Jung, CW 9i, Para 45

Even on the highest peak we shall never be "beyond good and evil," and the more we experience of their inextricable entanglement the more uncertain and confused will our moral judgment be.

It is in my view a great mistake to suppose that the psyche of a new-born child is a tabula rasa in the sense that there is absolutely nothing in it. In so far as the child is born with a differentiated brain that is predetermined by heredity and therefore individualized, it meets sensory stimuli coming from outside not with any aptitudes, but with specific ones, and this necessarily results in a particular, individual choice and pattern of apperception. These aptitudes can be shown to be inherited instincts and preformed patterns, the latter being the a priori and formal conditions of apperception that are based on instinct. Their presence gives the world of the child and the dreamer its anthropomorphic stamp. They are the archetypes, which direct all fantasy activity into its appointed paths and in this way produce, in the fantasy-images of children's dreams as well as in the delusions of schizophrenia, astonishing mythological parallels such as can also be found, though in lesser degree, in the dreams of normal persons and neurotics. It is not, therefore, a question of inherited ideas but of inherited possibilities of ideas. Carl Jung, CW, 9i, Para 136

It is a figure comparable to Hiranyagarbha, Purusha, Atman, and the mystic Buddha. For this reason I have elected to call it the "self," by which I understand a psychic totality and at the same time a centre, neither of which coincides with the ego but includes it, just as a larger circle encloses a smaller one. Carl Jung, CW 9I, 247.

Archetypes were, and still are, living psychic forces that demand to be taken seriously, and they have a strange way of making sure of their effect. Always they were the bringers of protection and salvation, and their violation has as its consequence the "perils of the soul" known to us from the psychology of primitives. Moreover, they are the infallible causes of neurotic and even psychotic disorders, behaving exactly like neglected or maltreated physical organs or organic functional systems. Carl Jung, CW 9i, Para 266

All the most powerful ideas in history go back to archetypes. This is particularly true of religious ideas, but the central concepts of science, philosophy, and ethics are no exception

to this rule. In their present form they are variants of archetypal ideas, created by consciously applying and adapting these ideas to reality. For it is the function of consciousness not only to recognize and assimilate the external world through the gateway of the senses, but to translate into visible reality the world within us. Carl Jung, CW 9i, Para 342

The symbol is a living body, corpus et anima; hence the "child" is such an apt formula for the symbol. The uniqueness of the psyche can never enter wholly into reality, it can only be realized approximately, though it still remains the absolute basis of all consciousness. The deeper "layers" of the psyche lose their individual uniqueness as they retreat farther and farther into darkness. "Lower down," that is to say as they approach the autonomous functional systems, they become increasingly collective until they are universalized and extinguished in the body's materiality, i.e., in chemical substances. The body's carbon is simply carbon. Hence "at bottom" the psyche is simply "world." In this sense I hold Kerenyi to be absolutely right when he says that in the symbol the world itself is speaking. The more archaic and "deeper," that is the more physiological, the symbol is, the more collective and universal, the more "material" it is. The more abstract, differentiated, and specific it is, and the more its nature approximates to conscious uniqueness and individuality, the more it sloughs off its universal character. Having finally attained full consciousness, it runs the risk of becoming a mere allegory which nowhere oversteps the bounds of conscious comprehension and is then exposed to all sorts of attempts at rationalistic and therefore inadequate explanation. Carl Jung, CW 9i, Para 291

Not for a moment dare we succumb to the illusion that an archetype can be finally explained and disposed of. Even the best attempts at explanation are only more or less successful translations into another metaphorical language. (Indeed, language itself is only an image.) The most we can do is to dream the myth onwards and give it a modern dress. And whatever explanation or interpretation does to it, we do to our own souls as well, with corresponding results for our own well-being. The archetype—let us never forget this—is a psychic organ present in all of us. Carl Jung, CW 9i, Para 271

In reality we can never legitimately cut loose from our archetypal foundations unless we are prepared to pay the price of a neurosis, any more than we can rid ourselves of our body and its organs without committing suicide. If we cannot deny the archetypes or otherwise neutralize them, we are confronted, at every new stage in the differentiation of consciousness to which civilization attains, with the task of finding a new interpretation appropriate to this stage, in order to connect the life of the past that still exists in us with the life of the present, which threatens to slip away from it. If this link-up does not take place, a kind of rootless consciousness comes into being no longer oriented to the past, a consciousness which succumbs helplessly to all manner of suggestions and, in practice, is susceptible to psychic epidemics. With the loss of the past, now become "insignificant," devalued, and incapable of revaluation, the saviour is lost too, for the saviour either is the insignificant thing itself or else arises out of it. Over and over again in the "metamorphosis of the gods," he rises up as the prophet or first-born of a new generation and appears unexpectedly in the unlikeliest places (sprung from a stone, tree, furrow, water, etc.) and in ambiguous form (Tom Thumb, dwarf, child, animal, and so on). Carl Jung, CW 9i, Para 267

All psychic events are so deeply grounded in the archetype and are so much interwoven with it that in every case considerable critical effort is needed to separate the unique from the typical with any certainty. Ultimately, every individual life is at the same time the eternal life of the species. The individual is continuously "historical" because strictly time-bound; the

relation of the type to time, on the other hand, is irrelevant.

The Catholic way of life is completely unaware of psychological problems in this sense. Almost the entire life of the collective unconscious has been channeled into the dogmatic archetypal ideas and flows along like a well-controlled stream in the symbolism of creed and ritual. It manifests itself in the inwardness of the Catholic psyche. The collective unconscious, as we understand it today, was never a matter of "psychology," for before the Christian Church existed there were the antique mysteries, and these reaches back into the grey mists of Neolithic prehistory. Mankind has never lacked powerful images to lend magical aid against all the uncanny things that live in the depths of the psyche. Always the figures of the unconscious were expressed in protecting and healing images and in this way were expelled from the psyche into cosmic space. Carl Jung, CW 9i, Para 2121

The gods of Greece and Rome perished from the same disease as did our Christian symbols people discovered then, as today, that they had no thoughts whatever on the subject. On the other hand, the gods of the strangers still had unexhausted mana. Their names were weird and incomprehensible and their deeds portentously dark—something altogether different from the hackneyed chronique scandaleuse of Olympus. At least one couldn't understand the Asiatic symbols, and for this reason they were not banal like the conventional gods. The fact that people accepted the new as unthinkingly as they had rejected the old did not become a problem at that time. Is it becoming a problem today? Shall we be able to put on, like a new suit of clothes, ready-made symbols grown on foreign soil, saturated with foreign blood, spoken in a foreign tongue, nourished by a foreign culture, interwoven with foreign history, and so resemble a beggar who wraps himself in kingly raiment, a king who disguises himself as a beggar? No doubt this is possible.

Or is there something in ourselves that commands us to go in for no mummeries, but perhaps even to sew our garment ourselves? Carl Jung, CW 9i, Para 26.

Anyone who has lost the historical symbols and cannot be satisfied with substitutes is certainly in a very difficult position today before him there yawns the void, and he turns away from it in horror. What is worse, the vacuum gets filled with absurd political and social ideas, which one and all are distinguished by their spiritual bleakness. But if he cannot get along with these pedantic dogmatisms, he sees himself forced to be serious for once with his alleged trust in God, though it usually turns out that his fear of things going wrong if he did so is even more persuasive. Carl Jung, CW 9i, Para 28

All ages before us have believed in gods in some form or other. Only an unparalleled impoverishment of symbolism could enable us to rediscover the gods as psychic factors, that is, as archetypes of the unconscious. No doubt this discovery is hardly credible at present. Carl Jung, CW 9i, Para 50

How else could it have occurred to man to divide the cosmos, on the analogy of day and night, summer and winter, into a bright day-world and a dark night-world peopled with fabulous monsters, unless he had the prototype of such a division in himself, in the polarity between the conscious and the invisible and unknowable unconscious? Primitive man's perception of objects is conditioned only partly by the objective behaviour of the things themselves, whereas a much greater part is often played by intrapsychic facts which are not related to the external objects except by way of projection. This is due to the simple fact that the primitive has not yet experienced that ascetic discipline of mind known to us as the

critique of knowledge. To him the world is a more or less fluid phenomenon within the stream of his own fantasy, where subject and object are undifferentiated and in a state of mutual interpenetration. Carl Jung, CW 9i, Para 187

The primitive cannot assert that he thinks; it is rather that "something thinks in him." The spontaneity of the act of thinking does not lie, causally, in his conscious mind, but in his unconscious. Moreover, he is incapable of any conscious effort of will; he must put himself beforehand into the "mood of willing," or let himself be put—hence his rites d'entree et de sortie. His consciousness is menaced by an almighty unconscious hence his fear of magical influences which may cross his path at any moment; and for this reason, too, he is surrounded by unknown forces and must adjust himself to them as best he can. Owing to the chronic twilight state of his consciousness, it is often next to impossible to find out whether he merely dreamed something or whether he really experienced it. The spontaneous manifestation of the unconscious and its archetypes intrudes everywhere into his conscious mind, and the mythical world of his ancestors—for instance, the aljira or Bulgari of the Australian aborigines—is a reality equal if not superior to the material world. It is not the world as we know it that speaks out of his unconscious, but the unknown world of the psyche, of which we know that it mirrors out empirical world only in part, and that, for the other part, it moulds this empirical world in accordance with its own psychic assumptions. The archetype does not proceed from physical facts but describes how the psyche experiences the physical fact, and in so doing the psyche often behaves so autocratically that it denies tangible reality or makes statements that fly in the face of it. Carl Jung, CW 9i, Para 260

Since the stars have fallen from heaven and our highest symbols have paled, a secret life holds sway in the unconscious. That is why we have a psychology today, and why we speak of the unconscious. All this would be quite superfluous in an age or culture that possessed symbols. Symbols are spirit from above, and under those conditions the spirit is above too. Therefore it would be a foolish and senseless undertaking for such people to wish to experience or investigate an unconscious that contains nothing but the silent, undisturbed sway of nature. Our unconscious, on the other hand, hides living water, spirit that has become nature, and that is why it is disturbed. Heaven has become or us the cosmic space of the physicists, and the divine empyrean a fair memory of things that once were. But "the heart glows," and a secret unrest gnaws at the roots of our being. Carl Jung, CW 9i, Para 50

The reason why consciousness exists, and why there is an urge to widen and deepen it, is very simple without consciousness things go less well. This is obviously the reason why Mother Nature deigned to produce consciousness, that most remarkable of all nature's curiosities. Genesis represents the act of becoming conscious as a taboo infringement, as though knowledge meant that a sacrosanct barrier had been impiously overstepped. I think that Genesis is right in so far as every step towards greater consciousness is a kind of Promethean guilt through knowledge, the gods are as it were robbed of their fire, that is, something that was the property of the unconscious powers is torn out of its natural context and subordinated to the whims of the conscious mind. The man who has usurped the new knowledge suffers, however, a transformation or enlargement of consciousness, which no longer resembles that of his fellow men. He has raised himself above the human level of his age ("ye shall become like unto God"), but in so doing has alienated himself from humanity. The pain of this loneliness is the vengeance of the gods, for never again can he return to mankind. He is, as the myth says, chained to the lonely cliffs of the Caucasus, forsaken of God and man. Carl Jung, CW 9i, Para 243

Everything that man should, and yet cannot, be or do be it in a positive or negative sense—lives on as a mythological figure and anticipation alongside his consciousness, either as a religious projection or—what is still more dangerous—as unconscious contents which then project themselves spontaneously into incongruous objects, e.g., hygienic and other "Salvationist" doctrines or practices. All these are so many rationalized substitutes for mythology, and their unnaturalness does more harm than good. Carl Jung, CW 9i, Para 287

The stirring up of conflict is a Luciferian virtue in the true sense of the word. Conflict engenders fire, the fire of affects and emotions, and like every other fire it has two aspects, that of combustion and that of creating light. On the one hand, emotion is the alchemical fire whose warmth brings everything into existence and whose heat burns all superfluities to ashes {pmnes superfiuitates comburii). But on the other hand, emotion is the moment when steel meets flint and a spark is struck forth, for emotion is the chief source of consciousness. There is no change from darkness to light or from inertia to movement without emotion. Carl Jung CW 9i, 179

"But why on earth," you may ask, "should it be necessary for man to achieve, by hook or by crook, a higher level of consciousness?" This is truly the crucial question, and I do not find the answer easy. Instead of a real answer I can only make a confession of faith. I believe that, after thousands and millions of years, someone had to realize that this wonderful world of mountains and oceans, suns and moons, galaxies and nebulae, plants and animals, exists. From a low hill in the Athi plains of East Africa I once watched the vast herds of wild animals grazing in soundless stillness, as they had done from time immemorial, touched only by the breath of a primeval world. I felt then as if I were the first man, the first creature, to know that all this is. The entire world round me was still in its primeval state; it did not know that it was. And then, in that one moment in which I came to know, the world sprang into being without that moment it would never have been. All Nature seeks this goal and finds it fulfilled in man, but only in the most highly developed and most fully conscious man. Carl Jung CW 9i, Para 177

Who must God have made love to in order to have given birth to all this sound, to this sacred spectrum of colors, scents, and music from wind’s body and existence’s plea for mercy – that plea for the real mercy, unbearable joy? Carl Jung, Selected Writings, Page 97

"All that is outside, also is inside," we could say with Goethe. But this "inside," which modern rationalism is so eager to derive from "outside," has an a priori structure of its own that antedates all conscious experience. It is quite impossible to conceive how "experience" in the widest sense, or, for that matter, anything psychic, could originate exclusively in the outside world. The psyche is part of the inmost mystery of life, and it has its own peculiar structure and form like every other organism. Whether this psychic structure and its elements, the archetypes, ever "originated" at all is a metaphysical question and therefore unanswerable. The structure is something given, the precondition that is found to be present in every case. And this is the mother, the matrix—the form into which all experience is poured. Carl Jung, CW 9i, Pages 101-102

Despite the materialistic tendency to understand the psyche as a mere reflection or imprint of physical and chemical processes, there is not a single proof of this hypothesis. Quite the contrary, innumerable facts prove that the psyche translates physical processes into sequences of images which have hardly any recognizable connection with the objective

process. The materialistic hypothesis is much too bold and flies in the face of experience with almost metaphysical presumption. The only thing that can be established with certainty, in the present state of our knowledge, is our ignorance of the nature of the psyche. There is thus no ground at all for regarding the psyche as something secondary or as an epiphenomenon; on the contrary, there is every reason to regard it, at least hypothetically, as a factor sui generis, and to go on doing so until it has been sufficiently proved that psychic processes can be fabricated in a retort. Carl Jung, CW 9i, Pages 7-8

Every science is descriptive at the point where it can no longer proceed experimentally, without on that account ceasing to be scientific. But an experimental science makes itself impossible when it delimits its field of work in accordance with theoretical concepts. The psyche does not come to an end where some physiological assumption or other stops. In other words, in each individual case that we observe scientifically, we have to consider the manifestations of the psyche in their totality. Carl Jung, CW 9i, Para 113

It is through the "affect" that the subject becomes involved and so comes to feel the whole weight of reality. The difference amounts roughly to that between a severe illness which one reads about in a text-book and the real illness which one has. In psychology one possesses nothing unless one has experienced it in reality. Hence a purely intellectual insight is not enough, because one knows only the words and not the substance of the thing from inside. Carl Jung, CW 9i, Para 61

To strive for perfection is a high ideal. But I say: "Fulfil something you are able to fulfil rather than run after what you will never achieve." Nobody is perfect. Remember the saying: "None is good but God alone" [Luke 18:19], nobody can be. It is an illusion.

We are that pair of Dioscuri, one of whom is mortal and the other immortal, and who, though always together, can never be made completely one. The transformation processes strive to approximate them to one another, but our consciousness is aware of resistances, because the other person seems strange and uncanny, and because we cannot get accustomed to the idea that we are not absolute master in our own house. We should prefer to be always "I" and nothing else. But we are confronted with that inner friend or foe, and whether he is our friend, or our foe depends on ourselves. Carl Jung, CW 9i, Para 235

Our intellect has achieved the most tremendous things, but in the meantime our spiritual dwelling has fallen into disrepair. We are absolutely convinced that even with the aid of the latest and largest reflecting telescope, now being built in America, men will discover behind the farthest nebulae no fiery empyrean; and we know that our eyes will wander despairingly through the dead emptiness of interstellar space. Nor is it any better when mathematical physics reveals to us the world of the infinitely small. In the end we dig up the wisdom of all ages and peoples, only to find that everything most dear and precious to us has already been said in the most superb language. Like greedy children we stretch out our hands and think that, if only we could grasp it, we would possess it too. But what we possess is no longer valid, and our hands grow weary from the grasping, for riches lie everywhere, as far as the eye can reach. All these possessions turn to water, and more than one sorcerer’s apprentice has been drowned in the waters called up by himself—if he did not first succumb to the saving delusion that this wisdom was good and that was bad. It is from these adepts that there come those terrifying invalids who think they have a prophetic mission. For the artificial sundering of true and false wisdom creates a tension in the psyche, and from this there arises a loneliness and a craving like that of the morphine addict, who always hopes to

find companions in his vice. Carl Jung, CW 9i, Para 31

When our natural inheritance has been dissipated, then the spirit too, as Heraclitus says, has descended from its fiery heights. But when spirit becomes heavy it turns to water, and with Luciferian presumption the intellect usurps the seat where once the spirit was enthroned. The spirit may legitimately claim the patria potestas over the soul; not so the earth-born intellect, which is man's sword or hammer, and not a creator of spiritual worlds, a father of the soul. Carl Jung, CW 9i, Para 32

The irrationality of events is shown by what we call chance, which we are obviously compelled to deny because we cannot in principle think of any process that is not causal and necessary, whence it follows that it cannot happen by chance. In practice, however, chance reigns everywhere, and so obtrusively that we might as well put our causal philosophy in our pocket. The plenitude of life is governed by law and yet not governed by law, rational and yet irrational. Hence reason and the will that is grounded in reason are valid only up to a point. The further we go in the direction selected by reason, the surer we may be that we are excluding the irrational possibilities of life which have just as much right to be lived. It was indeed highly expedient for man to become somewhat more capable of directing his life. It may justly be maintained that the acquisition of reason is the greatest achievement of humanity; but that is not to say that things must or will always continue in that direction. Carl Jung, CW 9i, Para 2

I am far from wishing to belittle the divine gift of reason, man's highest faculty. But in the role of absolute tyrant it has no meaning—no more than light would have in a world where its counterpart, darkness, was absent. Man would do well to heed the wise counsel of the mother and obey the inexorable laws of nature which sets limits to every being. He ought never to forget that the world exists only because opposing forces are held in equilibrium. So, too, the rational is counterbalanced by the irrational, and what is planned and purposed by what is. Carl Jung, CW 9i, Para 174

There is not a single important idea or view that does not possess historical antecedents. Ultimately they are all founded on primordial archetypal forms whose concreteness dates from a time when consciousness did not thin, but only perceived. "Thoughts" were objects of inner perception, not thought at all, but sensed as external phenomena—seen or heard, so to speak. Thought was essentially revelation, not invented but forced upon us or bringing conviction through its immediacy and actuality. Carl Jung, CW 9i, Para 69

The religions should constantly recall to us the origin and original character of the spirit, lest man should forget what he is drawing into himself and with what he is filling his consciousness. He himself did not create the spirit, rather the spirit makes him creative, always spurring him on, giving him lucky ideas, staying power, "enthusiasm" and "inspiration," Carl Jung, CW 9i, Para 393.

Progress and development are ideals not lightly to be rejected, but they lose all meaning if man only arrives at his new state as a fragment of himself, having left his essential hinterland behind him in the shadow of the unconscious, in a state of primitivity of, indeed, barbarism. The conscious mind split off from its origins, incapable of realizing the meaning of the new state, then relapses all too easily into a situation far worse than the one from which the innovation was intended to free it —exempla sunt odiosal Carl Jung, CW 9i, Para 293.

There is a temperament which regards ideas as real entities and not merely as nomina. It so happens—by the merest accident, one might say—that for the past two hundred years we have been living in an age in which it has become unpopular or even unintelligible to suppose that ideas could be anything but nomina. Anyone who continues to think as Plato did must pay for his anachronism by seeing the "supracelestial," i.e., metaphysical, essence of the Idea relegated to the unverifiable realm of faith and superstition, or charitably left to the poet.

Once again, in the age-old controversy over universals, the nominalistic standpoint has triumphed over the realistic, and the Idea has evaporated into a mere fiatus vocis. This change was accompanied—and, indeed, to a considerable degree caused —by the marked rise of empiricism, the advantages of which were only too obvious to the intellect. Since that time the Idea is no longer something a priori but is secondary and derived. Carl Jung, CW 9i, Para 149

Man conquers not only nature, but spirit also, without realizing what he is doing. To the man of enlightened intellect it seems like the correction of a fallacy when he recognizes that what he took to be spirits is simply the human spirit and ultimately his own spirit. All the superhuman things, whether good or bad, that former ages predicated of the daimonia, are reduced to "reasonable" proportions as though they were pure exaggeration, and everything seems to be in the best possible order. But were the unanimous convictions of the past really and truly only exaggerations? If they were not, then the integration of the spirit means nothing less than its demonization, since the superhuman spiritual agencies that were formerly tied up in nature are introjected into human nature, thus endowing it with a power which extends the bounds of the personality ad infinitum, in the most perilous way. Carl Jung, CW 9i, Para 454

After the last World War we hoped for reason: we go on hoping. But already we are fascinated by the possibilities of atomic fission and promise ourselves a Golden Age the surest guarantee that the abomination of desolation will grow to limitless dimensions. And who or what is it that causes all this.? It is none other than that harmless (!), ingenious, inventive, and sweetly reasonable human spirit who unfortunately is abysmally unconscious of the demonism that still clings to him. Worse, this spirit does everything to avoid looking himself in the face, and we all help him like mad. Only, heaven preserve us from psychology —that depravity might lead to self-knowledge! Rather let us have wars, for which somebody else is always to blame, nobody seeing that all the world is driven to do just what all the world flees from in terror. Carl Jung, CW 9i, Para 454

Primitive man, being closer to his instincts, like the animal, is characterized by fear of novelty and adherence to tradition. To our way of thinking he is painfully backward, whereas we exalt progress. But our progressiveness, though it may result in a great many delightful wish-fulfillments, piles up an equally gigantic Promethean debt, which has to be paid off from time to time in the form of hideous catastrophes. For ages man has dreamed of flying, and all we have got for it is saturation bombing! We smile today at the Christian hope of a life beyond the grave, and yet we often fall into chiliasms a hundred times more ridiculous than the notion of a happy Hereafter. Carl Jung, CW 9i, Para 276

Being that has soul is living being. Soul is the living thing in man, that which lives of itself and causes life. Therefore God breathed into Adam a living breath, that he might live.

With her cunning play of illusions the soul lures into life the inertness of matter that does not want to live. She makes us believe incredible things, that life may be lived. She is full of snares and traps, in order that man should fall, should reach the earth, entangle himself there, and stay caught, so that life should be lived as Eve in the garden of Eden could not rest content until she had convinced Adam of the goodness of the forbidden apple. Were it not for the leaping and twinkling of the soul, man would rot away in his greatest passion, idleness. Carl Jung, CW 9i, Para 56

The best cannot be told, anyhow, and the second best does not strike home. One must be able to let things happen. I have learned from the East what is meant by wu-wei: "not-doing," "letting be," which is quite different from doing nothing. Some Occidentals, also, have known what this not-doing means; for instance, Meister Eckhart, who speaks of sich lassen, "letting go." The region of darkness into which one falls is not empty; it is the "lavishing mother" of Lao-tzu, the "images" and the "seed." When the surface has been cleared, things can grow out of the depths. People always suppose that they have lost their way when they come up against these depths of experience. But if they do not know how to go on, the only answer, the only advice that makes any sense is "Wait for what the unconscious has to say about the situation." A way is only the way when one finds it and follows it oneself. There is no general prescription for "how to do it." Carl Jung, CW 9i, Para 31

The splendour of the "light" god has been enhanced beyond measure, but the darkness supposedly represented by the devil has localized itself in man. This strange development was precipitated chiefly by the fact that Christianity, terrified of Manichaean dualism, strove to preserve its monotheism by main force. But since the reality of darkness and evil could not be denied, there was no alternative but to make man responsible for it. Even the devil was largely, if not entirely, abolished, with the result that this metaphysical figure, who at one time was an integral part of the Deity, was introjected into man, who thereupon became the real carrier of the mysterium iniqtiitatis ’. "omne bonum a Deo, omne malum ab homine." In recent times this development has suffered a diabolical reverse, and the wolf in sheep’s clothing now goes about whispering in our ear that evil is really nothing but a misunderstanding of good and an effective instrument of progress. We think that the world of darkness has thus been abolished for good and all, and nobody realizes what a poisoning this is of man’s soul. In this way he turns himself into the devil, for the devil is half of the archetype whose irresistible power makes even unbelievers ejaculate "Oh God!" on every suitable and unsuitable occasion. Carl Jung, CW 9i, Para 189

But if we step through the door of the shadow we discover with terror that we are the objects of unseen factors. To know this is decidedly unpleasant, for nothing is more disillusioning than the discovery of our own inadequacy. It can even give rise to primitive panic, because, instead of being believed in, the anxiously guarded supremacy of consciousness which is in truth one of the secrets of human success-is questioned in the most dangerous way. But since ignorance is no guarantee of security, and in fact only makes our insecurity still worse, it is probably better despite our fear to know where the danger lies. To ask the right question is already half the solution of a problem. At any rate we then know that the greatest danger threatening us comes from the unpredictability of the psyche’s reactions. Discerning persons have realized for some time that external historical conditions, of whatever kind, are only occasions, jumping-off grounds, for the real dangers that threaten our lives. These are the present politico-social delusional systems. We should not regard them causally, as necessary consequences of external conditions, but as decisions precipitated by the collective unconscious. Carl Jung CW 9i, Para 49

The personality is seldom, in the beginning, what it will be later on. For this reason the possibility of enlarging it exists, at least during the first half of life. The enlargement may be effected through an accretion from without, by new vital contents finding their way into the personality from outside and being assimilated. In this way a considerable increase of personality may be experienced. We therefore tend to assume that this increase comes only from without, thus justifying the prejudice that one becomes a personality by stuffing into oneself as much as possible from outside. But the more assiduously we follow this recipe, and the more stubbornly we believe that all increase has to come from without, the greater becomes our inner poverty. Therefore, if some great idea takes hold of us from outside, we must understand that it takes hold of us only because something in us responds to it and goes out to meet it. Richness of mind consists in mental receptivity, not in the accumulation of possessions. What comes to us from outside, and, for that matter, everything that rises up from within, can only be made our own if we are capable of an inner amplitude equal to that of the incoming content. Real increase of personality means consciousness of an enlargement that flows from inner sources. Without psychic depth we can never be adequately related to the magnitude of our object. It has therefore been said quite truly that a man grows with the greatness of his task. But he must have within himself the capacity to grow; otherwise even the most difficult task is of no benefit to him. More likely he will be shattered by it. Carl Jung, CW 9i, Para 215

Together the patient and I address ourselves to the 2,000,000-year-old man that is in all of us. In the last analysis, most of our difficulties come from losing contact with our instincts, with the age-old unforgotten wisdom stored up in us. And where do we make contact with this old man in us? In our dreams. Carl Jung, New York Times, 4 October 1936.

Anyone who wants to know the human psyche will learn next to nothing from experimental psychology. We would do well to abandon from the start any attempt to apply ready-made solutions and warmed-up generalities of which the patient knows just as much as the doctor. Long experience has taught me not to know anything in advance and not to know better, but to let the unconscious take precedence. Our instincts have ridden so infinitely many times, unharmed, over the problems that arise [in later] life that we may be sure the transformation processes which make the transition possible have long been prepared in the unconscious and are only waiting to be released. Carl Jung, CW 9i, Para 528

There is hope of repairing a breakdown whenever a patient has neurotic symptoms. They indicate that he is not at one with himself, and the neurotic symptoms usually diagnose what is wrong. Those who have no neurotic symptoms are probably beyond help by anyone. Carl Jung, NY Times 29 Sept 1912

All I have written is correct. I only realize its full reality now Carl Jung; Jung His Life and Work; Page 279.

The doctor has to cope with actual suffering for better or worse, and ultimately has nothing to rely on except the mystery of divine Providence. Carl Jung, Para 18, Para 693

A mother-complex is not got rid of by blindly reducing the mother to human proportions. Besides that we run the risk of dissolving the experience "Mother" into atoms, thus destroying something supremely valuable and throwing away the golden key which a good fairy laid in our cradle. That is why mankind has always instinctively added the pre-existent divine pair to

the personal parents—the "god"- father and "god"-mother of the newborn child—so that, from sheer unconsciousness or shortsighted rationalism, he should never forget himself so far as to invest his own parents with divinity. Carl Jung, CW 9i, Para 172

The overdevelopment of the maternal instinct is identical with that well-known image of the mother which has been glorified in all ages and all tongues. This is the motherlove which is one of the most moving and unforgettable memories of our lives, the mysterious root of all growth and change; the love that means homecoming, shelter, and the long silence from which everything begins and in which everything ends. Intimately known and yet strange like Nature, lovingly tender and yet cruel like fate, joyous and untiring giver of life —mater dolorosa and mute implacable portal that closes upon the dead. Mother is motherlove, my experience and my secret. Why risk saying too much, too much that is false and inadequate and beside the point, about that human being who was our mother, the accidental carrier of that great experience which includes herself and myself and all mankind, and indeed the whole of created nature, the experience of life whose children we are? The attempt to say these things has always been made, and probably always will be but a sensitive person cannot in all fairness load that enormous burden of meaning, responsibility, duty, heaven and hell, on to the shoulders of one frail and fallible human being—so deserving of love, indulgence, understanding, and forgiveness—who was our mother. He knows that the mother carries for us that inborn image of the mater natura and mater spiritualis, of the totality of life of which we are a small and helpless part. Carl Jung, CW 9i, Para 172

Anyone who overlooks the instincts will be ambuscaded by them. Carl Jung, CW 9i, Para 620

As long as a woman is content to be a jemme a homme, she has no feminine individuality. She is empty and merely glitters—a welcome vessel for masculine projections. Woman as a personality, however, is a very different thing here illusion no longer works. So that when the question of personality arises, which is as a rule the painful fact of the second half of life, the childish form of the self disappears too. Carl Jung, CW 9i, Para 355

The woman who fights against her father still has the possibility of leading an instinctive, feminine existence, because she rejects only what is alien to her. But when she fights against the mother she may, at the risk of injury to her instincts, attain to greater consciousness, because in repudiating the mother she repudiates all that is obscure, instinctive, ambiguous, and unconscious in her own nature. Carl Jung, CW 9i, Para 186

Archetypes are complexes of experience that come upon us like fate, and their effects are felt in our most personal life. The anima no longer crosses our path as a goddess, but, it may be, as an intimately personal misadventure, or perhaps as our best venture. When, for instance, a highly esteemed professor in his seventies abandons his family and runs off with a young red-headed actress, we know that the gods have claimed another victim. Carl Jung, CW 9i, Para 62

All that feminine indefiniteness is the longed-for counterpart of male decisiveness and single-mindedness, which can be satisfactorily achieved only if a man can get rid of everything doubtful, ambiguous, vague, and muddled by projecting it upon some charming example of feminine innocence. Because of the woman’s characteristic passivity, and the feelings of inferiority which make her continually play the injured innocent, the man finds himself cast in an attractive role he has the privilege of putting up with the familiar feminine foibles with real

superiority, and yet with forbearance, like a true knight. Carl Jung, CW 9i, Para 169

Emptiness is a great feminine secret. It is something absolutely alien to man, the chasm, the unplumbed depths, the yin. The pitifulness of this vacuous nonentity goes to his heart (I speak here as a man), and one is tempted to say that this constitutes the whole "mystery" of woman. Such a female is fate itself. A man may say what he likes about it; be for it or against it, or both at once; in the end he falls, absurdly happy, into this pit, or, if he doesn't, he has missed and bungled his only chance of making a man of himself. In the first case one cannot disprove his foolish good luck to him, and in the second one cannot make his misfortune seem plausible. "The Mothers, the Mothers, how eerily it sounds!" Carl Jung, CW 9i, Para 183

The girl's notorious helplessness is a special attraction. She is so much an appendage of her mother that she can only flutter confusedly when a man approaches. She just doesn't know a thing. She is so inexperienced, so terribly in need of help, that even the gentlest swain becomes a daring abductor who brutally robs a loving mother of her daughter. Such a marvellous opportunity to pass himself off as a gay Lothario does not occur every day and therefore acts as a strong incentive. This was how Pluto abducted Persephone from the inconsolable Demeter. But, by a decree of the gods, he had to surrender his wife every year to his mother-in-law for the summer season. Carl Jung, CW 9i, Para 169

[In America] the men and women are giving their vital energy to everything except the relation between themselves. In that relation all is confusion. The women are the mothers of their husbands as well as of their children, yet at the same time there is in them the old primitive desire to be possessed, to yield, to surrender. And there is nothing in the man for her to surrender to except his kindness, his courtesy, his generosity, his chivalry. His competitor, his rival in business must yield, but she need not. Carl Jung, NY Times, 30 Sept 1912

I therefore suspect that the juror paedogogictis is a god-sent method of by-passing the central problem touched on by Schiller, namely the education of the educator. Children are educated by what the grown-up is and not by what he says. Carl Jung, CW 9i, Para 293

We see colours but not wave-lengths. This well-known fact must nowhere be taken to heart more seriously than in psychology. The effect of the personal equation begins already in the act of observation. One sees what one can best see oneself. Thus, first and foremost, one sees the mote in one's brother's eye. No doubt the mote is there, but the beam sits in one's own—and may considerably hamper the act of seeing. I mistrust the principle of "pure observation" in so-called objective psychology unless one confines oneself to the eyepieces of chronoscopes and tachistoscopes and suchlike "psychological" apparatus. With such methods one also guards against too embarrassing a yield of empirical psychological facts. But the personal equation asserts itself even more in the presentation and communication of one's own observations, to say nothing of the interpretation and abstract exposition of the empirical material. Nowhere is the basic requirement so indispensable as in psychology that the observer should be adequate to his object, in the sense of being able to see not only subjectively but also objectively.

Today we are convinced that in all fields of knowledge psychological premises exist which exert a decisive influence upon the choice of material, the method of investigation, the nature of the conclusions, and the formulation of hypotheses and theories. We have even come to believe that Kant's personality was a decisive conditioning factor of his Critique of Pure Reason. Not only our philosophers, but our own predilections in philosophy, and even what we are fond

of calling our "best" truths are affected, if not dangerously undermined, by this recognition of a personal premise. All creative freedom, we cry out, is taken away from us! What? Can it be possible that a man only thinks or says or does what he himself is } Carl Jung, CW 9i, Para 150?

Every victory contains the germ of future defeat. Carl Jung, CW 9i, Para 150

Psychology, as one of the many expressions of psychic life, operates with ideas which in their turn are derived from archetypal structures and thus generate a somewhat more abstract kind of myth. Psychology therefore translates the archaic speech of myth into a modern mythologem not yet, of course, recognized as such—which constitutes one element of the myth "science." Carl Jung, CW 9i, Para 302

Although common prejudice still believes that the sole essential basis of our knowledge is given exclusively from outside, and that "nihil est in intellectu quod non antea fuerit in sensu," it nevertheless remains true that the thoroughly respectable atomic theory of Leucippus and Democritus was not based on any observations of atomic fission but on a "mythological" conception of smallest particles, which, as the smallest animated parts, the soul-atoms, are known even to the still Paleolithic inhabitants of central Australia. How much "soul" is projected into the unknown in the world of external appearances is, of course, familiar to anyone acquainted with the natural science and natural philosophy of the ancients. It is, in fact, so much that we are absolutely incapable of saying how the world is constituted in itself—and always shall be, since we are obliged to convert physical events into psychic processes as soon as we want to say anything about knowledge. But who can guarantee that this conversion produces anything like an adequate "objective" picture of the world? Carl Jung, CW 9i, Para 116.

So far mythologists have always helped themselves out with solar, lunar, meteorological, vegetal, and other ideas of the kind. The fact that myths are first and foremost psychic phenomena that reveal the nature of the soul is something they have absolutely refused to see until now. Primitive man is not much interested in objective explanations of the obvious, but he has an imperative need—or rather, his unconscious psyche has an irresistible urge—to assimilate all outer sense experiences to inner, psychic events. It is not enough for the primitive to see the sun rise and set; this external observation must at the same time be a psychic happening the sun in its course must represent the fate of a god or hero who, in the last analysis, dwells nowhere except in the soul of man. All the mythologized processes of nature, such as summer and winter, the phases of the moon, the rainy seasons, and so forth, are in no sense allegories of these objective occurrences; rather they are symbolic expressions of the inner, unconscious drama of the psyche which becomes accessible to man’s consciousness by way of projection—that is, mirrored in the events of nature. Carl Jung, CW 9i, Para 7

It is not storms, not thunder and lightning, not rain and cloud that remain as images in the psyche, but the fantasies caused by the affects they arouse. I once experienced a violent earthquake, and my first, immediate feeling was that I no longer stood on the solid and familiar earth, but on the skin of a gigantic animal that was heaving under my feet. It was this image that impressed itself on me, not the physical fact. Man’s curses against devastating thunderstorms, his terror of the unchained elements—these affects anthropomorphize the passion of nature, and the purely physical element becomes an angry god. Carl Jung, CW 9i, Para 331

Life is crazy and meaningful at once. And when we do not laugh over the one aspect and speculate about the other, life is exceedingly drab, and everything is reduced to the littlest scale. There is then little sense and little nonsense either. When you come to think about it, nothing has any meaning, for when there was nobody to think, there was nobody to interpret what happened. Interpretations are only for those who don't understand; it is only the things we don't understand that have any meaning. Man woke up in a world he did not understand, and that is why he tries to interpret it. Carl Jung, CW 9i, Para 65

Values spring from a need of human consciousness and lose their validity outside the human sphere. Values must find their ultimate reason in the complexio oppositorum of the self. Carl Jung, CW 91, Para 403

Carl Jung: CW 9ii "Aion: Researches into the Phenomenology of the Self"

[11]Aion: Researches into the Phenomenology of the Self (Collected Works of C.G. Jung Vol.9 Part 2

The real moral problems spring from conflicts of duty. Anyone who is sufficiently humble, or easy-going, can always reach a decision with the help of some outside authority Carl Jung, CW 9ii, Para 48.

My learned friend Victor White O.P. … thinks he can detect a Manichean streak in me…In addition to this my critic should know that how very much I stress the unity of the self, this central archetype, which is a complexio oppositorum par excellence, and that my leanings are therefore towards the very reverse of dualism. Carl Jung, CW 9ii, Para 112

It has been objected that Christ cannot have been a valid symbol of the self … I can agree with this view only if it refers strictly to the present time, when psychological criticism has become possible, but not if it pretends to judge the psychological age. Christ did not merely symbolize wholeness, but, as a psychic phenomenon, he was wholeness. Carl Jung, CW 9ii, Para 115, fn 75

… there are good grounds for the prejudice that the ego is the centre of the personality, and that the field of consciousness is the psyche per se … [I]t is only since the end of the nineteenth century that modern psychology … has discovered the foundations of consciousness and proved empirically the existence of a psyche outside consciousness. With this discovery the position of the ego, till then absolute, became relativized … It is part of the personality but not the whole of it. Carl Jung, CW 9ii, Para 11

I have defined the anima as a personification of the unconscious. Carl Jung, CW 9ii, Para 20, fn 1

… Mercurius is the anima mundi. Carl Jung, CW 9ii, Para 212

Nor is she [the anima] a substitute figure for the mother. Carl Jung, CW 9ii, Para 26

Intellect and feeling … conflict with one another by definition. Whoever identifies with an intellectual standpoint will occasionally find his feeling confronting him like an enemy in the guise of the anima … Carl Jung, CW 9ii, Para 58?

… the anima becomes, through integration, the Eros of consciousness, … the anima gives relationship and relatedness to a man's consciousness … Carl Jung, CW 9ii, Para 33.

What, then, is this projection-making factor? The East calls it the "Spinning Woman" – Maya, who creates illusion by her dancing. (I have defined the anima as a personification of the unconscious.) Carl Jung, CW 9ii, Para 50, fn 1

… she is the great illusionist, the seductress, who draws him into life with her Maya…… I have suggested … the term "anima" … Carl Jung, CW 9ii, Para 24-25

… the anima corresponds to the maternal Eros. Carl Jung, CW 9ii, Para 29

Anima is "the glamorous, possessive, moody, and sentimental seductress in a man" Carl Jung, CW 9ii, Para 422.

… if a man does not know what a thing is, it is at least an increase in knowledge if he knows what it is not. Carl Jung, CW 9ii, Para 429

When, therefore, an alchemist conjured up the spirit of Saturn as his familiar, this was an attempt to bring to consciousness a standpoint outside the ego, involving a relativization of the ego and its contents. Carl Jung, CW 9ii, Para 11

The Anima/Animus state is correlated with polytheism, the Self with monotheism. Carl Jung, CW 9ii, Para 427

The problems which the integration of the unconscious sets modern doctors and psychologists can only be solved along the lines traced out by history, and the upshot will be a new assimilation of the traditional myth. Carl Jung, CW 9ii, Page 282

The agent is an inanimate and in itself passive substance, water. It is drawn from the depths of the well, handled by human hands, and used according to man's needs. It signifies the visible doctrine, the aqua doctrinae or the Logos, communicated to others by word of mouth and by ritual. Carl Jung, CW 9ii, Para 293

Here the magnetic attraction comes from the Logos. This denotes a thought or idea that has been formulated and articulated, hence a content and a product of consciousness. Consequently the Logos is very like the aqua doctrinae, but whereas the Logos has the advantage of being an autonomous personality, the latter is merely a passive object of human action. The Logos is nearer to the historical Christ-figure, just as the "water" is nearer to the magical water used in ritual (ablution, aspersion, baptism). Carl Jung, CW 9ii, Para 293

So when I say that the impulses which we find in ourselves should be understood as the "will of God," I wish to emphasize that they ought not to be regarded as an arbitrary wishing and willing, but as absolutes which one must learn how to handle correctly. The will can control them only in part. ... I should also like the term "God" in the phrase "the will of God" to be understood not so much in the Christian sense as in the sense intended by Diotima, when she said: "Eros, dear Socrates, is a mighty daemon." The Greek words daimon and daimonion express a determining power which comes upon man from outside, like providence, or fate, though the ethical decision is left to man. He must know, however, what he is deciding about and what he is doing. Then, if he obeys he is following not just his own opinion, and if he rejects he is destroying not just his own invention. Carl Jung, CW 9ii, Page 27

But one should not overlook the fact that in reality man's procreative power is only a special instance of the "procreative nature of the Whole." "This, for them, is the hidden and mystical Logos," which, in the text that follows, is likened to the phallus of Osiris—"and they say Osiris is water." Although the substance of this seed is the cause of all things, it does not partake of their nature. They say therefore: "I become what I will, and I am what I am." Carl Jung, CW 9ii, Para 313

It is the lowest (devil) and the highest (son of God, Logos, Nous, Agathodaimon). Carl Jung, CW 9ii, Para 293

This Logos or quaternity is "the cup from which the king, drinking, draws his omens," 10° or the beaker of Anacreon. The cup leads Hippolytus on to the wine miracle at Cana, which, he says, "showed forth the kingdom of heaven"; for the kingdom of heaven lies within us, like the wine in the cup. Carl Jung, CW 9ii, Para 331

It is significant that Gnostic philosophy found its continuation in alchemy.

Mater Alchemia' is one of the mothers of modern science, and modern science has given us an unparalleled knowledge of the

dark' side of matter. It has also penetrated into the secrets of physiology and evolution and made the very roots of life itself an object of investigation. In this way the human mind has sunk deep into the sublunary world of matter, thus repeating the Gnostic myth of the Nous, who, beholding his reflection in the depths below, plunged down and was swallowed in the embrace of Physis. Carl Jung, CW 9ii, Page 368

The zodia are important determinants in the horoscope, modifying the influence of the planets that have moved into them, or, even if there are no planets, giving the individual houses a special character. In the present instance the Fishes would characterize the ascendent, the moment of the world's birth. Carl Jung, CW 9ii, Para 230

Jung noted: "Astrologically the beginning of the next Aeon, according to the starting point you select, falls between AD 2000 and 2200" Carl Jung, CW 9ii, Para149, note 88.

Let him know that man's greatest treasure is to be found within man, and not outside him. From him it goes forth inwardly ... whereby that is outwardly brought to pass which he sees with his own eyes. Therefore unless his mind be blinded, he will see, that is, understand, who and of what sort he is inwardly, and by the light of nature he will know himself through outward things. Carl Jung Citing Dorn, CW 9ii, Para 250.

One can describe this authority either as the “will of God” or as an “action of uncontrollable natural forces,” though psychologically it makes a good deal of difference how one thinks of it Carl Jung, CW 9ii, Para 48.

There are things which from a certain point of view are extremely evil, that is to say dangerous. There are also things in human nature which are very dangerous and which therefore seem proportionately evil to anyone standing in their line of fire Carl Jung, CW 9ii, Para 97.

Wholeness is perforce paradoxical in its manifestations, and the two fishes going in the opposite directions, or the co-operation of birds and fishes, are an instructive illustration of this Carl Jung, CW 9ii, Para 224.

The arcane substance, as its attributes show, refers to the Self, and so, in the Oxyrhynchus sayings, does the “kingdom of heaven” or the conjectural “city” Carl Jung, CW 9ii, Para 224.

Only ruthless self-knowledge on the widest scale, which sees good and evil in correct perspective and can weigh up the motives of human action, offers some guarantee that the end-result will not turn out too badly Carl Jung, CW 9ii, Para 255.

Hippolytus was in the enviable position of being able to see Christian doctrine side by side with its pagan sisters, and similar comparisons had also been attempted by Justin Martyr Carl Jung, CW 9ii, Para 267.

To the honour of Christian thinking it must be said that up till the time of Kepler there was no lack of praiseworthy attempts to interpret and understand Nature, in the broadest sense, on the basis of Christian dogma Carl Jung, CW 9ii, Para 267.

Faith, quite as much as science with its traditional objectivity, is absolute, which is why faith and knowledge can no more agree than Christians can with one another Carl Jung, CW 9ii, Para 269.

Indeed, self-knowledge as a psychotherapeutic measure frequently requires much painstaking work extending over a long period Carl Jung, CW 9ii, Para 14.

Closer examination of the dark characteristics that is, the inferiorities constituting the shadow reveals that they have an emotional nature, a kind of autonomy, and accordingly an obsessive or, better, possessive quality 1 Carl Jung, CW 9ii, Para 5.

To become conscious of the shadow involves recognizing the dark aspects of the personality as present and real. This act is the essential condition for any kind of self-knowledge, and it therefore, as a rule, meets with considerable resistance Carl Jung, CW 9ii, Para 14.

Emotion, incidentally, is not an activity of the individual but something that happens to him. Affects occur usually where adaptation is weakest, and at the same time they reveal the reason for its weakness, namely a certain degree of inferiority and the existence of a lower level of personality Carl Jung, CW 9ii, Para 15.

On this lower level with its uncontrolled or scarcely controlled emotions one behaves more or less like a primitive, who is not only the passive victim of his affects but also singularly incapable of moral judgment 1 Carl Jung, CW 9ii, Para 15.

Although, with insight and good will, the shadow can to some extent be assimilated into the conscious personality, experience shows that there are certain features which offer the most obstinate resistance to moral control and prove almost impossible to influence. These resistances are usually bound up with projections, which are not recognized as such, and their recognition is a moral achievement beyond the ordinary Carl Jung, CW 9ii, Para 16.

While some traits peculiar to the shadow can be recognized without too much difficulty as one's own personal qualities, in this case both insight and good will are unavailing because the cause of the emotion appears to lie, beyond all possibility of doubt, in the other person. No matter how obvious it may be to the neutral observer that it is a matter of projections, there is little hope that the subject will perceive this himself. He must be convinced that he throws a very long shadow before he is willing to withdraw his emotionally-toned projections from their object Carl Jung, CW 9ii, Para 16.

let us suppose that a certain individual shows no inclination whatever to recognize his projections. The projection-making factor then has a free hand and can realize its object if it has one or bring about some other situation characteristic of its power. As we know, it is not the conscious subject but the unconscious which does the projecting. Hence one meets with projections, one does not make them Carl Jung, CW 9ii, Para 17.

The effect of projection is to isolate the subject from his environment, since instead of a real relation to it there is now only an illusory one. Projections change the world into the replica of one's own unknown face. In the last analysis, therefore, they lead to an autoerotic or autistic condition in which one dreams a world whose reality remains forever unattainable Carl Jung, CW 9ii, Para 17.

The resultant sentiment d'incomplétude and the still worse feeling of sterility are in their turn explained by projection as the malevolence of the environment, and by means of this vicious circle the isolation is intensified. The more projections are thrust in between the subject and the environment, the harder it is for the ego to see through its illusions. A forty-five-year-old patient who had suffered from a compulsion neurosis since he was twenty and had become completely cut off from the world once said to me: "But I can never admit to myself that I've wasted the best twenty-five years of my life!" Carl Jung, CW 9ii, Para 17

With a little self-criticism one can see through the shadow so far as its nature is personal. But when it appears as an archetype, one encounters the same difficulties as with anima and animus. In other words, it is quite within the bounds of possibility for a man to recognize the relative evil of his nature, but it is a rare and shattering experience for him to gaze into the face of absolute evil Carl Jung, CW 9ii, Para 19.

What, then, is this projection-making factor? The East calls it the "Spinning Woman "Maya, who creates illusion by her dancing. Had we not long since known it from the symbolism of dreams, this hint from the Orient would put us on the right track: the enveloping, embracing, and devouring element points unmistakably to the mother, that is, to the son's relation to the real mother, to her imago, and to the woman who is to become a mother for him Carl Jung, CW 9ii, Para 20?

His Eros is passive like a child's; he hopes to be caught, sucked in, enveloped, and devoured. He seeks, as it were, the protecting, nourishing, charmed circle of the mother, the

condition of the infant released from every care, in which the outside world bends over him and even forces happiness upon him. No wonder the real world vanishes from sight! Carl Jung, CW 9ii, Para 20

If this situation is dramatized, as the unconscious usually dramatizes it, then there appears before you on the psychological stage a man living regressively, seeking his childhood and his mother, fleeing from a cold cruel world which denies him understanding Carl Jung, CW 9ii, Para 21.

Often a mother appears beside him who apparently shows not the slightest concern that her little son should become a man, but who, with tireless and self-immolating effort, neglects nothing that might hinder him from growing up and marrying. You behold the secret conspiracy between mother and son, and how each helps the other to betray life Carl Jung, CW 9ii, Para 21.

Where does the guilt lie? With the mother, or with the son? Probably with both. The unsatisfied longing of the son for life and the world ought to be taken seriously. There is in him a desire to touch reality, to embrace the earth and fructify the field of the world. But he makes no more than a series of fitful starts, for his initiative as well as his staying power are crippled by the secret memory that the world and happiness may be had as a gift from the mother Carl Jung, CW 9ii, Para 22.

The fragment of world which he, like every man, must encounter again and again is never quite the right one, since it does not fall into his lap, does not meet him half way, but remains resistant, has to be conquered, and submits only to force. It makes demands on the masculinity of a man, on his ardour, above all on his courage and resolution when it comes to throwing his whole being into the scales Carl Jung, CW 9ii, Para 22.

For this he would need a faithless Eros, one capable of forgetting his mother and undergoing the pain of relinquishing the first love of his life. The mother, foreseeing this danger, has carefully inculcated into him the virtues of faithfulness, devotion, loyalty, so as to protect him from the moral disruption which is the risk of every life adventure Carl Jung, CW 9ii, Para 22.

He has learnt these lessons only too well and remains true to his mother. This naturally causes her the deepest anxiety (when, to her greater glory, he turns out to be a homosexual, for example) and at the same time affords her an unconscious satisfaction that is positively mythological Carl Jung, CW 9ii, Para 22.

For, in the relationship now reigning between them, there is consummated the immemorial and most sacred archetype of the marriage of mother and son. What, after all, has commonplace reality to offer, with its registry offices, pay envelopes, and monthly rent, that could outweigh the mystic awe of the hierosgamos? Or the star-crowned woman whom the dragon pursues, or the pious obscurities veiling the marriage of the Lamb? Carl Jung, CW 9ii, Para 22

This myth, better than any other, illustrates the nature of the collective unconscious. At this level the mother is both old and young, Demeter and Persephone, and the son is spouse and sleeping suckling rolled into one. The imperfections of real life, with its laborious adaptations and manifold disappointments, naturally cannot compete with such a state of

indescribable fulfilment Carl Jung, CW 9ii, Para 23.

But one who trusts others as little as himself can never reach a decision at all, unless it is brought about in the manner which Common Law calls an “Act of God.” The Oxford Dictionary defines this concept as the “action of uncontrollable natural forces” Carl Jung, CW 9ii, Para 48.

In all such cases there is an unconscious authority which puts an end to doubt by creating a fait accompli. (In the last analysis this is true also of those who get their decision from an external authority, only in more veiled form) Carl Jung, CW 9ii, Para 48.

The rationalistic interpretation of this inner authority as “natural forces” or the instincts satisfies the modern intellect but has the great disadvantage that the apparent victory of instinct offends our moral self-esteem; hence we like to persuade ourselves that the matter has been decided solely by the rational motions of the will Carl Jung, CW 9ii, Para 48.

Civilized man has such a fear of the “crimen laesae maiestatis humanae” [crime of high treason] that whenever possible he indulges in a retrospective coloration of the facts in order to cover up the feeling of having suffered a moral defeat. He prides himself on what he believes to be his self-control and the omnipotence of his will and despises the man who lets himself be outwitted by mere nature Carl Jung, CW 9ii, Para 48.

But the psychic phenomenon cannot be grasped in its totality by the intellect, for it consists not only of meaning but also of value, and this depends on the intensity of the accompanying feeling-tones. Hence at least the two “rational” functions [thinking and feeling] are needed in order to map out anything like a complete diagram of a given psychic content Carl Jung, CW 9ii, Para 52.

If, therefore, in dealing with psychic contents one makes allowance not only for intellectual judgments but for value judgments as well, not only is the result a more complete picture of the content in question, but one also gets a better idea of the particular position it holds in the hierarchy of psychic contents in general Carl Jung, CW 9ii, Para 53.

The feeling-value is a very important criterion which psychology cannot do without, because it determines in large measure the role which the content will play in the psychic economy. That is to say, the affective value gives the measure of the intensity of an idea, and the intensity in its turn expresses that idea’s energic tension, its effective potential Carl Jung, CW 9ii, Para 53.

The shadow, for instance, usually has a decidedly negative feeling-value, while the anima, like the animus, has more of a positive one. Whereas the shadow is accompanied by more or less definite and describable feeling-tones, the anima and animus exhibit feeling qualities that are harder to define. Mostly they are felt to be fascinating or numinous. Often they are surrounded by an atmosphere of sensitivity, touchy reserve, secretiveness, painful intimacy, and even absoluteness. The relative autonomy of the anima- and animus-figures expresses itself in these qualities Carl Jung, CW 9ii, Para 53.

I am speaking here of the subjective feeling-value, which is subject to the more or less periodic changes described above. But there are also objective values which are founded on a consensus omniummoral, aesthetic, and religious values, for instance, and these are universally recognized ideals or feeling-toned collective ideas (Lévy-Bruhl’s “représentations collectives”) Carl Jung, CW 9ii, Para 54.

Collective ideals often have no subjective feeling-tone, but nevertheless retain their feeling-value. This value, therefore, cannot be demonstrated by subjective symptoms, though it may be by the attributes attaching to these collective ideas and by their characteristic symbolism, quite apart from their suggestive effect Carl Jung, CW 9ii, Para 54.

The problem has a practical aspect, since it may easily happen that a collective idea, though significant in itself, is because of its lack of subjective feeling-tone represented in a dream only by a subsidiary attribute, as when a god is represented by his theriomorphic attribute, etc. Carl Jung, CW 9ii, Para 55.

The first case we mentioned, where the collective idea is represented in a dream by a lowly aspect of itself, is certainly the more frequent: the “goddess” appears as a black cat, and the Deity as the lapis exilis (stone of no worth) Carl Jung, CW 9ii, Para 57.

This knowledge is an essential prerequisite for any integration that is to say a content can only be integrated when its double aspect has become conscious and when it is grasped not merely intellectually but understood according to its feeling-value 5 Carl Jung, CW 9ii, Para 8.

Intellect and feeling, however, are difficult to put into one harness they conflict with one another by definition. Whoever identifies with an intellectual standpoint will occasionally find his feeling confronting him like an enemy in the guise of the anima; conversely, an intellectual animus will make violent attacks on the feeling standpoint. Therefore, anyone who wants to achieve the difficult feat of realizing something not only intellectually, but also according to its feeling-value, must for better or worse come to grips with the anima / animus problem in order to open the way for a higher union, a coniunctio oppositorum. This is an indispensable prerequisite for wholeness Carl Jung, CW 9ii, Para 58.

Finally the Self, on account of its empirical peculiarities, proves to be the eidos behind the supreme ideas of unity and totality that are inherent in all monotheistic and monistic systems Carl Jung, CW 9ii, Para 64.

I regard these parallels [of Self, shadow, anima, animus] as important because it is possible, through them, to relate so-called metaphysical concepts, which have lost their root connection with natural experience, to living, universal psychic processes, so that they can recover their true and original meaning. In this way the connection is re-established between the ego and projected contents now formulated as “metaphysical” ideas Carl Jung, CW 9ii, Para 65.

Unfortunately, as already said, the fact that metaphysical ideas exist and are believed in does nothing to prove the actual existence of their content or of the object they refer to, although the coincidence of idea and reality in the form of a special psychic state, a state of grace, should not be deemed impossible, even if the subject cannot bring it about by an act of will Carl Jung, CW 9ii, Para 65.

One clings to possessions that have once meant wealth; and the more ineffective, incomprehensible, and lifeless they become the more obstinately people cling to them. (Naturally it is only sterile ideas that they cling to; living ideas have content and riches enough, so there is no need to cling to them.) Thus in the course of time the meaningful turns into the meaningless.

This is unfortunately the fate of metaphysical ideas Carl Jung, CW 9ii,

“Good” is what seems suitable, acceptable, or valuable from a certain point of view; evil is its opposite. If the things we call good are “really” good, then there must be evil things that are “real” too Carl Jung, CW 9ii, Para 97.

It is evident that psychology is concerned with a more or less subjective judgment, i.e., with a psychic antithesis that cannot be avoided in naming value relationships: “good” denotes something that is not bad, and “bad” something that is not good Carl Jung, CW 9ii, Para 97.

It is pointless to gloss over these evil things, because that only lulls one into a sense of false security. Human nature is capable of an infinite amount of evil, and the evil deeds are as real as the good ones so far as human experience goes and so far as the psyche judges and differentiates between them Carl Jung, CW 9ii, Para 97.

Only unconsciousness makes no difference between good and evil. Inside the psychological realm one honestly does not know which of them predominates in the world. We hope, merely, that good does i.e., what seems suitable to us Carl Jung, CW 9ii, Para 97.

Today as never before it is important that human beings should not overlook the danger of the evil lurking within them. It is unfortunately only too real, which is why psychology must insist on the reality of evil and must reject any definition that regards it as insignificant or actually non-existent Carl Jung, CW 9ii, Para 98.

Psychology is an empirical science and deals with realities. As a psychologist, therefore, I have neither the inclination nor the competence to mix myself up with metaphysics. Only, I have to get polemical when metaphysics encroaches on experience and interprets it in a way that is not justified empirically. My criticism of the privatio boni holds only so far as psychological experience goes. From the scientific point of view the privatio boni, as must be apparent to everyone, is founded on a petitio principii, where what invariably comes out at the end is what you put in at the beginning. Arguments of this kind have no power of conviction. But the fact that such arguments are not only used but are undoubtedly believed is something that cannot be disposed of so easily Carl Jung, CW 9ii, Para 98.

It proves that there is a tendency, existing right from the start, to give priority to “good,” and to do so with all the means in our power, whether suitable or unsuitable. So if Christian metaphysics clings to the privatio boni, it is giving expression to the tendency always to increase the good and diminish the bad. The privatio boni may therefore be a metaphysical truth. I presume to no judgment on this matter. I must only insist that in our field of experience white and black, light and dark, good and bad, are equivalent opposites which always predicate one another Carl Jung, CW 9ii, Para 98.

This elementary fact was correctly appreciated in the so-called Clementine Homilies, a collection of Gnostic-Christian writings dating from about A.D. 150. The unknown author understands good and evil as the right and left hand of God and views the whole of creation in terms of syzygies, or pairs of opposites Carl Jung, CW 9ii, Para 99.

In much the same way the follower of Bardesanes, Marinus, sees good as “light” and pertaining to the right hand, and evil as “dark” and pertaining to the left hand. The left also

corresponds to the feminine Carl Jung, CW 9ii, Para 99.

Provided that one has an oomorphic God-image and every God-image is anthropomorphic in a more or less subtle way the logic and naturalness of Clement's view can hardly be contested. At all events this view, which may be some two hundred years older than the quotations given above, proves that the reality of evil does not necessarily lead to Manichaean dualism and so does not endanger the unity of the God-image Carl Jung, CW 9ii, Para 99.

As a matter of fact, it guarantees that unity on a plane beyond the crucial difference between the Yahwistic and the Christian points of view. Yahweh is notoriously unjust, and injustice is not good. The God of Christianity, on the other hand, is only good. There is no denying that Clement's theology helps us to get over this contradiction in a way that fits the psychological facts Carl Jung, CW 9ii, Para 99.

To offset this, early Christianity, with unerring logic, balanced Christ against an Antichrist. For how can you speak of "high" if there is no "low," or "right" if there is no "left," of "good" if there is no "bad," and the one is as real as the other? Carl Jung, CW 9ii, Para 113

The dreamer was watching a Passion play in the theatre. On the way to Golgotha, the actor taking the part of the Saviour suddenly changed into a snake or crocodile Carl Jung, CW 9ii, Para 130.

It is the navel of the world and at the same time hell. Bernard of Clairvaux apostrophizes Lucifer thus: "And dost thou strive perversely towards the north? The more thou dost hasten toward the heights, the more speedily shalt thou go down to thy setting" Carl Jung, CW 9ii, Para 192.

Here the dreamer awoke with a violent emotion: he decided there and then to study science, and he kept to this decision. I must emphasize that the dreamer was not under any psychological influence that might have suggested such an interpretation. The conclusion he drew from the dream was undoubtedly the right one, but it does not by any means exhaust the meaning of the symbol. The dream is archetypal a "big" dream Carl Jung, CW 9ii, Para 208.

The wood that grows dusky and turns into a primeval forest means entry into the unconscious. The round pool with the jelly-fish in it represents a three-dimensional mandala, the Self: wholeness as the goal to which the "archetic appetite" points, the magnetic north which gives the traveller his bearings on the "sea of the world" Carl Jung, CW 9ii, Para 208.

His other synonym is Mercurius, whose heart is to be found at the Pole, and who guides men on their perilous voyage over the sea of the world Carl Jung, CW 9ii, Para 209.

But the same note is struck by Meister Eckhart when he says that, on returning to his true Self, he enters an abyss "deeper than hell itself." Scurrilous as it is, the alchemical idea cannot be denied a certain grandeur. What is particularly interesting, psychologically, is the nature of the image: it is the projection of an archetypal pattern of order, the mandala, which represents the idea of totality Carl Jung, CW 9ii, Para 209?

The centering of the image on hell, which at the same time is God, is grounded on the

experience that highest and lowest both come from the depths of the soul, and either bring the frail vessel of consciousness to shipwreck or carry it safely to port, with little or no assistance from us. The experience of this “centre” is therefore a numinous one in its own right Carl Jung, CW 9ii, Para 209.

Echeneis remora, is the common remora or sucking-fish. It belongs to the mackerel family, and is distinguished by a large, flat, oval-shaped sucker on the top of the head in place of the dorsal fin Carl Jung, CW 9ii, Para 217.

By means of this it attaches itself either to a larger fish or to a ship’s bottom and in this wise is transported about the world Carl Jung, CW 9ii, Para 217.

The alchemical fish symbol, the Echeneis, clearly derives from Pliny. But fishes also crop up in the writings of Sir George Ripley. What is more, they appear in their “messianic” role: together with the birds, they bring the Stone, just as in the Oxyrhynchus sayings of Jesus it is the “fowls of the air and the fishes of the sea and whatsoever is upon or beneath the earth” that point the way to the kingdom of heaven (motif of the “helpful animals”) Carl Jung, CW 9ii, Para 224?

In Lambspringk’s symbols the zodiacal fishes that move in opposite directions symbolize the arcane substance Carl Jung, CW 9ii, Para 224.

All this theriomorphism is simply a visualization of the unconscious Self manifesting itself through “animal” impulses. Some of these can be attributed to known instincts, but for the most part they consist of feelings of certainty, beliefs, compulsions, idiosyncrasies, and phobias that may run directly counter to the so-called biological instincts without necessarily being pathological on that account Carl Jung, CW 9ii, Para 224.

The Echeneis exercises an attraction on ships that could best be compared with the influence of a magnet on iron. The attraction, so the historical tradition says, emanates from the fish and brings the vessel, whether powered by sail or oarsmen, to a standstill Carl Jung, CW 9ii, Para 239.

I mention this seemingly unimportant feature because, as we shall see, in the alchemical view the attraction no longer proceeds from the fish but from a magnet which man possesses and which exerts the attraction that was once the mysterious property of the fish Carl Jung, CW 9ii, Para 239.

If we bear in mind the significance of the fish, it is easy to understand why a powerful attraction should emanate from this arcane centre, which might aptly be compared with the magnetism of the North Pole. As we shall see in a later chapter, the Gnostics said the same thing about the magnetic effect of their central figure (point, monad, son, etc.) Carl Jung, CW 9ii, Para 239.

It is therefore a remarkable innovation when the alchemists set out to manipulate an instrument that would exert the same powers as the Echeneis, but on the Echeneis itself Carl Jung, CW 9ii, Para 239.

This reversal of direction is important for the psychology of alchemy because it offers a parallel to the adept’s claim to be able to produce the filius macrocosmi, the equivalent of Christ Deo concedente through his art. In this way the artifex [alchemical artificer] or his

instrument comes to replace the Echeneis and everything it stood for as the arcane substance. He has, so to speak, inveigled the secret out of the fish and seeks to draw the arcane substance to the surface in order to prepare from it the filius philosophorum, the lapis Carl Jung, CW 9ii, Para 239.

The case in question is that of a young woman who had uncommonly lively and plastic dreams. She was very much under the influence of her father, who had a materialistic outlook and was not happily married. She shut herself off from these unfavourable surroundings by developing, at a very early age, an intense inner life of her own Carl Jung, CW 9ii, Para 236.

The motif of the first coinciding with the fourth was expressed long ago in the axiom of Maria: "One becomes two, two becomes three, and out of third comes the One as the fourth" Carl Jung, CW 9ii, Para 237.

The dream sums up in condensed form the whole symbolism of the individuation process in a person who was totally unacquainted with the literature of the subject. Cases of this kind are by no means rare and ought to make us think. They demonstrate the existence of an unconscious "knowledge" of the individuation process and its historical symbolism Carl Jung, CW 9ii, Para 238.

The content of this secret teaching is the real arcanum of alchemy: the discovery or production of the prima materia Carl Jung, CW 9ii, Para 240.

The "doctrine" or "theory" is personified or rather, concretized as "Mercurius non vulgi," the philosophical mercury. This conception is as ambiguous as the antique Hermes; sometimes Mercurius is a substance like quicksilver, sometimes it is a philosophy Carl Jung, CW 9ii, Para 240.

Concerning the prima materia the adepts talk a great deal but say very little so little that in most cases one can form no conception of it whatever. This attitude is proof of serious intellectual difficulties understandably so, because in the first place no such material existed from which the lapis could be prepared, nor did anyone ever succeed in making a lapis that would have come up to expectations Carl Jung, CW 9ii, Para 240.

Secondly, the names given to the prima materia show that it was not a definite substance at all, but rather an intuitive concept for an initial psychic situation, symbolized by such terms as water of life, cloud, heaven, shadow, sea, mother, moon, dragon, Venus, chaos, massa confusa, Microcosmos, etc. Carl Jung, CW 9ii, Para 240.

First, those which refer to the extrapsychic chemical substance or its metaphysical equivalent, e.g., serpens mercurialis, spiritus, anima mundi, veritas, sapientia, etc. Carl Jung, CW 9ii, Para 246.

Second, those denoting the chemical preparations produced by the adept, such as solvents (aqua, acetum, lac virginis) or their "philosophical" equivalent, the theoria or Scientia, which, when it is "right," has miraculous effects on matter, as Dorn explains in his philosophical treatises Carl Jung, CW 9ii, Para 246.

These two categories continually overlap: sometimes the arcane substance is apparently nothing but a chemical body, sometimes an idea, which today we would call a psychic content

Carl Jung, CW 9ii, Para 247.

the secret of the magnet's effect lies in a salt prepared by the adept. Whenever an alchemist speaks of "salt," he does not mean sodium chloride or any other salt, or only in a very limited sense. He could not get away from its symbolic significance, and therefore includes the sal sapientiae in the chemical substance Carl Jung, CW 9ii, Para 247.

That is the salt hidden in the magnet and prepared by the adept on the one hand, a product of his art; on the other, already present in nature. This contradiction can be resolved very easily by taking it simply as the projection of a psychic content Carl Jung, CW 9ii, Para 247.

But such knowledge has nothing to do with the ego's subjective knowledge of itself. That is a dog chasing its own tail. The other, on the contrary, is a difficult and morally exacting study of which so-called psychology knows nothing and the educated public very little Carl Jung, CW 9ii, Para 251.

The alchemist, however, had at the very least an indirect inkling of it: he knew definitely that as part of the whole he had an image of the whole in himself, of the "firmament" or "Olympus," as Paracelsus calls it Carl Jung, CW 9ii, Para 251.

An idea that reached its full development 200 years later in Leibniz' monadology, and then fell into complete oblivion for another 200 years owing to the rise of the scientific trinity space, time, causality. Herbert Silberer, who was also interested in alchemy, says: "I would almost prefer to surrender entirely to picture-language, and to call the deepest subconsciousness our internal heaven of fixed stars" Carl Jung, CW 9ii, Para 251.

This interior microcosm was the unwitting object of alchemical research. Today we would call it the collective unconscious, and we would describe it as "objective" because it is identical in all individuals and is therefore one. Out of this universal One there is produced in every individual a subjective consciousness, i.e., the ego. This is, roughly, how we today would understand Dorn's "formerly one" and "separated by a divine act of creation" Carl Jung, CW 9ii, Para 251.

It does not require much imagination to see what this involvement in the ways of the world means in the moral sense. Only an infantile person can pretend that evil is not at work everywhere, and the more unconscious he is, the more the devil drives him Carl Jung, CW 9ii, Para 255.

It is just because of [the outer unconsciousness of evil and] this inner connection with the black side of things that it is so incredibly easy for the mass man to commit the most appalling crimes without thinking 255.

Only ruthless self-knowledge on the widest scale, which sees good and evil in correct perspective and can weigh up the motives of human action, offers some guarantee that the end-result will not turn out too badly Carl Jung, CW 9ii, Para 255.

Beginning, roughly, with Christianity, alchemy gave birth in the sixteenth and seventeenth centuries to the age of science, only to perish, unrecognized and misunderstood, and sink from sight in the stream of the centuries as an age that had been outlived. But, just as every mother was once a daughter, so too was alchemy Carl Jung, CW 9ii, Para Carl Jung, CW 9ii,

Para 267.

Alchemy owes its real beginnings to the Gnostic systems, which Hippolytus rightly regarded as philosophic, and which, with the help of Greek philosophy and the mythologies of the Near and Middle East, together with Christian dogmatics and Jewish cabalism, made extremely interesting attempts, from the modern point of view, to synthetize a unitary vision of the world in which the physical and the mystical aspects played equal parts Carl Jung, CW 9ii, Para 267.

Had this attempt succeeded, we would not be witnessing today the curious spectacle of two parallel world-views neither of which knows, or wishes to know, anything about the other Carl Jung, CW 9ii, Para 267?

To the honour of Christian thinking it must be said that up till the time of Kepler there was no lack of praiseworthy attempts to interpret and understand Nature, in the broadest sense, on the basis of Christian dogma Carl Jung, CW 9ii, Para 267.

Faith lacked experience and science missed out the soul. Instead, science believed fervently in absolute objectivity and assiduously overlooked the fundamental difficulty that the real vehicle and begetter of all knowledge is the psyche, the very thing that scientists knew the least about for the longest time Carl Jung, CW 9ii, Para 268.

It was regarded as a symptom of chemical reactions, an epiphenomenon of biological processes in the brain-cells indeed, for some time it did not exist at all Carl Jung, CW 9ii, Para 268.

Yet all the while scientists remained totally unaware of the fact that they were using for their observations a photographic apparatus of whose nature and structure they knew practically nothing, and whose very existence many of them were unwilling to admit Carl Jung, CW 9ii, Para 268.

Aside from the psychology of the unconscious, contemporary science and philosophy know only of what is outside, while faith knows only of the inside, and then only in the Christian form imparted to it by the passage of the centuries, beginning with St. Paul and the gospel of St. John Carl Jung, CW 9ii, Para 269.

The Creed is a “symbolum.” This comprises practically everything of importance that can be ascertained about the manifestations of the psyche in the field of inner experience, but it does not include Nature, at least not in any recognizable form Carl Jung, CW 9ii, Para 270.

The word “dogma” has even acquired a somewhat unpleasant sound and frequently serves merely to emphasize the rigidity of a prejudice. For most people living in the West, dogma has lost its meaning as a symbol for a virtually unknowable and yet “actual” i.e., operative fact Carl Jung, CW 9ii, Para 271.

Even in theological circles any real discussion of dogma had as good as ceased until the recent papal declarations, a sign that the symbol has begun to fade, if it is not already withered Carl Jung, CW 9ii, Para 271.

This is a dangerous development for our psychic health, as we know of no other symbol that better expresses the world of the unconscious Carl Jung, CW 9ii, Para 271.

More and more people then begin looking round for exotic ideas in the hope of finding a substitute, for example in India. This hope is delusory, for though the Indian symbols formulate the unconscious just as well as the Christian ones do, they each exemplify their own spiritual past Carl Jung, CW 9ii, Para 271.

The Indian teachings constitute the essence of several thousand years of experience of Indian life. Though we can learn a lot from Indian thought, it can never express the past that is stored up within us. The premise we start from is and remains Christianity, which covers anything from eleven to nineteen centuries of Western life Carl Jung, CW 9ii, Para 271.

I mention these facts in order to illustrate how thin is the wall that separates us from pagan times. Besides that, the Germanic peoples never developed organically out of primitive polydemonism to polytheism and its philosophical subtleties, but in many places accepted Christian monotheism and its doctrine of redemption only at the sword's point of the Roman legions, as in Africa the machine-gun is the latent argument behind the Christian invasion Carl Jung, CW 9ii, Para 272.

Doubtless the spread of Christianity among barbarian peoples not only favoured, but actually necessitated, a certain inflexibility of dogma. Much the same thing can be observed in the spread of Islam, which was likewise obliged to resort to [religious] fanaticism and rigidity Carl Jung, CW 9ii, Para 272.

In India the symbol [dogma] developed far more organically and pursued a less disturbed course. Even the great Hindu Reformation, Buddhism, is grounded, in true Indian fashion, on yoga, and, in India at least, it was almost completely reassimilated by Hinduism in less than a millennium, so that today the Buddha himself is enthroned in the Hindu pantheon as the avatar of Vishnu, along with Christ, Matsya (the fish), Kurma (the tortoise), Vamana (the dwarf), and a host of others Carl Jung, CW 9ii, Para 272.

Dogma no longer formulates anything, no longer expresses anything; it has become a tenet to be accepted in and for itself, with no basis in any experience that would demonstrate its truth. Indeed, faith has itself become that experience Carl Jung, CW 9ii, Para 276.

This is not to contest the legitimacy and importance of dogma. The Church is not concerned only with people who have a religious life of their own, but also with those from whom no more can be expected than that they should hold a tenet to be true and confess themselves satisfied with this formula. Probably the great majority of "believers" do not get beyond this level. For them dogma retains its role as a magnet and can therefore claim to be the "final" truth Carl Jung, CW 9ii, Para 276.

It may strike my reader as strange that a physician and psychologist should be so insistent about dogma. But I must emphasize it, and for the same reasons that once moved the alchemist to attach special importance to his "theoria." His doctrine was the quintessence of the symbolism of unconscious processes, just as the dogmas are a condensation or distillation of "sacred history," of the myth of the divine being and his deeds Carl Jung, CW 9ii, Para 278.

If we wish to understand what alchemical doctrine means, we must go back to the historical as well as the individual phenomenology of the symbols, and if we wish to gain a closer understanding of dogma, we must perforce consider first the myths of the Near and

Middle East that underlie Christianity, and then the whole of mythology as the expression of a universal disposition in man Carl Jung, CW 9ii, Para 278.

This disposition I have called the collective unconscious, the existence of which can be inferred only from individual phenomenology. In both cases the investigator comes back to the individual, for what he is all the time concerned with are certain complex thought-forms, the archetypes, which must be conjectured as the unconscious organizers of our ideas Carl Jung, CW 9ii, Para 278.

We meet these images and ideas in Gnosticism, to which we must now give our attention; for Gnosticism was, in the main, a product of cultural assimilation and is therefore of the greatest interest in elucidating and defining the contents constellated by prophecies about the Redeemer, or by his appearance in history, or by the synchronicity of the archetype Carl Jung, CW 9ii, Para 287.

Unfortunately it is not possible for me to elucidate or even to document this statement [the synchronicity of the archetype] here. But, as Rhine's ESP (extrasensory perception) experiments show, any intense emotional interest or fascination is accompanied by phenomena which can only be explained by a psychic relativity of time, space, and causality Carl Jung, CW 9ii, Para 287.

Since the archetypes usually have a certain numinosity, they can arouse just that fascination which is accompanied by synchronistic phenomena Carl Jung, CW 9ii, Para 287.

These consist in the meaningful coincidence of two or more causally unrelated facts. For details I would refer the reader to my "Synchronicity: An Acausal Connecting Principle" Carl Jung, CW 9ii, Para 287.

In a passage in the Acts (17: 30), Paul reminds the Athenians that they were "God's offspring," and that God, looking back disapprovingly on "the times of ignorance," had sent the message to mankind, commanding "all men everywhere to repent" Carl Jung, CW 9ii, Para 299.

These utterances on the nature of the Deity express transformations of the God-image which run parallel with changes in human consciousness, though one would be at a loss to say which is the cause of the other Carl Jung, CW 9ii, Para 303.

The God-image is not something invented, it is an experience that comes upon man spontaneously as anyone can see for himself unless he is blinded to the truth by theories and prejudices. The unconscious God-image can therefore alter the state of consciousness, just as the latter can modify the God-image once it has become conscious. This, obviously, has nothing to do with the "prime truth," the unknown God at least, nothing that could be verified Carl Jung, CW 9ii, Para 303.

Psychologically, however, the idea of God's[unknownness], or of the [inconceivable god or god without conception], is of the utmost importance, because it identifies the Deity with the numinosity of the unconscious. The atman / purusha philosophy of the East and, as we have seen, Meister Eckhart in the West both bear witness to this Carl Jung, CW 9ii, Para 303.

The name Prunicus means both

carrying a burden' and

lewd.’ The latter connotation is more probable, because this Gnostic sect believed that, through the sexual act, they could recharge Barbelo with the pneuma that was lost in the world Carl Jung, CW 9ii, Para 307.

In Simon Magus it is Helen, the soul, who “descended to the lower regions and generated the inferior powers, angels, and firmaments.” She was forcibly held captive by the lower powers (Irenaeus, I, 27, 1-4). She corresponds to the much later alchemical idea of the “soul in fetters” Carl Jung, CW 9ii, Para 307.

The idea derives from Greek alchemy and can be found in Zosimos. In the “Liber quartorum” it is of Sabaean origin Carl Jung, CW 9ii, Para 307.

In Chwolsohn, Die Ssabier und der Ssabismus II, p. 494: The soul once turned towards matter, fell in love with it, and, burning with desire to experience bodily pleasures, was no longer willing to tear herself away from it. So was the world born Carl Jung, CW 9ii, Para 307?

The king is male / female; from him come “father and mother;” he consists of three parts: the rational, the psychic, and the earthly. These three “came down together into one man, Jesus,” and “these three men spoke together, each of them from his own substance to his own,” i.e., from the rational to the rational, etc. Carl Jung, CW 9ii, Para 313.

But the souls were “brought down from the blessed Man on high, the arch-man Adamas, into the form of clay, that they might serve the demiurge of this creation, Esaldaios, a fiery god, the fourth by number.” Esaldaios corresponds to Ialdabaoth, the highest archon, and also to Saturn Carl Jung, CW 9ii, Para 325.

Ialdabaoth means “child of chaos”; hence when Goethe, borrowing from alchemical terminology, calls the devil the “strange son of chaos,” the name is a very apt one Carl Jung, CW 9ii, Para 325.

He leads them to Oceanus and in the immortal words of Homer to “the doors of Helios and the land of dreams.” “He [Hermes] is Oceanus, the begetter of gods and men, ever ebbing and flowing, now forth, now back.” Men are born from the ebb, and gods from the flow. “It is this, they say, that stands written: ‘I have said, you are gods, and all of you the sons of the most High”’ (Elenchos, V, 7, 37. Legge trans., I, p. 130) Carl Jung, CW 9ii, Para 327.

Here the affinity or identity of God and man is explicit, in the Holy Scriptures no less than in the Naassene teachings Carl Jung, CW 9ii, Para 327.

The father of the “perfectus” is the higher man or Protanthropos, who is “not clearly formed” and “without qualities.” Hippolytus goes on to say that he is called Papa (Attis) by the Phrygians. He is a bringer of peace and quells “the war of the elements” in the human body, a statement we meet again word for word in medieval alchemy, where the filius philosophorum “makes peace between enemies or the elements” Carl Jung, CW 9ii, Para 334.

This “Papa” [Protanthropos] is also called(cadaver), because he is buried in the body like a mummy in a tomb Carl Jung, CW 9ii, Para 334.

A similar idea is found in Paracelsus; his treatise De Vita longa opens with the words: “Life, verily, is naught but a kind of embalmed mummy, which preserves the mortal body from the mortal worms.” The body lives only from the “Mumia,” through which the “peregrinus microcosmus,” the wandering microcosm (corresponding to the macrocosm), rules the physical body Carl Jung, CW 9ii, Para 334.

His synonyms are the Adech, Archeus, Protothoma, Ides, Idechtrum, etc. He is the “Protoplast” (the first-created), and, as Ides, “the door whence all created things have come” Carl Jung, CW 9ii, Para 334.

The Mumia is born together with the body and sustains it, though not to the degree that the “supercelestial Mumia” does. The latter would correspond to the higher Adam of the Naassenes. Of the Ideus or Ides Paracelsus says that in it “there is but One Man and he is the Protoplast” Carl Jung, CW 9ii, Para 334.

The spirit, he said, was a great danger, because Yama, the god of death, would instantly carry off these people (the “imperfecti”) if they trod the spiritual path directly, without preparation Carl Jung, CW 9ii, Para 339.

The erotic sculptures were meant to remind them of their dharma (law), which bids them fulfil their ordinary lives. Only when they have fulfilled their dharma can they tread the spiritual path Carl Jung, CW 9ii, Para 339.

The obscenities were intended to arouse the erotic curiosity of visitors to the temples, so that they should not forget their dharma; otherwise they would not fulfil it Carl Jung, CW 9ii, Para 339.

Only the man who was qualified by his karma (the fate earned through works in previous existences), and who was destined for the life of the spirit, could ignore this injunction with impunity, for to him these obscenities mean nothing Carl Jung, CW 9ii, Para 339.

That was also why the two seductresses stood at the entrance of the temple, luring the people to fulfil their dharma, because only in this way could the ordinary man attain to higher spiritual development. And since the temple represented the whole world, all human activities were portrayed in it; and because most people are always thinking of sex anyway, the great majority of the temple sculptures were of an erotic nature Carl Jung, CW 9ii, Para 339.

For this reason too, he said, the lingam (phallus) stands in the sacred cavity of the adyton (Holy of Holies), in the garbha griha (house of the womb). This pundit was a Tantrist (scholastic; tantra = ‘book’) Carl Jung, CW 9ii, Para 339

For this purpose we must first of all review the facts that led psychologists to conjecture an archetype of wholeness, i.e., the Self. These are in the first-place dreams and visions; in the second place, products of active imagination in which symbols of wholeness appear Carl Jung, CW 9ii, Para 351.

A special variant of the quaternity motif is the dilemma of 3 + 1. Twelve (3 x 4) seems to belong here as a solution of the dilemma and as [twelve] a symbol of wholeness (zodiac, year) Carl Jung, CW 9ii, Para 351.

Three can be regarded as a relative totality, since it usually represents either a spiritual totality that is a product of thought, like the Trinity, or else an instinctual, chthonic one, like the triadic nature of the gods of the underworld the “lower triad” Carl Jung, CW 9ii, Para 351.

Another variant is the wheel (rota). The former motif [the circle and quaternity] emphasizes the ego’s containment in the greater dimension of the Self; the latter [the wheel] emphasizes the rotation which also appears as a ritual circumambulation Carl Jung, CW 9ii, Para 352.

The snake-symbol in alchemy points back to historically earlier images. Since the opus was understood by the alchemists as a recapitulation or imitation of the creation of the world, the serpent of Mercurius, that crafty and deceitful god, reminded them of the serpent in the Garden of Eden, and therefore of the devil, the tempter, who on their own admission played all sorts of tricks on them during their work Carl Jung, CW 9ii, Para 371.

Mephistopheles, whose “aunt is the snake,” is Goethe’s version of the alchemical familiar, Mercurius. Like the dragon, Mercurius is the slippery, evasive, poisonous, dangerous forerunner of the hermaphrodite, and for that reason he has to be overcome Carl Jung, CW 9ii, Para 371.

The serpens Mercurii is a chthonic spirit who dwells in matter, more especially in the bit of original chaos hidden in creation, the massa confusa or globosa Carl Jung, CW 9ii, Para 371.

This image is "My Lady Soul," as Spitteler called her. I have suggested instead the term "anima," as indicating something specific, for which the expression "soul" is too general and too vague. Carl Jung, CW 9ii, Para 25

Of these I would mention the lion, snake (coluber,

viper'), bird (devil = nocturna avis), raven (Christ = nycticorax,

night-heron’), eagle, and fish. It is also worth noting that Lucifer, the Morning Star, means Christ as well as the devil. Carl Jung, CW 9ii, Para 127

For the fish symbol, in the Near and Middle East especially, has a long and colorful prehistory, from the Babylonian fish-god Oannes and his priests who clothed themselves in fish-skins, to the sacred fish-meals in the cult of the Phoenician goddess Derceto-Atargatis and the obscurities of the Abercius inscription. The symbol ranges from the redeemer-fish of Manu in farthest India to the Eucharistic fish-feast celebrated by the “Thracian riders” in the Roman Empire. For our purpose it is hardly necessary to go into this voluminous material more closely. As Doelger and others have shown, there are plenty of occasions for fish symbolism within the original, purely Christian world of ideas. I need only mention the regeneration in the font, in which the baptized swim like fishes. Carl Jung, CW 9ii, Para 127

In view of this wide distribution of the fish symbol, its appearance at a particular place or at a particular moment in the history of the world is no cause for wonder. But the sudden activation of the symbol, and its identification with Christ even in the early days of the Church, lead one to conjecture a second source. This source is astrology, and it seems that Friedrich Muenter was the first to draw attention to it. Carl Jung, CW 9ii, Para 128

These astrological ideas are quite understandable when one considers that Saturn is the

star of Israel, and that Jupiter means the “king” (of justice). Among the territories ruled by the Fishes, the house of Jupiter, are Mesopotamia, Bactria, the Red Sea, and Palestine. Chiun (Saturn) is mentioned in Amos 5:26 as “the star of your god.” James of Sarug (d. 521) says the Israelites worshipped Saturn. The Sabaeans called him the “god of the Jews.” The Sabbath is Saturday, Saturn’s Day. Albumasar testifies that Saturn is the star of Israel. Carl Jung, CW 9ii, Para 128

In medieval astrology Saturn was believed to be the abode of the devil. Both Saturn and Ialdabaoth, the demiurge and highest archon, have lion’s faces. Origen elicits from the diagram of Celsus that Michael, the first angel of the Creator, has “the shape of a lion.” He obviously stands in the place of Ialdabaoth, who is identical with Saturn, as Origen points out. Carl Jung, CW 9ii, Para 128

Above all it is the connections with the age of the Fishes which are attested by the fish symbolism, either contemporaneously with the gospels themselves (“fishers of men,” fishermen as the first disciples, miracle of loaves and fishes), or immediately afterwards in the post-apostolic era. The symbolism shows Christ and those who believe in him as fishes, fish as the food eaten at the Agape, baptism as immersion in a fish-pond, etc. Carl Jung, CW 9ii, Para 147.

At first sight, all this points to no more than the fact that the fish symbols and mythologems which have always existed had assimilated the figure of the Redeemer; in other words, it was a symptom of Christ’s assimilation into the world of ideas prevailing at that time. Carl Jung, CW 9ii, Para 147

But, to the extent that Christ was regarded as the new Aeon, it would be clear to anyone acquainted with astrology that he was born as the first fish of the Pisces era, and was doomed to die as the last ram (lamb) of the declining Aries era. Matthew 27: 15ff. hands down this mythologem in the form of the old sacrifice of the seasonal god. Carl Jung, CW 9ii, Para 147

In addition to the “pisciculi Christianorum,” the shepherd and the lamb play, as we know only too well, an almost greater role in Christian allegory, and Hermes Kriophoros (the “ram-bearer”) became the prototype of the “good shepherd,” the tutelary god of flocks. Carl Jung, CW 9ii, Para 162

Another prototype, in his capacity as shepherd, was Orpheus. This aspect of the Poimen gave rise to a figure of similar name in the mystery cults, who was popularized in The Shepherd of Hermas (2nd century). Like the “giant fish” mentioned in the Abercius inscription, the shepherd probably has connections with Attis, both temporally and regionally. Reitzenstein even conjectures that The Shepherd of Hermas derives from the Poimandres writings, which are of purely pagan origin. Carl Jung, CW 9ii, Para 162

Shepherd, ram, and lamb symbolism coincides with the expiring Aeon of Aries. In the first century of our era the two aeons overlap, and the two most important mystery gods of this period, Attis and Christ, are both characterized as shepherds, rams, and fishes. Carl Jung, CW 9ii, Para 162

It is often tragic to see how blatantly a man bungles his own life and the lives of others yet remains totally incapable of seeing how much the whole tragedy originates in himself, and how he continually feeds it and keeps it going. Not consciously, of course—for consciously he

is engaged in bewailing and cursing a faithless world that recedes further and further into the distance. Rather, it is an unconscious factor which spins the illusions that veil his world. And what is being spun is a cocoon, which in the end will completely envelop him. Carl Jung, CW 9ii, Para 18

Expressed psychologically, the two fishes which the devil found on the primeval waters would signify the newly arisen world of consciousness. The comparison of the fishes with a yoke of oxen ploughing merits special attention. Oxen stand for the motive power of the plough. [This reminds us of the cinedian fish, the motivating fish] Since olden times the plough has stood for man's mastery over the earth: wherever man plows, he has wrested a patch of soil from the primal state and put it to his own use. That is to say: the fishes will rule this world and subdue it by working astrologically through man and molding his consciousness. Carl Jung, CW 9ii, Para 230-231

Another text says that you should hide yourselves at the moment of Yahweh's wrath, because we are warned by Him that at the moment of His unbridled irascibility, if a curse is uttered it will indeed be effective. In other words, you had better be very careful what you say, and what is said to you, at the particular moment when God's wrath is kindled. Another text says, "God's left-hand dashes to pieces; his right hand is glorious to save" Carl Jung, CW 9ii, Para 107.

My investigation seeks, with the help of Christian, Gnostic, and alchemical symbols of the Self, to throw light on the change of psychic situation within the "Christian Aeon" Carl Jung, CW 9ii, Para ix.

Christian tradition from the outset is not only saturated with Persian and Jewish ideas about the beginning and end of time but is filled with intimations of a kind of enantiodromian reversal of dominants. I mean by this the dilemma of Christ and Antichrist. Carl Jung, CW 9ii, Para ix.

Probably most of the historical speculations about time and the limitation of time were influenced, as the Apocalypse shows, by astrological ideas. It is therefore only natural that my reflections should gravitate mainly round the symbol of the Fishes, for the Pisces Aeon is the synchronistic concomitant of two thousand years of Christian development. Carl Jung, CW 9ii, Para ix.

In this time-period not only was the figure of the Anthropos (the "Son of Man") progressively amplified symbolically, and thus assimilated psychologically, but it brought with it changes in man's attitude that had already been anticipated by the expectation of the Antichrist in the ancient texts. Carl Jung, CW 9ii, Para ix.

'Because these texts relegate the appearance of Antichrist to the end of time, we are justified in speaking of a "Christian Aeon," which, it was presupposed, would find its end with the Second Coming. It seems as if this expectation coincides with the astrological conception of the "Platonic month" of the Fishes Carl Jung, CW 9ii, Para ix.

The immediate occasion for my proposing to discuss these historical questions is the fact that the archetypal image of wholeness, which appears so frequently in the products of

the unconscious, has its forerunners in history. Carl Jung, CW 9ii, Para x

These were identified very early with the figure of Christ, as I have shown in my book Psychology and Alchemy I have been requested so often by my readers to discuss the relations between the traditional Christ-figure and the natural symbols of wholeness that I finally decided to take this task in hand. Carl Jung, CW 9ii, Page x.

Another alchemical text mentions the “water from the rock” as the equivalent of the universal solvent, the aqua permanens. Khunrath, in his somewhat florid language, even speaks of the “Petroleum sapientum.” Carl Jung, CW 9ii, Para 143

According to Doelger, the Christian fish symbol first appeared in Alexandria around A.D. 200; similarly, the baptismal bath was described as a piscina (fish-pond) quite early. This presupposes that the believers were fishes, as is in fact suggested by the gospels (for instance Matt. 4:19). There Christ wants to make Peter and Andrew “fishers of men,” and the miraculous draught of fishes (Luke 5:10) is used by Christ himself as a paradigm for Peter’s missionary activity. Carl Jung, CW 9ii, Para 145

It is nothing less than the counterstroke of the devil, provoked by God’s Incarnation; for the devil attains his true stature as the adversary of Christ, and hence of God, only after the rise of Christianity, while as late as the Book of Job he was still one of God’s sons and on familiar terms with Yahweh. Carl Jung, CW 9ii, Para 77

Psychologically the case is clear, since the dogmatic figure of Christ is so sublime and spotless that everything else turns dark beside it. It is, in fact, so one-sidedly perfect that it demands a psychic complement to restore the balance. Carl Jung, CW 9ii, Para 77

This inevitable opposition led very early to the doctrine of the two sons of God, of whom the elder was called Satanaël. The coming of the Antichrist is not just a prophetic prediction it is an inexorable psychological law whose existence, though unknown to the author of the Johannine Epistles, brought him a sure knowledge of the impending enantiodromia. Carl Jung, CW 9ii, Para 77

Consequently he wrote as if he were conscious of the inner necessity for this transformation, though we may be sure that the idea seemed to him like a divine revelation. In reality every intensified differentiation of the Christ-image brings about a corresponding accentuation of its unconscious complement, thereby increasing the tension between above and below. Carl Jung, CW 9ii, Para 77

The ideal of spirituality striving for the heights was doomed to clash with the materialistic earth-bound passion to conquer matter and master the world. This change became visible at the time of the “Renaissance.” The word means “rebirth,” and it referred to the renewal of the antique spirit. Carl Jung, CW 9ii, Para 78

We know today that this spirit was chiefly a mask; it was not the spirit of antiquity that was reborn, but the spirit of medieval Christianity that underwent strange pagan transformations, exchanging the heavenly goal for an earthly one, and the vertical of the Gothic style for a horizontal perspective (voyages of discovery, exploration of the world and of nature). Carl Jung, CW 9ii, Para 78

The subsequent developments that led to the Enlightenment and the French Revolution have produced a world-wide situation today which can only be called “antichristian” in a sense that confirms the early Christian anticipation of the “end of time” Carl Jung, CW 9.2, Para 78

The other half [of the Self] appears in the Antichrist. The latter is just as much a manifestation of the Self, except that he consists of its dark aspect. Both [Antichrist and Christ] are Christian symbols, and they have the same meaning as the image of the Saviour crucified between two thieves. Carl Jung, CW 9ii, Para 79

This great symbol tells us that the progressive development and differentiation of consciousness leads to an ever more menacing awareness of the conflict and involves nothing less than a crucifixion of the ego, its agonizing suspension between irreconcilable opposites. Carl Jung, CW 9ii, Para 79

Naturally there can be no question of a total extinction of the ego, for then the focus of consciousness would be destroyed, and the result would be complete unconsciousness. The relative abolition of the ego affects only those supreme and ultimate decisions which confront us in situations where there are insoluble conflicts of duty. Carl Jung, CW 9ii, Para 79

This means, in other words, that in such cases the ego is a suffering bystander who decides nothing but must submit to a decision and surrender unconditionally. The “genius” of man [the Self], the higher and more spacious part of him whose extent no one knows, has the final word. Carl Jung, CW 9ii, Para 79

It is therefore well to examine carefully the psychological aspects of the individuation process in the light of Christian tradition, which can describe it for us with an exactness and impressiveness far surpassing our feeble attempts, even though the Christian image of the Self Christ lacks the shadow that properly belongs to it. Carl Jung, CW 9ii, Para 79

Apart from the snake, the fish is one of the oldest allegories. Nowadays we would prefer to call them symbols, because these synonyms always contain more than mere allegories, as is particularly obvious in the case of the fish symbol. It is unlikely that [Ichthys] is simply an anagrammatic abbreviation of, but rather the symbolical designation for something far more complex. Carl Jung, CW 9ii, Para 127

In Khunrath, magnesia is synonymous with “chaos” and “Aes Hermetis.” He calls it “A Catholic or Universal, that is, a Cosmic Ens or Entity, Three-in-One, naturally compounded of Body, Spirit, and Soul, the one and only true Subiectum Catholicon and true Universal Materia lapidis Philosophorum.” Carl Jung, CW 9ii, Para 291

In Michael Maier it signifies “the purity or homogeneity of the essence.” It is the “punctum solis” in the egg-yolk, which grows into a chick. In Khunrath it represents Sapientia in the form of the “salt-point”; in Maier it symbolizes gold. Carl Jung, CW 9ii, Para 345

The woman, like the man, becomes wrapped in a veil of illusions by her demon-familiar, and, as the daughter who alone understands her father (that is, is eternally right in everything), she is translated to the land of sheep, where she is put to graze by the shepherd of her soul, the animus. Carl Jung, CW 9ii, Para 32

The imago Dei imprinted on the soul, not on the body, is an image of an image, "for my

soul is not directly the image of God but is made after the likeness of the former image." Carl Jung, CW 9ii, Para 70

"The Word," he [St. Augustine] says, "took on complete manhood, as it were in its fulness: the soul and body of a man. And if you would have me put it more exactly—since even a beast of the field has a 'soul' and a body—when I say a human soul and human flesh, I mean he took upon him a complete human soul." Carl Jung, CW 9ii, Para 17

The God-image in man was not destroyed by the Fall but was only damaged and corrupted ("deformed") and can be restored through God's grace. The scope of the integration is suggested by the descensus ad inferos, the descent of Christ's soul to hell, its work of redemption embracing even the dead. Carl Jung, CW 9ii, Para 72

You must not look upon God as the author of the existence of evil, nor consider that evil has any subsistence in itself. For evil does not subsist as a living being does, nor can we set before our eyes any substantial essence thereof. For evil is the privation of good. And thus evil does not inhere in its own substance but arises from the mutilation of the soul. Neither is it uncreated, as the wicked say who set up evil for the equal of good nor is it created. For if all things are of God, how can evil arise from good? Carl Jung [citing St. Basil], CW 9ii, Para 82.

If the devil fell away from God of his own free will, this proves firstly that evil was in the world before man, and therefore that man cannot be the sole author of it, and secondly that the devil already had a "mutilated" soul for which we must hold a real cause responsible. Carl Jung, CW 9ii, Para 85

I have gone into the doctrine of the privatio boni at such length because it is in a sense responsible for a too optimistic conception of the evil in human nature and for a too pessimistic view of the human soul. Carl Jung, CW 9ii, Para 113

But there is still another reason why I must lay such critical stress on the privatio boni. As early as Basil we meet with the tendency to attribute evil to the disposition of the soul, and at the same time to give it a "non-existent" character. Carl Jung, CW 9ii, Para 114

This picture of the third sonship has certain analogies with the medieval filius philosophorum and the filius macrocosmi, who also symbolize the world-soul slumbering in matter. Carl Jung, CW 9ii, Para 120

Barbells were sacred to Typhon, who is "that part of the soul, which is passionate, impulsive, irrational, and truculent." Carl Jung, CW 9ii, Para 187

Ever since the Timaeus it has been repeatedly stated that the soul is a sphere. As the anima mundi, the soul revolves with the world wheel, whose hub is the Pole. Carl Jung, CW 9ii, Para 212

The world-soul or, in this case, the world-spirit is a projection of the unconscious, there being no method or apparatus which could provide an objective experience of this kind and thus furnish objective proof of the world's animation. Carl Jung, CW 9ii, Para 219

This idea is nothing more than an analogy of the animating principle in man which inspires his thoughts and acts of cognition. "Soul" and "spirit," or psyche as such, is in itself totally unconscious. Carl Jung, CW 9ii, Para 219

He who does not understand how to free the "truth" in his own soul from its fetters will never make a success of the physical opus, and he who knows how to make the stone can only do so on the basis of right doctrine, through which he himself is transformed, or which he creates through his own transformation. Carl Jung, CW 9ii, Para 248

This recalls the impressive opening sentence of Ignatius Loyola's "Foundation": "Man was created to praise, do reverence to, and serve God our Lord, and thereby to save his soul." Carl Jung, CW 9ii, Para 252

Thus, in the course of the eighteenth century, there arose that notorious rift between faith and knowledge. Faith lacked experience and science missed out the soul. Carl Jung, CW 9ii, Para 268

The connecting link here is the archetype of the God- man, which on the one hand became historical reality in Christ, and on the other, being eternally present, reigns over the soul in the form of a supraordinate totality, the self. Carl Jung, CW 9ii, Para 283

Through this doctrine Jesus is related to the Original Man (Christ as second Adam). His soul is "of three parts and (yet) one"—a Trinity. As examples of the Original Man the text mentions the Cabiros and Oannes. Carl Jung, CW 9ii, Para 313

Meister Eckhart, using a different formulation, says that "God is born from the soul," and when we come to the Cherubinic Wanderer of Angelus Silesius, God and the self-coincide absolutely. Carl Jung, CW 9ii, Para 321

The times have undergone a profound change: the procreative power no longer proceeds from God, rather is God born from the soul. The mythologem of the young dying god has taken on psychological form—a sign of further assimilation and conscious realization. Carl Jung, CW 9ii, Para 321

Hermes is a conjurer of spirits, a guide of souls, and a begetter of souls. But the souls were "brought down from the blessed Man on high, the archman Adamas, into the form of clay, that they might serve the demiurge of this creation, Esaldaios, a fiery god, the fourth by number." Carl Jung, CW 9ii, Para 325

He [Plotinus] says in the Enneads: "Self-knowledge reveals the fact that the soul's natural movement is not in a straight line, unless indeed it have undergone some deviation. Carl Jung, CW 9ii, Para 342

Here the point is the centre of a circle that is created, so to speak, by the circumambulation of the soul. But this point is the "centre of all things," a God-image. This is an idea that still underlies the mandala-symbols in modern dreams. Carl Jung, CW 9ii, Para 343

From various hints dropped by Hippolytus, it is clear beyond a doubt that many of the Gnostics were nothing other than psychologists. Carl Jung, CW 9ii, Para 347

Thus he [Hippolytus] reports them [Gnostics] as saying that "the soul is very hard to find and to comprehend," x and that knowledge of the whole man is just as difficult. "For knowledge of man is the beginning of wholeness, but knowledge of God is perfect wholeness." Carl Jung, CW 9ii, Para 347

And Monoimos, in his letter to Theophrastus, writes: "Seek him from out thyself, and learn who it is that taketh possession of everything in thee, saying: my god, my spirit, my understanding, my soul, my body; and learn whence is sorrow and joy, and love and hate, and waking though one would not, and sleeping though one would not, and getting angry though one would not, and falling in love though one would not. And if thou shouldst closely investigate these things, thou wilt find Him in thyself, the One and the Many, like to that little point, for it is in thee that he hath his origin and his deliverance." Carl Jung, CW 9ii, Para 347

This primary substance is round (massa globosa, rotundum, world and the world-soul; it is in fact the world-soul and the world-substance in one. It is the "stone that has a spirit," Carl Jung, CW 9ii, Para 376.

According to the old view the soul is round and the vessel must be round too, like the heavens or the world. The form of the Original Man is round. Carl Jung, CW 9ii, Para 377

Accordingly Dorn says that the vessel "should be made from a kind of squaring of the circle, so that the spirit and the soul of our material, separated from its body, may raise the body with them to the height of their own heaven." Carl Jung, CW 9ii, Para 377

The round Hermetic vessel in which the mysterious transformation is accomplished is God himself, the (Platonic) world-soul and man's own wholeness. Carl Jung, CW 9ii, Para 380

"The sulphurs are four souls [animae] which were hidden in the four elements." Here the active principle (anima) is not fire, but sulphur. The idea, however, is the same, namely that the elements or states of aggregation can be reduced to a common denominator. Carl Jung, CW 9ii, Para 394

With her cunning play of illusions the soul lures into life the inertness of matter that does not want to live. She makes us believe incredible things, that life may be lived. Carl Jung, CW 9ii, Pages 26-27

Were it not for the leaping and twinkling of the soul, man would rot away in his greatest passion, idleness. Carl Jung, CW 9ii, Pages 26-27

But to have soul is the whole venture of life, for soul is a life-giving daemon who plays his elfin game above and below human existence, for which reason-in the realm of dogma he is threatened and propitiated with superhuman punishments and blessings that go far beyond the possible deserts of human beings. Carl Jung, CW 9ii, Pages 26-27

To know where the other person makes a mistake is of little value. It only becomes interesting when you know where you make the mistake, for then you can do something about it. Carl Jung, CW 9ii, Para 424

The individual may strive after perfection but must suffer from the opposite of his intentions for the sake of his completeness. Carl Jung, CW 9ii, Para 123.

Indeed, it took the intervention of God himself to deliver humanity from the curse of evil, for without his intervention man would have been lost. Carl Jung, CW 9ii, Para 114

Psychology is an empirical science and deals with realities. Carl Jung, CW 9ii, Para 114

Projections change the world into the replica of one's unknown face. Carl Jung, CW 9ii. Para 17

Mistakes are, after all, the foundations of truth, and if a man does not know what a thing is, it is at least an increase in knowledge if he knows what it is not. Carl Jung, CW 9ii, Para 429

Yahweh and Allah are unreflected God-images, whereas in the Clementine Homilies there is a psychological and reflective spirit at work. Carl Jung, CW 9ii, Page 54n.

We need to find our way back to the original, living spirit which, because of its ambivalence, is also a mediator and uniter of opposites, an idea that preoccupied the alchemists for many centuries. Carl Jung, CW 9ii, Para 141

For alchemy is the mother of the essential substance as well as the concreteness of modern scientific thinking, and not scholasticism, which was responsible in the main only for the discipline and training of the intellect. Carl Jung, CW 9ii, Para 266.

The splitting of the Original Man into husband and wife expresses an act of nascent consciousness; it gives birth to the pair of opposites, thereby making consciousness possible. Carl Jung, CW 9ii, Para 320

No tree, it is said, can grow to heaven unless its roots reach down to hell. Carl Jung, CW 9ii, Page 43.

We can act differently, if we want to. Carl Jung, CW 9ii, Para 114.

Animals generally signify the instinctive forces of the unconscious, which are brought into unity within the mandala. This integration of the instincts is a prerequisite for individuation. Carl Jung, CW 9ii, Para 660.

The sin to be repented, of course, is unconsciousness. Carl Jung, CW 9ii, Pages 191-192.

[Uniting symbols] arise from the collision between the conscious and the unconscious and from the confusion which this causes (known in alchemy as 'chaos' or 'nigredo'). Empirically, this confusion takes the form of restlessness and disorientation. Carl Jung, CW 9ii, §304.

This meeting with oneself is, at first, the meeting with one's own shadow. The shadow is a tight passage, a narrow door, whose painful constriction no one is spared who goes down to the deep well. But one must learn to know oneself in order to know who one is. Carl Jung, CW 9ii, Page 21

Emotion is not an activity of the individual but something that happens to him. Carl Jung, CW 9ii, Para 15

The ego is the subject of all successful attempts at adaptation so far as these are achieved by the will. Carl Jung; CW 9ii; para 11.

Psychological truths are not metaphysical insights; they are habitual modes of thinking, feeling, and behaving that experience has proved appropriate and useful. Carl Jung, CW 9ii, para 50.

We can certainly hand it to Augustine that all natures are good, yet just not good enough to prevent their badness from being equally obvious. Carl Jung, CW 9ii, Para 95

Fishing is an intuitive attempt to "catch" unconscious contents (fishes). Carl Jung, CW 9ii, Para 137.

The causal factors determining his psychic existence reside largely in unconscious processes outside consciousness, and in the same way there are final factors at work in him which likewise originate in the unconscious. Carl Jung, CW 9ii, Para 253

Only unconsciousness makes no difference between good and evil. Carl Jung, CW 9ii, Para 97

As the animus is partial to argument, he can best be seen at work in disputes where both parties know they are right. Men can argue in a very womanish way, too, when they are anima-possessed and have thus been transformed into the animus of their own anima. Carl Jung, CW 9ii, Para 29

Magnesia is rather the "complete or conjoined mixture from which this moisture is extracted, i.e., the root-matter of our Stone" Carl Jung, CW 9ii, Para 241.

The complicated procedure for producing the magnesia is described in the treatise "Aristoteles de perfecto Magisterio." It is the whitened arcane substance Carl Jung, CW 9ii, Para 241.

Pandolfus says in the Turba: "I command you to take the hidden and venerable secret thing, which is the white magnesia" Carl Jung, Sermo XXI, CW 9ii, Para 241.

The magnesia is feminine, just as the magnet is masculine by nature. Hence it carries "in its belly the sal Armoniacum et vegetabile," meaning the arcane substance of the Stone. Even in Greek alchemy magnesia or "magnes" denoted the hermaphroditic transformative substance Carl Jung, CW 9ii, Para 241.

For the alchemists, magnesia is associated with "magnes" (magnet) not only phonetically, but also in meaning, as a recipe of Rosinus shows: Carl Jung, CW 9ii, Para 241.

Rosinus: Take therefore this animate Stone, the Stone which has a soul in it, the mercurial, which is sensible and sensitive to the presence and influence of the magnesia and the magnet, and [which is] the calaminary and the living Stone, yielding and repelling by local motion Carl Jung, CW 9ii, Para 241.

For behind all this looms the vast and unsolved riddle of life itself and of evolution in general, and the question of overriding importance in the end is not the origin of evolution but its goal. Nevertheless, when a living organism is cut off from its roots, it loses the connections with the foundations of its existence and must necessarily perish. When that happens, anamnesis of the origins is a matter of life and death. Carl Jung, CW 9ii, Para 279

No man can converse with an animus for five minutes without becoming the victim of his own anima. Anyone who still had enough sense of humour to listen objectively to the ensuing dialogue would be staggered by the vast number of commonplaces, misapplied truisms, clichés from newspapers and novels, shop-soiled platitudes of every description interspersed with vulgar abuse and brain-splitting lack of logic. It is a dialogue which, irrespective of its participants, is repeated millions and millions of times in all languages of the world and always remains essentially the same. Carl Jung, CW 9ii, Page 15

If it has been believed hitherto that the human shadow was the source of all evil, it can now be ascertained on closer investigation that the unconscious man, that is, his shadow, does not consist only of morally reprehensible tendencies, but also displays a number of good qualities, such as normal instincts, appropriate reactions, realistic insights, creative impulses, etc. Carl Jung, CW 9ii, Par 423.

The will can control them [the impulses] only in part. It may be able to suppress them, but it cannot alter their nature, and what is suppressed comes up again in another place in altered form, but this time loaded with a resentment that makes the otherwise harmless natural impulse our enemy Carl Jung, CW 9ii, Para 51.

I should also like the term “God” in the phrase “the will of God” to be understood not so much in the Christian sense as in the sense intended by Diotima, when she said: “Eros, dear Socrates, is a mighty daemon” Carl Jung, CW 9ii, Para 51.

The Greek words daimon and daimonion express a determining power which comes upon man from outside, like providence or fate, though the ethical decision is left to man. He must know, however, what he is deciding about and what he is doing. Then, if he obeys he is following not just his own opinion, and if he rejects he is destroying not just his own invention Carl Jung, CW 9ii, Para 51.

Where there is an undervaluation of sexuality the Self is symbolized as a phallus. Undervaluation can consist in an ordinary repression or in overt devaluation. In certain differentiated persons a purely biological interpretation and evaluation of sexuality can also have this effect Carl Jung, CW 9ii Para 357.

Any such conception overlooks the spiritual and “mystical” implications of the sexual instinct. These have existed from time immemorial as psychic facts but are devalued and repressed on rationalistic and philosophical grounds. In all such cases one can expect an unconscious phallicism by way of compensation. A good example of this is the mainly sexualistic approach to the psyche that is to be found in Freud Carl Jung, CW 9ii, Para 357.

Just as the circle is contrasted with the square, so the quaternity is contrasted with the 3 + 1 motif, and the positive, beautiful, good, admirable, and lovable human figure with a daemonic, misbegotten creature who is negative, ugly, evil, despicable and an object of fear

Carl Jung, CW 9ii, Para 9ii, 355.

Like all archetypes, the Self has a paradoxical, antinomial character. It is male and female, old man and child, powerful and helpless, large and small. The Self is a true “complexio oppositorum,” though this does not mean that it is anything like as contradictory in itself. It is quite possible that the seeming paradox is nothing but a reflection of the enantiodromian changes of the conscious attitude, which can have a favourable or an unfavourable effect on the whole Carl Jung, CW 9ii, Para 355.

The same is true of the unconscious in general, for its frightening figures may be called forth by the fear which the conscious mind has of the unconscious. The importance of consciousness should not be underrated; hence it is advisable to relate the contradictory manifestations of the unconscious causally to the conscious attitude, at least in some degree Carl Jung, CW 9ii, Para 355.

But consciousness should not be overrated either, for experience provides too many incontrovertible proofs of the autonomy of unconscious compensatory processes for us to seek the origin of these antinomies only in the conscious mind Carl Jung, CW 9ii, Para 355.

Between the conscious and the unconscious there is a kind of “uncertainty relationship,” because the observer is inseparable from the observed and always disturbs it by the act of observation. In other words, exact observation of the unconscious prejudices observation of the conscious and vice versa Carl Jung, CW 9ii, Para 355

Thus the Self can appear in all shapes from the highest to the lowest, inasmuch as these transcend the scope of the ego personality in the manner of a daimonion Carl Jung, CW 9ii, Para 356.

The final factors at work in us are nothing other than those talents which "a certain nobleman" entrusted to his "servants," that they might trade with them (Luke 19:12 ff.). It does not require much imagination to see what this involvement in the ways of the world means in the moral sense. Only an infantile person can pretend that evil is not at work everywhere, and the more unconscious s/he is, the more the devil drives her/him. Only ruthless self-knowledge o the widest scale, which sees good and evil in correct perspective and can weigh up the motives of human action, offers some guarantee that the end result will not turn out too badly Carl Jung, CW 9ii, Para 255.

It is of the greatest importance that the ego should be anchored in the world of consciousness and that consciousness should be reinforced by a very precise adaptation. For this, certain virtues like attention, consciousness, patience, etc., are of the greatest value on the moral side, just as accurate observation of the symptomatology of the unconscious and objective self-criticism are valuable on the intellectual side. Carl Jung, CW 9ii, Para 46.

Sooner or later nuclear physics and the psychology of the unconscious will draw closer together as both of them, independently of one another and from opposite directions, push forward into transcendental territory, the one with the concept of the atom, the other with that of the archetype. Carl Jung, CW 9ii, Para 412

No amount of insight into the relativity and fallibility of our moral judgment can deliver us from these defects, and those who deem themselves beyond good and evil are usually the

worst tormentors of mankind, because they are twisted with the pain and fear of their own sickness. Carl Jung, CW 9ii, Para 97

This subjective knowledge of the self [is what is meant by]: "No one can know himself unless he knows what, and not who, he is, on what he depends, or whose he is (or to whom or what he belongs) and for what end he was made." This distinction is crucial. Not the subjective ego-consciousness of the psyche is meant, but the psyche itself as the unknown, unprejudiced object that still has to be investigated. "What" refers to the neutral self, the objective fact of totality, since the ego is on the one hand causally "dependent on" or "belongs to" it, and on the other hand is directed toward it as to a goal Carl Jung, CW 9ii, para 252.

The shadow, the syzygy, and the Self are psychic factors of which an adequate picture can be formed only on the basis of a fairly thorough experience of them. Just as these concepts arose out of an experience of reality, so they can be elucidated only by further experience Carl Jung, CW 9ii, para 63.

We know only a small part of our psyches. The causal factors determining [one's] psychic existence reside largely in the unconscious processes outside consciousness, and in the same way there are final factors at work in [one] that likewise originate in the unconscious. Causes and ends thus transcend consciousness to a degree that ought not to be underestimated, and this implies that their nature and action are unalterable and irreversible [to the degree that] they have not become objects of consciousness. They can only be corrected through conscious insight and moral determination, which is why self-knowledge, being so necessary, is feared so much Carl Jung, CW 9ii, Para 253.

Through the Christ crucified between the two thieves, man gradually attained knowledge of his shadow and its duality. This duality had already been anticipated by the double meaning of the serpent. Just as the serpent stands for the power that heals as well as corrupts, so one of the thieves is destined upwards, the other downwards, and so likewise the shadow is on one side regrettable and reprehensible weakness, on the other side healthy instinctively and the prerequisite for higher consciousness. Carl Jung; CW 9ii; Page 255; Para 402.

Today humanity, as never before, is split into two apparently irreconcilable halves. The psychological rule says that when an inner situation is not made conscious, it happens outside, as fate. That is to say, when the individual remains undivided and does not become conscious of his inner opposite, the world must perforce act out the conflict and be torn into opposing halves. Carl Jung, CW 9ii, Para 126

Who are we to imagine that "it couldn't happen here"? We have only to multiply the population of Switzerland by twenty to become a nation of eighty million, and our public intelligence and morality would then be automatically divided by twenty in consequence of the devastating moral and psychic effects of living together in huge masses. Such a state of things provides the basis for collective crime, and it is then really a miracle if the crime is not committed. It has filled us with horror to realize all that man is capable of, and of which, therefore, we too are capable. Since then a terrible doubt about humanity, and about ourselves, gnaws at our hearts. Carl Jung, CW 9ii, Para 412

Why is psychology the youngest of the empirical sciences? Why have we not long since discovered the unconscious and raised up its treasure-house of eternal images? Simply because we had a religious formula for everything psychic — and one that is far more beautiful

and comprehensive than immediate experience. Though the Christian view of the world has paled for many people, the symbolic treasure-rooms of the East are still full of marvels that can nourish for a long time to come the passion for show and new clothes. What is more, these images — are they Christian or Buddhist or what you will — are lovely, mysterious, and richly intuitive. Carl Jung, CW 9ii, Pages 7-8.

The fact that individual consciousness means separation and opposition is something that man has experienced countless times. Loss of roots and lack of tradition neuroticize the masses and prepare them for collective hysteria. Collective hysteria calls for collective therapy, which consists in abolition of liberty and terrorization. Where rationalistic materialism holds sway, states tend to develop less into prisons than into lunatic asylums. Carl Jung, CW 9ii, Para 282

Indeed, it seems a very natural state of affairs for men to have irrational moods and women irrational opinions. Presumably this situation is grounded on instinct and must remain as it is to ensure that the Empedoclean game of the hate and love of the elements shall continue for all eternity. Nature is conservative and does not easily allow her courses to be altered; she defends in the most stubborn way the inviolability of the preserves where anima and animus roam. And on top of this there arises a profound doubt as to whether one is not meddling too much with nature's business by prodding into consciousness things which it would have been better to leave asleep. Carl Jung, CW 9ii, Para 35

When animus and anima meet, the animus draws his sword of power and the anima ejects her poison of illusion and seduction. The outcome need not always be negative, since the two are equally likely to fall in love (a special instance of love at first sight). Carl Jung, CW

Every mother and every beloved is forced to become the carrier and embodiment of this omnipresent and ageless image, which corresponds to the deepest reality in a man. It belongs to him, this perilous image of Woman; she stands for the loyalty which in the interests of life he must sometimes forgo; she is the much-needed compensation for the risks, struggles, sacrifices that all end in disappointment; she is the solace for all the bitterness of life. And, at the same time, she is the great illusionist, the seductress, who draws him into life with her Maya—and not only into life's reasonable and useful aspects, but into its frightful paradoxes and ambivalences where good and evil, success and ruin, hope and despair, counterbalance one another. Because she is his greatest danger she demands from a man his greatest, and if he has it in him she will receive it. Carl Jung, CW 9ii, Para 24

The bridge from dogma to the inner experience of the individual has broken down. Instead, dogma is "believed"; it is hypostatized, as the Protestants hypostatize the Bible, illegitimately making it the supreme authority, regardless of its contradictions and controversial interpretations. (As we know, anything can be authorized out of the Bible.) Dogma no longer formulates anything, no longer expresses anything; it has become a tenet to be accepted in and for itself, with no basis in any experience that would demonstrate its truth. Indeed, faith has itself become that experience. Carl Jung, CW 9ii, Para 276

Myths are miracle tales and treat of all those things which, very often, are also objects of belief. In the everyday world of consciousness such things hardly exist; that is to say, until 1933 only lunatics would have been found in possession of living fragments of mythology. After this date the world of heroes and monsters spread like a devastating fire over whole nations, proving that the strange world of myth had suffered no loss of vitality during the cen-

turies of reason and enlightenment. If metaphysical ideas no longer have such a fascinating effect as before, this is certainly not due to any lack of primitivity in the European psyche, but simply and solely to the fact that the erstwhile symbols no longer express what is now welling up from the unconscious as the end-result of the development of Christian consciousness through the centuries. This end result is a true antimimon pneuma, a false spirit of arrogance, hysteria, woolly-mindedness, criminal amorality, and doctrinaire fanaticism, a purveyor of shoddy spiritual goods, spurious art, philosophical stutterings, and Utopian humbug, fit only to be fed wholesale to the mass man of today. That is what the post-Christian spirit looks like. Carl Jung, CW 9ii, Para 66

I use Eros and Logos merely as conceptual aids to describe the fact that woman's consciousness is characterized more by the connective quality of Eros than by the discrimination and cognition associated with Logos. Carl Jung, CW 9ii, Para 29

In men, Eros, the function of relationship, is usually less developed than Logos. The Other, the fourth, corresponds in the Gnostic quaternities to the fiery god, "the fourth by number," to the dual wife of Moses (Zipporah and the Ethiopian woman), to the dual Euphrates (river and Logos), to the fire. Carl Jung, CW 9ii, Para 29

Just as the anima becomes, through integration, the Eros of consciousness, so the animus becomes a Logos; and in the same way that the anima gives relationship and relatedness to a man's consciousness, Carl Jung, CW 9ii, Para 33.

Together they form a divine pair, one of whom, in accordance with his Logos nature, is characterized by pneuma and nous, rather like Hermes with his ever-shifting hues, while the other, in accordance with her Eros nature, wears the features of Aphrodite, Carl Jung, CW 9ii, Para 41.

Irenaeus (Adversus haereses, II,5,1) records the Gnostic teaching that when Christ, as the demiurgic Logos, created his mother's being, he "cast her out of the Pleroma—that is, he cut her off from knowledge." Carl Jung, CW 9ii, Page 41, fn 23

Note that Satan finds the two fishes before the creation, i.e., "in the beginning," when the spirit of God still brooded upon the dark face of the waters (Gen. 1:2). Had it been one fish only, we could interpret it as a prefiguration of the Redeemer, as the pre-existent Christ of St. John's gospel, the Logos that "was in the beginning with God." (Christ himself says in this document, with reference to John 1:2: "But I shall sit with my Father.") Carl Jung, CW 9ii, Para 230

The Logos was in the beginning, and God was the Logos, long before the Incarnation. Carl Jung, CW 9ii, Para 294

The fact that not only the Gnostic Logos but Christ himself was drawn into the orbit of sexual symbolism is corroborated by the fragment from the Interrogationes maiores Mariae, quoted by Epiphanius. Carl Jung, CW 9ii, Para 314

The Archanthropos is the Logos, whom the souls follow "twittering," as the bats follow Hermes in the nekyia. He leads them to Oceanus and—in the immortal words of Homer—to "the doors of Helios and the land of dreams." Carl Jung, CW 9ii, Para 327

The text defines the above-mentioned quaternio, which is identical with Zeesar, the upwards-flowing Jordan, the hermaphrodite, Geryon of the threefold body, and the horn of the moon, as the cosmogonic Logos (John 1:iff.), and the "life that was in him" (John 1:4) as a "generation of perfect men". Carl Jung, CW 9ii, Para 339

From this we can see clearly that the serpent was either a forerunner of man or a distant copy of the Anthropos, and how justified is the equation Naas = Nous = Logos = Christ = Higher Adam. Carl Jung, CW 9ii, Para 367

For the Church Fathers Christ is this source, and Paradise means the ground of the soul from which the fourfold river of the Logos bubbles forth. Carl Jung, CW 9ii, Para 373

For instance, the fourth of the rivers of Paradise, the Euphrates, signifies the mouth through which food goes in and prayers go out, as well as the Logos. Carl Jung, CW 9ii, Para 396

The Other, the fourth, corresponds in the Gnostic quaternities to the fiery god, "the fourth by number," to the dual wife of Moses (Zipporah and the Ethiopian woman), to the dual Euphrates (river and Logos), to the fire. Carl Jung, CW 9ii, Para 397

The image of the city, house, and vessel brings us to their content—the inhabitant of the city or house, and the water contained in the vessel. The inhabitant, in his turn, has a relationship to the quaternity, and to the fifth as the unity of the four. The water appears in modern dreams and visions as a blue expanse reflecting the sky, as a lake, as four rivers (e.g., Switzerland as the heart of Europe with the Rhine, Ticino, Rhone, and Inn, or the Garden of Eden with the Gihon, Pison, Hiddekel, and Euphrates), as healing water and consecrated water, etc. Sometimes the water is associated with fire, or even combined with it as fire-water (wine, alcohol). Carl Jung, CW 9ii, Para 353

In alchemy the snake is the symbol of Mercurius non vulgi, who was bracketed with the god of revelation, Hermes. Both have a pneumatic nature. The serpens Mercurii is a chthonic spirit who dwells in matter, more especially in the bit of original chaos hidden in creation, the massa confusa or globosa. The snake-symbol in alchemy points back to historically earlier images. Since the opus was understood by the alchemists as a recapitulation or imitation of the creation of the world, the serpent of Mercurius, that crafty and deceitful god, reminded them of the serpent in the Garden of Eden, and therefore of the devil, the tempter, who on their own admission played all sorts of tricks on them during their work. Mephistopheles, whose “aunt is the snake,” is Goethe’s version of the alchemical familiar, Mercurius. Like the dragon, Mercurius is the slippery, evasive, poisonous, dangerous forerunner of the hermaphrodite, and for that reason he has to be overcome. Carl Jung, CW 9ii, Para 371

For the alchemists Paradise was a favourite symbol of the albedo the regained state of innocence, and the source of its rivers is a symbol of the aqua permanens. For the Church Fathers Christ is this source, and Paradise means the ground of the soul from which the fourfold river of the Logos bubbles forth. We find the same symbol in the alchemist and mystic John Pordage: divine Wisdom is a “New Earth, the heavenly Land. … For from this Earth grew all the Trees of Life. … Thus did Paradise … rise up from the Heart and Centre of this New Earth, and thus did the lost Garden of Eden flourish in greenness.” Carl Jung, CW 9ii, Para 373

Carl Jung: *CW 10 “Civilization in Transition”

[12]Civilization in Transition (The Collected Works of C. G. Jung, Volume 10)

Our cerebral consciousness is like an actor who has forgotten that he is playing a role. Carl Jung, CW 10, Para 332

Nobody can fall so low unless he has a great depth.

If such a thing can happen to a man, it challenges his best and highest on the other side; that is to say, this depth corresponds to a potential height, and the blackest darkness to a hidden light. Carl Jung, CW 10, Para 1375

The psychologist cannot avoid coming to grips with contemporary history, even if his soul shrinks from the political uproar, the lying propaganda and the jarring speeches of demagogues. We need not mention his duties as a citizen, which confront him with a similar task. Carl Jung, CW 10, Page177.

Spiritually the Western world is in a precarious situation, and the danger is greater the more we blind ourselves … with illusions about our beauty of soul. Western man lives in a thick cloud of incense which he burns to himself so that his own countenance may be veiled from him in the smoke. … that megalomania of ours which leads us to suppose … that Christianity is the only truth and the white Christ the only redeemer. No wonder that unearthing the psyche is like undertaking a full-scale drainage operation. Carl Jung, CW 10, Para 183

But I should be carrying brevity too far if I described the anima merely as a primordial image of woman consisting of irrational feelings, and the animus merely as a primordial image of man consisting of irrational views. Both figures present … elementary forms of that psychic phenomenon which from primitive times has been called “soul.” They are also the cause of that deep human need to speak of souls or daemons at all. Carl Jung, CW 10, Para 82

But I should be carrying brevity too far if I described the anima merely as a primordial image of woman consisting of irrational feelings, and the animus merely as a primordial image of man consisting of irrational views. Both figures present … elementary forms of that psychic phenomenon which from primitive times has been called “soul.” They are also the cause of that deep human need to speak of souls or daemons at all. Carl Jung, CW 10, Para 82

Here I would like to guard against a misunderstanding. The concept of “soul” which I am now using can be compared more with the primitive idea of the soul … than with the Christian idea of it which is an attempt to make a philosophical construct … My conception of the soul has absolutely nothing to do with this … Carl Jung, CW 10, Para 84

Feeling is a specifically feminine virtue … Carl Jung, CW 10, Para 79

… the queen and the king are one, in the sense that body and soul or spirit and soul are one … the queen corresponds to the soul (anima)…. Carl Jung, CW 10, Para 243

Here I would like to guard against a misunderstanding. The concept of “soul” which I am now using can be compared more with the primitive idea of the soul … than with the Christian idea of it which is an attempt to make a philosophical construct … My conception of the soul has absolutely nothing to do with this … Carl Jung, CW 10, Para 84

… a man’s consciousness projects all perceptions coming from the feminine personification of the unconscious onto an anima figure, i.e., a real woman … Carl Jung, CW 10, Para 714

When the shadow, the inferior personality, is in large measure unconscious, the unconscious is represented by a masculine figure. Carl Jung, CW 10, Para 714, Fn 21

… man will be forced to develop his feminine side, to open his eyes to the psyche and to Eros. It is a task he cannot avoid, unless he prefers to go trailing after woman in a hopelessly boyish fashion, worshipping from afar but always in danger of being stowed away in her pocket. Carl Jung, CW 10, Para 259.

‘The self plays the chief role in uniting apparently irreconcilable opposites and is therefore the best suited to compensate the split-mindedness of our age’ Carl Jung, CW 10, Page 622

… a man’s consciousness projects all perceptions coming from the feminine personification of the unconscious onto an anima figure … This explains the fateful quality of the anima … Carl Jung, CW 10, Para 713

The plurality of UFOs … is a projection of a number of psychic images of wholeness which appear in the sky because on the one hand they represent archetypes charged with energy and on the other hand are not recognized as psychic factors. Carl Jung, CW 10, Para 635

The modern man is solitary and the ways of [the past] have begun to pall upon him . . . An honest admission of modernity means voluntarily declaring oneself bankrupt, taking the vows of poverty and chastity in a new sense, and what is more painful, renouncing the halo of sanctity which history bestows. Carl Jung, CW 10, Page 152

Dr. Jung never said: "I simply believe that some part of the human self or soul is not subject to the laws of space and time."

Dr. Jung never said: “synchronicity is an ever present reality for those who have eyes to see.”

Therefore I say to the young psychotherapist: Learn the best, know the best—and then forget everything when you face the patient. No one has yet become a good surgeon by learning the text-books off by heart. Carl Jung, CW 10, Para 882

Small and hidden is the door that leads inward and the entrance is barred by countless prejudices, mistaken assumptions, and fears. Carl Jung, CW 10, Page 154.

The true historical event lies deeply buried, experienced by all and observed by none. It is the most private and subjective of psychic experiences." Carl Jung, CW 10, Para 315.

Too much soul is reserved for God, too little for man. But God himself cannot flourish if man's soul is starved. The feminine psyche responds to this hunger, for it is the function of Eros to unite what Logos has sundered. The woman of today is faced with a tremendous cultural task—perhaps it will be the dawn of a new era. Carl Jung, CW 10, Page 133

Just as every Jew has a Christ complex, so every Negro has a white complex and every American a Negro complex. As a rule the coloured man would give anything to change his skin, and the white man hates to admit that he has been touched by the black. - Carl Jung, CW 10, Para 963

Even today the European, however highly developed, cannot live with impunity among the Negroes in Africa; their psychology gets into him unnoticed and unconsciously he becomes a Negro. There is no fighting against it. In Africa there is a well-known technical expression for this: 'going black.' It is no mere snobbery that the English should consider anyone born in the colonies, even though the best blood may run in his veins, 'slightly inferior.' There are facts to support this view." Carl Jung, CW 10, Para 249

The rapid and worldwide growth of a psychological interest over the last two decades shows unmistakably that modern man is turning his attention from outward material things to his own inner processes. Expressionism in art prophetically anticipated this subjective development, for all art intuitively apprehends coming changes in the collective unconsciousness. Carl Jung, CW 10, Para 167

The psychological interest of the present time is an indication that modern man expects something from the psyche which the outer world has not given him: doubtless something which our religion ought to contain, but no longer does contain, at least for modern man. For him the various forms of religion no longer appear to come from within, from the psyche; they seem more like items from the inventory of the outside world. No spirit not of this world vouchsafes him inner revelation; instead, he tries on a variety of religions and beliefs as if they were Sunday attire, only to lay them aside again like worn-out clothes. Carl Jung, CW 10, Para 168

Yet he is somehow fascinated by the almost pathological manifestations from the hinterland of the psyche, difficult though it is to explain how something which all previous ages have rejected should suddenly become interesting. That there is a general interest in these matters cannot be denied, however much it offends against good taste. I am not thinking merely of the interest. Carl Jung, CW 10, Para 169

I am not thinking merely of the interest taken in psychology as a science, or of the still narrower interest in the psychoanalysis of Freud, but of the widespread and ever-growing interest in all sorts of psychic phenomena, including spiritualism, astrology, Theosophy, parapsychology, and so forth. The world has seen nothing like it since the end of the seventeenth century. We can compare it only to the flowering of Gnostic thought in the first and second centuries after Christ. The spiritual currents of our time have, in fact, a deep affinity with Gnosticism. There is even an "Église gnostique de la France," and I know of two schools in Germany which openly declare themselves Gnostic. The most impressive movement numerically is undoubtedly Theosophy, together with its continental sister, Anthroposophy;

these are pure Gnosticism in Hindu dress. Compared with them the interest in scientific psychology is negligible. What is striking about these Gnostic systems is that they are based exclusively on the manifestations of the unconscious, and that their moral teachings penetrate into the dark side of life, as is clearly shown by the refurbished European version of Kundalini yoga. The same is true of parapsychology, as everyone acquainted with this subject will agree. The passionate interest in these movements undoubtedly arises from psychic energy which can no longer be invested in obsolete religious forms. For this reason such movements have a genuinely religious character, even when they pretend to be scientific. It changes nothing when Rudolf Steiner calls his Anthroposophy "spiritual science," or when Mrs. Eddy invents a "Christian Science." These attempts at concealment merely show that religion has grown suspect – almost as suspect as politics and world-reform. Carl Jung, CW 10, Para 170

I do not believe that I am going too far when I say that modern man, in contrast to his nineteenth-century brother, turns to the psyche with very great expectations, and does so without reference to any traditional creed but rather with a view to Gnostic experience. The fact that all the movements I have mentioned give themselves a scientific veneer is not just a grotesque caricature or a masquerade, but a positive sign that they are actually pursuing "science," i.e., knowledge, instead of faith, which is the essence of the Western forms of religion. Modern man abhors faith and the religions based upon it. He holds them valid only so far as their knowledge-content seems to accord with his own experience of the psychic background. He wants to know – to experience for himself. Carl Jung, CW 10, Para 171

The age of discovery has only just come to an end in our day, when no part of the earth remains unexplored; it began when men would no longer believe that the Hyperboreans were one-footed monsters, or something of that kind, but wanted to find out and see with their own eyes what existed beyond the boundaries of the known world. Our age is apparently setting out to discover what exists in the psyche beyond consciousness. The question asked in every spiritualistic circle is: What happens after the medium has lost consciousness? Every Theosophist asks: What shall I experience at the higher levels of consciousness? The question which every astrologer asks is: What are the operative forces that determine my fate despite my conscious intention? And every psychoanalyst wants to know: What are the unconscious drives behind the neurosis? Carl Jung CW 10, Para 172

Our age wants to experience the psyche for itself. It wants original experience and not assumptions, though it is willing to make use of all the existing assumptions as a means to this end, including those of the recognized religions and the authentic sciences. The European of yesterday will feel a slight shudder run down his spine when he gazes more deeply in to these delvings. Not only does he consider the subject of this so-called research obscure and shuddersome, but even the methods employed seem to him a shocking misuse of man's finest intellectual attainments. What is the professional astronomer to say when he is told that at least a thousand times more horoscopes are cast today than were cast three hundred years ago? What will the educator and advocate of philosophical enlightenment say about the fact that the world has not grown poorer by a single superstition since the days of antiquity? Freud himself, the founder of psychoanalysis, has taken the greatest pains to throw as glaring a light as possible on the dirt and darkness and evil of the psychic background, and to interpret it in such a way as to make us lose all desire to look for anything behind it except refuse and smut. He did not succeed, and his attempt at deterrence has even brought about the exact opposite – an admiration for all this filth. Such a perverse phenomenon would normally be inexplicable were it not that even the scatologists are drawn by the secret fascination of the psyche. Carl Jung, CW 10, Para 173

Our loveliest mountain, which dominates Switzerland far and wide, is called the Jungfrau – the "Virgin." The Virgin Mary is the female patron saint of the Swiss. Of her Tertullian says: ". . . that virgin earth, not yet watered by the rains," and Augustine: "Truth has arisen from the earth, because Christ is born of a virgin." These are living reminders that the virgin mother is the earth. From olden times the astrological sign for Switzerland was either Virgo or Taurus; both are earth-signs, a sure indication that the earthy character of the Swiss had not escaped the old astrologers. From the earth-boundness of the Swiss come all their bad as well as their good qualities: their down-to-earthness, their limited outlook, their non-spirituality, their parsimony, stolidity, stubbornness, dislike of foreigners, mistrustfulness, as well as that awful Schwizerdütsch and their refusal to be bothered, or to put it in political terms, their neutrality. Carl Jung, CW 10, Para 914

There can be no doubt that from the beginning of the nineteenth century – ever since the time of the French Revolution – the psyche has moved more and more into the foreground of man's interest, and with a steadily increasing power of attraction. The enthronement of the Goddess of Reason in Notre Dame seems to have been a symbolic gesture of great significance for the Western world – rather like the hewing down of Wotan's oak by Christian missionaries. On both occasions no avenging bolt from heaven struck the blasphemer down. Carl Jung, CW 10, Para 174

It is certainly more than an amusing freak of history that just at the time of the Revolution a Frenchman, Anquetil du Perron, should be living in India and, at the beginning of the nineteenth century, brought back with him a translation of the Oupnek'hat, a collection of fifty Upanishads, which gave the West its first deep insight into the baffling mind of the East. To the historian this is a mere coincidence independent of the historical nexus of cause and effect. My medical bias prevents me from seeing it simply as an accident. Everything happened in accordance with a psychological law which is unfailingly valid in personal affairs. If anything of importance is devalued in our conscious life and perishes – so runs the law – there arises a compensation in the unconscious. We may see in this an analogy to the conservation of energy in the physical world, for our psychic processes also have a quantitative, energic aspect. No psychic value can disappear without being replaced by another of equivalent intensity. This is a fundamental rule which is repeatedly verified in the daily practice of the psychotherapist and never fails. The doctor in me refuses point blank to consider the life of a people as something that does not conform to psychological law. For him the psyche of a people is only a somewhat more complex structure than the psyche of an individual. Moreover, has not a poet spoken of the "nations of his soul"? And quite correctly, it seems to me, for in one of its aspects the psyche is not individual, but is derived from the nation, from the collectivity, from humanity even. In some way or other we are part of a single, all-embracing psyche, a single "greatest man," the homo maximus, to quote Swedenborg. Carl Jung, CW 10, Para 175

And so we can draw a parallel: just as in me, a single individual, the darkness calls forth a helpful light, so it does in the psychic life of a people. In the crowds that poured into Notre Dame, bent on destruction, dark and nameless forces were at work that swept the individual off his feet; these forces worked also upon Anquetil du Perron and provoked an answer which has come down in history and speaks to us through the mouths of Schopenhauer and Nietzsche. For he brought the Eastern mind to the West, and its influence upon us we cannot as yet measure. Let us beware of underestimating it! So far, indeed, there is little of it to be

seen on the intellectual surface: a handful of orientalists, one or two Buddhist enthusiasts, a few sombre celebrities like Madame Blavatsky and Annie Besant with her Krishnamurti. These manifestations are like tiny, scattered islands in the ocean of mankind; in reality they are the peaks of submarine mountain-ranges. The cultural Philistines believed until recently that astrology had been disposed of long since and was something that could safely be laughed at. But today, rising out of the social deeps, it knocks at the doors of the universities from which it was banished some three hundred years ago. Carl Jung, CW 10, Para 176

. . .The heyday of astrology was not in the benighted Middle Ages but is in the middle of the twentieth century, when even the newspapers do not hesitate to publish the week's horoscope. A thin layer of rootless rationalists read with satisfaction in an encyclopaedia that in the year 1723 Mr. So-and-so had horoscopes cast for his children, and yet do not know that nowadays the horoscope has attained the rank of a visiting card. Those who have even a nodding acquaintance with this background and are in any way affected by it obey the unwritten but strictly observed convention: "One does not speak of such things." They are only whispered about, no one admits them, for no one wants to be considered all that stupid. In reality, however, it is very different. Carl Jung, CW 10, Para 700

Astrology and other methods of divination may certainly be called the science of antiquity. Carl Jung, CW 10, Para 121

The Negro by his mere presence is a source of temperamental and mimetic infection, which the European can't help noticing just as much as he sees the hopeless gap between the American and the African Negro. Racial infection is a most serious mental and moral problem where the primitive outnumbers the white man. America has this problem only in a relative degree, because the whites far outnumber the coloured. Apparently he can assimilate the primitive influence with little risk to himself. What would happen if there were a considerable increase in the coloured population is another matter. Carl Jung, CW 10, Para 966

If, on the other hand, I say that it is good or beautiful for certain other people, this is not necessarily a value judgment but may just as well be an intellectual statement of fact. Conscience, therefore, is made up of two layers, the lower one comprising a particular psychic event, while the upper one is a kind of superstructure representing the positive or negative judgment of the subject. Carl Jung, CW 10 Para 825

For example, a businessman I knew was made what looked like a perfectly serious and honourable offer which, it turned out much later, would have involved him in a disastrous fraud had he accepted it. The following night after he received this offer, which as I say seemed to him quite acceptable, he dreamt that his hands and forearms were covered with black dirt. He could see no connection with the events of the previous day, because he was unable to admit to himself that the offer had touched him on the vulnerable spot: his expectation of a good business deal. I warned him about this, and he was careful enough to take certain precautions which did in fact save him from more serious harm. Carl Jung, CW 10 Para 826

Had he examined the situation right at the beginning he would undoubtedly have had a bad conscience, for he would have understood that it was a "dirty business" which his morality would not have allowed him to touch. He would, as we say, have made his hands dirty. The dream represented this locution in pictorial form. In this instance the classical characteristic of conscience, the conscientia peccati ("consciousness of sin"), is missing. Accordingly the specific feeling-tone of a bad conscience is missing too. Instead, the sym-

bolical image of black hands appeared in a dream, calling his attention to some dirty work. In order to become conscious of his moral reaction, i.e., to feel his conscience, he had to tell the dream to me. This was an act of conscience on his part, in so far as dreams always made him feel rather uncertain. He had got this feeling of uncertainty in the course of an analysis, which showed him that dreams often contribute a great deal to self-knowledge. Without this experience he would probably have overlooked the dream. Carl Jung, CW 10, Para 827

From this we learn one important fact: the moral evaluation of an action, which expresses itself in the specific feeling-tone of the accompanying ideas, is not always dependent on consciousness but may function without it. Freud put forward the hypothesis that in these cases there is a repression exerted by a psychic factor, the so-called superego. But if the conscious mind is to accomplish the voluntary act of repression, we must presuppose that there is some recognition of the moral obnoxiousness of the content to be repressed, for without this motive the corresponding impulse of the will cannot be released. But it was just this knowledge which the businessman lacked, to such an extent that he not only felt no moral reaction but put only a limited trust in my warning. The reason for this was that he in no way recognized the dubious nature of the offer and therefore lacked any motive for repression. Hence the hypothesis of conscious repression cannot apply in this case. What happened was in reality an unconscious act which accomplished itself as though it were conscious and intentional as though, in other words, it were an act of conscience. It is as if the subject recognized the immorality of the offer and this recognition had released the appropriate emotional reaction. But the entire process took place subliminally, and the only trace it left behind was the dream, which, as a moral reaction, remained unconscious. Carl Jung, CW 10, Para 828

“Conscience,” in the sense in which we defined it above, as a “knowledge” of the ego, a conscientia, simply does not exist in this case. If conscience is a kind of knowledge, then it is not the empirical subject who is the knower, but rather an unconscious personality who, to all appearances, behaves like a conscious subject. It knows the dubious nature of the offer, it recognizes the acquisitive greed of the ego, which does not shrink even from illegality, and it causes the appropriate judgment to be pronounced. This means that the ego has been replaced by an unconscious personality who performs the necessary act of conscience. It was these and similar experiences which led Freud to endow the superego with special significance. The Freudian superego is not, however, a natural and inherited part of the psyche’s structure; it is rather the consciously acquired stock of traditional customs, the “moral code” as incorporated, for instance, in the Ten Commandments. Carl Jung, CW 10 Para 830

The superego is a patriarchal legacy which, as such, is a conscious acquisition and an equally conscious possession. If it appears to be an almost unconscious factor in Freud’s writings, this is due to his practical experience, which taught him that, in a surprising number of cases, the act of conscience takes place unconsciously, as in our example. Freud and his school rejected the hypothesis of inherited, instinctive modes of behaviour, termed by us archetypes, as mystical and unscientific, and accordingly explained unconscious acts of conscience as repressions caused by the superego. Carl Jung, CW 10, Para 835

In view of the fact that dreams lead astray as much as they exhort, it seems doubtful whether what appears to be a judgment of conscience should be evaluated as such in other words, whether we should attribute to the unconscious a function which appears moral to us CW 10 Para 835

Obviously we can understand dreams in a moral sense without at the same time assuming that the unconscious, too, connects them with any moral tendency. It seems, rather, that it pronounces moral judgments with the same objectivity with which it produces immoral fantasies. This paradox, or inner contradictoriness of conscience, has long been known to investigators of this question: besides the "right" kind of conscience there is a "wrong" one, which exaggerates, perverts, and twists evil into good and good into evil just as our own scruples do; and it does so with the same compulsiveness and with the same emotional consequences as the "right" kind of conscience. Were it not for this paradox the question of conscience would present no problem; we could then rely wholly on its decisions so far as morality is concerned. But since there is great and justified uncertainty in this regard, it needs unusual courage or what amounts to the same thing unshakable faith for a person simply to follow the dictates of his own conscience. Carl Jung, CW 10, Para 839

John says: "Try the spirits whether they are of God" (I John 4:1), an admonition we could profitably apply to ourselves. Since olden times conscience has been understood by many people less as a psychic function than as a divine intervention; indeed, its dictates were regarded as vox Dei, the voice of God CW 10 Para 839

This view shows what value and significance were, and still are, attached to the phenomenon of conscience. The psychologist cannot disregard such an evaluation, for it too is a well-authenticated phenomenon that must be taken into account if we want to treat the idea of conscience psychologically. The question of "truth," which is usually raised here in a quite non-objective way, as to whether it has been proved that God himself speaks to us with the voice of conscience, has nothing to do with the psychological problem. The vox Dei is an assertion and an opinion, like the assertion that there is such a thing as conscience at all. All psychological facts which cannot be verified with the help of scientific apparatus and exact methods of measurement are assertions and opinions, and, as such, are psychic realities. It is a psychological truth that the opinion exists that the voice of conscience is the voice of God. Carl Jung, CW 10, Para 839

Since then, the phenomenon of conscience in itself does not coincide with the moral code, but is anterior to it, transcends its contents and as already mentioned, can also be "false," the view of conscience as the voice of God becomes an extremely delicate problem CW 10 Para 840

In practice it is very difficult to indicate the exact point at which the "right" conscience stops and the "false" one begins, and what the criterion is that divides one from the other. Presumably it is the moral code again, which makes it its business to know exactly what is good and what is evil. But if the voice of conscience is the voice of God, this voice must possess an incomparably higher authority than traditional morality. Anyone, therefore, who allows conscience this status should, for better or worse, put his trust in divine guidance and follow his conscience rather than give heed to conventional morality. Carl Jung, CW 10, Para 840

If the believer had absolute confidence in his definition of God as the Summum Bonum, it would be easy for him to obey the inner voice, for he could be sure of never being led astray. But since, in the Lord's Prayer, we still beseech God not to lead us into temptation, this undermines the very trust the believer should have if, in the darkness of a conflict of duty, he is to obey the voice of conscience without regard to the "world" and, very possibly, act against the precepts of the moral code by "obeying God rather than men" (Acts 5: 29) Carl Jung, CW 10, Para 840

Conscience no matter on what it is based commands the individual to obey his inner voice even at the risk of going astray. We can refuse to obey this command by an appeal to the moral code and the moral views on which it is founded, though with an uncomfortable feeling of having been disloyal. Carl Jung, CW 10 Para 841

One may think what one likes about an ethos, yet an ethos is and remains an inner value, injury to which is no joke and can sometimes have very serious psychic consequences. These, admittedly, are known to relatively few people, for there are only a few who take objective account of psychic causality. Primitive man regards the autonomy of the psyche as demonism and magic. This, we consider, is only what one would expect in primitive society. On closer inspection one finds, however, that the civilized man of antiquity, such as Socrates, still had his daemon and that there was a widespread and natural belief in superhuman beings who, we would suppose today, were personifications of projected unconscious contents. Carl Jung, CW 10 Para 843

This belief has not, in principle, disappeared, but still persists in numerous variants. For instance, in the assumption that conscience is the voice of God, or that it is a very important psychic factor (and one which manifests itself according to temperament, seeing that it usually accompanies the most differentiated function, as in the case of a “thinking” or a “feeling” morality). Again, where conscience seems to play no role, it appears indirectly in the form of compulsions or obsessions. These manifestations all go to show that the moral reaction is the outcome of a man’s autonomous dynamism, fittingly called:

Daemon

Genius

Guardian angel

Better self

Heart

Inner voice

The inner and higher man, etc.

Close beside these, beside the positive, “right” conscience, there stands the negative, “false” conscience referred to variously as:

Devil

Seducer

Tempter

Evil spirit, etc. Carl Jung, CW 10, Para 844

Everyone who examines his conscience is confronted with this fact, and he must admit that the good exceeds the bad only by a very little, if at all. It is therefore quite in order for

St. Paul to admit to having his “messenger of Satan” (II Corinthians 12:7). The psychologist can criticize metaphysics as a human assertion, but he is not in a position to make such assertions himself. He can only establish that these assertions exist as a kind of exclamation, well knowing that neither one nor the other can be proved right and objectively valid, although he must acknowledge the legitimacy of subjective assertions as such. Carl Jung, CW 10 Para 845

Assertions of this kind are manifestations of the psyche which belong to our human nature, and there is no psychic wholeness without them, even though one can grant them no more than subjective validity. Thus the vox Dei hypothesis is another subjective exclamation, whose purpose it is to underline the numinous character of the moral reaction. Conscience is a manifestation of mana, of the “extraordinarily powerful,” a quality which is the especial peculiarity of archetypal ideas. For, in so far as the moral reaction is only apparently identical with the suggestive effect of the moral code, it falls within the sphere of the collective unconscious, exemplifying an archetypal pattern of behaviour reaching down into the animal psyche. Carl Jung, CW 10, Para 846

Experience shows that the archetype, as a natural phenomenon, has a morally ambivalent character, or rather, it possesses no moral quality in itself but is amoral, like the Yahwistic God-image, and acquires moral qualities only through the act of cognition. Thus Yahweh is both just and unjust, kindly and cruel, truthful and deceitful. This is eminently true of the archetype as well. That is why the primitive form of conscience is paradoxical: to burn a heretic is on the one hand a pious and meritorious act as John Hus himself ironically recognized when, bound to the stake, he espied an old woman hobbling towards him with a bundle of faggots, and exclaimed, “0 sancta simplicitas!” and on the other hand a brutal manifestation of ruthless and savage lust for revenge. Carl Jung, CW 10, Para 846

Both forms of conscience the right and the false, stem from the same source, and both therefore have approximately the same power of conviction. This is also apparent in the symbolic designation of Christ as Lucifer (“‘bringer of light”), lion, raven (or nycticorax: night-heron), serpent, son of God, etc., all of which he shares with Satan; in the idea that the good father-god of Christianity is so vindictive that it takes the cruel sacrifice of his son to reconcile him to humanity; in the belief that the Summum Bonum has a tendency to lead such an inferior and helpless creature as man into temptation, only to consign him to eternal damnation if he is not astute enough to spot the divine trap Carl Jung, CW 10 Para 846

Faced with these insufferable paradoxes, which are an affront to our religious feelings, I would suggest reducing the notion of the vox Dei [voice of God] to the hypothesis of the archetype, for this at least is understandable and accessible to investigation. The archetype is a pattern of behaviour that has always existed, that is morally indifferent as a biological phenomenon, but possesses a powerful dynamism by means of which it can profoundly influence human behaviour. The reduction of the act of conscience to a collision with the archetype is, by and large, a tenable explanation. On the other hand we must admit that the psychoid archetype, that is, its irrepresentable and unconscious essence, is not just a postulate only, but possesses qualities of a parapsychological nature which I have grouped together under the term “synchronicity” CW 10 Para 849

I use this term to indicate the fact that, in cases of telepathy, precognition, and similar inexplicable phenomena, one can very frequently observe an archetypal situation. This may be connected with the collective nature of the archetype, for the collective unconscious,

unlike the personal unconscious, is one and the same everywhere, in all individuals, just as all biological functions and all instincts are the same in members of the same species. Carl Jung, CW 10, Para 849.

And just as the material of the body that is ready for life has need of the psyche in order to be capable of life, so the psyche presupposes the living body in order that its images may live. Carl Jung, CW 10, Para 618

The object of therapy is not the neurosis but the man who has the neurosis. We have long known, for instance, that a cardiac neurosis comes not from the heart, as the old medical mythology would have it, but from the mind of the sufferer. No does it come from some obscure corner of the unconscious, as many psychotherapists still struggle to believe; it comes from the totality of a man's life and from all the experiences that have accumulated over the years and decades, and finally, not merely from his life as an individual but from his psychic experience within the family or even the social group. Carl Jung, CW 10, Para 337

An archetype is like an old watercourse along which the water of life has flowed for centuries, digging a deep channel for itself Carl Jung, CW 10, Para 395.

But the full extent of these projections from the unconscious became known through analysis of those obscure and inexplicable feelings and emotions which give some intangible, magical quality to certain places, certain moods of nature, certain works of art, and also to certain ideas and certain people. This magic likewise comes from projection, but a projection of the collective unconscious Carl Jung, CW 10, Para 43

If it is inanimate objects that have the "magical" quality, often their mere statistical incidence is sufficient to prove that their significance is due to the projection of a mythological content from the collective unconscious. Mostly these contents are motifs already known to us from myths and fairytales. I would mention as an example the mysterious house where a witch or magician dwells, where some monstrous crime is being committed or has been committed, where there is a ghost, where a hidden treasure lies buried, and so on Carl Jung, CW 10, Para 43

The projection of this primordial image can be recognized when, one day, a person somehow comes upon this mysterious house when, in other words, a real but quite ordinary house makes a magical impression upon him. Generally, too, the whole atmosphere of the place seems symbolic and is, therefore, the projection of a coherent unconscious system Carl Jung, CW 10, Para 43

All kinds of objects and signs mark these places, and pious awe surrounds the marked spot. Thus does primitive man dwell in his land and at the same time in the land of his unconscious. Everywhere his unconscious jumps out at him, alive and real. How different is our relationship to the land we dwell in! Carl Jung, CW 10, Para 44

Feelings totally strange to us accompany the primitive at every step. Who knows what the cry of a bird means to him, or the sight of that old tree! A whole world of feeling is closed to us and is replaced by a pale aestheticism Carl Jung, CW 10, Para 44

Nevertheless, the world of primitive feeling is not entirely lost to us; it lives on in the unconscious. The further we remove ourselves from it with our enlightenment and our rational superiority, the more it fades into the distance, but is made all the more potent by everything

that falls into it, thrust out by our one-sided rationalism Carl Jung, CW 10, Para 44

This lost bit of nature seeks revenge and returns in faked, distorted form, for instance as a tango epidemic, as Futurism, Dadaism, and all the other crazes and crudities in which our age abounds Carl Jung, CW 10, Para 44

For the Chinese, "spirit" does not signify order, meaning, and everything that is good: on the contrary, it is a fiery and sometimes dangerous power. Carl Jung, CW 10, Para 939

It is a fact that cannot be denied the wickedness of others becomes our own wickedness because it kindles something evil in our own hearts. Carl Jung, CW 10, Para 408

In the realm of consciousness we are our own masters; we seem to be the "factors" themselves. But if we step through the door of the shadow we discover with terror that we are the objects of unseen factors, Carl Jung, CW 10, Para 49

If only people could realize what an enrichment it is to find one's own guilt, what a sense of honour and spiritual dignity! Carl Jung, CW 10, Para 416

The world is still full of betes noires and scapegoats, just as it formerly teemed with witches and werewolves. Carl Jung, CW 10, Para 130

The wise man learns only from his own guilt. He will ask himself: Who am I that all this should happen to me? To find the answer to this fateful question he will look into his own heart. Carl Jung, CW 10, Para 152

The danger that faces us today is that the whole of reality will be replaced by words. This accounts for that terrible lack of instinct in modern man, particularly the city-dweller. Carl Jung, CW 10, Para 882

We never appreciate how dependent we are on lucky ideas—until we find to our distress that they will not come. Carl Jung, CW 10, Para 305

The mere act of enlightenment may have destroyed the spirits of nature, but not the psychic factors that correspond to them, such as suggestibility, lack of criticism, fearfulness, propensity to superstition and prejudice—in short, all those qualities which make possession possible. Carl Jung, CW 10, Para 431

All human control comes to an end when the individual is caught in a mass movement. Carl Jung, CW 10, Para 395

In our most private and most subjective lives we are not only the passive witnesses of our age, and its sufferers, but also its makers. Carl Jung, CW 10, Para 315

Words like "Society" and "State" are so concretized that they are almost personified. Carl Jung, CW 10, Para 554

It is not the will of individuals that moulds the destinies of nations, but supra-personal factors, the spirit and the earth, which work in mysterious ways and in unfathomable darkness. Carl Jung, CW 10, Para 921

But it cannot be denied that in the course of the last two centuries Christianity, no less than Confucianism in China and Buddhism in India, has largely forfeited its educative activity. Carl Jung, CW 10, Para 326

Most men are erotically blinded—they commit the unpardonable mistake of confusing Eros with sex. Carl Jung, CW 10, Para 255

Resistance to the organized mass can be effected only by the man who is as well organized in his individuality as the mass itself. I fully realize that this proposition must sound well-nigh unintelligible to the man of today. Carl Jung, CW 10, Page 43.

People go on blithely organizing and believing in the sovereign remedy of mass action, without the least consciousness of the fact that the most powerful organizations can be maintained only by the greatest ruthlessness of their leaders and the cheapest of slogans. Carl Jung, CW 10, Page 40.

Instinct is anything but a blind and indefinite impulse, since it proves to be attuned and adapted to a definite external situation. Carl Jung, CW 10, Page 49.

Just as the chaotic movements of the crowd, all ending in mutual frustration, are impelled in a definite direction by a dictatorial will, so the individual in his dissociated state needs a directing and ordering principle. Carl Jung, CW 10, Pages 43-44.

The individual who is not anchored in God can offer no resistance on his own resources to the physical and moral blandishments of the world. For this he needs the evidence of inner, transcendent experience which alone can protect him from the otherwise inevitable submersion in the mass. Carl Jung, CW 10, Page 258.

Just as man, as a social being, cannot in the long run exist without a tie to the community, so the individual will never find the real justification for his existence and his own spiritual and moral autonomy anywhere except in an extramundane principle capable of relativizing the overpowering influence of external factors. Carl Jung, CW 10, Page 258.

Archaic man believes it to be the sun, and civilized man believes it to be the eye—so far, at any rate, as he reflects at all and does not suffer from the disease of the poets. Carl Jung, CW 10, Para 135

Great innovations never come from above; they come invariably from below, just as trees never grow from the sky downward, but upward from the earth. Carl Jung, CW 10, Para 177

And it is just the people from the obscurer levels who follow the unconscious drive of the psyche; it is the much-derided, silent folk of the land, who are less infected with academic prejudices than the shining celebrities are wont to be. Carl Jung, CW 10, Para 177

The primitives I observed in East Africa took it for granted that "big" dreams are dreamed only by "big" men - medicine-men, magicians, chiefs, etc. This may be true on a primitive level. But with us these dreams are dreamed also by simple people, more particularly when they have got themselves, mentally or spiritually, in a fix. Carl Jung. CW 10, Page 324.

Even if the whole world were to fall to pieces, the unity of the psyche would never be shattered. And the wider and more numerous the fissures on the surface, the more the unity is strengthened in the depths. Carl Jung; CW 10, Para 310.

The struggle between light and darkness has broken out everywhere. The rift runs through the whole globe and set the fire that is smoldering and glowing Germany ablaze wherever we look. The conflagration that broke out in Germany was the outcome of psychic conditions that are universal. Carl Jung, CW 10, para 485.

To confront a person with his shadow is to show him his own light. Once one has experienced a few times what it is like to stand judgingly between the opposites, one begins to understand what is meant by the self. Anyone who perceives his shadow and his light simultaneously sees himself from two sides and thus gets in the middle. Carl Jung, CW 10, Page 872.

The spirit is the life of the body seen from within, and the body the outward manifestation of the life of the spirit - the two being really one. Carl Jung, CW 10, Page 195.

In some way or other we are part of a single, all-embracing psyche, a single “greatest man." Carl Jung, CW 10: Page 175.

We still attribute to the other fellow all the evil and inferior qualities that we do not like to recognize in ourselves, and therefore have to criticize and attack him, when all that has happened is that an inferior “soul” has emigrated from one person to another. The world is still full of betes noires and scapegoats, just as it formerly teemed with witches and werewolves. Carl Jung, CW 10, Page 130.

The marked tendency of the Western democracies to internal dissension is the very thing that could lead them to a more hopeful path. Carl Jung; CW 10; Page 225.

Any large company composed of wholly admirable persons has the morality and intelligence of an unwieldy, stupid and violent animal. Carl Jung; CW 10; Page 228

Archetypes are like riverbeds which dry up when the water deserts them, but which it can find again at any time. An archetype is like an old watercourse along which the water of life has flowed for centuries, digging a deep channel for itself. The longer it has flowed in this channel the more likely it is that sooner or later the water will return to its old bed. Carl Jung: CW 10, Page 395.

The heaping together of paintings by Old master’s in museums is a catastrophe; likewise, a collection of a hundred Great Brains makes one big fathead. Carl Jung; CW 10, Para 944.

The development of modern art with its seemingly nihilistic trend towards disintegration must be understood as the symptom and symbol of a mood of universal destruction and renewal that has set its mark on our age. Carl Jung, CW 10, Pages 303-304.

It is possible to have an attitude to the external conditions of life only when there is a point of reference outside them. Carl Jung, CW 10, par. 506.

Even domestic animals, to whom we erroneously deny a conscience, have complexes and moral reactions. Carl Jung, CW 10, Page 446.

Until now it has not truly and fundamentally been noted that our time, despite the prevalence of irreligiosity, is so to speak congenitally charged with the attainment of the Christian epoch, namely with the supremacy of the word, that Logos which the central figure of Christian faith represents. The word has literally become our God and has remained so" Carl Jung, CW 10, §554.

I tried to give a general view of the structure of the unconscious. Its contents, the archetypes, are as it were the hidden foundations of the conscious mind, or, to use another comparison, the roots which the psyche has sunk not only in the earth in the narrower sense but in the world in general. Carl Jung, CW 10, Page 31.

Archetypes are systems of readiness for action, and at the same time images and emotions. They are inherited with the brain structure—indeed, they are its psychic aspect. Carl Jung, CW 10, Page 31.

We shall have to reckon with quite unusual difficulties in dealing with it, and the first of these is that the archetype and its function must be understood far more as a part of man's prehistoric, irrational psychology than as a rationally conceivable system. Carl Jung, CW 10, Page 31.

Phylogenetically as well as ontogenetically we have grown up out of the dark confines of the earth; hence the factors that affected us most closely became archetypes, and it is these primordial images which influence us most directly, and therefore seem to be the most powerful. Carl Jung, CW 10, Page 32.

I would like to suggest that every psychic reaction which is out of proportion to its precipitating cause should be investigated as to whether it may be conditioned at the same time by an archetype. Carl Jung, CW 10, Page 32.

We should make the archetype responsible only for a definite, minimal, normal degree of fear; any pronounced increase, felt to be abnormal, must have special causes. Carl Jung, CW 10, Page 33.

People measure their self-knowledge by what the average person in their social environment knows of himself, but not by the real psychic facts which are for the most part hidden from them. Carl Jung, CW 10, Par. 491

The upheaval of our world and the upheaval of our consciousness are one and the same. Carl Jung, CW 10, Para 177.

Thinking is difficult, therefore let the herd pronounce judgment! Carl Jung, CW 10, Page 344, Para 652.

The dream is a little hidden door in the innermost and most secret recesses of the soul, opening into that cosmic night which was psyche long before there was any ego consciousness, and which will remain psyche no matter how far our ego-consciousness extends. Carl Jung, CW 10, Pages 144-145

Religion means dependence on and submission to the irrational facts of experience. Carl Jung, CW 10, Para 505.

Where is a height without depth, and how can there be light that throws no shadow? There is no good that is not opposed by evil. Carl Jung, CW 10, Para 271.

Think of nearly two thousand years of Christian Idealism followed, not by the return of the Messiah and the heavenly millennium, but by the World War among Christian nations with its barbed wire and poison gas. What a catastrophe in heaven and on earth! Carl Jung, CW 10, Pages 76-77

When you walk with naked feet, how can you ever forget the earth? Carl Jung, CW 10, Page, Para 988

Therefore, never ask what a man does, but how he does it. If he does it from love or in the spirit of love, then he serves a god; and whatever he may do is not ours to judge, for it is ennobled. Carl Jung, CW 10, Para 234

Love is a force of destiny whose power reaches from heaven to hell. Carl Jung, CW 10, Para 198.

A man is ill, but the illness is nature's attempt to heal him. Carl Jung, CW 10, Para 361

From the illness itself we can learn so much for our recovery, and what the neurotic flings away as absolutely worthless contains the true gold we should never have found elsewhere. Carl Jung, CW 10, Para 361

It is the privilege and the task of maturer people, who have passed the meridian of life, to create culture. Carl Jung, CW 10, Para 272

Consciousness is a precondition of being. Carl Jung, CW 10, Para 528

Knowledge of God is a transcendental problem. Carl Jung, CW 10, Para 565

The attainment of consciousness was the most precious fruit of the tree of knowledge, the magical weapon which gave man victory over the earth, and which we hope will give him a still greater victory over himself. Carl Jung, CW 10, Para 289

The fact that individual consciousness means separation and opposition is something that man has experienced countless times in his long history. Carl Jung, CW 10, Para 290

Eternal truths are never true at any given moment in history. Carl Jung, CW 10, Para 1004

If the individual is not truly regenerated in spirit, society cannot be either, for society is the sum total of individuals in need of redemption. Carl Jung, CW 10, Para 536

In our strength we are independent and isolated, are masters of our own fate; in our

weakness we are dependent and bound, and become unwilling instruments of fate, for here it is not the individual will that counts but the will of the species. Carl Jung, CW 10, Para 261

But, precisely because the truest and most devoted love is also the most beautiful, let no man seek to make it easy. Carl Jung, CW 10, Para 232

He is a sorry knight who shrinks from the difficulty of loving his lady. Carl Jung, CW 10, Para 232

Love is like God: both give themselves only to their bravest knights. Carl Jung, CW 10, Para 232

Every true and deep love is a sacrifice. The lover sacrifices all other possibilities, or rather, the illusion that such possibilities exist. Carl Jung, CW 10, Para 231

When, towards middle life, the last gleam of childhood illusion fades—this it must be owned is true only of an almost ideal life, for many go as children to their graves—then the archetype of the mature man or woman emerges from the parental imago: an image of man as woman has known him from the beginning of time, and an image of woman that man carries within him eternally. Carl Jung, CW 10, Para 74

A psychology of neurosis that sees only the negative elements empties out the baby with the bath-water, since it neglects the positive meaning and value of these “infantile”—i.e., creative—fantasies. Carl Jung, CW 10, Para 355

Just as there is a relationship of mind to body, so there is a relationship of body to earth. Carl Jung, CW 10, Para 19

A civilization does not decay, it regenerates. Carl Jung, CW 10, Para 299

Was it not Meister Eckhart who said: “For this reason God is willing to bear the brunt of sins and often winks at them, mostly sending them to people for whom he has prepared some high destiny. Carl Jung, CW 10, Para 440

Without guilt, unfortunately, there can be no psychic maturation and no widening of the spiritual horizon. Carl Jung, CW 10, Para 440

I know people who feel that the strange power in their own psyche is something divine, for the very simple reason that it has given them an understanding of what is meant by religious experience. Carl Jung, CW 10, Para 312.

They [Religions] express the whole range of the psychic problem in mighty images; they are the avowal and recognition of the soul, and at the same time the revelation of the soul’s nature. Carl Jung, CW 10, Para 367

Mere continuation can be left to the animals, but inauguration is the prerogative of man, the one thing he can boast of that lifts him above the beasts. Carl Jung, CW 10, Para 268

Unlived life is a destructive, irresistible force that works softly but inexorably. Carl Jung, CW 10, Para 252

Here each of us must ask: Have I any religious experience and immediate relation to God, and hence that certainty which will keep me, as an individual, from dissolving in the crowd? Carl Jung, CW 10, Para 564

Religion, as the careful observation and taking account of certain invisible and uncontrollable factors, is an instinctive attitude peculiar to man, and its manifestations can be followed all through human history. Carl Jung, CW 10, Para 512

A creed coincides with the established Church or, at any rate, forms a public institution whose members include not only true believers but vast numbers of people who can only be described as "indifferent" in matters of religion and who belong to it simply by force of habit. Here the difference between a creed and a religion becomes palpable. Carl Jung, CW 10, Para 508.

Love has more than one thing in common with religious faith. It demands unconditional trust and expects absolute surrender. Carl Jung, CW 10, Page 112

The very fact that a man enters into a marriage on trial means that he is making a reservation; he wants to be sure of not burning his fingers, to risk nothing. Carl Jung, CW 10, Page 112

Love is not cheap—let us therefore beware of cheapening it! Carl Jung, CW 10, Page 112

All our bad qualities, our egotism, our cowardice, our worldly wisdom, our cupidity—all these would persuade us not to take love seriously. But love will reward us only when we do. Carl Jung, CW 10, Page 112

I must even regard it as a misfortune that nowadays the sexual question is spoken of as something distinct from love. Carl Jung, CW 10, Page 112

The two questions should not be separated, for when there is a sexual problem it can be solved only by love. Carl Jung, CW 10, Page 112

It is one of the most difficult and thankless of tasks to say anything of importance about the civilized man of today for the speaker finds himself caught in the same presuppositions and is blinded by the same prejudices as those whom he wishes to view from a superior standpoint. Carl Jung, CW 10, Para 104

He alone is modern who is fully conscious of the present. Carl Jung, CW 10, Para 149

All human control comes to an end when the individual is caught in a mass movement. Then the archetypes begin to function, as happens also in the lives of individuals when they are confronted with situations that cannot be dealt with in any of the familiar ways. Carl Jung, CW 10, Para 395

Resistance to the organized mass can be effected only by the man who is as well organized in his individuality as the mass itself. Carl Jung, CW 10, Para 540

It is quite natural that with the triumph of the Goddess of Reason a general neuroticizing of modern man should set in, a dissociation of personality analogous to the splitting of the world today by the Iron Curtain. This boundary line bristling with barbed wire runs through the psyche of modern man, no matter on which side he lives. Carl Jung, CW 10, Para 544

If only a world-wide consciousness could arise that all division and all fission are due to the splitting of opposites in the psyche, then we should know where to begin. Carl Jung, CW 10, Para 575

The heaping together of paintings by Old master's in museums is a catastrophe; likewise, a collection of a hundred Great Brains makes one big fathead. Carl Jung, CW 10, Para 944

A million zeros joined together do not, unfortunately, add up to one. Carl Jung, CW 10, Para 535

The principal and indeed the only thing that is wrong with the world is man. Carl Jung, CW 10, Para 441

Let man but accumulate sufficient engines of destruction and the devil within him will soon be unable to resist putting them to their fated use. It is well known that firearms go off of themselves if only enough of them are together. Carl Jung, CW 10,

It is a fact that cannot be denied the wickedness of others becomes our own wickedness because it kindles something evil in our own hearts. Carl Jung, CW 10, Para 408

All psychological facts which cannot be verified with the help of scientific apparatus and exact measurement are assertions and opinions, and, as such, are psychic realities. Carl Jung, CW 10, Para, 839

Dreams are impartial, spontaneous products of the unconscious psyche, outside the control of the will. They are pure nature; they show us the unvarnished, natural truth, and are therefore fitted, as nothing else is, to give us back an attitude that accords with our basic human nature when our consciousness has strayed too far from its foundations and run into an impasse. Carl Jung, CW 10, Para 317

One should never forget that one dreams in the first place, and almost to the exclusion of all else, of oneself. Carl Jung, CW 10, Para 321

It is amazing how people get caught in words. They imagine that the name postulates the thing—just as if we were doing the devil a serious wrong when we call him a neurosis! Carl Jung, CW 10, Para

The personality of the patient demands all the resources of the doctor's personality and not technical tricks. Carl Jung, CW 10, Para 338

When the ego has been made a "seat of anxiety," someone is running away from himself and will not admit it. Carl Jung, CW 10, Para 360

The elementary fact that a person always thinks another's psychology is identical with

his own effectively prevents a correct understanding of feminine psychology. Carl Jung, CW 10, Para 240

Women are increasingly aware that love alone can give them full stature, just as men are beginning to divine that only the spirit can give life its highest meaning. Both seek a psychic relationship, because love needs the spirit, and the spirit love, for its completion. Carl Jung, CW 10, Para 269

The love of woman is not sentiment, as is a man's, but a will that is at times terrifyingly unsentimental and can even force her to self-sacrifice. A man who is loved in this way cannot escape his inferior side, for he can only respond to the reality of her love with his own reality. Carl Jung, CW 10, Para 261

In the eyes of the ordinary man, love in its true sense coincides with the institution of marriage, and outside marriage there is only adultery or "platonic" friendship. For woman, marriage is not an institution at all but a human love-relationship. Carl Jung, CW 10, Para 255

Relationship is possible only if there is a psychic distance between people, in the same way that morality presupposes freedom. For this reason the unconscious tendency of woman aims at loosening the marriage structure, but not at the destruction of marriage and the family. Carl Jung, CW 10, Para 273

Seldom or never does a marriage develop into an individual relationship smoothly and without crises. There is no birth of consciousness without pain. Carl Jung, CW 10, Para 331

It is impossible to derive any philosophical system from the fundamental thoughts of primitive man. They provide only antinomies, but it is just these that are the inexhaustible source of all spiritual problems in all times and in all civilizations. Carl Jung, CW 10, Para 144

Sexuality dished out as sexuality is brutish; but sexuality as an expression of love is hallowed. Carl Jung, CW 10, Para 234

in his long history. And just as for the individual a time of dissociation is a time for sickness, so it is in the life of nations. We can hardly deny that ours is a time of dissociation and sickness. The political and social conditions, the fragmentation of religion and philosophy, the contending schools of modern art and modern psychology all have one meaning in this respect. And does anyone who is endowed with the slightest sense of responsibility feel any satisfaction at this turn of events? If we are honest, we must admit that no one feels quite comfortable in the present-day world; indeed, it becomes increasingly uncomfortable. The word "crisis," so often heard, is a medical expression which always tells us that the sickness has reached a dangerous climax. Carl Jung, CW 10, Para 290

Magic is the science of the jungle. Carl Jung, CW 10, Page 63.

Anything that comes upon me with this intensity I experience as numinous, no matter whether I call it divine or devilish or just "fate." Carl Jung, CW 10, Para 871

The unconscious is the only available source of religious experience. Carl Jung, CW 10, Para 565

So, too, man will be forced to develop his feminine side, to open his eyes to the psyche and to Eros, it is a task he can' not avoid. Carl Jung, CW 10, Page 125.

All psychological facts which cannot be verified with the help of scientific apparatus and exact measurement are assertions and opinions, and, as such, are psychic realities. Carl Jung, CW 10, Para, 839

Since the gods are without doubt personifications of psychic forces, to assert their meta-physical existence is as much an intellectual presumption as the opinion that they could ever be invented. Carl Jung, CW 10, Para 387

The man who has attained consciousness of the present is solitary. Carl Jung, CW 10, Para 150

None of us stands outside humanity's black collective shadow. Carl Jung, CW 10, Page 297

We should not try to "get rid" of a neurosis, but rather to experience what it means, what it has to teach, what its purpose is. Carl Jung, CW 10, Page 179

But God himself cannot flourish if man's soul is starved. Carl Jung, CW 10, Para 275

Religion means dependence on and submission to the irrational facts of experience. Carl Jung, CW 10, Para 505

The art of interpreting dreams cannot be learnt from books. Carl Jung, CW 10, Page 152.

No one who does not know himself can know others. And in each of us there is another whom we do not know. Carl Jung, CW 10, Page 152.

If only people could realize what an enrichment it is to find one's own guilt, what a sense of honour and spiritual dignity! Carl Jung, CW 10, Para 416.

The only thing that cannot be improved upon is morality, for every alteration of tradi-tional morality is by definition an immorality. This bon mot has an edge to it, against which many an innovator has barked his shins. Carl Jung, CW 10, Para 114

Nothing is so jealous as a truth. Carl Jung, CW 10, Para 190.

"a change in the attitude of the individual can bring about a renewal in the spirit of the nations." Carl Jung, CW 10, Para 459.

The victim is not the only sufferer; everybody in the vicinity of the crime, including the murderer, suffers with him. Something of the abysmal darkness of the world has broken in on us, poisoning the very air we breathe and befouling the pure water with the stale, nauseating taste of blood Carl Jung, CW 10, Para 410

True, we are innocent, we are the victims, robbed, betrayed, outraged; and yet for all that, or precisely because of it, the flame of evil glowers in our moral indignation. It must be

so, for it is necessary that someone should feel indignant, that someone should let himself be the sword of judgment wielded by fate Carl Jung, CW 10, Para 410

Evil calls for expiation, otherwise the wicked will destroy the world utterly, or the good suffocate in their rage which they cannot vent, and in either case no good will come of it Carl Jung, CW 10, Para 410

When evil breaks at any point into the order of things, our whole circle of psychic protection is disrupted. Action inevitably calls up reaction, and, in the matter of destructiveness, this turns out to be just as bad as the crime, and possibly even worse, because the evil must be exterminated root and branch Carl Jung, CW 10, Para 411

In order to escape the contaminating touch of evil we need a proper rite de sortie, a solemn admission of guilt by judge, hangman, and public, followed by an act of expiation. Carl Jung, CW 10, Para 411

Nevertheless, it should be clear to everyone that such a state of degradation [such as the Nazi concentration camps] can come about only under certain conditions. The most important of these is the accumulation of urban, industrialized masses of people torn from the soil, engaged in one-sided employment, and lacking every healthy instinct, even that of self-preservation Carl Jung, CW 10, Para 413

Loss of the instinct of self-preservation can be measured in terms of dependence on the State, which is a bad symptom. Dependence on the State means that everybody relies on everybody else (= State) instead of on himself. Every man hangs on to the next and enjoys a false feeling of security, for one is still hanging in the air even when hanging in the company of ten thousand other people. The only difference is that one is no longer aware of one's own insecurity Carl Jung, CW 10, Para 413

The increasing dependence on the State is anything but a healthy symptom; it means that the whole nation is in a fair way to becoming a herd of sheep, constantly relying on a shepherd to drive them into good pastures. The shepherd's staff soon becomes a rod of iron, and the shepherds turn into wolves Carl Jung, CW 10, Para 413

In childhood, the love of one's parents is a problem, and for the old man the problem is what he has made of his love. Love is a force of destiny whose power reaches from heaven to hell Carl Jung, CW 10, Para 198

We must, I think, understand love in this way if we are to do any sort of justice to the problems it involves. They are of immense scope and complexity, not confined to any particular province but covering every aspect of human life Carl Jung, CW 10, Para 198

The steady growth of the Welfare State is no doubt a very fine thing from one point of view, but from another it is a doubtful blessing, as it robs people of their individual responsibility and turns them into infants and sheep. Besides this, there is the danger that the capable will simply be exploited by the irresponsible, as happened on a huge scale in Germany Carl Jung, CW 10, Para 413

This invasion of love into all the collective spheres of life is, however, only a minor difficulty in comparison with the fact that love is also an intensely individual problem. For

it means that every general criterion and rule loses its validity, in exactly the same way that religious beliefs, although constantly codified in the course of history, are always, in essence, an individual experience which bows to no traditional rule Carl Jung, CW 10, Para 198

It is, unfortunately, only too clear that if the individual is not truly regenerated in spirit, society cannot be either, for society is the sum total of individuals in need of redemption. I can therefore see it only as a delusion when the Churches try—as apparently they do—to rope the individual into some social organization and reduce him to a condition of diminished responsibility, instead of raising him out of the torpid, mindless mass and making clear to him that he is the one important factor and that the salvation of the world consists in the salvation of the individual soul. Carl Jung, CW 10, Para 536

The carrier of this consciousness is the individual, who does not produce the psyche of his own volition but is, on the contrary, performed by it and nourished by the gradual awakening of consciousness during childhood. If therefore the psyche is of overriding empirical importance, so also is the individual, who is the only immediate manifestation of the psyche. Carl Jung, CW 10, Para 528

A neurosis is truly removed only when it has removed the false attitude of the ego. We do not cure it—it cures us. A man is ill, but the illness is nature's attempt to heal him, and what the neurotic flings away as absolutely worthless contains the true gold we should never have found elsewhere. Carl Jung, CW 10, Para 361

What the Christian sacrament of baptism purports to do is a landmark of the utmost significance in the psychic development of mankind. Baptism endows the individual with a living soul. I do not mean that the baptismal rite in itself does this, by a unique and magical act. I mean that the idea of baptism lifts man out of his archaic identification with the world and transforms him into a being who stands above it. The fact that mankind has risen to the level of this idea is baptism in the deepest sense, for it means the birth of the spiritual man who transcends nature. Carl Jung, CW 10, Para 136

It is not ethical principles, however lofty, or creeds, however orthodox, that lay the foundations for the freedom and autonomy of the individual, but simply and solely the empirical awareness, the incontrovertible experience of an intensely personal, reciprocal relationship between man and an extramundane authority which acts as a counterpoise to the "world" and its "reason." Carl Jung, CW 10, Para 509

Thus, the sickness of dissociation in our world is at the same time a process of recovery, or rather, the climax of a period of pregnancy which heralds the throes of birth. A time of dissociation such as prevailed during the Roman Empire is simultaneously an age of rebirth. Not without reason do we date our era from the age of Augustus, for that epoch saw the birth of the symbolical figure of Christ, who was invoked by the early Christians as the Fish, the Ruler of the Aeon of Pisces which had just begun. He became the ruling spirit of the next two thousand years. Like the teacher of wisdom in Babylonian legend, Cannes, he rose up from the sea, from the primeval darkness, and brought a world-period to an end. It is true that he said, "I am come not to bring peace but a sword." But that which brings division ultimately creates union. Therefore his teaching was one of all-uniting love. Carl Jung, CW 10, Para 293

Belief is no adequate substitute for inner experience, and where this is absent even a strong faith which came miraculously as a gift of grace may depart equally miraculously.

People call faith the true religious experience, but they do not stop to consider that actually it is a secondary phenomenon arising from the fact that something happened to us in the first place which instilled pistis into us—that is, trust and loyalty. Carl Jung, CW 10, Para 521

For thousands of years the mind of man has worried about the sick soul, perhaps even earlier than it did about the sick body. The propitiation of gods, the perils of the soul and its salvation, these are not yesterday's problems. Religions are psychotherapeutic systems in the truest sense of the word, and on the grandest scale. They express the whole range of the psychic problem in mighty images; they are the avowal and recognition of the soul, and at the same time the revelatio of the soul's nature. From this universal foundation no human soul is cut off; only the individual consciousness that has lost its connection with the psychic totality remains caught in the illusion that the soul is a small, circumscribed area, a fit subject for "scientific" theorizing. The loss of this great relationship is the prime evil of neurosis. Carl Jung, CW 10 Para 367

The reality of good and evil consists in things and situations that just happen to you, that are too big for you, where you are always facing death. Anything that comes upon me with this intensity I experience as numinous, no matter whether I call it divine or devilish or just "fate." Carl Jung, CW 10, Para 871

Grounds for an unusually intense fear of death are nowadays not far to seek they are obvious enough, the more so as all life that is senselessly wasted and misdirected means death too. This may account for the unnatural intensification of the fear of death in our time, when life has lost its deeper meaning for so many people, forcing them to exchange the life-preserving rhythm of the aeons for the dread ticking of the clock. Carl Jung, CW 10, Para 696

We distinctly resent the idea of invisible and arbitrary forces, for it is not so long ago that we made our escape from that frightening world of dreams and superstitions and constructed for ourselves a picture of the cosmos worthy of our rational consciousness—that latest and greatest achievement of man. We are now surrounded by a world that is obedient to rational laws. It is true that we do not know the causes of everything, but in time they will be discovered, and these discoveries will accord with our reasoned expectations. There are, to be sure, also chance occurrences, but they are merely accidental, and we do not doubt that they have a causality of their own. Chance happenings are repellent to the mind that loves order. They disturb the regular, predictable course of events in the most absurd and irritating way. We resent them as much as we resent invisible, arbitrary forces, for they remind us too much of Satanic imps or of the caprice of a deus ex machina. They are the worst enemies of our careful calculations and a continual threat to all our undertakings. Being admittedly contrary to reason, they deserve all our abuse, and yet we should not fail to give them their due. Carl Jung, CW 10, Para 113

"The stars of thine own fate lie in thy breast," says Seni to Wallenstein—a dictum that should satisfy all astrologers if we knew even a little about the secrets of the heart. But for this, so far, men have had little understanding. Nor would I dare to assert that things are any better today. Carl Jung, CW 10, Para 9

Whether primitive or not, mankind always stands on the brink of actions it performs it-self but does not control. The whole world wants peace and the whole world prepares for war, to take but one example. Mankind is powerless against mankind, and the gods, as ever, show

it the ways of fate. Today we call the gods "factors," which comes from facere, 'to make.' The makers stand behind the wings of the world-theatre. It is so in great things as in small. In the realm of consciousness we are our own masters; we seem to be the "factors" themselves. But if we step through the door of the shadow we discover with terror that we are the objects of unseen factors. Carl Jung CW 10 Para 49

It is dangerous to avow spiritual poverty, for the poor man has desires, and whoever has desires calls down some fatality on himself. A Swiss proverb puts it drastically: "Behind every rich man stands a devil, and behind every poor man two." Carl Jung, CW 10, Para 28

In our strength we are independent and isolated and are masters of our own fate; in our weakness we are dependent and bound, and become unwilling instruments of fate, for here it is not the individual will that counts but the will of the species. Carl Jung, CW 10, Para 28

Great innovations never come from above; they come invariably from below, just as trees never grow from the sky downward, but upward from the earth. The upheaval of our world and the upheaval of our consciousness are one and the same. Everything has become relative and therefore doubtful. And while man, hesitant and questioning, contemplates a world that is distracted with treaties of peace and pacts of friendship, with democracy and dictatorship, capitalism and Bolshevism, his spirit yearns for an answer that will allay the turmoil of doubt and uncertainty. And it is just the people from the obscurer levels who follow the unconscious drive of the psyche; it is the much-derided, silent folk of the land, who are less infected with academic prejudices than the shining celebrities are wont to be. Carl Jung, CW 10, Para 177

The "present" is a thin surface stratum that is laid down in the great centres of civilization. If it is very thin, as in Tsarist Russia, it has no meaning, as events have shown. But once it has attained a certain strength, we can speak of civilization and progress, and then problems arise that are characteristic of an epoch. Carl Jung, CW 10, Para 239

Who has fully realized that history is not contained in thick books but lives in our very blood? Carl Jung, CW 10, Para 266

The time is as great as one thinks it, and man grows to the stature of the time. Carl Jung, CW 10, Para 945

The man of the present must work for the future and leave others to conserve the past. He is therefore not only a builder but also a destroyer. He and his world have both become questionable and ambiguous. The ways that the past shows him and the answers it gives to his questions are insufficient for the needs of the present. All the old, comfortable ways are blocked, new paths have been opened up, and new dangers have arisen of which the past knew nothing. It is proverbial that one never learns anything from history, and in regard to present-day problems it usually teaches us nothing. The new path has to be made through untrodden regions, without presuppositions and often, unfortunately, without piety. Carl Jung, CW 10, Para 239

Sometimes, when we look back at history, it seems as though the present time had analogies with certain periods in the past, when great empires and civilizations had passed their zenith and were hastening irresistibly towards decay. But these analogies are deceptive, for there are always renaissances. What does move more clearly into the foreground is Europe's position

midway between the Asiatic East and the Anglo-Saxon—or shall we say American—West. Europe now stands between two colossi, both uncouth in their form but implacably opposed to one another in their nature. They are profoundly different not only racially but in their ideals. In the West there is the maximum political freedom with the minimum personal freedom; in the East it is just the opposite. We see in the West a tremendous development of Europe's technological and scientific tendencies, and in the Far East an awakening of all those spiritual forces which, in Europe, these tendencies hold in check. The power of the West is material, that of the East ideal. Carl Jung, CW 10, Para 237

Western man has no need of more superiority over nature, whether outside or inside. He has both in almost devilish perfection. What he lacks is conscious recognition of his inferiority to the nature around and within him. He must learn that he may not do exactly as he wills. If he does not learn this, his own nature will destroy him. Carl Jung, CW 10, Para 870

If you want to learn the greatest lesson India can teach you, wrap yourself in the cloak of your moral superiority, go to the Black Pagoda of Konarak, sit down in the shadow of the mighty ruin that is still covered with the most amazing collection of obscenities, read Murray's cunning old Handbook^ for India, which tells you how to be properly shocked by this lamentable state of affairs, and how you should go into the temples in the evening, because in the lamplight they look if possible "more (and how beautifully!) wicked"; and then analyse carefully and with the utmost honesty all your reactions, feelings, and thoughts. It will take you quite a while, but in the end, if you have done good work, you will have learned something about yourself, and about the white man in general, which you have probably never heard from anyone else. Carl Jung, CW 10, Para 1013

How totally different did the world appear to medieval man! For him the earth was eternally fixed and at rest in the centre of the universe, circled by a sun that solicitously bestowed its warmth. Men were all children of God under the loving care of the Most High, who prepared them for eternal blessedness; and all knew exactly what they should do and how they should conduct themselves in order to rise from a corruptible world to an incorruptible and joyous existence. Such a life no longer seems real to us, even in our dreams. Science has long ago torn this lovely veil to shreds. That age lies as far behind as childhood, when one's own father was unquestionably the handsomest and strongest man on earth. Carl Jung, CW 10, Para 162

Is a thing beautiful because I attribute beauty to it? Or is it the objective beauty of the thing that compels me to acknowledge it? As we know, great minds have wrestled with the problem whether it is the glorious sun that illuminates the world, or the sun-like human eye. Archaic man believes it to be the sun, and civilized man believes it to be the eye—so far, at any rate, as he reflects at all and does not suffer from the disease of the poets. He must de-psychize nature in order to dominate her; and in order to see his world objectively he must take back all his archaic projections. Carl Jung, CW 10, Para 135

For the Chinese, "spirit" does not signify order, meaning, and everything that is good on the contrary, it is a fiery and sometimes dangerous power. Carl Jung, CW 10, Para 939

I am convinced that a truly scientific attitude in psychology must lead to the conclusion that the dynamic processes o£ the psyche cannot be reduced to this or that concrete instinct—we should merely find ourselves back at the stage of the phlogiston theory. We shall be obliged to take the instincts as constituent parts of the psyche, and then abstract our principle of explanation from their mutual relationship. I have therefore pointed out that we

would do well to posit a hypothetical quantity, an "energy," as a psychological explanatory principle, and to call it "libido" in the classical sense of the word, without harbouring any prejudice with regard to its substantiality. With the help of such a quantity, the psychodynamic processes could be explained in an unobjectionable manner, without that unavoidable distortion which a concrete ground of explanation necessarily entails. Carl Jung, CW 10, Para 7

The man who promises everything is sure to fulfil nothing, and everyone who promises too much is in danger of using evil means in order to carry out his promises and is already on the road to perdition. Carl Jung, CW 10, Para, 413

The judgment of others is not in itself a standard of value, it may be no more than a useful piece of information. The individual has a right, indeed it is his duty, to set up and apply his own standard of value. In the last resort ethics are the concern of the individual. Carl Jung, CW 10, Para 912

I am neither spurred on by excessive optimism nor in love with high ideals but am merely concerned with the fate of the individual human being—that infinitesimal unit on whom a world depends, and in whom, if we read the meaning of the Christian message aright, even God seeks his goal. Carl Jung, CW 10, Para 588

We say that it is egoistic or "morbid" to be preoccupied with oneself; one's own company is the worst, "it makes you melancholy"—such are the glowing testimonials accorded to our human make-up. They are evidently deeply ingrained in our Western minds. Whoever thinks in this way has obviously never asked himself what possible pleasure other people could find in the company of such a miserable coward. Carl Jung, CW 10, Para 323

Nothing in us ever remains quite uncontradicted, and consciousness can take up no position which will not call up, somewhere in the dark corners of the psyche, a negation or a compensatory effect, approval or resentment. The "other" in us always seems alien and unacceptable; but if we let ourselves be aggrieved the feeling sinks in, and we are the richer for this little bit of self-knowledge Carl Jung, CW 10, Para 918

Only a fool is interested in other people's guilt, since he cannot alter it. The wise man learns only from his own guilt. He will ask himself: Who am I that all this should happen to me? To find the answer to this fateful question he will look into his own heart. Carl Jung, CW 10, Para 152

To confront a person with his shadow is to show him his own light. Once one has experienced a few times what it is like to stand judgingly between the opposites, one begins to understand what is meant by the self. Anyone who perceives his shadow and his light simultaneously sees himself from two sides and thus gets in the middle. Carl Jung, CW 10, Para 872

Only an exceedingly naive and unconscious person could imagine that he is in a position to avoid sin. Psychology can no longer afford childish illusions of this kind; it must ensure the truth and declare that unconsciousness is not only no excuse but is actually one of the most heinous sins. Human law may exempt it from punishment, but Nature avenges herself more mercilessly, for it is nothing to her whether a man is conscious of his sin or not. Carl Jung, CW 10, Para 676

Christ the ideal took upon himself the sins of the world. But if the ideal is wholly out-

side then the sins of the individual are also outside, and consequently he is more of a fragment than ever, since superficial misunderstanding conveniently enables him, quite literally, to "cast his sins upon Christ" and thus to evade his deepest responsibilities—which is contrary to the spirit of Christianity. Carl Jung, CW 10, Para 9

We psychologists have learned, through long and painful experience, that you deprive a man of his best resource when you help him to get rid of his complexes. You can only help him to become sufficiently aware of them and to start a conscious conflict within himself. In this way the complex becomes a focus of life. Anything that disappears from your psychological inventory is apt to turn up in the guise of a hostile neighbour, who will inevitably arouse your anger and make you aggressive. It is surely better to know that your worst enemy is right there in your own heart. Carl Jung, CW 10, Para 456

The people who fancy they are sure of themselves are the ones who are truly unsure. Our whole life is unsure, so a feeling of unsureness is much nearer to the truth than the illusion and bluff of sureness. In the long run it is the better adapted man who triumphs, not the wrongly self-confident, who is at the mercy of dangers from without and within. Carl Jung, CW 10. Para 18

No doubt it is a great nuisance that mankind is not uniform but compounded of individuals whose psychic structure spreads them over a span of at least ten thousand years. Hence there is absolutely no truth that does not spell salvation to one person and damnation to another. All universalisms get stuck in this terrible dilemma, Carl Jung, CW 10, Para 36

For a moral man the ethical problem is a passionate question which has its roots in the deepest instinctual processes as well as in his most idealistic aspirations. The problem for him is devastatingly real. It is not surprising, therefore, that the answer likewise springs from the depths of his nature. Carl Jung, CW 10, Para 289

Why do we always forget that there is nothing majestic or beautiful in the wide domain of human culture that did not grow originally from a lucky idea? What would become of mankind if nobody had lucky ideas anymore? It would be far truer to say that our consciousness is a sack which has nothing in it except what chances to fall into it. We never appreciate how dependent we are on lucky ideas—until we find to our distress that they will not come. Carl Jung, CW 10, Para 305

The true genius nearly always intrudes and disturbs. He speaks to a temporal world out of a world eternal. He says the wrong things at the right time. Eternal truths are never true at any given moment in history. The process of transformation has to make a halt in order to digest and assimilate the utterly impractical things that the genius has produced from the storehouse of eternity. Yet the genius is the healer of his time, because anything he reveals of eternal truth is healing. Carl Jung, CW 10, Para 1004

Nature, as we know, is not so lavish with her boons that she joins to a high intelligence the gifts of the heart also. As a rule, where one is present the other is missing, and where one capacity is present in perfection it is generally at the cost of all the others. Carl Jung, CW 10, Para 569

Has it ever—except in the most benighted periods of history—been observed that a scientific truth needed to be elevated to the rank of a dogma? Truth can stand on its own feet;

only shaky opinions require the support of dogmatization. Fanaticism is ever the brother of doubt, Carl Jung, CW 10, Para 335

The danger that faces us today is that the whole of reality will be replaced by words. This accounts for that terrible lack of instinct in modern man, particularly the city-dweller. He lacks all contact with life and the breath of nature. He knows a rabbit or a cow only from the illustrated paper, the dictionary, or the movies, and thinks he knows what it is really like—and is then amazed that cowsheds "smell," because the dictionary didn't say so. Carl Jung, CW 10, Para 882

One of the most fundamental characteristics of every civilization is the quality of permanence, something created by man and wrested from the meaningless flux of nature. Every house, every bridge, every street, is a witness to the value of duration in the midst of change. Carl Jung, CW 10, Para 923

He who is rooted in the soil endures. Alienation from the unconscious and from its historical conditions spells rootlessness. That is the danger that lies in wait for the conqueror of foreign lands, and for every individual who, through one-sided allegiance to any kind of -ism, loses touch with the dark, maternal, earthy ground of his being. Carl Jung, CW 10, Para 103

No one can make history who is not willing to risk everything for it, to carry the experiment with his own life through to the bitter end, and to declare that his life is not a continuation of the past, but a new beginning. Mere continuation can be left to the animals, but inauguration is the prerogative of man, the one thing he can boast of that lifts him above the beasts. Carl Jung, CW 10, Para 268

No man can begin with the present; he must slowly grow into it, for there would be no present but for the past. A young person has not yet acquired a past; therefore he has no present either. He does not create culture, he merely exists. It is the privilege and the task of maturer people, who have passed the meridian of life, to create culture. Carl Jung, CW 10, Para 272

It is obvious that in handling "big" dreams intuitive guesswork will lead nowhere. Wide knowledge is required, such as a specialist ought to possess. But no dream can be interpreted with knowledge alone. This knowledge, furthermore, should not be dead material that has been memorized; it must possess a living quality, and be infused with the experience of the person who uses it. Of what use is philosophical knowledge in the head, if one is not also a philosopher at heart? Carl Jung, CW 10, Para 324

Most men are erotically blinded—they commit the unpardonable mistake of confusing Eros with sex. A man thinks he possesses a woman if he has her sexually. He never possesses her less, for to a woman the Eros-relationship is the real and decisive one. For her, marriage is a relationship with sex thrown in as an accompaniment. Carl Jung, CW 10, Para 255

Traditionally, man is regarded as the marriage breaker. This legend comes from times long past, when men still had leisure to pursue all sorts of pastimes. But today life makes so many demands on men that the noble hidalgo, Don Juan, is to be seen nowhere save in the theatre. More than ever man loves his comfort, for ours is an age of neurasthenia, impotence, and easy chairs. There is no energy left for window-climbing and duels. If anything is to happen in the way of adultery it must not be too difficult. In no respect

must it cost too much, hence the adventure can only be of a transitory kind. The man of to-day is thoroughly scared of jeopardizing marriage as an institution. Carl Jung, CW 10, Para 248

Woman nowadays feels that there is no real security in marriage, for what does her husband's faithfulness mean when she knows that his feelings and thoughts are running after others and that he is merely too calculating or too cowardly to follow them? What does her own faithfulness mean when she knows that she is simply using it to exploit her legal right of possession, and warping her own soul? She has intimations of a higher fidelity to the spirit and to a love beyond human weakness and imperfection. Carl Jung, CW 10, Para 270

Do our legislators really know what "adultery" is? Is their definition of it the final embodiment of the truth? From the psychological standpoint, the only one that counts for a woman, it is a wretched piece of bungling, like everything else contrived by men for the purpose of codifying love. For a woman, love has nothing to do with "marital misconduct," "extramarital intercourse," "deception of the husband," or any of the less savoury formulas invented by the erotically blind masculine intellect and echoed by the self-opinionated demon in woman. Children have an almost uncanny instinct for the teacher's personal shortcomings. They know the false from the true far better than one likes to admit. Therefore the teacher should watch his own psychic condition, so that he can spot the source of the trouble when anything goes wrong with the children entrusted to his care. He himself may easily be the unconscious cause of evil. Naturally we must not be too naive in this matter there are people, doctors as well as teachers, who secretly believe that a person in authority has the right to behave just as he likes, and that it is up to the child to adapt as best he may, because sooner or later he will have to adapt to real life which will treat him no better. Such people are convinced at heart that the only thing that matters is material success, and that the only real and effective moral restraint is the policeman behind the penal code. No doubt we are right to open the eyes and ears of our young people to the wide world, but it is the maddest of delusions to think that this really equips them for the task of living. It is the kind of training that enables a young person to adapt himself outwardly to the world and reality, but no one gives a thought to the necessity of adapting to the self, to the powers of the psyche, which are far mightier than all the Great Powers of the earth. A system of education does indeed exist, but it has its origins partly in antiquity and partly in the early Middle Ages. It styles itself the Christian Church. But it cannot be denied that in the course of the last two centuries Christianity, no less than Confucianism in China and Buddhism in India, has largely forfeited its educative activity. Human iniquity is not to blame for this, but rather a gradual and widespread spiritual change, the first symptom of which was the Reformation. It shattered the authority of the Church as a teacher, and thereafter the authoritarian principle itself began to crumble away. The inevitable consequence was an increase in the importance of the individual, which found expression in the modern ideals of humanity, social welfare, democracy, and equality. Carl Jung, CW 10, Para 326

Nobody but the absolute believer in the inviolability of traditional marriage could perpetrate such breaches of good taste, just as only the believer in God can really blaspheme. Whoever doubts marriage in the first place cannot infringe against it; for him the legal definition is invalid because, like St. Paul, he feels himself beyond the law, on the higher plane of love. But because the believers in the law so frequently trespass against their own laws, whether from stupidity, temptation, or mere viciousness, the modern woman begins to wonder whether she too may not belong to the same category. Carl Jung, CW 10, Para 265

Secretaries, typists, shop-girls, all are agents of this process, and through a million sub-

terranean channels creeps the influence that is undermining marriage. For the desire of all these women is not to have sexual adventures only the stupid could believe that—but to get married. The possessors of that bliss must be ousted, not as a rule by naked force, but by that silent, obstinate desire which, as we know, has magical effects, like the fixed stare of a snake. This was ever the way of women. Carl Jung, CW 10, Para 251

It is no longer a question of a few dozen voluntary or involuntary old maids here and there, but of millions. Our legislation and our social morality give no answer to this question. Or can the Church provide a satisfactory answer? Should we build gigantic nunneries to accommodate all these women? Or should tolerated prostitution be increased? Obviously this is impossible, since we are dealing neither with saints nor sinners but with ordinary women who cannot register their spiritual requirements with the police. They are decent women who want to marry, and if this is not possible, well—the next best thing. Carl Jung, CW 10, Para 248

It is a bad sign when doctors begin writing books of advice on how to achieve the "perfect marriage." Healthy people need no doctors. Marriage today has indeed become rather precarious. In America about a quarter of the marriages end in divorce. And the remarkable thing is that this time the scapegoat is not the man but the woman. She is the one who doubts and feels uncertain. It is not surprising that this is so, for in post-war Europe there is such an alarming surplus of unmarried women that it would be inconceivable if there were no reaction from that quarter. Carl Jung, CW 10, Para 248

Since the aims of the second half of life are different from those of the first, to linger too long in the youthful attitude produces a division of the will. Consciousness still presses forward in obedience, as it were, to its own inertia, but the unconscious lags behind, because the strength and inner resolve needed for further expansion have been sapped. This disunity with oneself begets discontent, and since one is not conscious of the real state of things one generally projects the reasons for it upon one’s partner. A critical atmosphere thus develops, the necessary prelude to conscious realization. Carl Jung, CW 10, Para 331

Human relationship leads into the world of the psyche, into that intermediate realm between sense and spirit, which contains something of both and yet forfeits nothing of its own unique character. Into this territory a man must venture if he wishes to meet woman halfway. Circumstances have forced her to acquire a number of masculine traits, so that she shall not remain caught in an antiquated, purely instinctual femininity, lost and alone in the world of men. So, too, man will be forced to develop his feminine side, to open his eyes to the psyche and to Eros. It is a task he cannot avoid, unless he prefers to go trailing after woman in a hopelessly boyish fashion, worshipping from afar but always in danger of being stowed away in her pocket. Carl Jung, CW 10, Para 258

The masculinity of the woman and the femininity of the man are inferior, and it is regrettable that the full value of their personalities should be contaminated by something that is less valuable. On the other hand, the shadow belongs to the wholeness of the personality the strong man must somewhere be weak, somewhere the clever man must be stupid, otherwise he is too good to be true and falls back on pose and bluff. Is it not an old truth that woman loves the weaknesses of the strong man more than his strength, and the stupidity of the clever man more than his cleverness? Carl Jung, CW 10, Para 261

The question of relationship borders on a region that for a man is dark and painful. He can face this question only when the woman carries the burden of suffering, that is, when he

is the "contained"—in other words, when she can imagine herself having a relationship with another man, and as a consequence suffering disunion within herself. Then it is she who has the painful problem, and he is not obliged to see his own, which is a great relief to him. In this situation he is not unlike a thief who, quite undeservedly, finds himself in the enviable position of having been forestalled by another thief who has been caught by the police. Suddenly he becomes an honourable, impartial onlooker. In any other situation a man always finds the discussion of personal relations painful and boring, just as his wife would find it boring if he examined her on the Critique of Pure Reason. For him, Eros is a shadowland which entangles him in his feminine unconscious, in something "psychic," while for woman Logos is a deadly boring kind of sophistry if she is not actually repelled and frightened by it. Carl Jung, CW 10, Para 256

Unconscious assumptions or opinions are the worst enemy of woman; they can even grow into a positively demonic passion that exasperates and disgusts men and does the woman herself the greatest injury by gradually smothering the charm and meaning of her femininity and driving it into the background. Such a development naturally ends in profound psychological disunion, in short, in a neurosis. Carl Jung, CW 10, Para 245

It is a woman's outstanding characteristic that she can do anything for the love of a man. But those women who can achieve something important for the love of a thing are most exceptional, because this does not really agree with their nature. Love for a thing is a man's prerogative. But since masculine and feminine elements are united in our human nature, a man can live in the feminine part of himself, and a woman in her masculine part. None the less the feminine element in man is only something in the background, as is the masculine element in woman. If one lives out the opposite sex in oneself one is living in one's own background, and one's real individuality suffers. A man should live as a man and a woman as a woman. Carl Jung, CW 10, Para 243

What can a man say about woman, his own opposite? I mean of course something sensible, that is outside the sexual programme, free of resentment, illusion, and theory. Where is the man to be found capable of such superiority? Woman always stands just where the man's shadow falls, so that he is only too liable to confuse the two. Then, when he tries to repair this misunderstanding, he overvalues her and believes her the most desirable thing in the world, Carl Jung, CW 10, Para 236

The discussion of the sexual problem is only a somewhat crude prelude to a far deeper question, and that is the question of the psychological relationships between the sexes. In comparison with this the other pales into insignificance, and with it we enter the real domain of woman. Woman's psychology is founded on the principle of Eros, the great binder and loosener, whereas from ancient times the ruling principle ascribed to man is Logos. Carl Jung, CW 10, Para 254

[All that pertains to the opposite sex] has a mysterious charm tinged with fear, perhaps even with disgust. For this reason its charm is particularly attractive and fascinating, even when it comes to us not directly from outside, in the guise of a woman, but from within, as a psychic influence—for instance in the form of a temptation to abandon oneself to a mood or an affect. Carl CW 10, Para 244

A conscientious doctor must be able to doubt all his skills and all his theories, otherwise he is be fooled by a system. But all systems mean bigotry and inhumanity. Neurosis —let there be no doubt about this—may be any number of things, but never a "nothing but."

It is the agony of a human soul in all its vast complexity—so vast, indeed, that any and every theory of neurosis is little better than a worthless sketch, unless it be a gigantic picture of the psyche which not even a hundred Fausts could conceive. Carl Jung, CW 10, Para 357

The patient has not to learn how to get rid of his neurosis, but how to bear it. His illness is not a gratuitous and therefore meaningless burden; it is his own self, the "other" whom, from childish laziness or fear, or for some other reason, he was always seeking to exclude from his life. In this way, as Freud rightly says, we turn the ego into a "seat of anxiety," which it would never be if we did not defend ourselves against ourselves so neurotically. Carl Jung, CW 10, Para 360

Hidden in the neurosis is a bit of still undeveloped personality, a precious fragment of the psyche lacking which a man is condemned to resignation, bitterness, and everything else that is hostile to life. A psychology of neurosis that sees only the negative elements empties out the baby with the bathwater, since it neglects the positive meaning and value of these "infantile"—i.e., creative—fantasies. Carl Jung, CW 10, Para 355

Infantilism, however, is something extremely ambiguous. First, it can be either genuine or purely symptomatic; and second, it can be either residuary or embryonic. There is an enormous difference between something that has remained infantile and something that is in the process of growth. Both can take an infantile or embryonic form, and more often than not it is impossible to tell at first glance whether we are dealing with a regrettably persistent fragment of infantile life or with a vitally important creative beginning. To deride these possibilities is to act like a dullard who does not know that the future is more important than the past. Carl Jung, CW 10, Para 345

A neurosis is by no means merely a negative thing, it is also something positive. Only a soulless rationalism reinforced by a narrow materialistic outlook could possibly have overlooked this fact. In reality the neurosis contains the patient’s psyche, or at least an essential part of it; and if, as the rationalist pretends, the neurosis could be plucked from him like a bad tooth, he would have gained nothing but would have lost something very essential to him. That is to say, he would have lost as much as the thinker deprived of his doubt, or the moralist deprived of his temptation, or the brave man deprived of his fear. To lose a neurosis is to find oneself without an object; life loses its point and hence its meaning. This would not be a cure; it would be a regular amputation. Carl Jung, CW 10, Para 355

It is presumptuous to think we can always say what is good or bad for the patient. Perhaps he knows something is really bad and does it anyway and then get a bad conscience. From the therapeutic, that is to say empirical, point of view, this may be very good indeed for him. Perhaps he has to experience the power of evil and suffer accordingly, because only in that way can he give up his Pharisaic attitude to other people. Perhaps fate or the unconscious or God —call it what you will—had to give him a hard knock and roll him in the dirt, because only such a drastic experience could strike home, pull him out of his infantilism, and make him more mature. How can anyone find out how much he needs to be saved if he is quite sure that there is nothing he needs saving from? Carl Jung, CW 10, Para 867

Each new case that requires thorough treatment is pioneer work, and every trace of routine then proves to be a blind alley. Consequently the higher psychotherapy is a most exacting business, and sometimes it sets tasks which challenge not only our understanding or our sympathy but the whole man. The doctor is inclined to demand this total effort from his patients, yet he must realize that this same demand only works if he is aware that it also

applies to himself. Carl Jung, CW 10, Para 3II

To concern ourselves with dreams is a way of reflecting on ourselves—a way of self-reflection. It is not our ego-consciousness reflecting on itself; rather, it turns its attention to the objective actuality of the dream as a communication or message from the unconscious, unitary soul of humanity. It reflects not on the ego but on the self; it recollects that strange self, alien to the ego, which was ours from the beginning, the trunk from which the ego grew. It is alien to us because we have estranged ourselves from it through the aberrations of the conscious mind. Carl Jung, CW 10, Para 318

A dream is nothing but a lucky idea that comes to us from the dark, all-unifying world of the psyche. What would be more natural, when we have lost ourselves amid the endless particulars and isolated details of the world's surface, than to knock at the door of dreams and inquire of them the bearings which would bring us closer to the basic facts of human existence? Here we encounter the obstinate prejudice that dreams are so much froth, they are not real, they lie, they are mere wish-fulfilments. All this is but an excuse not to take dreams seriously, for that would be uncomfortable. Our intellectual hybris of consciousness loves isolation despite all its inconveniences, and for this reason people will do anything rather than admit that dreams are real and speak the truth. There are some saints who had very rude dreams. Where would their saintliness be, the very thing that exalts them above the vulgar rabble, if the obscenity of a dream were a real truth? But it is just the most squalid dreams that emphasize our blood-kinship with the rest of mankind, and most effectively damp down the arrogance born of an atrophy of the instincts. Even if the whole world were to fall to pieces, the unity of the psyche would never be shattered. And the wider and more numerous the fissures on the surface, the more this unity is strengthened in the depths. Carl Jung, CW 10, Para 305

In each of us there is another whom we do not know. He speaks to us in dreams and tells us how differently he sees us from the way we see ourselves. When, therefore, we find ourselves in a difficult situation to which there is no solution, he can sometimes kindle a light that radically alters our attitude—the very attitude that led us into the difficult situation. Carl Jung, CW 10, Para 325

One would do well to treat every dream as though it were a totally unknown object. Look at it from all sides, take it in your hand, carry it about with you, let your imagination play round it, and talk about it with other people. Primitives tell each other impressive dreams, in a public palaver if possible, and this custom is also attested in late antiquity, for all the ancient peoples attributed great significance to dreams. Treated in this way, the dream suggests all manner of ideas and associations which lead us closer to its meaning. The ascertainment of the meaning is, I need hardly point out, an entirely arbitrary affair, and this is where the hazards begin. Narrower or wider limits will be set to the meaning, according to one's experience, temperament, and taste. Some people will be satisfied with little, for others much is still not enough. Also the meaning of the dream, or our interpretation of it, is largely dependent on the intentions of the interpreter, on what he expects the meaning to be or requires it to do. In eliciting the meaning he will involuntarily be guided by certain presuppositions, and it depends very much on the scrupulousness and honesty of the investigator whether he gains something by his interpretation or perhaps only becomes still more deeply entangled in his mistakes. Carl Jung, CW 10, Para 320

As individuals we are not completely unique but are like all other men. Hence a dream

with a collective meaning is valid in the first-place tor the dreamer, but it expresses at the same time the fact that his momentary problem is also the problem of other people. This is often of great practical importance, for there are countless people who are inwardly cut off from humanity and oppressed by the thought that nobody else has their problems. Or else they are those all-too-modest souls who, feeling themselves nonentities, have kept their claim to social recognition on too low a level. Moreover, every individual problem is somehow connected with the problem of the age, so that practically every subjective difficulty has to be viewed from the standpoint of the human situation as a whole. But this is permissible only when the dream really is a mythological one and makes use of collective symbols. Carl Jung, CW 10, Para 323

If, in addition to this, we bear in mind that the unconscious contains everything that is lacking to consciousness, that the unconscious therefore has a compensatory tendency, then we can begin to draw conclusions—provided, of course, that the dream does not come from too deep a psychic level. If it is a dream of this kind, it will as a rule contain mythological motifs, combinations of ideas or images which can be found in the myths of one's own folk or in those of other races. The dream will then have a collective meaning, a meaning which is the common property of mankind. Carl Jung, CW 10, Para 322

When we consider the infinite variety of dreams, it is difficult to conceive that there could ever be a method or a technical procedure which would lead to an infallible result. It is, indeed, a good thing that no valid method exists, for otherwise the meaning of the dream would be limited in advance and would lose precisely that virtue which makes dreams so valuable for therapeutic purposes —their ability to offer new points of view. Carl Jung, CW 10, Para 319

The dream is a little hidden door in the innermost and most secret recesses of the soul, opening into that cosmic night which was psyche long before there was any ego consciousness, and which will remain psyche no matter how far our ego-consciousness extends. For all ego-consciousness is isolated; because it separates and discriminates, it knows only particulars, and it sees only those that can be related to the ego. Its essence is limitation, even though it reach to the farthest nebulae among the stars. All consciousness separates: but in dreams we put on the likeness of that more universal, truer, more eternal man dwelling in the darkness of primordial night. There he is still the whole, and the whole is in him, indistinguishable from nature and bare of all egohood. It is from these all-uniting depths that the dream arises, be it never so childish, grotesque, and immoral. Carl Jung, CW 10, Para 304

It is not only primitive man whose psychology is archaic. It is the psychology also of modern, civilized man, and not merely of individual "throw-backs" in modern society. On the contrary, every civilized human being, however high his conscious development, is still an archaic man at the deeper levels of his psyche. Just as the human body connects us with the mammals and displays numerous vestiges of earlier evolutionary stages going back even to the reptilian age, so the human psyche is a product of evolution which, when followed back to its origins, shows countless archaic traits. Carl Jung, CW 10, Para 105

The psyche consists essentially of images. It is a series of images in the truest sense, not an accidental juxtaposition or sequence, but a structure that is throughout full of meaning and purpose; it is a "picturing" of vital activities. And just as the material of the body that is ready for life has need of the psyche in order to be capable of life, so the psyche presupposes the living body in order that its images may live. Carl Jung, CW 10, Para 618

Without consciousness there would, practically speaking, be no world, for the world exists for us only in so far as it is consciously reflected by a psyche. Consciousness is a precondition of being. Thus the psyche is endowed with the dignity of a cosmic principle, which philosophically and in fact gives it a position co-equal with the principle of physical being. The carrier of this consciousness is the individual, who does not produce the psyche of his own volition but is, on the contrary, performed by it and nourished by the gradual awakening of consciousness during childhood. If therefore the psyche is of overriding empirical importance, so also is the individual, who is the only immediate manifestation of the psyche. Carl Jung, CW 10, Para 528

The man who has attained consciousness of the present is solitary. The "modern" man has at all times been so, for every step towards fuller consciousness removes him further from his original, purely animal participation mystique with the herd, from submersion in a common unconsciousness. Every step forward means tearing oneself loose from the maternal womb of unconsciousness in which the mass of men dwells. Carl Jung, CW 10, Para 150

The unconscious is the only available source of religious experience. This is certainly not to say that what we call the unconscious is identical with God or is set up in his place. It is simply the medium from which religious experience seems to flow. As to what the further cause of such experience might be, the answer to this lies beyond the range of human knowledge. Knowledge of God is a transcendental problem. Carl Jung, CW 10, Para 565

It suits our hypertrophied and hybristic modern consciousness not to be mindful of the dangerous autonomy of the unconscious and to treat it negatively as an absence of consciousness. The hypothesis of invisible gods or daemons would be, psychologically, a far more appropriate formulation, even though it would be an anthropomorphic projection. But since the development of consciousness requires the withdrawal of all the projections we can lay our hands on, it is not possible to maintain any non-psychological doctrine about the gods. Since the gods are without doubt personifications of psychic forces, to assert their metaphysical existence is as much an intellectual presumption as the opinion that they could ever be invented. Not that "psychic forces" have anything to do with the conscious mind, fond as we are of playing with the idea that consciousness and psyche are identical. This is only another piece of intellectual presumption. "Psychic forces" have far more to do with the realm of the unconscious. Our mania for rational explanations obviously has its roots in our fear of metaphysics, for the two were always hostile brothers. Hence anything unexpected that approaches us from that dark realm is regarded either as coming from outside and therefore as real, or else as an hallucination and therefore not true. The idea that anything could be real or true which does not come from outside has hardly begun to dawn on. Carl Jung, CW 10, Para 387

The primitive form of conscience is paradoxical to burn a heretic is on the one hand a pious and meritorious act as John Hus himself ironically recognized when, bound to the stake, he espied an old woman hobbling towards him with a bundle of faggots, and exclaimed, "O sancta simplicitas!"— and on the other hand a brutal manifestation of ruthless and savage lust for revenge, Carl Jung, CW 10, Para 845

Whatever name we may put to the psychic background, the fact remains that our consciousness is influenced by it in the highest degree, and all the more so the less we are conscious of it. The layman can hardly conceive how much his inclinations, moods, and decisions are influenced by the dark forces of his psyche, and how dangerous or helpful they

may be in shaping his destiny. Our cerebral consciousness is like an actor who has forgotten that he is playing a role. But when the play comes to an end, he must remember his own subjective reality, for he can no longer continue to live as Julius Caesar or as Othello, but only as himself, from whom he has become estranged by a momentary sleight of consciousness. He must know once again that he was merely a figure on the stage who was playing a piece by Shakespeare, and that there was a producer as well as a director in the background who, as always, will have something very important to say about his acting, Carl Jung, CW 10, Para 332

Besides the "right" kind of conscience there is a "wrong" one, which exaggerates, perverts, and twists evil into good and good into evil just as our own scruples do; and it does so with the same compulsiveness and with the same emotional consequences as the "right" kind of conscience. Were it not for this paradox the question of conscience would present no problem we could then rely wholly on its decisions so far as morality is concerned. But since there is great and justified uncertainty in this regard, it needs unusual courage or—what amounts to the same thing—unshakable faith for a person simply to follow the dictates of his own conscience. As a rule one obeys only up to a certain point, which is determined in advance by the moral code. This is where those dreaded conflicts of duty begin. Generally they are answered according to the precepts of the moral code, but only in a very few cases are they really decided by an individual act of judgment. For as soon as the moral code ceases to act as a support, conscience easily succumbs to a fit of weakness, Carl Jung, CW 10, Para 835

"Conscience," in ordinary usage, means the consciousness of a factor which in the case of a "good conscience" affirms that a decision or an act accords with morality and, if it does not, condemns it as "immoral." This view, deriving as it does from the mores^ from what is customary, can properly be called "moral." Distinct from this is the ethical form of conscience, which appears when two decisions or ways of acting, both affirmed to be moral and therefore regarded as "duties," collide with one another. In these cases, not foreseen by the moral code because they are mostly very individual, a judgment is required which cannot properly be called "moral" or in accord with custom. Here the decision has no custom at its disposal on which it could rely. The deciding factor appears to be something else it proceeds not from the traditional moral code but from the unconscious foundation of the personality. The decision is drawn from dark and deep waters. It is true these conflicts of duty are solved very often and very conveniently by a decision in accordance with custom, that is, by suppressing one of the opposites. But this is not always so. If one is sufficiently conscientious the conflict is endured to the end, and a creative solution emerges which is produced by the constellated archetype and possesses that compelling authority not unjustly characterized as the voice of God. Carl Jung, CW 10, Para 856

Where is a height without depth, and how can there be light that throws no shadow? There is no good that is not opposed by evil. "No man can be redeemed from a sin he has not committed," says Carpocrates; a deep saying for all who wish to understand, and a golden opportunity for all those who prefer to draw false conclusions. What is down below is not just an excuse for more pleasure, but something we fear because it demands to play its part in the life of the more conscious and more complete man. Carl Jung, CW 10, Para 271

The optimum of life is not to be found in crude egoism, for fundamentally man is so constituted that the pleasure he gives his neighbour is something essential to him. Nor can the optimum be reached by an unbridled craving for individualistic supremacy, for the collective element in man is so powerful that his longing for fellowship would destroy all pleasure in naked egoism.

The optimum can be reached only through obedience to the tidal laws of the libido, by which systole alternates with diastole—laws which bring pleasure and the necessary limitations of pleasure, and also set us those individual life-Does neutral Switzerland, with its backward, earthy nature, fulfil any meaningful function in the European system? I think we must answer this question affirmatively. The answer to political or cultural questions need not be only: Progress and Change, but also: Stand still! Hold fast! These days one can doubt in good faith whether the condition of Europe shows any change for the better since the war. Opinions, as we know, are very divided, and we have just heard Spengler's lamentations on the decline of the West. Progress can occasionally go down-hill, and in the face of a dangerously rapid tempo standing still can be a lifesaver. Nations, too, get tired and long for political and social stabilization. The Pax Romana meant a good deal to the Roman Empire. Carl Jung, CW 10, Para 922

There are two kinds of interference which cause the hackles of the Swiss to rise: political and spiritual. Everyone can understand why they should defend themselves to the utmost against political interference, and this utmost is the art of neutrality born of necessity. But why they should defend themselves against spiritual interference is rather more mysterious. It is, however, a fact, as I can confirm from my own experience. English, American, and German patients are far more open to new ideas than the Swiss. A new idea for the Swiss is always something of a risk; it is like an unknown, dangerous animal, which must if possible be circumvented or else approached with extreme caution. Carl Jung, CW 10, Para 916

If it be true that we are the most backward, conservative, stiff-necked, self-righteous, smug, and churlish of all European nations, this would mean that in Switzerland the European is truly at home in his geographical and psychological centre. There he is attached to the earth, unconcerned, self-reliant, conservative, and backward—in other words, still intimately connected with the past, occupying a neutral position between the fluctuating and contradictory aspirations and opinions of the other nations or functions. That wouldn't be a bad role for the Swiss to act as Europe's centre of gravity. Carl Jung, CW 10, Para 920

The revolution in our conscious outlook, brought about by the catastrophic results of the [first] World War, shows itself in our inner life by the shattering of our faith in ourselves and our own worth. We used to regard foreigners as political and moral reprobates, but the modern man is forced to recognize that he is politically and morally just like anyone else. Whereas formerly I believed it was my bounden duty to call others to order, I must now admit I need calling to order myself. Carl Jung, CW 10, Para 162

The horror which the dictator States have of late brought upon mankind is nothing less than the culmination of all those atrocities of which our ancestors made themselves guilty in the not so distant past. Quite apart from the barbarities and blood baths perpetrated by the Christian nations among themselves throughout European history, the European has also to answer for all the crimes he has committed against the coloured races during the process of colonization. In this respect the white man carries a very heavy burden indeed. It shows us a picture of the common human shadow that could hardly be painted in blacker colours. The evil that comes to light in man and that undoubtedly dwells within him is of gigantic proportions. Carl Jung, CW 10, Para 571

We need not be ashamed of ourselves as a nation, nor can we alter its character. Only the individual can alter or improve himself, provided he can outgrow his national prejudices in the course of his psychic development. The national character is imprinted on a man as a fate he has not chosen—like a beautiful or an ugly body. It is not the will of individuals that moulds

the destinies of nations, but supra-personal factors, the spirit and the earth, which work in mysterious ways and in unfathomable darkness. Carl Jung, CW 10, Para 921

The mystery of the earth is no joke and no paradox. One only needs to see how, in America, the skull and pelvis measurements of all the European races begin to indianize themselves in the second generation of immigrants. That is the mystery of the American earth. The soil of every country holds some such mystery. We have an unconscious of this in the psyche: just as there is a relationship of mind to body, so there is a relationship of body to earth. Carl Jung, CW 10, Para 18

The Swiss national character that has been built up over the centuries was not formed by chance; it is a meaningful response to the dangerously undermining influence of the environment. We Swiss should certainly understand why a mind like Keyserling's judges us so harshly, but he should also understand that the very things he taxes us with belong to our most necessary possessions. Carl Jung, CW 10, CW 924

Our loveliest mountain, which dominates Switzerland far and wide, is called the Jungfrau—the "Virgin." The Virgin Mary is the female patron saint of the Swiss. Of her Tertullian says: "that virgin earth, not yet watered by the rains," and Augustine: "Truth has arisen from the earth, because Christ is born of a virgin." These are living reminders that the virgin mother is the earth. From olden times the astrological sign for Switzerland was either Virgo or Taurus; both are earth-signs, a sure indication that the earthy character of the Swiss had not escaped the old astrologers. From the earth-boundness of the Swiss come all their bad as well as their good qualities: their down-to earthness, their limited outlook, their non-spirituality, their parsimony, stolidity, stubbornness, dislike of foreigners, mistrustfulness, as well as that awful Schwizerdutsch and their refusal to be bothered, or to put it in political terms, their neutrality. Switzerland consists of numerous valleys, depressions in the earth's crust, in which the settlements of man are embedded. Nowhere are there measureless plains, where it is a matter of indifference where a man lives; nowhere is there a coast against which the ocean beats with its lore of distant lands. Buried deep in the backbone of the continent, sunk in the earth, the Alpine dweller lives like a troglodyte, surrounded by more powerful nations that are linked with the wide world, that expand into colonies or can grow rich on the treasures of their soil. The Swiss cling to what they have, for the others, the more powerful ones, have grabbed everything else. Under no circumstances will the Swiss be robbed of their own. Their country is small, their possessions limited. If they lose what they have, what is going to replace it? Carl Jung, CW 10, Para 914

Through his identification with the collective psyche a patient will infallibly try to force the demands of his unconscious upon others, for identity with the collective psyche always brings with it a feeling of universal validity—"godlikeness"—which completely ignores all differences in the personal psyche of his fellows. (The feeling of universal validity comes, of course, from the universality of the collective psyche.) A collective attitude naturally presupposes this same collective psyche in others. But that means a ruthless disregard not only of individual differences but also of differences of a more general kind within the collective psyche itself, as for example differences of race. This disregard for individuality obviously means the suffocation of the single individual, as a consequence of which the element of differentiation is obliterated from the community, Carl Jung, CW 10, Para 240

Far too little attention has been paid to the fact that, for all our irreligiousness, the distinguishing mark of the Christian epoch, its highest achievement, has become the congenital

vice of our age: the supremacy of the word, of the Logos, which stands for the central figure of our Christian faith. The word has literally become our god, and so it has remained, even if we knew of Christianity only by hearsay. Words like "Society" and "State" are so concretized that they are almost personified. In the opinion of the man in the street, the "State," far more than any king in history, is the inexhaustible giver of all good; the "State" is invoked, made responsible, grumbled at, and so on and so forth. Society is elevated to the rank of a supreme ethical principle; indeed, it is even credited with positively creative capacities. No one seems to notice that this worship of the word, which was necessary at a certain phase of man's mental development, has a perilous shadow side. That is to say, the moment the word, as a result of centuries of education, attains universal validity, it severs its original connection with the divine Person. There is then a personified Church, a personified State; belief in the word becomes credulity, and the word itself an infernal slogan capable of any deception. Carl Jung, CW 10, Para 554

The mass as such is always anonymous and always irresponsible. So-called leaders are the inevitable symptoms of a mass movement. The true leaders of mankind are always those who are capable of self-reflection, and who relieve the dead weight of the masses at least of their own weight, consciously holding aloof from the blind momentum of the mass in movement. But who can resist this all-engulfing force of attraction, when each man clings to the next and each drags the other with him? Only one who is firmly rooted not only in the outside world but also in the world within. Carl Jung, CW 10, Para 326

It is indeed no small matter to know one's own guilt and one's own evil, and there is certainly nothing to be gained by losing sight of one's shadow. When we are conscious of our guilt we are in a more favorable position - we can at least hope to change and improve ourselves. Carl Jung, CW 10, Para 440.

But the full extent of these projections from the unconscious became known through analysis of those obscure and inexplicable feelings and emotions which give some intangible, magical quality to certain places, certain moods of nature, certain works of art, and also to certain ideas and certain people. This magic likewise comes from projection, but a projection of the collective unconscious Carl Jung, CW 10, Para 43

If it is inanimate objects that have the "magical" quality, often their mere statistical incidence is sufficient to prove that their significance is due to the projection of a mythological content from the collective unconscious. Mostly these contents are motifs already known to us from myths and fairytales. I would mention as an example the mysterious house where a witch or magician dwells, where some monstrous crime is being committed or has been committed, where there is a ghost, where a hidden treasure lies buried, and so on Carl Jung, CW 10, Para 43

The projection of this primordial image can be recognized when, one day, a person somehow comes upon this mysterious house when, in other words, a real but quite ordinary house makes a magical impression upon him. Generally, too, the whole atmosphere of the place seems symbolic and is, therefore, the projection of a coherent unconscious system Carl Jung, CW 10, Para 43

All kinds of objects and signs mark these places, and pious awe surrounds the marked spot. Thus does primitive man dwell in his land and at the same time in the land of his unconscious. Everywhere his unconscious jumps out at him, alive and real. How different is our relationship to the land we dwell in! Carl Jung, CW 10, Para 44

Feelings totally strange to us accompany the primitive at every step. Who knows what the cry of a bird means to him, or the sight of that old tree! A whole world of feeling is closed to us and is replaced by a pale aestheticism Carl Jung, CW 10, Para 44

Nevertheless, the world of primitive feeling is not entirely lost to us; it lives on in the unconscious. The further we remove ourselves from it with our enlightenment and our rational superiority, the more it fades into the distance, but is made all the more potent by everything that falls into it, thrust out by our one-sided rationalism Carl Jung, CW 10, Para 44

This lost bit of nature seeks revenge and returns in faked, distorted form, for instance as a tango epidemic, as Futurism, Dadaism, and all the other crazes and crudities in which our age abounds Carl Jung, CW 10, Para 44

The compensatory function expresses itself in quite definite arrangements of psychic material, for instance in dreams, in which nothing "symbolic" is to be found any more than in a ram's horn. In order to discover their symbolic quality a quite definite conscious attitude is needed, namely, the willingness to understand the dream-content symbolically, first of all as a mere hypothesis, and then leave experience to decide whether it is necessary or desirable to understand the dream in this way Carl Jung, CW 10, Para 29

She [a patient] was singing hymns that put particular emphasis on her belief in Christ, among others the hymn that goes Christ's blood and righteousness shall be My festal dress and jewelry; So shall I stand before the Lord When heaven shall grant me my reward They shall be saved at Judgment Day Who put their trust in Christ always. While she was singing it, she saw a bull tearing around madly in front of the window. Suddenly it gave a jump and broke one of its legs. She saw that the bull was in agony, and thought, turning her eyes away, that somebody ought to kill it. Then she awoke Carl Jung, CW 10, Para 30

The bull's agony reminded her of the torturings of animals whose unwilling witness she had been. She abominated such things and was extraordinarily upset by them because of her unconscious identification with the tortured animal. There was something in her that could be expressed by the image of an animal being tortured. This image was evidently evoked by the special emphasis on the belief in Christ in the hymns she was singing, for it was while she was singing that the bull got excited and broke its leg Carl Jung, CW 10, Para 31

This odd combination of ideas immediately led to an association concerning the profound religious disquiet she had felt during the war, which shook her belief in the goodness of God and in the adequacy of the Christian view of the world. This shock should have been assuaged by the emphasis on Christian faith in the hymn, but instead it aroused that animal element in the unconscious which was personified by the bull Carl Jung, CW 10, Para 31

This is just the element that is represented by the Christian symbol as having been conquered and offered up in sacrifice. In the Christian mystery it is the sacrificed Lamb, or more correctly, the "little ram" Carl Jung, CW 10, Para 31

In its sister-religion, Mithraism, which was also Christianity's most successful rival, the central symbol of the cult was the sacrifice not of a ram but of a bull. The usual altarpiece showed the overcoming of the bull by the divine saviour Mithras. We have, therefore, a very close historical connection between Christianity and the bull sacrifice. Christianity suppressed

this animal element, but the moment the absolute validity of the Christian faith is shaken, that element is thrust into the foreground again. The animal instinct seeks to break out, but in so doing breaks a leg in other words, instinct cripples itself. From the purely animal drives there also come all those factors which limit the sway of instinct Carl Jung, CW 10, Para 31

From the same root that produces wild, untamed, blind instinct there grow up the natural laws and cultural forms that tame and break its pristine power. But when the animal in us is split off from consciousness by being repressed, it may easily burst out in full force, quite unregulated and uncontrolled. An outburst of this sort always ends in catastrophe the animal destroys itself Carl Jung, CW 10, Para 31

What was originally something dangerous now becomes something to be pitied, something that really needs our compassion. The tremendous forces unleashed by the war bring about their own destruction because there is no human hand to preserve and guide them. Our view of the world has proved too narrow to channel these forces into a cultural form Carl Jung, CW 10, Para 31

Had I tried to explain to my elderly woman-patient that the bull was a sexual symbol, she would have got nothing out of it; on the contrary, she would merely have lost her religious point of view and been none the better off. In such cases it is not a question of an either / or explanation. If we are willing to adopt a symbolical standpoint, even if only as an hypothesis, we shall see that the dream is an attempt on the part of the unconscious to bring the Christian principle into harmony with its apparently irreconcilable opposite animal instinct by means of understanding and compassion Carl Jung, CW 10, Para 32

It is no accident that official Christianity has no relation to the animal. This omission, particularly striking in comparison with Buddhism, is often felt by sensitive people and has moved one modern poet to sing of a Christ who sacrifices his life for the sufferings of dumb animals Carl Jung, CW 10, Para 32

The Christian love of your neighbour can extend to the animal too, the animal in us, and can surround with love all that a rigidly anthropomorphic view of the world has cruelly repressed. By being repressed into the unconscious, the source from which it originated, the animal in us only becomes more beastlike, and that is no doubt the reason why no religion is so defiled with the spilling of innocent blood as Christianity, and why the world has never seen a bloodier war than the war of the Christian nations Carl Jung, CW 10, Para 32

The repressed animal bursts forth in its most savage form when it comes to the surface, and in the process of destroying itself leads to international suicide. If every individual had a better relation to the animal within him, he would also set a higher value on life. Life would be the absolute, the supreme moral principle, and he would react instinctively against any institution or organization that had the power to destroy life on a large scale Carl Jung, CW 10, Para 32

This dream, then, simply shows the dreamer the value of Christianity and contrasts it with an untamed force of nature, which, left to its raging, hurts itself and demands pity. A purely analytical reduction that traced the religious emotion back to the repression of animal instinct would, in this particular case, be sterile and uselessly destructive Carl Jung, CW 10, Para 33

If, on the other hand, we assert that the dream is to be understood symbolically and is

trying to give the dreamer an opportunity to become reconciled with herself, we have taken the first step in an interpretation which will bring the contradictory values into harmony and open up a new path of inner development. Subsequent dreams would then, in keeping with this hypothesis, provide the means for understanding the wider implications of the union of the animal component with the highest moral and intellectual achievements of the human spirit Carl Jung, CW 10, Para 33

In my experience this is what actually happens, for the unconscious is continuously compensatory in its action upon the conscious situation of the moment. It is therefore not a matter of indifference what our conscious attitude is towards the unconscious. The more negative, critical, hostile, or disparaging we are, the more it will assume these aspects, and the more the true value of the unconscious will escape us Carl Jung, CW 10, Para 33

Thus the unconscious has a symbol-creating function only when we are willing to recognize in it a symbolic element. The products of the unconscious are pure nature. Naturam si sequemur ducem, nunquam aberrabimus ["If we take Nature for our guide, we shall never go astray"], said the ancients. But nature is not, in herself, a guide, for she is not there for man's sake. Ships are not guided by the phenomenon of magnetism. We have to make the compass a guide and, in addition, allow for a specific correction, for the needle does not even point exactly to the north. So it is with the guiding function of the unconscious. It can be used as a source of symbols, but with the necessary conscious correction that has to be applied to every natural phenomenon in order to make it serve our purpose Carl Jung, CW 10, Para 34

Therefore, artificial aids have always been needed to bring the healing forces of the unconscious into play. It was chiefly the religions that performed this task. By taking the manifestations of the unconscious as divine or daemonic signs, revelations, or warnings, they offered it some idea or view that served as a favourable gradient. In this way [the artificial aids] directed particular attention to all phenomena of unconscious origin, whether they were dreams, visions, feelings, fantasies, or projections of the same in strange or unusual personalities, or in any striking processes of organic and inorganic nature. This concentration of attention enabled the unconscious contents and forces to overflow into conscious life, thereby influencing it and altering it Carl Jung, CW 10, Para 26

From this standpoint, religious ideas are an artificial aid that benefits the unconscious by endowing its compensatory function which, if disregarded, would remain ineffective with a higher value for consciousness. Faith, superstition, or any strongly feeling-toned idea gives the unconscious content a value which ordinarily it does not possess, but which it might in time attain, though in a very unpleasant form. When, therefore, unconscious contents accumulate as a result of being consistently ignored, they are bound to exert an influence that is pathological Carl Jung, CW 10, Para 26

There are just as many neurotics among primitives as among civilized Europeans. Hysterical Africans are by no means rare in Africa. These disagreeable manifestations of the unconscious account in large measure for the primitive fear of demons and the resultant rites of propitiation Carl Jung, CW 10, Para 26

The great events of world history are, at bottom, profoundly unimportant. In the last analysis, the essential thing is the life of the individual.... This alone makes history, here alone do the great transformations first take place, and the whole future, the whole history of the world, ultimately spring as a gigantic summation from these hidden sources in individu-

als…In our most private and most subjective lives we are not only the passive witnesses of our age, and its sufferers, but also its makers. We make our own epoch. C. G. Jung, CW l0, par 315.

What a distressing sight it was to see the whole of Germany heave a sigh of relief when a megalomaniac psychopath proclaimed, "I take over the responsibility!" Any man who still possesses the instinct of self-preservation knows perfectly well that only a swindler would offer to relieve him of responsibility, for surely no one in his senses would dream of taking responsibility for the existence of another. The man who promises everything is sure to fulfil nothing, and everyone who promises too much is in danger of using evil means in order to carry out his promises and is already on the road to perdition. Carl Jung, CW 10, Para 413.

The concept of Eros could be expressed in modern terms as psychic relatedness, and that of Logos as objective interest. Carl Jung, CW 10, Para 255

For woman, marriage is not an institution at all but a human love-relationship at least that is what she would like to believe. (Since her Eros is not naïve but is mixed with other, unavowed motives marriage as a ladder to social position, etc. The principle cannot be applied in any absolute sense). Carl Jung, CW 10, Para 255

Marriage means to her an exclusive relationship. She can endure its exclusiveness all the more easily, without dying of ennui, inasmuch as she has children or near relatives with whom she has a no less intimate relationship than with her husband. Carl Jung, CW 10, Para 255

The fact that she has no sexual relationship with these others means nothing, for the sexual relationship is of far less importance to her than the psychic relationship. It is enough that she and her husband both believe their relationship to be unique and exclusive. Carl Jung, CW 10, Para 255

If the husband happens to be the “container” he feels suffocated by this exclusiveness, especially if he fails to notice that the exclusiveness of his wife is nothing but a pious fraud. In reality she is distributed among the children and among as many members of the family as possible, thus maintaining any number of intimate relationships. Carl Jung, CW 10, Para 255

If her husband had anything like as many relationships with other people she would be mad with jealousy. Most men though, are erotically blinded they commit the unpardonable mistake of confusing Eros with sex. A man thinks he possesses a woman if he has her sexually. He never possesses her less, for to a woman the Eros-relationship is the real and decisive one. Carl Jung, CW 10, Para 255

For her, marriage is a relationship with sex thrown in as an accompaniment. Since sex is a formidable thing on account of its consequences, it is useful to have it in a safe place. But when it is less of a danger it also becomes less relevant, and then the question of relationship moves into the foreground. Carl Jung, CW 10, Para 255

The strong man must somewhere be weak, somewhere the clever man must be stupid, otherwise he is too good to be true and falls back on pose and bluff. Carl Jung, CW 10, Para 261

Is it not an old truth that woman loves the weaknesses of the strong man more than his

strength, and the stupidity of the clever man more than his cleverness? Her love wants the whole man not mere masculinity as such but also its negation. Carl Jung, CW 10, Para 261

The love of woman is not sentiment, as is a man's, but a will that is at times terrifyingly unsentimental and can even force her to self-sacrifice. A man who is loved in this way cannot escape his inferior side, for he can only respond to the reality of her love with his own reality. Carl Jung, CW 10, Para 261

This reality is no fair semblance, but a faithful reflection of that eternal human nature which links together all humanity, a reflection of the heights and depths of human life which are common to us all. Carl Jung, CW 10, Para 261

Just as the sea stretches its broad tongues between the continents and laps them round like islands, so our original unconsciousness presses round our individual consciousness. Carl Jung, CW 10, Para 285

In the catastrophe of mental disease the storm-tide of the sea surges over the island and swallows it back into the depths. In neurotic disturbances there is at least a bursting of dikes, and the fruitful lowlands are laid waste by flood. Carl Jung, CW 10, Para 285

Neurotics are all shore-dwellers they are the most exposed to the dangers of the sea. So-called normal people live inland, on higher, drier ground, near placid lakes and streams. No flood however high reaches them, and the circumambient sea is so far away that they even deny its existence. Carl Jung, CW 10, Para 285

Indeed, a person can be so identified with his ego that he loses the common bond of humanity and cuts himself off from all others. As nobody wants to be entirely like everybody else, this is quite a common occurrence. For primitive egoism, however, the standing rule is that it is never "I" who must change, but always the other fellow. Carl Jung, CW 10, Para 285

Individual consciousness is surrounded by the treacherous sea of the unconscious. This consciousness of ours has the appearance of being stable and reliable, but in reality it is a fragile thing and rests on very insecure foundations. Often no more than a strong emotion is needed to upset the sensitive balance of consciousness. Carl Jung, CW 10, Para 286

Our turns of speech are an indication of this. We say that a person was "beside himself" with rage, he "forgot himself completely," one "couldn't recognize him," "the devil had got into him," etc. Something makes you "jump out of your skin," "drives you mad," so that you "no longer know what you are doing." All these familiar phrases show how easily our ego-consciousness is disrupted by affects. Carl Jung, CW 10, Para 286

These disturbances do not show themselves only in acute form; often they are chronic and can bring about a lasting change of consciousness. As a result of some psychic upheaval whole tracts of our being can plunge back into the unconscious and vanish from the surface for years and decades. Carl Jung, CW 10, Para 286

Permanent changes of character are not uncommon. We therefore say, quite correctly, that after some such experience a person was a "changed man." These things happen not only to people with a bad heredity or to neurotics, but to normal people as well. Carl Jung, CW 10, Para 286

Disturbances caused by affects are known technically as phenomena of dissociation and are indicative of a psychic split. In every psychic conflict we can discern a split of this kind, which may go so far as to threaten the shattered structure of consciousness with complete disintegration. Carl Jung, CW 10, Para 286

But even the inland dwellers, the inhabitants of the normal world who forgot the sea, do not live on firm ground. The soil is so friable that at any moment the sea can rush in through continental fissures and maroon them. Carl Jung, CW 10, Para 287

Primitive man knows this danger not only from the life of his tribe but from his own psychology. The most important of these “perils of the soul,” as they are technically called, are loss of soul and possession Both are phenomena of dissociation. Carl Jung, CW 10, Para 287

In the first case [loss of soul], he will say that a soul has wandered away from him, and in the second [case of possession], that a strange soul has taken up its abode in him, generally in some unpleasant form. This way of putting it may sound odd, but it describes exactly the symptoms which today we call phenomena of dissociation or schizoid states. Carl Jung, CW 10, Para 287

They are not by any means purely pathological symptoms, for they are found just as much in normal people. They may take the form of fluctuations in the general feeling of well-being, irrational changes of mood, unpredictable affects, a sudden distaste for everything, psychic inertia, and so on. Carl Jung, CW 10, Para 287

Even the schizoid phenomena that correspond to primitive possession can be observed in normal people. They, too, are not immune to the demon of passion; they, too, are liable to possession by an infatuation, a vice, or a one-sided conviction; and these are all things that dig a deep grave between them and those they hold most dear and create an aching split in their own psyche. Carl Jung, CW 10, Para 287

It is difficult to estimate the sickness of the age in which we live. But if we glance back at the clinical history of mankind, we shall find earlier bouts of sickness which are easier to survey. One of the worst attacks was the malaise that spread through the Roman world in the first centuries after Christ. The dissociation showed itself in an unexampled breakdown of the political and social conditions, in religious and philosophical dissension, and in a deplorable decline of the arts and sciences. Carl Jung, CW 10, Para 291

If we reduced humanity as it then was to a single individual, we would see before us a highly differentiated personality who, after mastering his environment with sublime self-assurance, split himself up in the pursuit of his separate occupations and interests, forgetting his own origins and traditions, and even losing all memory of his former Self, so that he seemed to be now one thing and now another, and thus fell into a hopeless conflict with himself. In the end the conflict led to such a state of enfeeblement that the world he had conquered broke in like a devastating flood and completed the process of destruction. Carl Jung, CW 10, Para 291

But let us go back for a moment to our earlier attempt to construct a single individual from the period of classical decay. I tried to show you how he disintegrated psychologically, how in a disastrous fit of weakness he lost control of his environment, and finally succumbed

to the forces of destruction. Carl Jung, CW 10, Para 291

Let us suppose that this man came to me for a consultation. I would make the following diagnosis: "You are suffering from overstrain as a result of your numerous activities and boundless extraversion. In the profusion and complexity of your business, personal, and human obligations you have lost your head. You are a kind of Ivar Kreuger, who is a typical representative of the modern European spirit. You must realize, my dear Sir, that you are rapidly going to the dogs" Carl Jung, CW 10, Para 291

Look at it from all sides, take it in your hand, carry it about with you, let your imagination play round it, and talk about it with other people. Primitives tell each other impressive dreams, in a public palaver if possible, and this custom is also attested in late antiquity, for all the ancient peoples attributed great significance to dreams. Treated in this way, the dream suggests all manner of ideas and associations which lead us closer to its meaning. Carl Jung, CW 10, Para 291

The ascertainment of the meaning is, I need hardly point out, an entirely arbitrary affair, and this is where the hazards begin. Narrower or wider limits will be set to the meaning, according to one's experience, temperament, and taste. Some people will be satisfied with little, for others much is still not enough. Also the meaning of the dream, or our interpretation of it, is largely dependent on the intentions of the interpreter, on what he expects the meaning to be or requires it to do. Carl Jung, CW 10, Para 291

During the work of [dream-]interpretation one must abstain from all presuppositions that smack of superstition, such as, first and foremost, the notion that the protagonists in dreams are nothing other than these same persons in real life. Carl Jung, CW 10, Para 321

One should never forget that one dreams in the first place, and almost to the exclusion of all else, of oneself. (Any exceptions are governed by quite definite rules, but I cannot go into this here). Carl Jung, CW 10, Para 321

If we acknowledge this truth we shall sometimes find ourselves faced with very interesting problems. I remember two instructive cases: one of my patients dreamed of a drunken tramp who lay in a ditch, and another of a drunken prostitute who rolled about in the gutter. Carl Jung, CW 10, Para 321

The first patient was a theologian, the second a distinguished lady in high society. Both of them were outraged and horrified, and absolutely refused to admit that they had dreamed of themselves. I gave them both the well-meant advice that they should spend an hour in self-reflection, diligently and devoutly considering in what ways they were not much better than their drunken brother in the ditch and their drunken sister in the gutter. Carl Jung, CW 10, Para 321

This does not contradict my earlier remark that we always dream of ourselves. As individuals we are not completely unique but are like all other men. Hence a dream with a collective meaning is valid in the first place for the dreamer, but it expresses at the same time the fact that his momentary problem is also the problem of other people. This is often of great practical importance, for there are countless people who are inwardly cut off from humanity and oppressed by the thought that nobody else has their problems. Carl Jung, CW 10, Para 321

Or else they are those all-too-modest souls who, feeling themselves nonentities, have kept their claim to social recognition on too low a level. Moreover, every individual problem is somehow connected with the problem of the age, so that practically every subjective difficulty has to be viewed from the standpoint of the human situation as a whole. But this is permissible only when the dream really is a mythological one and makes use of collective symbols. Carl Jung, CW 10, Para 321

In this case it would be purely symptomatic and not genuine at all; and, if explained from the infantile angle, the explanation would be quite beside the point. More, an unforgiveable blunder would have been committed. Unfortunately such blunders are very frequent, because the doctor's attention is turned too exclusively to the infantile traits. The patient is then automatically charged with inferiority Carl Jung, CW 10, Para 344

Infantilism, however, is something extremely ambiguous. First, it can be either genuine or purely symptomatic; and second, it can be either residuary or embryonic. There is an enormous difference between something that has remained infantile and something that is in the process of growth. Both can take an infantile or embryonic form, and more often than not it is impossible to tell at first glance whether we are dealing with a regrettably persistent fragment of infantile life or with a vitally important creative beginning Carl Jung, CW 10, Para 345

To deride these possibilities is to act like a dullard who does not know that the future is more important than the past. For this reason it would be more advisable to examine these "infantile-perverse" fantasies for their creative content than to trace them back to the cradle, and to understand all neurosis more as an attempt at adaptation than as an unsuccessful or otherwise distorted wish-fulfilment Carl Jung, CW 10, Para 345

Naturally, the theory of infantilism has the inestimable advantage of always putting the doctor "on top" as the representative of sound, healthy, superior insight, while the poor patient lies there helpless, the victim of unconscious infantile-perverse wish-fulfilments. This also gives the doctor the opportunity to know better, to avoid meeting the patient's personality face to face, and to hide behind a technique Carl Jung, CW 10, Para 346

Because of their [Jewish] civilization, more than twice as ancient as ours, they are vastly more conscious than we of human weaknesses, of the shadow-side of things, and hence in this respect much less vulnerable than we are Carl Jung, CW 10, Para 353

Thanks to their [Jewish] experience of an old culture, they are able, while fully conscious of their frailties, to live on friendly and even tolerant terms with them, whereas we are still too young not to have "illusions" about ourselves Carl Jung, CW 10, Para 353

Without this tact and sensitiveness, it is hardly possible to distinguish what is valuable from what is not. A neurosis, as I have said, consists of two things: infantile unwillingness and the will to adapt. Hence one has first to feel one's way until one is sure on which side the accent lies, for the road goes on from there Carl Jung, CW 10, Para 359

If the accent is on the will to adapt, there is no sense in decrying the attempt at adaptation as an infantile wish-fantasy. The analyst is very liable to make this mistake with his patient, and the patient to his own great injury is ever so delighted because he is then protected on medical authority against the feared or hated demands of his neurosis, that is,

against the demands of that part of his personality which is concealed in it Carl Jung, CW 10, Para 359

But this “other” personality is the very thing he ought never to lose sight of, for it is his own inner antithesis, the conflict that must be fought out again and again if life is to go on. Without this initial opposition there is no flow of energy, no vitality Carl Jung, CW 10, Para 359

Lack of opposition brings life to a standstill wherever that lack reaches. But beyond that reach life flows on unconsciously in ever-renewed and ever-changing forms of neurosis. Only if we understand and accept the neurosis as our truest and most precious possession can we be sure of avoiding stagnation and of not succumbing to rigidity and neurotic subterfuge Carl Jung, CW 10, Para 359

In the neurosis is hidden one’s worst enemy and best friend. One cannot rate him too highly, unless of course fate has made one hostile to life. There are always deserters, but they have nothing to say to us, nor we to them Carl Jung, CW 10, Para 359

Neurotic symbolism is ambiguous, pointing at once forward and back, downward and up. In general the forward movement is the more important, because the future is coming and the past retreating. Only those who are preparing a retreat will do better to look back Carl Jung, CW 10, Para 360

The neurotic has no need to feel himself beaten; he has merely misjudged his necessary adversary, thinking that he could give him the slip. The whole task of his personality lies in the very thing he sought to avoid. Any doctor who deludes him on that score is doing him a disservice. The patient has not to learn how to get rid of his neurosis, but how to bear it. His illness is not a gratuitous and therefore meaningless burden; it is his own Self, the “other” whom, from childish laziness or fear, or for some other reason, he was always seeking to exclude from his life Carl Jung, CW 10, Para 361

We should not try to “get rid” of a neurosis, but rather to experience what it means, what it has to teach, what its purpose is. We should even learn to be thankful for it, otherwise we pass it by and miss the opportunity of getting to know ourselves as we really are. A neurosis is truly removed only when it has removed the false attitude of the ego. We do not cure it. it cures us Carl Jung, CW 10, Para 361

The true reason for a neurosis always lies in the present, since the neurosis exists in the present. It is definitely not a hangover from the past, a caput mortuum; it is fed and as it were new-made every day. And it is only in the today, not in our yesterdays, that the neurosis can be “cured” Carl Jung, CW 10, 363

Because the neurotic conflict has to be fought today, any historical deviation is a detour, if not actually a wrong turning. And because the neurosis contains a part of one’s own personality, an excursus into the thousand and one possibilities of obscene fantasy and unfulfillable infantile wishes is just a pretext for avoiding the essential question Carl Jung, CW 10, Para 363

We have seen him [Wotan] come to life in the German Youth Movement, and right at the beginning the blood of several sheep was shed in honour of his resurrection Carl Jung, CW 10, Para 373

Armed with rucksack and lute, blond youths, and sometimes girls as well, were to be seen as restless wanderers on every road from the North Cape to Sicily, faithful votaries of the roving god. Later, towards the end of the Weimar Republic, the wandering role was taken over by the thousands of unemployed, who were to be met with everywhere on their aimless journeys Carl Jung, CW 10, Para 373

By 1933 they wandered no longer but marched in their hundreds of thousands. The Hitler movement literally brought the whole of Germany to its feet, from five-year-olds to veterans, and produced the spectacle of a nation migrating from one place to another Carl Jung, CW 10, Para 373

Wotan the wanderer was on the move. He could be seen, looking rather shamefaced, in the meeting-house of a sect of simple folk in North Germany, disguised as Christ sitting on a white horse. I do not know if these people were aware of Wotan's ancient connection with the figures of Christ and Dionysus, but it is not very probable Carl Jung, CW 10, Para 373

Wotan is a restless wanderer who creates unrest and stirs up strife, now here, now there, and works magic. He was soon changed by Christianity into the devil, and only lived on in fading local traditions as a ghostly hunter who was seen with his retinue, flickering like a will o' the wisp through the stormy night Carl Jung, CW 10, Para 374

In the Middle Ages the role of the restless wanderer was taken over by Ahasuerus, the Wandering Jew, which is not a Jewish but a Christian legend. The motif of the wanderer who has not accepted Christ was projected on the Jews, in the same way as we always rediscover our unconscious psychic contents in other people. At any rate the coincidence of anti-Semitism with the reawakening of Wotan is a psychological subtlety that may perhaps be worth mentioning Carl Jung, CW 10, Para 374

The German youths who celebrated the solstice with sheep-sacrifices were not the first to hear a rustling in the primeval forest of the unconscious. They were anticipated by Nietzsche, Schuler, Stefan George, and Ludwig Klages Carl Jung, CW 10, Para 375

The literary tradition of the Rhineland and the country south of the Main has a classical stamp that cannot easily be got rid of; every interpretation of intoxication and exuberance is apt to be taken back to classical models, to Dionysus, to the puer aeternus and the cosmogonic Eros. No doubt it sounds better to academic ears to interpret these things as Dionysus, but Wotan might be a more correct interpretation Carl Jung, CW 10, Para 375

He [Wotan] is the god of storm and frenzy, the unleasher of passions and the lust of battle; moreover he is a superlative magician and artist in illusion who is versed in all secrets of an occult nature Carl Jung, CW 10, Para 375

Perhaps we may sum up this general phenomenon as Ergriffenheita state of being seized or possessed. The term postulates not only an Ergriffener (one who is seized) but also an Ergreifer (one who seizes). Wotan is an Ergreifer of men, and, unless one wishes to deify Hitler which has indeed actually happened he is really the only explanation Carl Jung, CW 10, Para 389

It is true that Wotan shares this quality with his cousin Dionysus, but Dionysus seems to

have exercised his influence mainly on women. The maenads were a species of female storm-troopers, and, according to mythical reports, were dangerous enough. Wotan confined himself to the berserkers, who found their vocation as the Blackshirts of mythical kings Carl Jung, CW 10, Para 389

It seems to me that Wotan hits the mark as an hypothesis. Apparently he really was only asleep in the Kyffhäuser mountain until the ravens called him and announced the break of day Carl Jung, CW 10, Para 389

He [Wotan] is a fundamental attribute of the German psyche, an irrational psychic factor which acts on the high pressure of civilization like a cyclone and blows it away Carl Jung, CW 10, Para 389

Despite their crankiness, the Wotan-worshippers seem to have judged things more correctly than the worshippers of reason. Apparently everyone had forgotten that Wotan is a Germanic datum of first importance, the truest expression and unsurpassed personification of a fundamental quality that is particularly characteristic of the Germans Carl Jung, CW 10, Para 389

Because the behaviour of a race takes on its specific character from its underlying images we can speak of an archetype "Wotan." As an autonomous psychic factor, Wotan produces effects in the collective life of a people and thereby reveals his own nature Carl Jung, CW 10, Para 391

Psychologically, it connotes the irrational presence of a subjective feeling (or conviction) of guilt, or an objective imputation of, or imputed share in, guilt Carl Jung, CW 10, Para 403

As an example of the latter, suppose a man belongs to a family which has the misfortune to be disgraced because one of its members has committed a crime. It is clear that he cannot be held responsible, either legally or morally. Yet the atmosphere of guilt makes itself felt in many ways. His family name appears to have been sullied, and it gives him a painful shock to hear it bandied about in the mouths of strangers Carl Jung, CW 10, Para 403

Guilt can be restricted to the lawbreaker only from the legal, moral, and intellectual point of view, but as a psychic phenomenon it spreads itself over the whole neighbourhood Carl Jung, CW 10, Para 403

A house, a family, even a village where a murder has been committed feels the psychological guilt and is made to feel it by the outside world. Would one take a room where one knows a man was murdered a few days before? Is it particularly pleasant to marry the sister or daughter of a criminal? Carl Jung, CW 10, Para 405

Psychological collective guilt is a tragic fate. It hits everybody, just and unjust alike, everybody who was anywhere near the place where the terrible thing happened. Naturally no reasonable and conscientious person will lightly turn collective into individual guilt by holding the individual responsible without giving him a hearing. He will know enough to distinguish between the individually guilty and the merely collectively guilty Carl Jung, CW 10, Para 405

But how many people are either reasonable or conscientious, and how many take the trouble to become so? I am not very optimistic in this respect. Therefore, although collective guilt, viewed on the archaic and primitive level, is a state of magical uncleanness, yet precisely

because of the general unreasonableness it is a very real fact, which no European outside Europe and no German outside Germany can leave out of account Carl Jung, CW 10, Para 405

If the German intends to live on good terms with Europe, he must be conscious that in the eyes of Europeans he is a guilty man Carl Jung, CW 10, Para 405

In reality, it always happens over a wide radius. The sensation aroused by a crime, the passionate interest in tracking down the criminal, the eagerness with which the court proceedings are followed, and so on, all go to prove the exciting effect which the crime has on everybody who is not abnormally dull or apathetic. Everybody joins in, feels the crime in his own being, tries to understand and explain it. Something is set aflame by that great fire of evil that flared up in the crime Carl Jung, CW 10, Para 408

Was not Plato aware that the sight of ugliness produces something ugly in the soul? Indignation leaps up, angry cries of "Justice!" pursue the murderer, and they are louder, more impassioned, and more charged with hate the more fiercely burns the fire of evil that has been lit in our souls. It is a fact that cannot be denied: the wickedness of others becomes our own wickedness because it kindles something evil in our own hearts Carl Jung, CW 10, Para 408

In this way we are unavoidably drawn into the uncleanness of evil, no matter what our conscious attitude may be. No one can escape this, for we are all so much a part of the human community that every crime calls forth a secret satisfaction in some corner of the fickle human heart. It is true that, in persons with a strong moral disposition, this reaction may arouse contrary feelings in a neighbouring compartment of the mind Carl Jung, CW 10, Para 408

The victim is not the only sufferer; everybody in the vicinity of the crime, including the murderer, suffers with him. Something of the abysmal darkness of the world has broken in on us, poisoning the very air we breathe and befouling the pure water with the stale, nauseating taste of blood Carl Jung, CW 10, Para 419

True, we are innocent, we are the victims, robbed, betrayed, outraged; and yet for all that, or precisely because of it, the flame of evil glowers in our moral indignation. It must be so, for it is necessary that someone should feel indignant, that someone should let himself be the sword of judgment wielded by fate Carl Jung, CW 10, Para 410

In order to escape the contaminating touch of evil we need a proper rite de sortie, a solemn admission of guilt by judge, hangman, and public, followed by an act of expiation Carl Jung, CW 10, Para 411

The increasing dependence on the State is anything but a healthy symptom; it means that the whole nation is in a fair way to becoming a herd of sheep, constantly relying on a shepherd to drive them into good pastures. The shepherd's staff soon becomes a rod of iron, and the shepherds turn into wolves Carl Jung, CW 10, Para 413

What a distressing sight it was to see the whole of Germany heave a sigh of relief when a megalomaniac psychopath [Hitler] proclaimed, "I take over the responsibility!" Any man who still possesses the instinct of self-preservation knows perfectly well that only a swindler would offer to relieve him of responsibility, for surely no one in his senses would dream of taking responsibility for the existence of another. The man who promises everything is sure to fulfil nothing, and everyone who promises too much is in danger of using evil means in or-

der to carry out his promises, and is already on the road to perdition Carl Jung, CW 10, Para 413

The steady growth of the Welfare State is no doubt a very fine thing from one point of view, but from another it is a doubtful blessing, as it robs people of their individual responsibility and turns them into infants and sheep. Besides this, there is the danger that the capable will simply be exploited by the irresponsible, as happened on a huge scale in Germany Carl Jung, CW 10, Para 413

The citizen's instinct of self-preservation should be safeguarded at all costs, for, once a man is cut off from the nourishing roots of instinct, he becomes the shuttlecock of every wind that blows. He is then no better than a sick animal, demoralized and degenerate, and nothing short of a catastrophe can bring him back to health Carl Jung, CW 10, Para 417

He [the pale criminal] simply will not and cannot admit that he is what he is; he cannot endure his own guilt, just as he could not help incurring it. He will stoop to every kind of self-deception if only he can escape the sight of himself. It is true that this happens everywhere, but nowhere does it appear to be such a national characteristic as in Germany Carl Jung, CW 10, Para 417

I am by no means the first to have been struck by the inferiority feelings of the Germans. What did Goethe, Heine, and Nietzsche have to say about their countrymen? A feeling of inferiority does not in the least mean that it is unjustified. Only, the inferiority does not refer to that side of the personality, or to the function, in which it visibly appears, but to an inferiority which none the less really exists even though only dimly suspected Carl Jung, CW 10, Para 417

This condition can easily lead to an hysterical dissociation of the personality, which consists essentially in one hand not knowing what the other is doing, in wanting to jump over one's own shadow, and in looking for everything dark, inferior, and culpable in others Carl Jung, CW 10, Para 417

Hence the hysteric always complains of being surrounded by people who are incapable of appreciating him and who are activated only by bad motives; by inferior mischief-makers, a crowd of submen who should be exterminated neck and crop so that the Superman can live on his high level of perfection. The very fact that his thinking and feeling proceed along these lines is clear proof of inferiority in action Carl Jung, CW 10, Para 417

Therefore all hysterical people are compelled to torment others, because they are unwilling to hurt themselves by admitting their own inferiority. But since nobody can jump out of his skin and be rid of himself, they stand in their own way everywhere as their own evil spirit and that is what we call an hysterical neurosis Carl Jung, CW 10, Para 417

All these pathological features complete lack of insight into one's own character, autoerotic self-admiration and self-extenuation, denigration and terrorization of one's fellow men (how contemptuously Hitler spoke of his own people!), projection of the shadow, lying, falsification of reality, determination to impress by fair means or foul, bluffing and double-crossing all these were united in the man who was diagnosed clinically as an hysteric, and whom a strange fate chose to be the political, moral, and religious spokesman of Germany for twelve years. Is this pure chance? Carl Jung, CW 10, Para 418

Hitler's theatrical, obviously hysterical gestures struck all foreigners (with a few amaz-

ing exceptions) as purely ridiculous. When I saw him with my own eyes, he suggested a psychic scarecrow (with a broomstick for an outstretched arm) rather than a human being. It is also difficult to understand how his ranting speeches, delivered in shrill, grating, womanish tones, could have made such an impression Carl Jung, CW 10, Para 419

But the German people would never have been taken in and carried away so completely if this figure had not been a reflected image of the collective German hysteria. It is not without serious misgivings that one ventures to pin the label of "psychopathic inferiority" on to a whole nation, and yet, heaven knows, it is the only explanation which could in any way account for the effect this scarecrow had on the masses Carl Jung, CW 10, Para 419

A sorry lack of education, conceit that bordered on madness, a very mediocre intelligence combined with the hysteric's cunning and the power fantasies of an adolescent, were written all over this demagogue's face. His gesticulations were all put on, devised by an hysterical mind intent only on making an impression. He behaved in public like a man living in his own biography, in this case as the sombre, daemonic "man of iron" of popular fiction, the ideal of an infantile public whose knowledge of the world is derived from the deified heroes of trashy films Carl Jung, CW 10, Para 419

Although we may be able to understand why the Germans were misled in the first place, the almost total absence of any reaction is quite incomprehensible. Were there not army commanders who could have ordered their troops to do anything they pleased? Why then was the reaction totally lacking? I can only explain this as the outcome of a peculiar state of mind, a passing or chronic disposition which, in an individual, we call hysteria Carl Jung, CW 10, Para 419

This term by no means implies that the individual or the nation is "inferior" in every respect, but only that there is a place of least resistance, a peculiar instability, which exists independently of all the other qualities Carl Jung, CW 10, Para 423

An hysterical disposition means that the opposites inherent in every psyche, and especially those affecting character, are further apart than in normal people. This greater distance produces a higher energic tension, which accounts for the undeniable energy and drive of the Germans Carl Jung, CW 10, Para 423

On the other hand, the greater distance between the opposites produces inner contradictions, conflicts of conscience, disharmonies of character in short, everything we see in Goethe's Faust. Nobody but a German could ever have devised such a figure, it is so intrinsically, so infinitely German. In Faust we see the same "hungering for the infinite" born of inner contradiction and dichotomy, the same eschatological expectation of the Great Fulfilment Carl Jung, CW 10, Para 423

In him [Faust] we experience the loftiest flight of the mind and the descent into the depths of guilt and darkness, and still worse, a fall so low that Faust sinks to the level of a mountebank and wholesale murderer as the outcome of his pact with the devil Carl Jung, CW 10, Para 423

Faust, too, is split and sets up "evil" outside himself in the shape of Mephistopheles, to serve as an alibi in case of need. He likewise "knows nothing of what has happened," i.e., what the devil did to Philemon and Baucis. We never get the impression that he has real insight or suffers genuine remorse. His avowed and unavowed worship of success stands

in the way of any moral reflection throughout, obscuring the ethical conflict, so that Faust's moral personality remains misty Carl Jung, CW 10, Para 423

He never attains the character of reality: he is not a real human being and cannot become one (at least not in this world). He remains the German idea of a human being, and therefore an image somewhat overdone and distorted of the average German Carl Jung, CW 10, Para 423

The essence of hysteria is a systematic dissociation, a loosening of the opposites which normally are held firmly together. It may even go to the length of a splitting of the personality, a condition in which quite literally one hand no longer knows what the other is doing. As a rule there is amazing ignorance of the shadow; the hysteric is only aware of his good motives, and when the bad ones can no longer be denied he becomes the unscrupulous Superman and Herrenmensch who fancies he is ennobled by the magnitude of his aim Carl Jung, CW 10, Para 424

Ignorance of one's other side creates great inner insecurity. One does not really know who one is; one feels inferior somewhere and yet does not wish to know where the inferiority lies, with the result that a new inferiority is added to the original one Carl Jung, CW 10, Para 425

This sense of insecurity is the source of the hysteric's prestige psychology, of his need to make an impression, to flaunt his merits and insist on them, of his insatiable thirst for recognition, admiration, adulation, and longing to be loved Carl Jung, CW 10, Para 425

It is the cause of that loud-mouthed arrogance, uppishness, insolence, and tactlessness by which so many Germans, who at home grovel like dogs, win a bad reputation for their countrymen abroad. Insecurity is also responsible for their tragic lack of civic courage, criticized by Bismarck (one need only recall the pitiable role of the German generals) Carl Jung, CW 10, Para 425

To my mind, the history of the last twelve years [post first World War] is the case-chart of an hysterical patient. The truth should not be withheld from him, for when the doctor makes a diagnosis he does so as part of his effort to find the remedy, and not in order to hurt, degrade, or insult the sufferer. A neurosis or a neurotic disposition is not a disgrace, it is a handicap, and sometimes merely a façon de parler. It is not a fatal disease, but it does grow worse to the degree that one is determined to ignore it Carl Jung, CW 10, Para 427

When I say that the Germans are psychically ill it is surely kinder than saying that they are criminals. I have no wish to irritate the notorious sensitiveness of the hysteric, but there comes a time when we can no longer afford to gloss over all the painful symptoms and to help the patient forget what has happened, merely in order that his pathological condition should remain undisturbed. I would not like to insult the healthy-minded and decent German by suspecting him of being a coward who runs away from his own image Carl Jung, CW 10, Para 427

We should do him the honour of treating him like a man and telling him the truth, and not conceal from him that our soul is cut to the quick by the terrible things that happened in his country and were perpetrated by the Germans in Europe. We are hurt and indignant and have no particular feelings of loving-kindness nor can any amount of determination and will-power twist these sentiments into a Christian "love of your neighbour." For the sake of the healthy-minded and decent Germans one should not attempt to do so; they would surely

prefer the truth to insulting forbearance Carl Jung, CW 10, Para 427

Such non-personal phenomena always manifest themselves in dreams as mythological motifs that are also to be found in legends and fairy tales throughout the world. I have called these mythological motifs archetypes: that is, typical modes or forms in which these collective phenomena are experienced Carl Jung, CW 10, Para 447

There was a disturbance of the collective unconscious in every single one of my German patients. One can explain these disorders causally, but such an explanation is apt to be unsatisfactory, as it is easier to understand archetypes by their aim rather than by their causality Carl Jung, CW 10, Para 447

The archetypes I had observed expressed primitivity, violence, and cruelty. When I had seen enough of such cases, I turned my attention to the peculiar state of mind then prevailing in Germany. I could only see signs of depression and a great restlessness, but this did not allay my suspicions. In a paper which I published at that time, I suggested that the "blond beast" was stirring in an uneasy slumber and that an outburst was not impossible Carl Jung, CW 10, Para 447

The tide that rose in the unconscious after the first World War was reflected in individual dreams, in the form of collective, mythological symbols which expressed primitivity, violence, cruelty: in short, all the powers of darkness Carl Jung, CW 10, Para 449

When such symbols occur in a large number of individuals and are not understood, they begin to draw these individuals together as if by magnetic force, and thus a mob is formed Carl Jung, CW 10, Para 449

Its leader will soon be found in the individual who has the least resistance, the least sense of responsibility and, because of his inferiority, the greatest will to power. He will let loose everything that is ready to burst forth, and the mob will follow with the irresistible force of an avalanche Carl Jung, CW 10, Para 449

Deep down in his being [Hitler], he was motivated by the forces of order, which became operative in him the moment desirousness and greed had taken complete possession of his conscious mind. Hitler was the exponent of a "new order," and that is the real reason why practically every German fell for him Carl Jung, CW 10, Para 454

The Germans wanted order, but they made the fatal mistake of choosing the principal victim of disorder and unchecked greed for their leader. Their individual attitude remained unchanged: just as they were greedy for power, so they were greedy for order. Like the rest of the world, they did not understand wherein Hitler's significance lay, that he symbolized something in every individual Carl Jung, CW 10, Para 454

Hitler was the most prodigious personification of all human inferiorities. He was an utterly incapable, unadapted, irresponsible, psychopathic personality, full of empty, infantile fantasies, but cursed with the keen intuition of a rat or a guttersnipe. He represented the shadow, the inferior part of everybody's personality, in an overwhelming degree, and this was another reason why they fell for him Carl Jung, CW 10, Para 454

In Switzerland we have built up the "perfect democracy," where our warlike instincts ex-

pend themselves in the form of domestic quarrels called “political life.” We fight each other within the limits of the law and the constitution, and we are inclined to think of democracy as a chronic state of mitigated civil war Carl Jung, CW 10, Para 455

We are far from being at peace with ourselves: on the contrary, we hate and fight each other because we have succeeded in introverting war. Our peaceful outward demeanour merely serves to safeguard our domestic quarrels from foreign intruders who might disturb us Carl Jung, CW 10, Para 455

Thus far we have succeeded, but we are still a long way from the ultimate goal. We still have enemies in the flesh, and we have not yet managed to introvert our political disharmonies. We still labour under the unwholesome delusion that we should be at peace within ourselves Carl Jung, CW 10, Para 455

Yet even our [Swiss] national, mitigated state of war would soon come to an end if everybody could see his own shadow and begin the only struggle that is really worthwhile: the fight against the overwhelming power-drive of the shadow Carl Jung, CW 10, Para 455

We have a tolerable social order in Switzerland because we fight among ourselves. Our order would be perfect if only everybody could direct his aggressiveness inwards, into his own psyche. Unfortunately, our religious education prevents us from doing this, with its false promises of an immediate peace within. Peace may come in the end, but only when victory and defeat have lost their meaning. What did our Lord mean when he said: “I came not to send peace, but a sword”? Carl Jung, CW 10, Para 455

Whenever an archetype appears things become critical, and it is impossible to foresee what turn they will take. As a rule this depends on the way consciousness reacts to the situation Carl Jung, CW 10, Para 461

During a collective manifestation of archetypes there is always a great danger of a mass movement, and a catastrophe can be avoided only if the effect of the archetype can be intercepted and assimilated by a sufficiently large majority of individuals Carl Jung, CW 10, Para 461

At the very least there must be a certain number of individuals who are still capable of making their influence felt Carl Jung, CW 10, Para 461

I have been blamed in many quarters for allowing myself to speak of German “psychopathy.” I am and always was of the opinion that the political mass movements of our time are psychic epidemics, in other words, mass psychoses Carl Jung, CW 10, Para 465

They are, as their inhuman concomitants show, abnormal mental phenomena, and I refuse to regard such things as normal, to say nothing of whitewashing them as excusable blunders. Murder is murder, and the fact that the whole German nation threw itself with all its might into the most infamous war of aggression in history is a crime that nothing can ever wipe out Carl Jung, CW 10, Para 465

It is true that very many individuals stood out against it, but they were a small minority. The behaviour of the Germans in general is abnormal; were it not so, we should long since have been accustomed to look upon this form of war as the normal state of things Carl Jung,

CW 10, Para 465

For, in order to turn the individual into a function of the State, his dependence on anything else must be taken from him. Religion means dependence on and submission to the irrational facts of experience. These do not refer directly to social and physical conditions; they concern far more the individual's psychic attitude Carl Jung, CW 10, Para 505

Religion, however, teaches another authority opposed to that of the "world." The doctrine of the individual's dependence on God makes just as high a claim upon him as the world does. It may even happen that the absoluteness of this claim estranges him from the world in the same way as he is estranged from himself when he succumbs to the collective mentality Carl Jung, CW 10, Para 507

He can forfeit his judgment and power of decision in the former case (for the sake of religious doctrine) quite as much as in the latter. This is the goal which religion openly aspires to unless it compromises with the State. When religion does so [compromise], I prefer to call it not "religion" but a "creed" Carl Jung, CW 10, Para 507

A creed gives expression to a definite collective belief, whereas the word religion expresses a subjective relationship to certain metaphysical, extramundane factors Carl Jung, CW 10, Para 507

A creed is a confession of faith intended chiefly for the world at large and is thus an intramundane affair, while the meaning and purpose of religion lie in the relationship of the individual to God (Christianity, Judaism, Islam) or to the path of salvation and liberation (Buddhism) Carl Jung, CW 10, Para 507

From this basic fact all ethics is derived, which without the individual's responsibility before God can be called nothing more than conventional morality Carl Jung, CW 10, Para 507

Since they are compromises with mundane reality, the creeds have accordingly seen themselves obliged to undertake a progressive codification of their views, doctrines, and customs, and in so doing have externalized themselves to such an extent that the authentic religious element in them the living relationship to and direct confrontation with their extramundane point of reference has been thrust into the background Carl Jung, CW 10, Para 508

The denominational standpoint measures the worth and importance of the subjective religious relationship by the yardstick of traditional doctrine, and where this is not so frequent, as in Protestantism, one immediately hears talk of pietism, sectarianism, eccentricity, and so forth, as soon as anyone claims to be guided by God's will Carl Jung, CW 10, Para 508

To be the adherent of a creed, therefore, is not always a religious matter but more often a social one and, as such, it does nothing to give the individual any foundation. For this he has to depend exclusively on his relation to an authority which is not of this world Carl Jung, CW 10, Para 509

The criterion here is not lip service to a creed but the psychological fact that the life of the individual is not determined solely by the ego and its opinions or by social factors, but quite as much, if not more, by a transcendent authority Carl Jung, CW 10, Para 509

Religion, as the careful observation and taking account of certain invisible and uncontrollable factors, is an instinctive attitude peculiar to man, and its manifestations can be followed all through human history. Its evident purpose is to maintain the psychic balance, for the natural man has an equally natural "knowledge" of the fact that his conscious functions may at any time be thwarted by uncontrollable happenings coming from inside as well as from outside Carl Jung, CW 10, Para 512

For this reason he has always taken care that any difficult decision likely to have consequences for himself and others shall be rendered safe by suitable measures of a religious nature Carl Jung, CW 10, Para 512

Offerings are made to the invisible powers, formidable blessings are pronounced, and all kinds of solemn rites are performed. Everywhere and at all times there have been rites d'entrée et de sortie whose efficacy is impugned as magic and superstition by rationalists incapable of psychological insight Carl Jung, CW 10, Para 512

But magic has above all a psychological effect whose importance should not be underestimated. The performance of a "magical" action gives the person concerned a feeling of security which is absolutely essential for carrying out a decision, because a decision is inevitably somewhat one-sided and is therefore rightly felt to be a risk Carl Jung, CW 10, Para 512

Even a dictator thinks it necessary not only to accompany his acts of State with threats but to stage them with all manner of solemnities. Brass bands, flags, banners, parades, and monster demonstrations are no different in principle from ecclesiastical processions, cannonades, and fireworks to scare off demons Carl Jung, CW 10, Para 512

Only, the suggestive parade of State power engenders a collective feeling of security, which, unlike religious demonstrations, gives the individual no protection against his inner demonism. Hence he will cling all the more to the power of the State, i.e., to the mass, thus delivering himself up to it psychically as well as morally and putting the finishing touch to his social depotentiation Carl Jung, CW 10, Para 512

The State, like the Church, demands enthusiasm, self-sacrifice, and love, and if religion requires or presupposes the "fear of God," then the dictator State takes good care to provide the necessary terror Carl Jung, CW 10, Para 512

That is why the findings of laboratory psychology are, for all practical purposes, often so remarkably unenlightening and devoid of interest Carl Jung, CW 10, Para 531

The more the individual object dominates the field of vision, the more practical, detailed, and alive will be the knowledge derived from it. This means that the objects of investigation, too, become more and more complicated and that the uncertainty of the individual factors grows in proportion to their number, thus increasing the possibility of error Carl Jung, CW 10, Para 531

Understandably enough, academic psychology is scared of this risk and prefers to avoid complex situations by asking ever simpler questions, which it can do with impunity. It has full freedom in the choice of questions it will put to Nature Carl Jung, CW 10, Para 531

Medical psychology, on the other hand, is very far from being in this more or less enviable position. Here the object puts the question and not the experimenter. The analyst is

confronted with facts which are not of his choosing and which he probably never would choose if he were a free agent. It is the sickness or the patient himself that puts the crucial questions in other words, Nature experiments with the doctor in expecting an answer from him Carl Jung, CW 10, Para 532

The uniqueness of the individual and of his situation stares the analyst in the face and demands an answer. His duty as a physician forces him to cope with a situation swarming with uncertainty factors. At first he will apply principles based on general experience, but he will soon realize that principles of this kind do not adequately express the facts and fail to meet the nature of the case. The deeper his understanding penetrates, the more the general principles lose their meaning Carl Jung, CW 10, Para 532

But these principles are the foundation of objective knowledge and the yardstick by which it is measured. With the growth of what both patient and doctor feel to be “understanding,” the situation becomes increasingly subjectivized. What was an advantage to begin with threatens to turn into a dangerous disadvantage Carl Jung, CW 10, Para 532

Subjectivation (in technical terms, transference and countertransference) creates isolation from the environment, a social limitation which neither party wishes for but which invariably sets in when understanding predominates and is no longer balanced by knowledge Carl Jung, CW 10, Para 532

As understanding deepens, the further removed it becomes from knowledge. An ideal understanding would ultimately result in each party’s unthinkingly going along with the other’s experience a state of uncritical passivity coupled with the most complete subjectivity and lack of social responsibility Carl Jung, CW 10, Para 532

Understanding carried to such lengths is in any case impossible, for it would require the virtual identification of two different individuals. Sooner or later the relationship reaches a point where one partner feels he is being forced to sacrifice his own individuality so that it may be assimilated by that of the other. This inevitable consequence breaks the understanding, for understanding also presupposes the integral preservation of the individuality of both partners Carl Jung, CW 10, Para 532

It is therefore advisable to carry understanding only to the point where the balance between understanding and knowledge is reached, for understanding at all costs is injurious to both partners Carl Jung, CW 10, Para 532

But that does not explain why the fantasies did not develop any pathological effects during the interim period. These effects develop only when the individual is faced with a situation which he cannot overcome by conscious means Carl Jung, CW 10, Para 546

The resultant standstill in the development of personality opens a sluice for infantile fantasies, which, of course, are latent in everybody but do not display any activity so long as the conscious personality can continue on its way unimpeded Carl Jung, CW 10, Para 546

When the fantasies reach a certain level of intensity, they begin to break through into consciousness and create a conflict situation that becomes perceptible to the patient himself, splitting him into two personalities with different characters. The dissociation, however, had been prepared long before in the unconscious, when the energy flowing off from consciousness

(because unused) reinforced the negative qualities of the unconscious and particularly the infantile traits of the personality Carl Jung, CW 10, Para 546

Since the normal fantasies of a child are nothing other, at bottom, than the imagination of the instincts, and may thus be regarded as preliminary exercises in the use of future conscious activities, it follows that the fantasies of the neurotic, even though pathologically altered and perhaps perverted by the regression of energy, contain a core of normal instinct, the hallmark of which is adaptedness Carl Jung, CW 10, Para 547

A neurotic illness always implies an unadapted alteration and distortion of normal dynamisms and of the "imagination" proper to them Carl Jung, CW 10, Para 547

Instincts, however, are highly conservative and of extreme antiquity as regards both their dynamism and their form. Their form, when represented to the mind, appears as an image which expresses the nature of the instinctive impulse visually and concretely, like a picture Carl Jung, CW 10, Para 547

If we could look into the psyche of the yucca moth, for instance, we would find in it a pattern of ideas, of a numinous or fascinating character, which not only compels the moth to carry out its fertilizing activity on the yucca plant but helps it to "recognize" the total situation Carl Jung, CW 10, Para 547

Instinct is anything but a blind and indefinite impulse, since it proves to be attuned and adapted to a definite external situation. This latter circumstance gives it its specific and irreducible form. Just as instinct is original and hereditary, so, too, its form is age-old, that is to say, archetypal. It is even older and more conservative than the body's form Carl Jung, CW 10, Para 547

It is as if two different persons were making statements about the same thing, each from his own point of view, or as if one person in two different frames of mind were sketching a picture of his experience. If for "person" we substitute "modern society," it is evident that the latter [modern society] is suffering from a mental dissociation, i.e., a neurotic disturbance Carl Jung, CW 10, Para 552

In view of this, it does not help matters at all if one party pulls obstinately to the right and the other to the left. This is what happens in every neurotic psyche, to its own deep distress, and it is just this distress that brings the patient to the analyst Carl Jung, CW 10, Para 552

The analyst has to establish a relationship with both halves of his patient's personality, because only from them can he put together a whole and complete man, and not merely from one half by suppression of the other half. But this suppression is just what the patient has been doing all along, for the modern Weltanschauung leaves him with no alternative Carl Jung, CW 10, Para 553

Far too little attention has been paid to the fact that, for all our irreligiousness, the distinguishing mark of the Christian epoch, its highest achievement, has become the congenital vice of our age: the supremacy of the word, of the Logos, which stands for the central figure of our Christian faith. The word has literally become our god and so it has remained, even if we know of Christianity only from hearsay Carl Jung, CW 10, Para 554

Words like “Society” and “State” are so concretized that they are almost personified. In the opinion of the man in the street, the “State,” far more than any king in history, is the inexhaustible giver of all good; the “State” is invoked, made responsible, grumbled at, and so on and so forth. Society is elevated to the rank of a supreme ethical principle; indeed, it is even credited with positively creative capacities Carl Jung, CW 10, Para 554

No one seems to notice that this worship of the word, which was necessarily at a certain phase of man’s mental development, has a perilous shadow side. That is to say, the moment the word, as a result of centuries of education, attains universal validity, it severs its original connection with the divine Person Carl Jung, CW 10, Para 554

There is then a personified Church, a personified State; belief in the word becomes credulity, and the word itself an infernal slogan capable of any deception Carl Jung, CW 10, Para 554

With credulity come propaganda and advertising to dupe the citizen with political jobbery and compromises, and the lie reaches proportions never known before in the history of the world. Carl Jung, CW 10, Para 554

It is highly probable that all man’s psychic functions have an instinctual foundation, as is obviously the case with animals. It is easy to see that in animals instinct functions as the spiritus rector of all behaviour. This observation lacks certainty only when the learning capacity begins to develop, for instance in the higher apes and in man Carl Jung, CW 10, Para 556

In animals, as a result of their learning capacity, instinct undergoes numerous modifications and differentiations, and in civilized man the instincts are so split up that only a few of the basic ones can be recognized with any certainty in their original form. The most important are the two fundamental instincts already mentioned [sexuality and the power drive] and their derivatives, and these have been the exclusive concern of medical psychology so far. But in following up the ramifications of instinct investigators came upon configurations which could not with certainty be ascribed to either group Carl Jung, CW 10, Para 556

To take but one example: The discoverer of the power instinct raised the question whether an apparently indubitable expression of the sexual instinct might not be better explained as a “power arrangement,” and Freud himself felt obliged to acknowledge the existence of “ego instincts” in addition to the overriding sexual instinct a clear concession to the Adlerian standpoint Carl Jung, CW 10, Para 556

In view of this uncertainty, it is hardly surprising that in most cases neurotic symptoms can be explained, almost without contradiction, in terms of either theory. This perplexity does not mean that one or the other standpoint is erroneous or that both are. Rather, both are relatively valid and, unlike certain one-sided and dogmatic tendencies, admit the existence and competition of still other instincts Carl Jung, CW 10, Para 556

Although, as I have said, the question of human instinct is a far from simple matter, we shall probably not be wrong in assuming that the learning capacity, a quality almost exclusive to man, is based on the instinct for imitation found in animals. It is in the nature of this instinct to disturb other instinctive activities and eventually to modify them, as can be observed, for instance, in the songs of birds when they adopt other melodies Carl Jung, CW 10, Para 556

Nothing estranges man more from the ground-plan of his instincts than his learning ca-

pacity, which turns out to be a genuine drive for progressive transformation of human modes of behaviour. Carl Jung, CW 10, Para 557

It, more than anything else, is responsible for the altered conditions of his existence and the need for new adaptations which civilization brings Carl Jung, CW 10, Para 557

It [learning capacity] is also the ultimate source of those numerous psychic disturbances and difficulties which are occasioned by man's progressive alienation from his instinctual foundation, i.e., by his uprootedness and identification with his conscious knowledge of himself, by his concern with consciousness at the expense of the unconscious Carl Jung, CW 10, Para 557

This is the unconscious Zeitgeist. It compensates the attitude of the conscious mind and anticipates changes to come. An excellent example of this is modern art: though seeming to deal with aesthetic problems, it is really performing a work of psychological education on the public by breaking down and destroying their previous aesthetic views of what is beautiful in form and meaningful in content Carl Jung, CW 10, Para 584

The pleasingness of the artistic product is replaced by chill abstractions of the most subjective nature which brusquely slam the door on the naïve and romantic delight in the senses and on the obligatory love for the object. Carl Jung, CW 10, Para 584

This tells us, in plain and universal language, that the prophetic spirit of art has turned away from the old object-relationship towards the forth the time being dark chaos of subjectivisms Carl Jung, CW 10, Para 584

Certainly art, so far as we can judge of it, has not yet discovered in this darkness what it is that could hold all men together and give expression to their psychic wholeness. Since reflection seems to be needed for this purpose, it may be that such discoveries are reserved for other fields of endeavour Carl Jung, CW 10, Para 584

Great art till now has always derived its fruitfulness from myth, from the unconscious process of symbolization which continues through the ages and, as the primordial manifestation of the human spirit, will continue to be the root of all creation in the future. Carl Jung, CW 10, Para 585

The development of modern art with its seemingly nihilistic trend towards disintegration must be understood as the symptom and symbol of a mood of universal destruction and renewal that has set its mark on our age. Carl Jung, CW 10, Para 585

As the behaviour of the press is a sort of Gallup test with reference to world opinion, one must draw the conclusion that news affirming the existence of Ufos is welcome, but that scepticism seems to be undesirable. To believe that Ufos are real suits the general opinion, whereas disbelief is to be discouraged. This creates the impression that there is a tendency all over the world to believe in saucers and to want them to be real, unconsciously helped along by a press that otherwise has no sympathy with the phenomenon Carl Jung, CW 10, Para 589

As we know from ancient Egyptian history, they are manifestations of psychic changes which always appear at the end of one Platonic month and at the beginning of another. Carl Jung, CW 10, Para 589

Apparently they are changes in the constellation of psychic dominants, of the archetypes, or "gods" as they used to be called, which bring about, or accompany, long-lasting transformations of the collective psyche. This transformation started in the historical era and left its traces first in the passing of the Aeon of Taurus into that of Aries, and then of Aries into Pisces, whose beginning coincides with the rise of Christianity. We are now nearing that great change which may be expected when the spring-point enters Aquarius Carl Jung, CW 10, Para 589

I came to the same conclusion as Edward J. Ruppelt, one-time chief of the American Air Force's project for investigating Ufo reports. The conclusion is: something is seen, but one doesn't know what. Carl Jung, CW 10, Para 591

Such an object provokes, like nothing else, conscious and unconscious fantasies, the former giving rise to speculative conjectures and pure fabrications, and the latter supplying the mythological background inseparable from these provocative observations Carl Jung, CW 10, Para 593

Regarded in this light, the Ufo reports may seem to the sceptical mind to be rather like a story that is told all over the world but differs from an ordinary rumour in that it is expressed in the form of visions, or perhaps owed its existence to them in the first place and is now kept alive by them. I would call this comparatively rare variation a visionary rumour It is closely akin to the collective visions of, say, the crusaders during the siege of Jerusalem, the troops at Mons in the first World War, the faithful followers of the pope at Fatima, Portugal, etc. Apart from collective visions, there are on record cases where one or more persons see something that physically is not there Carl Jung, CW 10, Para 597

The signal for the Ufo stories was given by the mysterious projectiles seen over Sweden during the last two years of the war attributed of course to the Russians and by the reports about "Foo fighters," i.e., lights that accompanied the Allied bombers over Germany (Foo = feu). These were followed by the strange sightings of "Flying Saucers" in America. The impossibility of finding an earthly base for the Ufos and of explaining their physical peculiarities soon led to the conjecture of an extra-terrestrial origin. With this development the rumour got linked up with the psychology of the great panic that broke out in the United States just before the second World War, when a radio play, based on a novel by H. G. Wells, about Martians invading New York, caused a regular stampede and numerous car accidents. The play evidently hit the latent emotion connected with the imminence of war Carl Jung, CW 10, Para 599

But if it is a case of psychological projection, there must be a psychic cause for it. One can hardly suppose that anything of such worldwide incidence as the Ufo legend is purely fortuitous and of no importance whatever. The many thousands of individual testimonies must have an equally extensive causal basis. When an assertion of this kind is corroborated practically everywhere, we are driven to assume that a corresponding motive must be present everywhere, too Carl Jung, CW 10, Para 608

In addition, there are cases where the same collective cause produces identical or similar effects, i.e., the same visionary images and interpretations, in the very people who are least prepared for such phenomena and least inclined to believe in them. This fact gives the eyewitness accounts an air of particular credibility: it is usually emphasized that the witness is above suspicion because he was never distinguished for his lively imagination or credulousness but, on the contrary, for his cool judgment and critical reason Carl Jung, CW

10, Para 609

Considering the notorious camera-mindedness of Americans, it is surprising how few "authentic" photos of Ufos seem to exist, especially as many of them are said to have been observed for several hours at relatively close quarters. I myself happen to know someone who saw a Ufo with hundreds of other people in Guatemala. He had his camera with him, but in the excitement he completely forgot to take a photo, although it was daytime and the Ufo remained visible for an hour. I have no reason to doubt the honesty of his report. He has merely strengthened my impression that Ufos are somehow not photogenic Carl Jung, CW 10, Para 613

As one can see from all this, the observation and interpretation of Ufos have already led to the formation of a regular legend. Quite apart from the thousands of newspaper reports and articles there is now a whole literature on the subject, some of it humbug, some of it serious. The Ufos themselves, however, do not appear to have been impressed; as the latest observations show, they continue their way undeterred. Be that as it may, one thing is certain: they have become a living myth Carl Jung, CW 10, Para 614

We have here a golden opportunity of seeing how a legend is formed, and how in a difficult and dark time for humanity a miraculous tale grows up of an attempted intervention by extra-terrestrial "heavenly" powers and this at the very time when human fantasy is seriously considering the possibility of space travel and of visiting or even invading other planets Carl Jung, CW 10, Para 614

Sensationalism, love of adventure, technological audacity, intellectual curiosity may appear to be sufficient motives for our futuristic fantasies, but the impulse to spin such fantasies, especially when they take such a serious form witness the sputniks springs from an underlying cause, namely a situation of distress and the vital need that goes with it Carl Jung, CW 10, Para 615

What as a rule is seen is a body of round shape, disk-like or spherical, glowing or shining fierily in different colours, or, more seldom, a cigar-shaped or cylindrical figure of various sizes. It is reported that occasionally they are invisible to the naked eye but leave a "blip" on the radar screen. The round bodies in particular are figures such as the unconscious produces in dreams, visions, etc. Carl Jung, CW 10, Para 618

In this case they are to be regarded as symbols representing, in visual form, some thought that was not thought consciously, but is merely potentially present in the unconscious in invisible form and attains visibility only through the process of becoming conscious Carl Jung, CW 10, Para 618

The visible form, however, expresses the meaning of the unconscious content only approximately. In practice the meaning has to be completed by amplificatory interpretation. The unavoidable errors that result can be eliminated only through the principle of "waiting on events"; that is to say we obtain a consistent and readable text by comparing sequences of dreams dreamt by different individuals. The figures in a rumour can be subjected to the same principles of dream interpretation Carl Jung, CW 10, Para 618

If we apply them to the round object whether it be a disk or a sphere we at once get an analogy with the symbol of totality well known to all students of depth psychology, namely

the mandala (Sanskrit for circle). This is not by any means a new invention, for it can be found in all epochs and in all places, always with the same meaning, and it reappears time and again, independently of tradition, in modern individuals as the “protective” or apotropaic circle, whether in the form of the prehistoric “sun wheel,” or the magic circle, or the alchemical microcosm, or a modern symbol of order, which organizes and embraces the psychic totality Carl Jung, CW 10, Para 619

In so far as the mandala encompasses, protects, and defends the psychic totality against outside influences and seeks to unite the inner opposites, it is at the same time a distinct individuation symbol and was known as such even to medieval alchemy Carl Jung, CW 10, Para 621

The soul was supposed to have the form of a sphere, on the analogy of Plato’s world-soul, and we meet the same symbol in modern dreams. This symbol, by reason of its antiquity, leads us to the heavenly spheres, to Plato’s “supra-celestial place” where the “Ideas” of all things are stored up Carl Jung, CW 10, Para 621

Hence there would be nothing against the naïve interpretation of Ufos as “souls.” Naturally they do not represent our modern conception of the psyche, but give an involuntary archetypal or mythological picture of an unconscious content, a rotundum, as the alchemists called it, that expresses the totality of the individual Carl Jung, CW 10, Para 621

I have defined this spontaneous image as a symbolical representation of the Self, by which I mean not the ego but the totality composed of the conscious and the unconscious. I am not alone in this, as the Hermetic philosophy of the Middle Ages had already arrived at very similar conclusions Carl Jung, CW 10, Para 621

If the round shining objects that appear in the sky be regarded as visions, we can hardly avoid interpreting them as archetypal images. They would then be involuntary, automatic projections based on instinct, and as little as any other psychic manifestations or symptoms can they be dismissed as meaningless and merely fortuitous Carl Jung, CW 10, Para 622

Anyone with the requisite historical and psychological knowledge knows that circular symbols have played an important role in every age; in our own sphere of culture, for instance, they were not only soul symbols but “God-images.” There is an old saying that “God is a circle whose centre is everywhere and the circumference nowhere.” God in his omniscience, omnipotence, and omnipresence is a totality symbol par excellence, something round, complete, and perfect. Epiphanies of this sort are, in the tradition, often associated with fire and light Carl Jung, CW 10, Para 622

On the antique level, therefore, the Ufos could easily be conceived as “gods.” They are impressive manifestations of totality whose simple, round form portrays the archetype of the Self, which as we know from experience plays the chief role in uniting apparently irreconcilable opposites and is therefore best suited to compensate the split-mindedness of our age. It has a particularly important role to play among the other archetypes in that it is primarily the regulator and orderer of chaotic states, giving the personality the greatest possible unity and wholeness Carl Jung, CW 10, Para 622

The dream describes, as the exposition of the initial situation, a mass panic as at an air-raid warning. A Ufo appears, having the form of a drop. A fluid body assumes the form of a

drop when it is about to fall, from which it is clear that the Ufo is conceived as a liquid falling from the sky, like rain Carl Jung, CW 10, Para 628

From many of the reports, particularly the early ones, it is evident that the Ufos can appear suddenly and vanish equally suddenly. They can be tracked by radar but remain invisible to the eye, and conversely, can be seen by the eye but not detected by radar. Ufos can make themselves invisible at will, it is said, and must obviously consist of a substance that is visible at one moment and invisible the next Carl Jung, CW 10, Para 630

The nearest analogy to this is a volatile liquid which condenses out of an invisible state into the form of drops. In reading the old texts one can still feel the miracle of disappearance and reappearance which the alchemists beheld in the vaporization of water or quicksilver: for them it was the transformation of the "souls that had become water" (Heraclitus) into the invisible pneuma at the touch of Hermes' wand, and their descent out of the empyrean into visible form again. Zosimos of Panopolis (third century A.D.) has left us a valuable document describing this transformation, which takes place in a cooking-vessel Carl Jung, CW 10, Para 630

The fantasies born of musing over the steaming cooking-pot one of the most ancient experiences of mankind may also be responsible for the sudden disappearance and reappearance of the Ufo Carl Jung, CW 10, Para 630

The plurality of Ufos, then, is a projection of a number of psychic images of wholeness which appear in the sky because on the one hand they represent archetypes charged with energy and on the other hand are not recognized as psychic factors Carl Jung, CW 10, Para 635

Very probably there is a phallic analogy in the dream, which, in accordance with the meaning of this exceedingly archaic symbol, gives the Ufo the character of something "procreative," "fructifying," and, in the broadest sense, "penetrating" Carl Jung, CW 10, Para 638

The dreamer does not flee from the menacing aspect of the Ufo, even when she sees it coming straight at her. During this confrontation the original spherical or lens-shaped aspect reappears in the form of a circular eye. Carl Jung, Para 639

Nowadays people who have an experience of this kind are more likely to go running to the doctor or psychiatrist than to the theologian. I have more than once been consulted by people who were terrified by their dreams and visions. They took them for symptoms of mental illness, possibly heralding insanity, whereas in reality they were "dreams sent by God," real and genuine religious experiences that collided with a mind unprepared, ignorant, and profoundly prejudiced Carl Jung, CW 10, Para 642

The second dream differs from the first in that it brings out the dreamer's inner relationship to the Ufo. The Ufo has marked her out and not only turns a searching eye upon her but irradiates her with magical heat, a synonym for her own inner affectivity Carl Jung, CW 10, Para 643

Fire is the symbolical equivalent of a very strong emotion or affect, which in this case comes upon her quite unexpectedly. In spite of her justifiable fear of the Ufo she held her ground, as though it were intrinsically harmless, but is now made to realize that it is capable of sending out a deadly heat, a statement we often meet with in the Ufo literature Carl Jung, CW 10, Para 643

This heat is a projection of her own unrealized emotion of a feeling that has intensified into a physical effect but remains unrecognized. Even her facial expression was altered (burnt) by it. This recalls not only the changed face of Moses but also that of Brother Klaus after his terrifying vision of God. It points to an “indelible” experience whose traces remain visible to others, because it has brought about a demonstrable change in the entire personality Carl Jung, CW 10, Para 643

Psychologically, of course, such an event betokens only a potential change; it has first to be integrated into consciousness. That is why Brother Klaus felt it necessary to spend long years in wearisome study and meditation until he succeeded in recognizing his terrifying vision as a vision of the Holy Trinity, in accordance with the spirit of the age Carl Jung, CW 10, Para 643

In this way he transformed the experience into an integrated conscious content that was intellectually and morally binding for him. This work has still to be done by the dreamer, and perhaps also by all those who see Ufos, dream of them, or spread rumours about them Carl Jung, CW 10, Para 643

The motif of the isolated “God’s eye,” which the unconscious proffers as an interpretation of the Ufo, can be found in ancient Egyptian mythology as the “eye of Horus,” who with its help healed the partial blinding of his father Osiris, caused by Set. The isolated God’s eye also appears in Christian iconography Carl Jung, CW 10, Para 645

The sexual aspect of the Ufos merits our attention, as it shows that a very powerful instinct like sexuality has its share in the structure of the phenomenon. It is probably no accident that in one of the dreams we have been discussing a feminine symbol appears, and in the other a masculine, in accordance with the reports of lens-shaped and cigar-shaped Ufos, for where one appears, we may also expect its partner Carl Jung, CW 10, Para 662

She thus creates an acute consciousness of sex, deleterious to weaker spirits but of advantage in promoting reflection and broadening the consciousness of the stronger Carl Jung, CW 10, Para 654

The worldly pomps of the Catholic Church for which she is reproached by the Protestants have the obvious purpose of holding the power of the spirit visibly before the natural power-instinct. This is infinitely more effective than the best logical arguments, which no one likes following. Carl Jung, CW 10, Para 654

Only the tiniest fraction of the population learns anything from reflection; everything else consists in the suggestive power of ocular evidence. Carl Jung, CW 10, Para 654

The dream describes, as the exposition of the initial situation, a mass panic as at an air-raid warning. A Ufo appears, having the form of a drop. A fluid body assumes the form of a drop when it is about to fall, from which it is clear that the Ufo is conceived as a liquid falling from the sky, like rain Carl Jung, CW 10, Para 628

From many of the reports, particularly the early ones, it is evident that the Ufos can appear suddenly and vanish equally suddenly. They can be tracked by radar but remain invisible to the eye, and conversely, can be seen by the eye but not detected by radar. Ufos can make themselves invisible at will, it is said, and must obviously consist of a substance that is visible

at one moment and invisible the next Carl Jung, CW 10, Para 630

The nearest analogy to this is a volatile liquid which condenses out of an invisible state into the form of drops. In reading the old texts one can still feel the miracle of disappearance and reappearance which the alchemists beheld in the vaporization of water or quicksilver: for them it was the transformation of the “souls that had become water” (Heraclitus) into the invisible pneuma at the touch of Hermes’ wand, and their descent out of the empyrean into visible form again. Zosimos of Panopolis (third century A.D.) has left us a valuable document describing this transformation, which takes place in a cooking-vessel Carl Jung, CW 10, Para 630

Spiders, like all animals that are not warm-blooded or have no cerebrospinal nervous system, function in dreams as symbols of a profoundly alien psychic world Carl Jung, CW 10, Para 671

So far as I can see, they [spiders express contents which, though active, are unable to reach consciousness; they have not yet entered the sphere of the cerebrospinal nervous system but are as though lodged in the deeper-lying sympathetic and parasympathetic systems. Carl Jung, CW 10, Para 671

In this connection I remember the dream of a patient who had the greatest difficulty in conceiving the idea of the supraordinate totality of the psyche and felt the utmost resistance to it. He had picked up the idea from one of my books but, characteristically enough, was unable to distinguish between the ego and the Self, and, because of his hereditary taint, was threatened with a pathological inflation Carl Jung, CW 10, Para 671

In such cases there is a real weakness of the ego, which cannot therefore afford any suggestion of taking second place, as that would fatally emphasize its littleness and has to be avoided at all costs. Illusions, however, are inimical to life, because they are unhealthy and sooner or later trip you up. The dream therefore attempts a kind of corrective, which, like the Delphic oracle, turns out to be ambivalent. It says in effect: “What is troubling you in the head (attic) is, though you may not know it, a rare jewel. It is like an animal that is strange to you, forming symbolically the centre of many concentric circles, reminiscent of the centre of a large or small world, like the eye of God in medieval pictures of the universe” Carl Jung, CW 10, Para 672

Confronted with this, a healthy mind would fight against identification with the centre, because of the danger of paranoiac God-likeness Carl Jung, CW 10, Para 672

Anyone who gets into this spider’s net is wrapped round like a cocoon and robbed of his own life. He is isolated from his fellows, so that they can no longer reach him, nor he them. He lives in the loneliness of the world creator, who is everything and has nothing outside himself Carl Jung, CW 10, Para 672

If, on top of all this, you have had an insane father, there is the danger that you will begin to “spin” yourself, and for this reason the spider has a sinister aspect that should not be overlooked Carl Jung, CW 10, Para 672

For his everyday life man seems to need no instincts, especially when he is convinced of the sovereign power of his will. He ignores the meaning of instinct and devalues it to the

point of atrophy, not seeing how much he endangers his very existence through loss of instinct Carl Jung, CW 10, Para 679

When therefore dreams emphasize instinct they are trying to fill a perilous gap in our adaptation to life. Carl Jung, CW 10, Para 679

Deviations from instinct show themselves in the form of affects, which in dreams are likewise expressed by animals. Hence uncontrolled affects are rightly regarded as bestial or primitive and should be avoided. Carl Jung, CW 10, Para 680

But we cannot do this [avoid uncontrolled affects] without repressing them, that is, without a splitting of consciousness. In reality we can never escape their power. Carl Jung, CW 10, Para 680

Somewhere or other they will continue to operate even though they cannot be found in consciousness. At worst they manifest themselves in a neurosis or in an unconscious "arrangement" of inexplicable mishaps Carl Jung, CW 10, Para 680

The saint, who seems exempt from these weaknesses, pays for his immunity with suffering and abnegation of the earthly man, without which of course he would not be a saint. The lives of holy men show that the two sides cancel out. None can escape the chain of suffering that leads to sickness, old age and death. Carl Jung, CW 10, Para 680

We can and should, for the sake of our humanity, "control" our affects and keep them in check, but we should know that we have to pay dearly for it. The choice of currency in which we wish to pay the tribute is sometimes even left to us Carl Jung, CW 10, Para 680

Remaining down below and subordinating ourselves to a theriomorphic symbol, which seems very like an insult to our human dignity, means no more than that we should remain conscious of these simple truths and never forget that in point of anatomy and psychology the earthly man, for all his high flights, is first cousin to the anthropoids Carl Jung, CW 10, Para 681

Should it be granted to him, however, to develop into something higher without crippling his nature, he is reminded that this transformation is not his to command, for he is dependent on factors he cannot influence Carl Jung, CW 10, Para 681

He [death] is the great perfector, drawing his inexorable line under the balance-sheet of human life. In him alone is wholeness one way or another attained. Death is the end of the empirical man and the goal of the spiritual man, as the perspicacious Heraclitus says: "It is to Hades that they rage and celebrate their feasts" Carl Jung, CW 10, Para 695

Everything that is not yet where it ought to be, that has not yet gone where it ought to have gone, fears the end, the final reckoning. We avoid as long as possible making ourselves conscious of those things which wholeness still lacks, thus preventing ourselves from becoming conscious of the Self and preparing for death. The Self then remains in projection Carl Jung, CW 10, Para 695

What is the use of a compensation that, because of its symbolic form, is not understood by the conscious mind? Apart from those not so uncommon cases where only a little reflection is needed to understand the meaning of a dream, we can take it as a general rule that the

compensation is not immediately obvious and is therefore easily overlooked Carl Jung, CW 10, Para 732

The language of the unconscious does not have the intentional clarity of conscious language; it is a condensation of numerous data, many of them subliminal, whose connection with conscious contents is not known. These data do not take the form of a directed judgment, but follow an instinctive, archaic “pattern” which, because of its mythological character, is not recognized by the reasoning mind Carl Jung, CW 10, Para 732

The reaction of the unconscious is a natural phenomenon that is not concerned to benefit or guide the personal human being but is regulated exclusively by the demands of psychic equilibrium. Thus there are times when, as I have often seen, a dream that is not understood can still have a compensatory effect, even though as a rule conscious understanding is required on the alchemical principle “Quod natura relinquit imperfectum, ars perficit” (what nature leaves imperfect, the art perfects) Carl Jung, CW 10, Para 732

Were this not so, human reflection and effort would be superfluous. For its part, the conscious mind often proves incapable of recognizing the full scope and significance of certain vital situations it has created for itself, and so challenges the unconscious to bring up the subliminal context, which, however, is written not in rational language but in an archaic one with two or more meanings Carl Jung, CW 10, Para 732

Since the metaphors it uses reach far back into the history of the human mind, its interpreters will need historical knowledge in order to understand its meaning Carl Jung, CW 10, Para 732

Instead, it has to turn its attention to the individual exceptions, which are murdered by statistics. The human psyche attains its true meaning not in the average but in the unique, and this does not count in a scientific procedure Carl Jung, CW 10, Para 744

This point of view is anathema to the exclusively scientific attitude, despite the fact that without exceptions there would be no statistics at all. Moreover, in actual reality the exceptions are almost more important than the rule Carl Jung, CW 10, Para 744

The psychological effect is very like that of the Rorschach test, where a purely fortuitous and irrational picture appeals to the irrational powers of the imagination and brings the observer’s unconscious into play. When his extraverted interest is snubbed in this way it falls back on the “subjective factor” and increases the latter’s energy charge, a phenomenon that was observed very clearly in the original word association tests Carl Jung, CW 10, Para 753

The isolated stimulus word uttered by an experimenter bewilders and embarrasses the subject because it may have more than one meaning Carl Jung, CW 10, Para 753

He does not quite know what to answer, and this accounts for the extraordinary variety of answers in these tests and what is more important for the large number of disturbed reactions which are caused by the intrusion of unconscious contents Carl Jung, CW 10, Para 753

The rebuffing of interest by unintelligibility results in its introversion and a constellation of the unconscious. Modern art has the same effect Carl Jung, CW 10, Para 754

We can therefore attribute to modern art a conscious or unconscious intention to turn the beholder's eyes away from the intelligible and enjoyable world of the senses and to enforce a revelation of the unconscious as a kind of substitute for the loss of human surroundings Carl Jung, CW 10, Para 754

This is also the intention of the [word] association experiment and the Rorschach test: they are meant to supply information concerning the background of consciousness, and this they do with great success Carl Jung, CW 10, Para 754

The experimental setup of modern art is evidently the same: it faces the observer with the question, "How will you react? What do you think? What kind of fantasy will come up?" In other words, modern art is less concerned with the pictures it produces than with the observer and his involuntary reactions Carl Jung, CW 10, Para 754

He peers at the colours on the canvas, his interest is aroused, but all he can discover is a product that defies human understanding. He feels disappointed, and already he is thrown back on a subjective reaction which vents itself in all sorts of exclamations Carl Jung, CW 10, Para 754

Anyone who knows how to interpret these will learn a lot about the subjective disposition of the observer but next to nothing about the painting as such. For him it is no more than a psychological test Carl Jung, CW 10, Para 754

This may sound disparaging, but only for those who regard the subjective factor merely as a source of discomfort. But if they are interested in their own psyches, they will try to submit their constellated complexes to closer scrutiny Carl Jung, CW 10, Para 754

In its attempt to leave the world of visible and intelligible appearances and to float in the boundlessness of chaos, modern art, to a still greater degree than the psychological tests, evokes complexes which have sloughed off their usual personal aspect and appear as what they originally were, namely primordial forms of the instincts. They are of a suprapersonal, collective-unconscious nature Carl Jung, CW 10, Para 755

Personal complexes arise wherever there are conflicts with the instinctual disposition. These are the points of faulty adaptation, and their sensitiveness releases affects which tear the mask of adaptedness off the face of civilized man Carl Jung, CW 10, Para 755

This also seems to be the goal that modern art is indirectly aiming at. For all the appearance of extreme arbitrariness and boundless chaos, the loss of beauty and meaning is compensated by a strengthening of the unconscious. And since this is not chaotic but pertains to the natural order of things, it is to be expected that forms and patterns will arise which are indicative of this order Carl Jung, CW 10, Para 755

As the illustration shows, this sighting was made in Basel. The dark colour of the Ufos may be due to their having been seen against the light of the rising sun. Some of them were bright and fiery. Their speed and irregular motion are typical Ufo features Carl Jung, CW 10, Para 759

This broadsheet (fig. 404.06) relates the story of a "very frightful spectacle" seen by "numerous men and women" at sunrise on April 14, 1561. They saw "globes" of a blood-red,

bluish, or black colour, or “plates” in large numbers near the sun, “some three in a row, now and then four in a square, also some standing alone. And amongst these globes some blood-coloured crosses were seen.” They all began to fight one another.” This went on for about an hour. Then “they all fellas one sees in the picture from the sun and sky down to the earth, as if everything were on fire, then it slowly faded away on the earth, producing a lot of steam.” Underneath the globes was a long object, “shaped like a great black spear.” Naturally this “spectacle” was interpreted as a divine warning Carl Jung, CW 10, Para 760

This report, as the reader will have noted, contains certain details already known to us. Above all the “tubes,” which are analogous to the cylindrical objects in the Ufo reports. These, in Ufo language, are the “mother-ships” which are said to carry the smaller, lens-shaped Ufos for long distances. The picture shows them in operation, releasing Ufos or taking them on board. Especially important, though lacking in the modern Ufo reports, are the indubitable quaternities, seen sometimes as simple crosses, sometimes as disks in the form of a cross, that is, as regular mandalas. There also seems to be a hint of the 3 + 1 motif in the dilemma of three and four. The militaristic interpretation is as characteristic of the sixteenth century as the technological one is of ours. The tubes are cannons and the globes cannonballs, and the shooting to and from of the globes is an artillery engagement. The great black spearhead, as well as the spearshafts (?), seem to represent the masculine element, especially in its “penetrating” capacity. Similar things are reported in the Ufo literature Carl Jung, CW 10, Para 761

The emphasis on the cross motif is striking. The Christian meaning of the cross can hardly be considered here, since we are dealing with a natural phenomenon, a swarm of round objects in violent motion, shooting in opposite directions and reminding the reporter of a battle. If the Ufos were living organisms, one would think of a swarm of insects rising with the sun, not to fight one another but to mate and celebrate the marriage flight. Here the cross signifies a union of opposites (vertical and horizontal), a “crossing”; as a plus sign, it is also a joining together, an addition. Where the globes are coupled together to form quaternities, they have given rise to the crossed marriage quaternio, which I have discussed in my “Psychology of the Transference.” It forms the model for the primitive “cross cousin marriage,” but is also an individuation symbol, the union of the “four” Carl Jung, CW 10, Para 762

Columns of smoke rise up from the place where the cannonballs have fallen, reminding us of Tanguy’s picture. The moment of sunrise, the Aurora consurgens (Aquinas, Boehme), suggests the revelation of the light. Both reports have clear analogies not only with one another but also with the modern saucer stories and with the individual products of the unconscious today Carl Jung, CW 10, Para 763

This seventeenth-century woodcut (fig. 404.07), possibly representing a Rosicrucian illumination, comes from a source unknown to me. On the right it shows the familiar world. The pilgrim, who is evidently on a pélerinage de l’âme [pilgrimage of the soul], has broken through the star-strewn rim of his world and behold another, supernatural universe filled with what look like layers of cloud or mountain ranges. In it appear the wheels of Ezekiel and disks or rainbowlike figures, obviously representing the “heavenly spheres.” In these symbols we have a prototype of the Ufo vision, which is vouchsafed to the illuminati. They cannot be heavenly bodies belonging to our empirical world, but are projected “rotunda” from the inner, four-dimensional world Carl Jung, CW 10, Para 764

This picture (fig. 404.08) comes from the Rupertsberg Codex Scivias, written by Hilde-

gard of Bingen (12th cent.). It shows the quickening or “animation” of the child in the body of the mother. From a higher world an influx enters the foetus. This upper world has a remarkable quadratic form divided into three to correspond with the Trinity, but, unlike the latter, which is supposed to consist of three equal parts, the middle section is different from the other two. It contains round objects, whereas the other two are characterized by the eye motif. Like the wheels of Ezekiel, the little rotunda are associated with eyes Carl Jung, CW 10, Para 765

As Hildegard’s text states, the radiance of the “countless eyes” (there are in reality twenty-four in each section) means “God’s knowledge,” that is, his seeing and knowing, with reference to the seven eyes of God that “run to and from through the whole earth” (Zech. 4: 10) Carl Jung, CW 10, Para 766

The rotunda, on the other hand, are God’s deeds, such as the sending of his son as a saviour. Hildegard adds: “All, the bad as well as the good, appear in God’s knowledge, for it is not ever clouded round by any darkness.” The souls of men are “fireballs”, so presumably the soul of Christ was also such a ball, for Hildegard interprets her vision not with reference to the growth of a human child only, but with particular reference to Christ and the Mother of God Carl Jung, CW 10, Para 766

The square divided into three stands for the Holy Ghost entering into the child. The pro-creative aspect of the Holy Ghost unites the Godhead with matter, as is clear from the sacred legend. The intermediate forms between spirit and matter are obviously the rotunda, early stages of animated bodies, filling the middle section of the square. There are thirty of them, and, however accidental this may be, the number 30 (days of the month) suggests the moon, ruler of the hylical world, whereas twenty-four (hours of the day) suggests the sun, the king. This indicates the motif of the coniunctio (* and *) an instance of that unconscious readiness which later came to expression in Cusanus’ definition of God as a complexio oppositorum Carl Jung, CW 10, Para 766

In the miniature the rotunda are fire-coloured, the fiery seeds from which human beings will sprout, a sort of pneumatic roe. This comparison is justified in so far as alchemy compares the rotunda to fish’s eyes. The eyes of a fish are always open, like the eyes of God. They are synonymous with the scintillae, “soul-sparks.” It is just possible that these alchemical allusions crept into Hildegard’s text via the atoms of Democritus (spiritus insert us atomis). Another such source may be responsible for the squareness of the Holy Ghost Carl Jung, CW 10, Para 766

The square, being a quaternity, is a totality symbol in alchemy. Having four corners it signifies the earth, whereas a circular form is attributed to the spirit. Earth is feminine, spirit masculine. The square as a symbol of the spiritual world is certainly most unusual but becomes more intelligible when we take Hildegard’s sex into account. This remarkable symbolism is reflected in the squaring of the coniunctio oppositorum. “Squareness” in alchemy is an important feature of the unitary substance, the Mercurius Philosophorum sive quadratus, and characterizes its chthonic nature, which it possesses along with spirituality (spiritus mercurialis) Carl Jung, CW 10, Para 767

They [numbers] are an aspect of the physically real as well as of the psychically imaginary. They do not only count and measure, and are not merely quantitative; they also make qualitative statements and are therefore a mysterious something midway between myth and

reality, partly discovered and partly invented Carl Jung, CW 10, Para 777

Equations, for instance, that were invented as pure mathematical formulae have subsequently proved to be formulations of the quantitative behaviour of physical things. Carl Jung, CW 10, Para 777

Conversely, owing to their individual qualities, numbers can be vehicles for psychic processes in the unconscious. The structure of the mandala, for instance, is intrinsically mathematical. We may exclaim with the mathematician Jacobi: "In the Olympian host Number eternally reigns" Carl Jung, CW 10, Para 777

Thus it is a fact of singular importance that number also characterizes the "personal" nature of the mediating figure, that it appears as a mediator. From the psychological standpoint and having regard to the limits set to all scientific knowledge, I have called the mediating or "uniting" symbol which necessarily proceeds from a sufficiently great tension of opposites the "Self." I chose this term in order to make clear that I am concerned primarily with the formulation of empirical facts and not with dubious incursions into metaphysics Carl Jung, CW 10, Para 779

Living in the West, I would have to say Christ instead of "Self," in the Near East it would be Khidr, in the Far East atman or Tao or the Buddha, in the Far West maybe a hare or Mondamin, and in cabalism it would be Tifereth Carl Jung, CW 10, Para 779

That there is something beyond the borderline, beyond the frontiers of knowledge, is shown by the archetypes and, most clearly of all, by numbers, which this side of the border are quantities but on the other side are autonomous psychic entities, capable of making qualitative statements which manifest themselves in a priori patterns of order Carl Jung, CW 10, Para 780

The patterns include not only causally explicable phenomena like dream-symbols and such, but remarkable relativizations of time and space which simply cannot be explained causally Carl Jung, CW 10, Para 780

They are the parapsychological phenomena which I have summed up under the term "synchronicity" and which have been statistically investigated by Rhine. The positive results of his experiments elevate these phenomena to the rank of undeniable facts Carl Jung, CW 10, Para 780

This brings us a little nearer to understanding the mystery of psychophysical parallelism, for we now know that a factor exists which mediates between the apparent incommensurability of body and psyche, giving matter a kind of "psychic" faculty and the psyche a kind of "materiality," by means of which the one can work on the other Carl Jung, CW 10, Para 780

That the body can work on the psyche seems to be a truism, but strictly speaking all we know is that any bodily defect or illness also expresses itself psychically. Naturally this assumption only holds good if, contrary to the popular materialistic view, the psyche is credited with an existence of its own Carl Jung, CW 10, Para 780

But materialism in its turn cannot explain how chemical changes can produce a psyche. Both views, the materialistic as well as the spiritualistic, are metaphysical prejudices Carl Jung, CW 10, Para 780

It accords better with experience to suppose that living matter has a psychic aspect, and the psyche a physical aspect. If we give due consideration to the facts of parapsychology, then the hypothesis of the psychic aspect must be extended beyond the sphere of biochemical processes to matter in general. In that case all reality would be grounded on an as yet unknown substrate possessing material and at the same time psychic qualities. In view of the trend of modern theoretical physics, this assumption should arouse fewer resistances than before Carl Jung, CW 10, Para 780

The peculiarity of "conscience" is that it is a knowledge of, or certainty about, the emotional value of the ideas we have concerning the motives of our actions. According to this definition, conscience is a complex phenomenon consisting on the one hand in an elementary act of the will, or in an impulse to act for which no conscious reason can be given, and on the other hand in a judgment grounded on rational feeling Carl Jung, CW 10, Para 825

This judgment is a value judgment, and it differs from an intellectual judgment in that, besides having an objective, general, and impartial character, it reveals the subjective point of reference. A value judgment always implicates the subject, presupposing that something is good or beautiful for me Carl Jung, CW 10, Para 825

that it is good or beautiful for certain other people, this is not necessarily a value judgment but may just as well be an intellectual statement of fact. Conscience, therefore, is made up of two layers, the lower one comprising a particular psychic event, while the upper one is a kind of superstructure representing the positive or negative judgment of the subject Carl Jung, CW 10, Para 825

For example, a business man I knew was made what looked like a perfectly serious and honourable offer which, it turned out much later, would have involved him in a disastrous fraud had he accepted it. The following night after he received this offer, which as I say seemed to him quite acceptable, he dreamt that his hands and forearms were covered with black dirt. He could see no connection with the events of the previous day, because he was unable to admit to himself that the offer had touched him on the vulnerable spot: his expectation of a good business deal. I warned him about this, and he was careful enough to take certain precautions which did in fact save him from more serious harm Carl Jung, CW 10, Para 826

In this instance the classical characteristic of conscience, the conscientia peccati ("consciousness of sin"), is missing. Accordingly the specific feeling-tone of a bad conscience is missing too Carl Jung, CW 10, Para 827

From this we learn one important fact: the moral evaluation of an action, which expresses itself in the specific feeling-tone of the accompanying ideas, is not always dependent on consciousness but may function without it. Freud put forward the hypothesis that in these cases there is a repression exerted by a psychic factor, the so-called superego Carl Jung, CW 10, Para 828

It was these and similar experiences which led Freud to endow the superego with special significance. The Freudian superego is not, however, a natural and inherited part of the psyche's structure; it is rather the consciously acquired stock of traditional customs, the "moral code" as incorporated, for instance, in the Ten Commandments Carl Jung, CW 10, Para 830

In view of the fact that dreams lead astray as much as they exhort, it seems doubtful whether what appears to be a judgment of conscience should be evaluated as such in other words, whether we should attribute to the unconscious a function which appears moral to us Carl Jung, CW 10, Para 835

John says: “Try the spirits whether they are of God” (I John 4:1), an admonition we could profitably apply to ourselves. Since olden times conscience has been understood by many people less as a psychic function than as a divine intervention; indeed, its dictates were regarded as vox Dei, the voice of God Carl Jung, CW 10, Para 839

Since then, the phenomenon of conscience in itself does not coincide with the moral code, but is anterior to it, transcends its contents and as already mentioned, can also be “false,” the view of conscience as the voice of God becomes an extremely delicate problem Carl Jung, CW 10, Para 840

Conscience no matter on what it is based commands the individual to obey his inner voice even at the risk of going astray. We can refuse to obey this command by an appeal to the moral code and the moral views on which it is founded, though with an uncomfortable feeling of having been disloyal Carl Jung, CW 10, Para 841

Primitive man regards the autonomy of the psyche as demonism and magic. This, we consider, is only what one would expect in primitive society. On closer inspection one finds, however, that the civilized man of antiquity, such as Socrates, still had his daemon and that there was a widespread and natural belief in superhuman beings who, we would suppose today, were personifications of projected unconscious contents Carl Jung, CW 10, Para 843

The psychologist can criticize metaphysics as a human assertion, but he is not in a position to make such assertions himself. He can only establish that these assertions exist as a kind of exclamation, well knowing that neither one nor the other can be proved right and objectively valid, although he must acknowledge the legitimacy of subjective assertions as such Carl Jung, CW 10, Para 845

The reduction of the act of conscience to a collision with the archetype is, by and large, a tenable explanation. On the other hand we must admit that the psychoid archetype, that is, its irrepresentable and unconscious essence, is not just a postulate only, but possesses qualities of a parapsychological nature which I have grouped together under the term “synchronicity” Carl Jung, CW 10, Para 849

Good and evil are in themselves principles, and we must bear in mind that a principle exists long before us and extends far beyond us Carl Jung, CW 10, Para 859

When we speak of good and evil we are speaking concretely of something whose deepest qualities are in reality unknown to us. Whether it is experienced as evil and sinful depends, furthermore, on our subjective judgment, as also does the extent and gravity of the sin Carl Jung, CW 10, Para 860

To confront a person with his shadow is to show him his own light. Once one has experienced a few times what it is like to stand judgingly between the opposites, one begins to understand what is meant by the Self. Anyone who perceives his shadow and his light simultaneously sees himself from two sides and thus gets in the middle Carl Jung, CW 10,

Para 872

That is the secret of the Eastern attitude: observing the opposites teaches the Easterner the character of Maya. It gives reality the glint of illusion. Behind the opposites and in the opposites is true reality, which sees and comprehends the whole Carl Jung, CW 10, Para 873

The Indian calls this Atman. Reflecting on ourselves we can say, “I am he who speaks good and evil,” or better, “I am he through whom good and evil are spoken. The one who is in me, who voices the principles, uses me as a means of expression. He speaks through me” Carl Jung, CW 10, Para 873

This corresponds to what the Indian calls Atman that which, figuratively speaking, “breathes through” me. Not through me alone, but through all; for it is not only the individual Atman but Atman-Purusha, the universal Atman, the pneuma, who breathes through all Carl Jung, CW 10, Para 873

We use the word “Self” for this, contrasting it with the little ego. From what I have said it will be clear that this Self is not just a rather more conscious or intensified ego, as the words “self-conscious,” “self-satisfied,” etc. might lead one to suppose. What is meant by the Self is not only in me but in all beings, like the Atman, like Tao. It is psychic totality Carl Jung, CW 10, Para 873

A patient should not be regarded as an inferior being whom one lays on a couch while one sits behind him like a god, letting a word drop now and then. Everything suggestive of illness should be avoided. The patient is tending in this direction anyway and would like nothing better than to take refuge in illness: “now I can give up, now I must just lie there, now I am good and sick.” Illness too is a solution of sorts, a way of disposing of life’s problems: “I am ill, now the doctor must help!” Carl Jung, CW 10, Para 881

As a therapist I mustn’t be naïve. Unless the patient should really be in bed he should be treated like a normal person, indeed like a partner. That provides a sound basis for the treatment Carl Jung, CW 10, Para 881

People often come to me expecting me to let loose some medical magic. Then they are disappointed when I treat them as normal people and myself act like a normal man. Carl Jung, CW 10, Para 881

What are called esoteric secrets are mostly artificial secrets, not real ones. Man needs to have secrets, and since he has no notion of the real ones he fakes them. Carl Jung, CW 10, Para 886

But the real [secrets] come to him [man] out of the depths of the unconscious, and then he may reveal things which he ought really to have kept secret. Here again we see the numinous character of the reality in the background. It is not we who have secrets, it is the real secrets that have us Carl Jung, CW 10, Para 886

Laughing is a very important emotional expression and one learns a lot about character from a careful observation of the way people laugh Carl Jung, CW 10, Para 953

There are people who suffer from a crippled laughter. It’s just painful to see them laugh and the sound of that shrill, evil, compressed rattle almost makes you sick Carl Jung, CW 10,

Para 953

America as a nation can laugh, and that means a lot. There is still a childlikeness, a soundness of emotion, an immediate rapport with your fellow being Carl Jung, CW 10, Para 953

This laughter goes hand in hand with a remarkable vivacity and a great ease of expression. Americans are great talkers Carl Jung, CW 10, Para 954

Gossip and chattering spill over into monstrously big newspapers. The talking goes on even when you are reading Carl Jung, CW 10, Para 954

A style of "good" American writing is a talking style. When it is not too flat, it is just as refreshing and exhilarating for us Europeans as your laughter. But often, alas, it is just chattering, the vibrating noise of a big ant-heap Carl Jung, CW 10, Para 954

One of the greatest advantages of the American language is its slang. I am far from sniffing at American slang, on the contrary I like it profoundly. Slang means a language in the making, a thing fully alive. Its images are not worn-out and worm-eaten metaphors, pale reflections hallowed by immemorial age, smooth, correct, and concise conventions, but figures full of life, carrying all the stamina of their earthly origin, and the incomparable flavour of local conditions peculiar to the strange and unprejudiced soil of a new country Carl Jung, CW 10, Para 955

One feels a new current of strange life in the flow of the old English language, and one wonders where it comes from. Is it the new country only? I doubt it Carl Jung, CW 10, Para 955

There is a marked tendency in America to sexual promiscuity, which shows not only in the frequency of divorces but quite particularly in the peculiar liberation from sex prejudices in the younger generation Carl Jung, CW 10, Para 958

As an inevitable consequence the individual rapport between the sexes will suffer. An easy access never calls forth and therefore never develops the values of character, and at the same time it is a most serious obstacle to any deeper mutual understanding Carl Jung, CW 10, Para 958

Such an understanding, without which no real love can exist, is reached only by overcoming all the difficulties due to the psychological difference between the sexes. Promiscuity paralyses all these efforts by offering easy opportunities of escape. Individual rapport becomes quite superfluous Carl Jung, CW 10, Para 958

But the more a so-called unprejudiced freedom and easy promiscuity prevail, the more love becomes flat and degenerates into transitory sex interludes. The most recent developments in the field of sexual morality tend toward sexual primitivity, analogous to the instability of the moral habits of primitive peoples, where under the influence of collective emotion all sex taboos instantly disappear Carl Jung, CW 10, Para 958

It would be difficult not to see that the coloured [African American] man, with his primitive motility, his expressive emotionality, his childlike directness, his sense of music and rhythm, his funny and picturesque language, has infected the American "behaviour." As any

psychologist and any doctor knows, nothing is more contagious than tics, stammering, choreic movements, signs of emotion, above all laughter and peculiarities of speech. Even if your mind and heart are elsewhere, even if you don't understand a joke in a foreign language, you can't help smiling when everybody else smiles Carl Jung, CW 10, Para 965

Stammering can have a most infectious quality, so that you hardly can refrain from imitating it involuntarily Carl Jung, CW 10, Para 965

Melody and rhythm are most insidious, they can obsess you for days, and as to language it is most disturbing how its metaphors and different ways of pronunciation affect you, beginning with some apologetic quotation, and then because you just can't help it Carl Jung, CW 10, Para 965

Sometimes you can catch it in a formula, sometimes the genius is more elusive, yet nonetheless it is indescribably present as a sort of atmosphere that permeates everything, the look of the people, their speech, behaviour, clothing, smell, their interests, ideals, politics, philosophy, art, and even their religion Carl Jung, CW 10, Para 972

In a well-defined civilization with a solid historical background, such as for instance the French, you can easily discover the keynote of the French esprit: it is "la gloire," a most marked prestige psychology in its noblest as well as its most ridiculous forms. You find it in their speech, gestures, beliefs, in the style of everything, in politics and even in science Carl Jung, CW 10, Para 972

In Germany it is the "Idea" that is impersonated by everybody. There are no ordinary human beings, you are "Herr Professor" or "Herr Geheimrat," "Herr Oberrechnungsrat," and even longer things than that. Sometimes the German idea is right and sometimes it is wrong, but it never ceases to be an idea whether it belongs to the highest philosophy or is merely a foolish bias. Even when you die in Germany, you don't die in mere human misery, you die in the ideal form of "Hausbesitzersgattin" or something of the sort Carl Jung, CW 10, Para 973

England's innermost truth and at the same time her most valuable contribution to the assets of the human family is the "gentleman," rescued from the dusty chivalry of the early Middle Ages and now penetrating into the remotest corner of modern English life. It is an ultimate principle that never fails to carry conviction, the shining armour of the perfect knight in soul and body, and the miserable coffin of poor natural feelings Carl Jung, CW 10, Para 974

America has a principle or idea or attitude, but it is surely not money. Often, when I was searching through the conscious and the unconscious mind of my American patients and pupils, I found something which I can only describe as a sort of Heroic Ideal Carl Jung, CW 10, Para 976

The [American's] most idealistic effort is concerned with bringing out the best in every man, and when you find a good man you naturally support him and push him on, until at last he is liable to collapse from sheer exertion, success, and triumph. It is done in every family, where ambitious mothers egg their boys on with the idea that they must be heroes of some sort, or you find it in the factory, where the whole system anxiously tries to get the best man into the best place Carl Jung, CW 10, Para 976

Or again in the schools where every child is trained to be brave, courageous, efficient, and a "good sport," a hero in short. There is no record which people will not kill themselves to

break, even if it is the most appalling nonsense. The moving pictures abound with heroes of every description Carl Jung, CW 10, Para 976

American applause holds the world's record. The "great" and "famous" man gets mobbed by enthusiastic crowds, whatever he may be "great" in; even Valentino got his full share. In Germany you are great if your titles are two yards long, in England if you are a gentleman as well, in France if you coincide with the prestige of the country Carl Jung, CW 10, Para 976

In small countries there is, as a rule, no greatness when you are alive, because things need to be small, therefore it is usually posthumous. America is perhaps the only country where "greatness" is unrestricted, because it expresses the most fundamental hopes, desires, ambitions, and convictions of the nation Carl Jung, CW 10, Para 976

In comparison, Islam seems to be a superior, more spiritual, and more advanced religion. Its mosques are pure and beautiful, and of course wholly Asiatic. There is not much mind about it, but a great deal of feeling. The cult is one wailing outcry for the All-Merciful. It is a desire, an ardent longing and even greed for God; I would not call it love Carl Jung, CW 10, Para 990

But there is love, the most poetic, most exquisite love of beauty in these old Moguls. In a world of tyranny and cruelty, a heavenly dream crystallized in stone: the Taj Mahal. I cannot conceal my unmitigated admiration for this supreme flower, for this jewel beyond price, and I marvel at that love which discovered the genius of Shah Jehan and used it as an instrument of self-realization. This is the one place in the world where the alasall too invisible and all too jealously guarded beauty of the Islamic Eros has been revealed by a well-nigh divine miracle. It is the delicate secret of the rose gardens of Shiraz and of the silent patios of Arabian palaces, torn out of the heart of a great lover by a cruel and incurable loss Carl Jung, CW 10, Para 990

The mosques of the Moguls and their tombs may be pure and austere, their divans, or audience halls, may be of impeccable beauty, but the Taj Mahal is a revelation. It is thoroughly un-Indian. It is more like a plant that could thrive and flower in the rich Indian earth as it could nowhere else. It is Eros in its purest form; there is nothing mysterious, nothing symbolic about it. It is the sublime expression of human love for a human being. Carl Jung, CW 10, Para 990

It is common knowledge that mankind can never remain on an apex of illumination and spiritual endeavour. Buddha was an untimely intruder, upsetting the historical process, which afterwards got the better of him Carl Jung, CW 10, Para 1003

Indian religion is like a vimana, or pagoda. The gods climb over one another like ants, from the elephants carved on the base to the abstract lotus which crowns the top of the building. In the long run, the gods become philosophical concepts Carl Jung, CW 10, Para 1003

Buddha, a spiritual pioneer for the whole world, said, and tried to make it true, that the enlightened man is even the teacher and redeemer of his gods (not their stupid denier, as Western "enlightenment" will have it) Carl Jung, CW 10, Para 1003

This was obviously too much, because the Indian mind was not at all ready to integrate the gods to such an extent as to make them psychologically dependent upon man's mental condition. How Buddha himself could obtain such insight without losing himself in a complete

mental inflation borders on a miracle. (But any genius is a miracle) Carl Jung, CW 10, Para 1003

Buddha disturbed the historical process by interfering with the slow transformation of the gods into ideas. The true genius nearly always intrudes and disturbs. He speaks to a temporal world out of a world eternal. Thus he says the wrong things at the right time. Eternal truths are never true at any given moment in history Carl Jung, CW 10, Para 1004

The process of transformation has to make a halt in order to digest and assimilate the utterly impractical things that the genius has produced from the storehouse of eternity. Yet the genius is the healer of his time, because anything he reveals of eternal truth is healing Carl Jung, CW 10, Para 1004

The remote goal of the transformation process, however, is very much what Buddha intended. But to get there is possible neither in one generation nor in ten. It obviously takes much longer, thousands of years at all events, since the intended transformation cannot be realized without an enormous development of human consciousness. It can only be "believed," which is what Buddha's, as well as Christ's, followers obviously did, assuming as "believers" always do that belief is the whole thing Carl Jung, CW 10, Para 1005

Belief is a great thing, to be sure, but it is a substitute for a conscious reality which the Christians wisely relegate to a life in the hereafter. This "hereafter" is really the intended future of mankind, anticipated by religious intuition Carl Jung, CW 10, Para 1005

The Indian does not fish out infinitesimal details from the universe. His ambition is to have a vision of the whole. He does not yet know that you can screw the living world up tightly between two concepts. Did you ever stop to think how much of the conqueror (not to say thief or robber) lies in that very term "concept"? It comes from the Latin concipere, 'to take something by grasping it thoroughly.' That is how we get at the world Carl Jung, CW 10, Para 1012

for woman love is not mere sentiment (such a concept of love applies only to man), but a will to live which is frightfully unsentimental and even capable of calling forth the most chilling forms of self-sacrifice. On ne badine pas avec l'amour (Do not trifle with love). Carl Jung, CW 10, Para 26

But Indian "thinking" is an increase of vision and not a predatory raid into the yet unconquered realms of nature Carl Jung, CW 10, Para 1012

The most striking feature about the anima-type is that the maternal element is entirely lacking. She is the companion and friend in her favourable aspect, in her unfavourable aspect she is the courtesan … But the anima-type is presented in the most succinct and pregnant form in the Gnostic legend of Simon Magus … [who] was always accompanied on his travels by a girl, whose name was Helen. He had found her in a brothel in Tyre; she was a reincarnation of Helen of Troy. Carl Jung, CW 10, Para 75

The development of modern art with its seemingly nihilistic trend towards disintegration must be understood as the symptom and symbol of a mood of universal destruction and renewal that has set its mark on our age. This mood makes itself felt everywhere, politically, socially, and philosophically. We are living in what the Greeks called the right moment-for a "metamorphosis of the gods," of the fundamental principles and symbols. This peculiarity of

our time, which is certainly not of our conscious choosing, is the expression of the unconscious man within us who is changing. Carl Jung, CW 10, Para 585.

It is because we are here in the presence of a man alone that I would like to invite all those who feel isolated to reflect upon this book, to listen to this message, if they are truly alone … This theology is not learned in books or by historical critique of writings, but in the night and in the suffering of the soul, in the sublime inner battle fought without compromise, or cowardice, or abdication. Henry Corbin, Cited CW 10, Para. 106)

Carl Jung: *CW 11 "Psychology and Religion"

[13]Psychology and Religion: West and East (The Collected Works of C. G. Jung, Volume 11)

The term "archetypus" is used by Cicero, Pliny, and others. It appears in the Corpus Hermeticum, as a definitely philosophical concept: "Thou knowest in thy mind the archetypal form the beginning before the beginning, the unbounded" Carl Jung, CW 11, Para 89

How thin these protective walls are can be seen from the positively terrifying suggestibility that lies behind all psychic mass movements, beginning with the simple folk who call themselves "Jehovah's Witnesses," the "Oxford Groups" (so named for reasons of prestige) among the upper classes, and ending with the National Socialism of a whole nation—all in search of the unifying mystical experience! Carl Jung, CW 11, Para 275

The dualism of the Gnostic systems make sense, because they at least try to do justice to the real meaning of evil. They have also done us the supreme service of having gone very thoroughly into the question where evil comes from … in a monotheistic religion everything that goes against God can only be traced back to God himself. Carl Jung, CW 11, Para 249

The dark God has slipped the atom bomb and chemical weapons into [man's] hands and given him the power to empty out the apocalyptic vials of wrath on his fellow creatures. Since he has been granted an almost godlike power, he can no longer remain blind and unconscious Carl Jung, CW 11, Para 747

We have experienced things so unheard of and so staggering that the question of whether such things are in any way reconcilable with the idea of a good God has become burningly topical. It is no longer a problem for experts in theological seminaries, but a universal religious nightmare, to the solution of which even a layman in theology like myself can, or perhaps must, make a contribution. Carl Jung, CW 11, Para 736

Naturally we can believe that God is different from the image of him that we possess, but it must be admitted on the other side that the Lord himself, while insisting on the Father's perfect goodness, has given a picture of him which fits in badly with the idea of a perfectly moral being. (A father who temps his children, who did not prevent the error of the immediate parousia, who is so full wrath that the blood of his only son is necessary to appease him, who

left the crucified one to despair, who proposes to devastate his own creation and slay the millions of mankind to save very few of them, and who before the end of the world is going to replace his Son's covenant by another gospel and complement the love by the fear of God.) It is interesting, or rather tragic, that God undergoes a complete relapse in the last book of the New Testament. Carl Jung, CW 18, Para 1556

It is as though, at the climax of the illness, the destructive powers were converted into healing forces. This is brought about by the archetypes awaking to independent life and taking over the guidance of the psychic personality, thus supplanting the ego with its futile willing and striving ... T

... only an insignificant minority regards the psychic phenomenon as a category of existence per se and draws the necessary conclusions. It is indeed paradoxical that the category of existence, the indispensable sine qua non of all existence, namely the psyche, should be treated as if it were only semi-existent. Psychic existence is the only category of existence of which we have immediate knowledge, since nothing can be known unless it first appears as a psychic image. Carl Jung, CW 11, Para 769

We moderns are faced with the necessity of rediscovering the life of the spirit; we must experience it anew for ourselves' Carl Jung, CW 11, Page 780

... the unconscious is often personified by the anima ... Carl Jung, CW 11, Para 107

As a psychopomp she [Sophia] leads the way to God and assures immortality. Carl Jung, CW 11, Para 613

Looked at theologically, my concept of the anima ... is pure Gnosticism ... Carl Jung, CW 11, Para 460

It is normal for a man to resist his anima, because she represents ... all those tendencies and contents hitherto excluded from conscious life. Carl Jung, CW 11, Para 129

Through reflection, "life" and its "soul" are abstracted from Nature and endowed with a separate existence. (Reflection is a spiritual act that runs counter to the natural process; ... it should, therefore, be understood as an act of becoming conscious.) Carl Jung, CW 11, Para 235, fn 9

The Lucifer legend is in no sense an absurd fairytale; like the story of the serpent in the Garden of Eden, it is a "therapeutic" myth. Carl Jung, CW 11, Para 291

The classical world thought of this pneuma as Dionysus ... whose divine substance is distributed throughout the whole of nature. Carl Jung, CW 11, Para 387

God has indeed made an inconceivably sublime and mysteriously contradictory image of himself, without the help of man, and implanted it in man's unconscious as an archetype . . .

not in order that theologians of all times and places should be at one another's throats, but in order that the unpresumptuous man might glimpse an image, in the stillness of his soul, that is akin to him and is wrought of his stillness of his soul, that is akin to him and is wrought of his own psychic substance. This image contains everything he will ever imagine concerning his gods or concerning the ground of his psyche. Carl Jung, CW 11, Para 1508

What is performed concretely on the sacrificial animal, and what the shaman believes to be actually happening to himself, appears, on a higher level, in the vision of Zosimos, as a psychic process in which a product of the unconscious, an homunculus, is cut up and transformed. By all the rules of dream interpretation, this is an aspect of the observing subject himself; that is to say, Zosimos sees himself as an homunculus, or rather the unconscious represents.

him as such, as an incomplete, stunted, dwarfish creature ... and thus signifies the "hylical" man. Such a one is dark and sunk in materiality. He is essentially unconscious and therefore in need of transformation and enlightenment. For this purpose his body must be taken apart and dissolved into its constituents, a process known in alchemy as divisio, separatio and solutio, and in later treatises as discrimination and self-knowledge. Carl Jung, CW 11, Page 272

The modern man does not want to know in what way he can imitate Christ, but in what way he can live his own individual life, however meagre and uninteresting it may be. It is because every form of imitation seems to him deadening and sterile that he rebels against the forces of tradition .... He may not know it, but he behaves as if his own individual life were God's special will which must be fulfilled at all costs. Carl Jung, CW 11, Para 524

Inherited archetypes are devoid of content because, to begin with, they contain no personal experiences. They only emerge into consciousness when personal experiences have rendered them visible. Carl Jung, CW 11, Para 847

The main symbolic figures of a religion are always expressive of the particular moral and mental attitude involved. I would mention, for instance, the cross and its various religious meanings Carl Jung, CW 11, Para 107

Zeller says: "One is the first from which all other numbers arise, and in which the opposite qualities of numbers, the odd and the even, must therefore be united" Carl Jung, CW 11, Para 179

The One claim number is an exceptional position, which we meet again in the natural philosophy of the Middle Ages. According to this, one is not a number at all; the first number is two Carl Jung, CW 11, Para 180

In Plato the quaternity takes the form of a cube, which he correlates with earth. Lü Pu-wei says: "Heaven's way is round; earth's way is square" Carl Jung, CW 11, Para 247

Grain and wine therefore have something in the nature of a soul, a specific life principle which makes them appropriate symbols not only of man's cultural achievements, but also of the seasonally dying and resurgent god who is their life spirit Carl Jung, CW 11, Para 385

The vision, which in all probability has the character of a dream, must be regarded as a spontaneous psychic product that was never consciously intended. Like all dreams, it is a

product of nature Carl Jung, CW 11, Para 405

The Mass, on the other hand, is a product of man's mind or spirit, and is a definitely conscious proceeding Carl Jung, CW 11, Para 405

To use an old but not outmoded nomenclature, we can call the vision psychic, and the Mass pneumatic Carl Jung, CW 11, Para 405

The vision is undifferentiated raw material, while the Mass is a highly differentiated artifact. That is why the one is gruesome and the other beautiful Carl Jung, CW 11, Para 405

If the Mass is antique, it is antique in the best sense of the word, and its liturgy is therefore satisfying to the highest requirements of the present day Carl Jung, CW 11, Para 405

The Mass, on the other hand, represents and clearly expresses the Deity itself, and clothes it in the garment of the most beautiful humanity Carl Jung, CW 11, Para 405

Gnosticism affords some very instructive examples of this. Neologisms tend not only to hypostatize themselves to an amazing degree, but actually to replace the reality they were originally intended to express Carl Jung, CW 11, Para 442

Our cancer case shows clearly how impotent man's reason and intellect are against the most palpable nonsense. I always advise my patients to take such obvious but invincible nonsense as the manifestation of a power and a meaning they have not yet understood Carl Jung, CW 11, Para 26

Experience has taught me that it is much more effective to take these things seriously and then look for a suitable explanation. But an explanation is suitable only when it produces a hypothesis equal to the morbid effect. Our patient is confronted with a power of will and suggestion more than equal to anything his consciousness can put against it Carl Jung, CW 11, Para 26

In this precarious situation it would be bad strategy to convince him that in some incomprehensible way he is at the back of his own symptom, secretly inventing and supporting it. Such a suggestion would instantly paralyse his fighting spirit, and he would get demoralized. It is far better for him to understand that his complex is an autonomous power directed against his conscious personality. Moreover, such an explanation fits the actual facts much better than a reduction to personal motives. An apparently personal motivation does exist, but it is not made by his will, it just happens to him Carl Jung, CW 11, Para 26

Consciousness must have been a very precarious thing in its beginnings. In relatively primitive societies we can still observe how easily consciousness gets lost. One of the "perils of the soul," for instance, is the loss of a soul. This is what happens when part of the psyche becomes unconscious again Carl Jung, CW 11, Para 29

Another example is "running amok," the equivalent of "going berserk" in Germanic saga. This is a more or less complete trance-state, often accompanied by devastating social effects Carl Jung, CW 11, Para 29

Even a quite ordinary emotion can cause considerable loss of consciousness. Primitives

therefore cultivate elaborate forms of politeness, speaking in a hushed voice, laying down their weapons, crawling on all fours, bowing the head, showing the palms. Even our own forms of politeness still exhibit a “religious” consideration of possible psychic dangers. We propitiate fate by magically wishing one another a good day. It is not good form to keep the left hand in your pocket or behind your back when shaking hands. If you want to be particularly ingratiating you use both hands. Before people of great authority we bow with uncovered head, i.e., we offer our head unprotected in order to propitiate the powerful one, who might quite easily fall sudden prey to a fit of uncontrollable violence. In war-dances primitives can become so excited that they may even shed blood Carl Jung, CW 11, Para 29

Protestantism, having pulled down so many walls carefully erected by the Church, immediately began to experience the disintegrating and schismatic effect of individual revelation. As soon as the dogmatic fence was broken down and the ritual lost its authority, man had to face his inner experience without the protection and guidance of dogma and ritual, which are the very quintessence of Christian as well as of pagan religious experience. Protestantism has, in the main, lost all the finer shades of traditional Christianity: the mass, confession, the greater part of the liturgy, and the vicarious function of priesthood Carl Jung, CW 11, Para 33

I must emphasize that this statement is not a value-judgment and is not intended to be one. I merely state the facts. Protestantism has, however, intensified the authority of the Bible as a substitute for the lost authority of the Church Carl Jung, CW 11, Para 34

My patient is now very curious how I shall set about getting at the contents that form the root of the obsession. I then inform him, at the risk of shocking him severely, that his dreams will provide us with all the necessary information. We will take them as if they issued from an intelligent, purposive, and, as it were, personal source. This is of course a bold hypothesis and at the same time an adventure, because we are going to give extraordinary credit to a discredited entity the psyche whose very existence is still denied by not a few contemporary psychologists as well as by philosophers Carl Jung, CW 11, Para 36

A famous anthropologist, when I showed him my way of proceeding, made the typical remark: “That’s all very interesting indeed, but dangerous.” Yes, I admit it is dangerous, just as dangerous as a neurosis. If you want to cure a neurosis you have to risk something. To do something without taking a risk is merely ineffectual, as we know only too well. A surgical operation for cancer is a risk too, and yet it has to be done Carl Jung, CW 11, Para 36

In any case my experience is in favour of the probability that dreams are the visible links in a chain of unconscious events. If we want to shed any light on the deeper reasons for the dream, we must go back to the series and find out where it is located in the long chain of four hundred dreams Carl Jung, CW 11, Para 53

Frequently the voice issues from an authoritative figure, such as a military commander, or the captain of a ship, or an old physician. Sometimes, there is simply a voice coming apparently from nowhere. It was interesting to see how this very intellectual and sceptical man [the patient] accepted the voice; often it did not suit him at all, yet he accepted it unquestioningly, even humbly Carl Jung, CW 11, Para 63

Thus the voice revealed itself, in the course of several hundred carefully recorded dreams, as an important and even decisive spokesman of the unconscious. Since this patient is by no means the only one I have observed who exhibited the phenomenon of the voice in dreams

and in other peculiar states of consciousness, I am forced to admit that the unconscious is capable at times of manifesting an intelligence and purposiveness superior to the actual conscious insight. There can be no doubt that this is a basic religious phenomenon, observed here in a person whose conscious mental attitude certainly seemed most unlikely to produce religious phenomena. I have not infrequently made similar observations in other cases and I must confess that I am unable to formulate the facts in any other way Carl Jung, CW 11, Para 63

I have often met with the objection that the thoughts which the voice represents are no more than the thoughts of the individual himself. That may be but I would call a thought my own only when I have thought it, just as I would call money my own only when I have earned or acquired it in a conscious and legitimate manner. If somebody gives me the money as a present, then I shall certainly not say to my benefactor, “Thank you for my money,” although to a third person I might say afterwards: “This is my own money.” With the voice I am in a similar situation. The voice gives me certain contents, exactly as if a friend were informing me of his ideas. It would be neither decent nor truthful to suggest that what he says are my own ideas Carl Jung, CW 11, Para 63

Moreover owes, its continued existence, and its form on the one hand to so-called “revealed” or immediate experiences of the “Gnosis “for instance, the God-man, the Cross, the Virgin Birth, the Immaculate Conception, the Trinity, and so on, and on the other hand to the ceaseless collaboration of many minds over many centuries Carl Jung, CW 11, Para 81

It looks as if they were not yet advanced enough to suffer a process of salvation and to submit to a deity who was made visible in the magnificent structure of the Church. There was, perhaps, too much of the Imperium Romanum or of the Pax Romana in the Church too much, at least, for their energies, which were and still are insufficiently domesticated. It is quite likely that they needed an unmitigated and less controlled experience of God, as often happens to adventurous and restless people who are too youthful for any form of conservatism or domestication Carl Jung, CW 11, Para 82

They therefore did away with the intercession of the Church between God and man, some more and some less. With the demolition of protective walls, the Protestant lost the sacred images that expressed important unconscious factors, together with the ritual which, from time immemorial, has been a safe way of dealing with the unpredictable forces of the unconscious. A vast amount of energy was thus liberated and instantly went into the old channels of curiosity and acquisitiveness. In this way Europe became the mother of dragons that devoured the greater part of the earth Carl Jung, CW 11, Para 82

Hence the present alertness of the Protestant conscience and this bad conscience has all the disagreeable characteristics of a lingering illness which makes people chronically uncomfortable. But, for this very reason, the Protestant has a unique chance to make himself conscious of sin to a degree that is hardly possible for a Catholic mentality, as confession and absolution are always at hand to ease excess of tension Carl Jung, CW 11, Para 86

If a Protestant survives the complete loss of his church and still remains a Protestant, that is to say a man who is defenceless against God and no longer shielded by walls or communities, he has a unique spiritual opportunity for immediate religious experience Carl Jung, CW 11, Para 86

The term “archetypus” is used by Cicero, Pliny, and others. It appears in the Corpus

Hermeticum, as a definitely philosophical concept: “Thou knowest in thy mind the archetypal form the beginning before the beginning, the unbounded” Carl Jung, CW 11, Para 89

With special reference to psychology we find this theory in the works of Adolf Bastian and then again in Nietzsche. In French literature Hubert and Mauss, and also Lévy-Bruhl, mention similar ideas. I only gave an empirical foundation to the theory of what were formerly called primordial or elementary ideas, “categories” or “habitudes directrices de la conscience,” “représentations collectives,” etc., by setting out to investigate certain details Carl Jung, CW 11, Para 89

I do not know why he should. I only know that this is not an isolated case; many others under my observation or under that of my colleagues have spontaneously produced the same symbolism. I naturally do not think that it originated three or four hundred years ago. That was simply another epoch when this same archetypal idea was very much in the foreground. As a matter of fact, it is much older than the Middle Ages, as the Timaeus proves. Nor is it a classical or an Egyptian heritage, since it is to be found practically everywhere and in all ages. One has only to remember, for instance, how great an importance was attributed to the quaternity by the American Indians Carl Jung, CW 11, Para 99

I have always been particularly interested to see how people, if left to their own devices and not informed about the history of the symbol, would interpret it to themselves. I was careful, therefore, not to disturb them with my own opinions, and as a rule I discovered that they took it to symbolize themselves, or rather something in themselves. They felt it belonged intimately to themselves as a sort of creative background, a life-producing sun in the depths of the unconscious Carl Jung, CW 11, Para 100

Though it was easy to see that certain mandala-drawings were almost an exact replica of Ezekiel’s vision, it very seldom happened that people recognized the analogy even when they knew the vision which knowledge, by the way, is pretty rare nowadays. What one could almost call a systematic blindness is simply the effect of the prejudice that God is outside man Carl Jung, CW 11, Para 100

Another main symbol is the Trinity. It is of exclusively masculine character. The unconscious, however, transforms it into a quaternity, which is at the same time a unity, just as the three persons of the Trinity are one and the same God. The natural philosophers of antiquity represented the Trinity, so far as it was imaginata in natura, as the three or “spirits,” also called “volatilia,” namely water, air, and fire. The fourth constituent, on the other hand, was, the earth or the body. They symbolized the latter by the Virgin. In this way they added the feminine element to their physical Trinity, thereby producing the quaternity or circulus quadratus, whose symbol was the hermaphroditic Rebis, the filius sapientiae Carl Jung, CW 11, Para 107

The quaternity in modern dreams is a creation of the unconscious. As I explained in the first chapter, the unconscious is often personified by the anima, a feminine figure. Apparently the symbol of the quaternity issues from her. She would be the matrix of the quaternity, aor Mater Dei, just as the earth was understood to be the Mother of God. But since woman, as well as evil, is excluded from the Deity in the dogma of the Trinity, the element of evil would form part of the religious symbol if the latter should be a quaternity. It needs no particular effort of imagination to guess the far-reaching spiritual consequences of such a development Carl Jung, CW 11, Para 107

But since nature has not bestowed the same blessings upon each of her children, some are more and others less gifted. Thus there are people who can just afford to live properly and respectably; that is to say, no manifest flaw is discoverable. They either commit minor sins, if they sin at all, or their sins are concealed from them by a thick layer of unconsciousness. One is rather inclined to be lenient with sinners who are unconscious of their sins Carl Jung, CW 11, Para 130

But nature is not at all lenient with unconscious sinners. She punishes them just as severely as if they had committed a conscious offence. Thus we find, as the pious Henry Drummond once observed, that it is highly moral people, unaware of their other side, who develop particularly hellish moods which make them insupportable to their relatives. The odour of sanctity may be far reaching, but to live with a saint might well cause an inferiority complex or even a wild outburst of immorality in individuals less morally gifted. Morality seems to be a gift like intelligence. You cannot pump it into a system to which it is not indigenous Carl Jung, CW 11, Para 130

Religion is a relationship to the highest or most powerful value, be it positive or negative. The relationship is voluntary as well as involuntary, that is to say you can accept, consciously, the value by which you are possessed unconsciously. That psychological fact which wields the greatest power in your system functions as a god, since it is always the overwhelming psychic factor that is called “God.” As soon as a god ceases to be an overwhelming factor he dwindles to a mere name. His essence is dead and his power is gone. Why did the gods of antiquity lose their prestige and their effect on the human soul? Because the Olympians had served their time and a new mystery began: God became man Carl Jung, CW 11, Para 137

If we allow ourselves to draw conclusions from modern mandalas we should ask people, first, whether they worship stars, suns, flowers, and snakes. They will deny this, and at the same time they will assert that the globes, stars, crosses, and the like are symbols for a center in themselves. And if asked what they mean by this center, they will begin to stammer and to refer to this or that experience which may turn out to be something very similar to the confession of my patient, who found that the vision of his world clock had left him with a wonderful feeling of perfect harmony Carl Jung, CW 11, Para 138

Others will confess that a similar vision came to them in a moment of extreme pain or profound despair. To others again it is the memory of a sublime dream or of a moment when long and fruitless struggles came to an end and a reign of peace began Carl Jung, CW 11, Para 138

A modern mandala is an involuntary confession of a peculiar mental condition. There is no deity in the mandala, nor is there any submission or reconciliation to a deity. The place of the deity seems to be taken by the wholeness of man Carl Jung, CW 11, Para 139

The experience formulated by the modern mandala is typical of people who cannot project the divine image any longer. Owing to the withdrawal and introjection of the image they are in danger of inflation and dissociation of the personality. The round or square enclosures built round the center therefore have the purpose of protective walls or of a vas hermeticum to prevent an outburst or a disintegration. Thus the mandala denotes and assists exclusive concentration on the center, the Self. This is anything but egocentricity. On the contrary, it is a much-needed self-control for the purpose of avoiding inflation and dissociation Carl Jung,

CW 11, Para 156

The enclosure, as we have seen, has also the meaning of what is called in Greek a temenos, the precincts of a temple or any isolated sacred place. The circle in this case protects or isolates an inner content or process that should not get mixed up with things outside. Thus the mandala repeats in symbolic form archaic ways and means which were once concrete realities Carl Jung, CW 11, Para 157

As I have already mentioned, the inhabitant of the temenos was a god. But the prisoner, or the well-protected dweller in the mandala, does not seem to be a god, since the symbols used stars, crosses, globes, etc.do not signify a god but an obviously important part of the human personality. One might almost say that man himself, or his innermost soul, is the prisoner or the protected inhabitant of the mandala. Since modern mandalas are amazingly close parallels to the ancient magical circles, which usually have a deity in the center, it is clear that in the modern mandala man the deep ground, as it were, of the Self is not a substitute but a symbol for the deity Carl Jung, CW 11, Para 157

It is a remarkable fact that this symbol [the Self] is a natural and spontaneous occurrence and that it is always an essentially unconscious product, as our dream shows. If we want to know what happens when the idea of God is no longer projected as an autonomous entity, this is the answer of the unconscious psyche. The unconscious produces the idea of a deified or divine man who is imprisoned, concealed, protected, usually depersonalized, and represented by an abstract symbol Carl Jung, CW 11, Para 158

The symbols often contain allusions to the medieval conception of the microcosm, as was the case with my patient's world clock, for instance. Many of the processes that lead to the mandala, and the mandala itself, seem to be direct confirmations of medieval speculation. It looks as if the patients had read those old treatises on the philosophers' Stone, the divine water, the rotundum, the squaring of the circle, the four colours, etc. And yet they have never been anywhere near alchemical philosophy and its abstruse symbolism Carl Jung, CW 11, Para 158

From a psychological standpoint this view can be translated as follows: Christ lived a concrete, personal, and unique life which, in all essential features, had at the same time an archetypal character. This character can be recognized from the numerous connections of the biographical details with worldwide myth-motifs. These undeniable connections are the main reason why it is so difficult for researchers into the life of Jesus to construct from the gospel reports an individual life divested of myth. In the gospels themselves factual reports, legends, and myths are woven into a whole. This is precisely what constitutes the meaning of the gospels, and they would immediately lose their character of wholeness if one tried to separate the individual from the archetypal with a critical scalpel Carl Jung, CW 11, Para 146

"Whatever the wise seek is in mercury." A very ancient formula, attributed by Zosimos to the legendary Ostanes, runs: "Go to the waters of the Nile, and there thou wilt find a stone that hath a spirit [pneuma]." A commentator explains that this refers to quicksilver (hydrargyron, mercury) Carl Jung, CW 11, Para 151

This spirit, coming from God, is also the cause of the "greenness," the benedicta viriditas, much praised by the alchemists. Mylius says of it: "God has breathed into created things a kind of germination, which is the viridescence." In Hildegard of Bingen's Hymn to the Holy

Ghost, which begins “0 ignis Spiritus paraclite,” we read: “From you the clouds rain down, the heavens move, the stones have their moisture, the waters give forth streams, and the earth sweats out greenness” Carl Jung, CW 11, Para 151

In the first dream, then, there was violent criticism of Church religion, followed in the second dream by the mandala vision of a world clock which is what a planetarium is in the fullest sense. In the sky the divine pair stands united, he white, she red, thus reversing the famous alchemical pair, where he is red and she is white, whence she was called Beya (Arabic al baida,

```
the White One'), and he was called ``servus rubeus,'' the
```

red slave,’ although, as Gabricus (Arabic kibrit, ‘sulphur’), he is her royal brother Carl Jung, CW 11, Para 164

The third person appears in the form of Ka-mute (“the bull of his mother”), who is none other than the ka, the procreative power of the deity. In it and through it father and son are combined not in a triad but in a triunity. To the extent that Ka-mutef is a special manifestation of the divine ka, we can “actually speak of a triunity of God, king, and ka, in the sense that God is the father, the king is the son, and ka, the connecting-link between them” Carl Jung, CW 11, Para 177

In his concluding chapter Jacobsohn draws a parallel between this Egyptian idea and the Christian credo. Apropos the passage “qui conceptus est de Spiritu Sancto, natus ex Maria virgine,” he cites Karl Barth’s formulation: “There is indeed a unity of God and man; God himself creates it. It is no other unity than his own eternal unity as father and son. This unity is the Holy Ghost” (P. 64 Barth, Credo, p. 70). As procreator the Holy Ghost would correspond to Ka-mutef, who connotes and guarantees the unity of father and son. In this connection Jacobsohn cites Barth’s comment on Luke 1: 35 (“The Holy Ghost shall come upon thee, and the power of the Highest shall overshadow thee: therefore also that holy thing which shall be born of thee shall be called the Son of God”): “When the Bible speaks of the Holy Ghost, it is speaking of God as the combination of father and son, of the vinculum caritatis” Carl Jung, CW 11, Para 177

The divine procreation of Pharaoh takes place through Ka-mutef, in the human mother of the king. But, like Mary, she remains outside the Trinity. As Preisigke points out, the early Christian Egyptians simply transferred their traditional ideas about the ka to the Holy Ghost. This explains the curious fact that in the Coptic version of Pistis Sophia, dating from the third century, Jesus has the Holy Ghost as his double, just like a proper ka Carl Jung, CW 11, Para 177

“Two is the first even number” Carl Jung, CW 11, Para 179

“Three is the first that is uneven and perfect, because in it we first find beginning, middle, and end” (Zeller, A History of Greek Philosophy, I p. 429). The views of the Pythagoreans influenced Plato, as is evident from his Timaeus; and, as this had an incalculable influence on the philosophical speculations of posterity, we shall have to go rather deeply into the psychology of number speculation Carl Jung, CW 11, Para 179

Two is the first number because, with it, separation and multiplication begin, which alone make counting possible. With the appearance of the number two, another appears alongside the

one, a happening which is so striking that in many languages “the other” and “the second” are expressed by the same word. Also associated with the number two is the idea of right and left, and remarkably enough, of favourable and unfavourable, good and bad. The “other” can have a “sinister” significance or one feels it, at least, as something opposite and alien. Therefore, argues a medieval alchemist, God did not praise the second day of creation, because on this day (Monday, the day of the moon) the binarius, alias the devil, came into existence Carl Jung, CW 11, Para 180

Two implies a One which is different and distinct from the “numberless” One. In other words, as soon as the number two appears, a unit is produced out of the original unity, and this unit is none other than that same unity split into two and turned into a “number.” The “One” and the “Other” form an opposition, but there is no opposition between one and two, for these are simple numbers which are distinguished only by their arithmetical value and by nothing else. The “One,” however, seeks to hold to its one-and-alone existence, while the “Other” ever strives to be another opposed to the One. The One will not let go of the Other because, if it did, it would lose its character; and the Other pushes itself away from the One in order to exist at all. Thus there arises a tension of opposites between the One and the Other Carl Jung, CW 11, Para 180

But every tension of opposites culminates in a release, out of which comes the “third.” In the third, the tension is resolved and the lost unity is restored. Unity, the absolute One, cannot be numbered, it is indefinable and unknowable; only when it appears as a unit, the number one, is it knowable, for the “Other” which is required for this act of knowing is lacking in the condition of the One. Three is an unfolding of the One to a condition where it can be known unity becomes recognizable; had it not been resolved into the polarity of the One and the Other, it would have remained fixed in a condition devoid of every quality Carl Jung, CW 11, Para 180

Three, therefore, appears as a suitable synonym for a process of development in time, and thus form a parallel to the self-revelation of the Deity as the absolute One unfolded into Three. The relation of Threeness to Oneness can be expressed by an equilateral triangle, A = B = C, that is, by the identity of the three, threeness being contained in its entirety in each of the three angles. This intellectual idea of the equilateral triangle is a conceptual model for the logical image of the Trinity Carl Jung, CW 11, Para 180

The psychological datum consists of Father, Son, and Holy Ghost. If we posit “Father,” then “Son” logically follows; but “Holy Ghost” does not follow logically from either “Father” or “Son.” So we must be dealing here with a special factor that rests on a different presupposition. According to the old doctrine, the Holy Ghost is “vera persona, quae a filio et patre missa est” (a real person who is sent by the Son and the Father). The “processio a patre filioque” (procession from the Father and the Son) is a “spiration” and not a “begetting.” This somewhat peculiar idea corresponds to the separation, which still existed in the Middle Ages, of “corpus” and “spiramen,” the latter being understood as something more than mere “breath.” What it really denoted was the anima, which, as its name shows, is a breath-being (anemos = wind). Although an activity of the body, it was thought of as an independent substance (or hypostasis) existing alongside the body. The underlying idea is that the body “lives,” and that “life” is something superadded and autonomous, conceived as a soul unattached to the body. Applying this idea to the Trinity formula, we would have to say: Father, Son, and Life the life proceeding from both or lived by both Carl Jung, CW 11, Para 197

The Holy Ghost as “life” is a concept that cannot be derived logically from the identity of Father and Son, but is, rather, a psychological idea, a datum based on an irrational, primordial image. This primordial image is the archetype, and we find it expressed most clearly in the Egyptian theology of kingship. There, as we have seen, the archetype takes the form of God the father, Ka-mutef (the begetter), and the son. The ka is the life-spirit, the animating principle of men and gods, and therefore can be legitimately interpreted as the soul or spiritual double. He is the “life” of the dead man, and thus corresponds on the one hand to the living man’s soul, and on the other to his “spirit” or “genius” Carl Jung, CW 11, Para 197

We have seen that Ka-mutef is a hypostatization of procreative power. In the same way, the Holy Ghost is hypostatized procreative power and life-force. Hence, in the Christian Trinity, we are confronted with a distinctly archaic idea, whose extraordinary value lies precisely in the fact that it is a supreme, hypostatic representation of an abstract thought (two-dimensional triad). The form is still concretistic, in that the archetype is represented by the relationship “Father” and “Son.” Were it nothing but that, it would only be a dyad. The third element, however, the connecting link between “Father” and “Son,” is spirit and not a human figure Carl Jung, CW 11, Para 197

The masculine father-son relationship is thus lifted out of the natural order (which includes mothers and daughters) and translated to a sphere from which the feminine element is excluded: in ancient Egypt as in Christianity the Theotokos stands outside the Trinity. One has only to think of Jesus’s brusque rejection of his mother at the marriage in Cana: “Woman, what have I to do with thee?” (John 2: 4), and also earlier, when she sought the twelve-year-old child in the temple: “How is it that ye sought me? wist ye not that I must be about my Father’s business?” (Luke 2:49) Carl Jung, CW 11, Para 197

We shall probably not be wrong in assuming that this special sphere to which the father-son relationship is removed is the sphere of primitive mysteries and masculine initiations. Among certain tribes, women are forbidden to look at the mysteries on pain of death. Through the initiations the young men are systematically alienated from their mothers and are reborn as spirits. The celibacy of the priesthood is a continuation of this archetypal idea Carl Jung, CW 11, Para 197

The intellectual operation that lies concealed in the higher father-son relationship consists in the extrapolation of an invisible figure, a “spirit” that is the very essence of masculine life. The life of the body or of a man is posited as something different from the man himself. This led to the idea of a ka, or immortal soul, able to detach itself from the body and not dependent on it for its existence Carl Jung, CW 11, Para 198

In this respect, primitives have extraordinarily well-developed ideas about a plurality of souls. Some are immortal, others are only loosely attached to the body and can wander off and get lost in the night, or they lose their way and get caught in a dream. There are even souls that belong to a person without being lodged in his body, like the bush-soul, which dwells outside in the forest, in the body of an animal. The juxtaposition of a person and his “life” has its psychological basis in the fact that a mind which is not very well differentiated cannot think abstractly and is incapable of putting things into categories. It can only take the qualities it perceives and place them side by side: man and his life, or his sickness (visualized as a sort of demon), or his health or prestige (mana, etc.). This is obviously the case with the Egyptian ka. Father-son-life (or procreative power), together with rigorous exclusion of the Theotokos, constitute the patriarchal formula that was “in the air” long before the advent of Christianity

Carl Jung, CW 11, Para 198

But once the question is asked: “Whence comes the evil, why is the world so bad and imperfect, why are there diseases and other horrors, why must man suffer? “then reflection has already begun to judge the Father by his manifest works, and straightway one is conscious of a doubt, which is itself the symptom of a split in the original unity. One comes to the conclusion that creation is imperfect any more, that the Creator has not done his job properly, that the goodness and almightiness of the Father cannot be the sole principle of the cosmos. Hence the One has to be supplemented by the Other, with the result that the world of the Father is fundamentally altered and is superseded by the world of the Son Carl Jung, CW 11, Para 201

This was the time when the Greeks started criticizing the world, the time of “gnosis” in its widest sense, which ultimately gave birth to Christianity. The archetype of the redeemer-god and Original Man is age-old we simply do not know how old. The Son, the revealed god, who voluntarily or involuntarily offers himself for sacrifice as a man, in order to create the world or redeem it from evil, can be traced back to the Purusha of Indian philosophy, and is also found in the Persian conception of the Original Man, Gayomart. Gayomart, son of the god of light, falls victim to the darkness, from which he must be set free in order to redeem the world. He is the prototype of the Gnostic redeemer-figures and of the teachings concerning Christ, redeemer of mankind Carl Jung, CW 11, Para 202

Leaving aside the so-called prefigurations in the Old Testament, there is not a single passage in the New Testament where the Trinity is formulated in an intellectually comprehensible manner. Generally speaking, it is more a question of formulae for triple benediction, such as the end of the second epistle to the Corinthians Carl Jung, CW 11, Para 207

Now the important point is not that the New Testament contains no trinitarian formulae, but that we find in it three figures who are reciprocally related to one another: the Father, the Son, begotten through the Holy Ghost, and the Holy Ghost. Since olden times, formulae for benediction, all solemn agreements, occasions, attributes, etc. have had a magical, threefold character (e.g., the Trishagion) Carl Jung, CW 11, Para 209

Although they [the Father, Son, and Holy Ghost] are no evidence for the Trinity in the New Testament, they nevertheless occur and, like the three divine Persons, are clear indications of an active archetype operating beneath the surface and throwing up triadic formations. This proves that the trinitarian archetype is already at work in the New Testament, for what comes after is largely the result of what has gone before, a proposition which is especially apposite when, as in the case of the Trinity, we are confronted with the effects of an unconscious content or archetype Carl Jung, CW 11, Para 209

From the creeds to be discussed later, we shall see that at the synods of the Fathers the New Testament allusions to the divine trio were developed in a thoroughly consistent manner until the homoousia was restored, which again happened unconsciously, since the Fathers knew nothing of the ancient Egyptian model that had already reached the homoousian level. The after-effects on posterity were inevitable consequences of the trinitarian anticipations that were abroad in the early days of Christianity and are nothing but amplifications of the constellated archetype. These amplifications, so far as they were naïve and unprejudiced, are direct proof that what the New Testament is alluding to is in fact the Trinity, as the Church also

believes Carl Jung, CW 11, Para 209

Since people did not actually know what it was that had so suddenly revealed itself in the “Son of Man,” but only believed the current interpretations, the effects it had over the centuries signify nothing less than the gradual unfolding of the archetype in man’s consciousness, or rather, its absorption into the pattern of ideas transmitted by the cultures of antiquity. From this historical echo it is possible to recognize what had revealed itself in a sudden flash of illumination and seized upon men’s minds, even though the event, when it happened, was so far beyond their comprehension that they were unable to put it into a clear formula Carl Jung, CW 11, Para 210

Before “revealed” contents can be sorted out and properly formulated, time and distance are needed. The results of this intellectual activity were deposited in a series of tenets, the dogmata, which were then summed up in the “symbolum” or creed. This breviary of belief well deserves the name “symbolum,” for, from a psychological point of view, it gives symbolical expression to, and paints an anthropomorphic picture of, a transcendent fact that cannot be demonstrated or explained rationally, the word “transcendent” being used here in a strictly psychological sense Carl Jung, CW 11, Para 210

This creed is still entirely on the level of the gospels and epistles: there are three divine figures and they do not in any way contradict the one God. Here the Trinity is not explicit, but exists latently, just as Clement’s second letter says of the pre-existent Church: “It was spiritually there.” Even in the very early days of Christianity it was accepted that Christ as Logos was God himself (John 1: 1). For Paul he is pre-existent in God’s form, as is clear from the famous “kenosis” passage in Philippians 2: 6 (AV): “Who, being in the form of God, thought it not robbery to be equal with God. “There are also passages in the letters where the author confuses Christ with the Holy Ghost, or where the three are seen as one, as in II Corinthians 3: 17 (DV): “Now the Lord is the spirit. “When the next verse speaks of the “glory of the Lord,” Lord” seems to refer to Christ. But if you read the whole passage, from verses 7 to 18, it is evident that the “glory” refers equally to God, thus proving the promiscuity of the three figures and their latent Trinity Carl Jung, CW 11, Para 212

It was, apparently, a Spanish bishop, Hosius of Cordoba, who proposed to the emperor the crucial word homoousia. It did not occur then for the first time, for it can be found in Tertullian, as the “unitas substantiae.” The concept of homoousia can also be found in Gnostic usage, as for instance in Irenaeus’ references to the Valentinians (140circa 200), where the Aeons are said to be of one substance with their creator, Bythos. The Nicene Creed concentrates on the father-son relationship, while the Holy Ghost receives scant mention Carl Jung, CW 11, Para 216

Here the Holy Ghost is given due consideration: he is called “Lord” and is worshipped together with Father and Son. But he proceeds from the Father only. It was this point that caused the tremendous controversy over the “filioque” question, as to whether the Holy Ghost proceeds from the Father only, or from the Son as well. In order to make the Trinity a complete unity, the filioque was just as essential as the homoousia. The (falsely so-called) Athanasian Creed insisted in the strongest possible terms on the equality of all three Persons. Its peculiarities have given much offence to rationalistic and liberal-minded theologians Carl Jung, CW 11, Para 218

The sequence of creeds illustrates the evolution of the Trinity idea through the centuries.

In the course of its development it either consistently avoided, or successfully combated, all rationalistic deviations, such as, for instance, the so-plausible-looking Arian heresy. The creeds superimposed on the trinitarian allusions in the Holy Scriptures a structure of ideas that is a perpetual stumbling-block to the liberal-minded rationalist. Religious statements are, however, never rational in the ordinary sense of the word, for they always take into consideration that other world, the world of the archetype, of which reason in the ordinary sense is unconscious, being occupied only with externals. Thus the development of the Christian idea of the Trinity unconsciously reproduced the archetype of the homoousia of Father, Son, and Ka-mutef which first appeared in Egyptian theology. Not that the Egyptian model could be considered the archetype of the Christian idea Carl Jung, CW 11, Para 222

Wherever we find it, the archetype has a compelling force which it derives from the unconscious, and whenever its effect becomes conscious it has a distinctly numinous quality. There is never any conscious invention or cogitation, though speculations about the Trinity have often been accused of this. But collective and, above all, manifestly archetypal ideas can never be derived from the personal sphere. If Communism, for instance, refers to Engels, Marx, Lenin, and so on as the "fathers" of the movement, it does not know that it is reviving an archetypal order of society that existed even in primitive times, thereby explaining, incidentally, the "religious" and "numinous" (i.e., fanatical) character of Communism. Neither did the Church Fathers know that their Trinity had a prehistory dating back several thousand years Carl Jung, CW 11, Para 222

Thus the history of the Trinity presents itself as the gradual crystallization of an archetype that moulds the anthropomorphic conceptions of father and son, of life, and of different persons into an archetypal and numinous figure, the "Most Holy Three-in-One." The contemporary witnesses of these events apprehended it as something that modern psychology would call a psychic presence outside consciousness. If there is a consensus of opinion in respect of an idea, as there is here and always has been, then we are entitled to speak of a collective presence. Similar "presences" today are the Fascist and Communist ideologies, the one emphasizing the power of the chief, and the other communal ownership of goods in a primitive society Carl Jung, CW 11, Para 224

If we are to answer this psychological question, we must first of all examine the Christ-symbolism contained in the New Testament, together with the patristic allegories and medieval iconography, and compare this material with the archetypal content of the unconscious psyche in order to find out what archetypes have been constellated. The most important of the symbolical statements about Christ are those which reveal the attributes of the hero's life Carl Jung, CW 11, Para Carl Jung, CW 11, Para 229

The life of Christ is on the one hand only a short, historical interlude for proclaiming the message, but on the other hand it is an exemplary demonstration of the psychic experiences connected with God's manifestation of himself (or the realization of the Self). The important thing for man is not the and the (what is "shown" and "done"), but what happens afterwards: the seizure of the individual by the Holy Ghost Carl Jung, CW 11, Para 234

Here, however, we run into a great difficulty. For if we follow up the theory of the Holy Ghost and carry it a step further (which the Church has not done, for obvious reasons), we come inevitably to the conclusion that if the Father appears in the Son and breathes together with the Son, and the Son leaves the Holy Ghost behind for man, then the Holy Ghost breathes in man, too, and thus is the breath common to man, the Son, and the Father. Man is therefore

included in God's sonship, and the words of Christ "Ye are gods" (John 10: 34) appear in a significant light Carl Jung, CW 11, Para 235

The doctrine that the Paraclete was expressly left behind for man raises an enormous problem. The triadic formula of Plato would surely be the last word in the matter of logic, but psychologically it is not so at all, because the psychological factor keeps on intruding in the most disturbing way. Why, in the name of all that's wonderful, wasn't it "Father, Mother, and Son?" That would be much more "reasonable" and "natural" than "Father, Son, and Holy Ghost." To this we must answer: it is not just a question of a natural situation, but of a product of human reflection added on to the natural sequence of father and son. Through reflection, "life" and its "soul" are abstracted from Nature and endowed with a separate existence. Father and son are united in the same soul, or, according to the ancient Egyptian view, in the same procreative force, Ka-mutef. Ka-mutef is exactly the same hypostatization of an attribute as the breath or "spiration" of the Godhead Carl Jung, CW 11, Para 235

This psychological fact spoils the abstract perfection of the triadic formula and makes it a logically incomprehensible construction, since, in some mysterious and unexpected way, an important mental process peculiar to man has been imported into it. If the Holy Ghost is, at one and the same time, the breath of life and a loving spirit and the Third Person in whom the whole trinitarian process culminates, then he is essentially a product of reflection, a hypostatized noumenon tacked on to the natural family-picture of father and son. It is significant that early Christian Gnosticism tried to get round this difficulty by interpreting the Holy Ghost as the Mother. But that would merely have kept him within the archaic family-picture, within the tritheism and polytheism of the patriarchal world. It is, after all, perfectly natural that the father should have a family and that the son should embody the father. This train of thought is quite consistent with the father-world Carl Jung, CW 11, Para 236

On the other hand, the mother-interpretation would reduce the specific meaning of the Holy Ghost to a primitive image and destroy the most essential of the qualities attributed to him: not only is he the life common to Father and Son, he is also the Paraclete whom the Son left behind him, to procreate in man and bring forth works of divine parentage. It is of paramount importance that the idea of the Holy Ghost is not a natural image, but a recognition of the living quality of Father and Son, abstractly conceived as the "third" term between the One and the Other. Out of the tension of duality life always produces a "third" that seems somehow incommensurable or paradoxical. Hence, as the "third," the Holy Ghost is bound to be incommensurable and paradoxical too. Unlike Father and Son, he has no name and no character. He is a function, but that function is the Third Person of the Godhead Carl Jung, CW 11, Para 236

He [the Holy Ghost] is psychologically heterogeneous in that he cannot be logically derived from the father-son relationship and can only be understood as an idea introduced by a process of human reflection. The Holy Ghost is an exceedingly "abstract" conception, since a "breath" shared by two figures characterized as distinct and not mutually interchangeable can hardly be conceived at all. Hence one feels it to be an artificial construction of the mind, even though, as the Egyptian Ka-mutef concept shows, it seems somehow to belong to the very essence of the Trinity Carl Jung, CW 11, Para 237

The Gnostic interpretation of the Holy Ghost as the Mother contains a core of truth in that Mary was the instrument of God's birth and so became involved in the trinitarian drama as a human being. The Mother of God can, therefore, be regarded as a symbol of mankind's

essential participation in the Trinity. The psychological justification for this assumption lies in the fact that thinking, which originally had its source in the self-revelations of the unconscious, was felt to be the manifestation of a power external to consciousness. The primitive does not think; the thoughts come to him. We ourselves still feel certain particularly enlightening ideas as “influences,” “in-spirations,” etc. Where judgments and flashes of insight are transmitted by unconscious activity, they are often attributed to an archetypal feminine figure, the anima or mother-beloved. It then seems as if the inspiration came from the mother or from the beloved, the “femme inspiratrice” Carl Jung, CW 11, Para 240

In view of this, the Holy Ghost would have a tendency to exchange his neuter designation for a feminine one. (It may be noted that the Hebrew word for spirit ruach is predominantly feminine.) Holy Ghost and Logos merge in the Gnostic idea of Sophia, and again in the Sapientia of the medieval natural philosophers, who said of her: “In gremio matris sedet sapientia patris” (the wisdom of the father lies in the lap of the mother). These psychological relationships do something to explain why the Holy Ghost was interpreted as the mother, but they add nothing to our understanding of the Holy Ghost as such, because it is impossible to see how the mother could come third when her natural place would be second Carl Jung, CW 11, Para 240

When Goethe says that the fourth was the one “who thought for them all,” we rather suspect that the fourth was Goethe’s own thinking function Carl Jung, CW 11, Para 244

As compared with the trinitarian thinking of Plato, ancient Greek philosophy favoured thinking of a quaternary type. In Pythagoras the great role was played not by three but by four; the Pythagorean oath, for instance, says that the tetraktys “contains the roots of eternal nature.” The Pythagorean school was dominated by the idea that the soul was a square and not a triangle. The origin of these ideas lies far back in the dark prehistory of Greek thought. The quaternity is an archetype of almost universal occurrence. It forms the logical basis for any whole judgment. If one wishes to pass such a judgment, it must have this fourfold aspect. For instance, if you want to describe the horizon as a whole, you name the four quarters of heaven. Three is not a natural coefficient of order, but an artificial one. There are four elements, four prime qualities, four colours, four castes, four ways of spiritual development in Buddhism, etc. So, too, there are four aspects of psychological orientation, beyond which nothing fundamental remains to be said Carl Jung, CW 11, Para 246

Ever since the Timaeus the “fourth” has signified “realization,” i.e., entry into an essentially different condition, that of worldly materiality, which, it is authoritatively stated, is ruled by the Prince of this world for matter is the diametrical opposite of spirit. It is the true abode of the devil, whose hellish hearth-fire burns deep in the interior of the earth, while the shining spirit soars in the aether, freed from the shackles of gravity Carl Jung, CW 11, Para 251

I would like to call attention to Gerhard Dorn, a physician and alchemist, and a native of Frankfurt. He took great exception to the traditional quaternity of the basic principles of his art, and also to the fourfold nature of its goal, the lapis philosophorum. It seemed to him that this was a heresy, since the principle that ruled the world was a Trinity Carl Jung, CW 11, Para 262

The quaternity must therefore be of the devil. Four, he maintained, was a doubling of two, and two was made on the second day of Creation, but God was obviously not altogether pleased with the result of his handiwork that evening. The binarius is the devil of discord

and, what is worse, of feminine nature. (In East and West alike even numbers are feminine.) The cause of dissatisfaction was that, on this ominous second day of Creation, just as with Ahura-Mazda, a split was revealed in God's nature. Out of it crept the "four-horned serpent," who promptly succeeded in seducing Eve, because she was related to him by reason of her binary nature. ("Man was created by God, woman by the ape of God.") Carl Jung, CW 11, Para 262

The devil is the aping shadow of God, thein Gnosticism and also in Greek alchemy. He is "Lord of this world," in whose shadow man was born, fatally tainted with the original sin brought about by the devil. Christ, according to the Gnostic view, cast off the shadow he was born with and remained without sin Carl Jung, CW 11, Para 263

It will have struck the reader that two corresponding elements cross one another in our quaternity schema (shown below). On the one hand we have the polaristic identity of Christ and his adversary, and on the other the unity of the Father unfolded in the multiplicity of the Holy Ghost. The resultant cross is the symbol of the suffering Godhead that redeems mankind. This suffering could not have occurred, nor could it have had any effect at all, had it not been for the existence of a power opposed to God, namely "this world" and its Lord. The quaternity schema recognizes the existence of this power as an undeniable fact by fettering trinitarian thinking to the reality of this world Carl Jung, CW 11, Para 264

The differentiated and differentiable functions are much easier to cope with, and for understandable reasons, we prefer to leave the "inferior" function around the corner, or to repress it altogether, because it is such an awkward customer. And it is a fact that it has the strongest tendency to be infantile, banal, primitive, and archaic. Anybody who has a high opinion of himself will do well to guard against letting it make a fool of him. On the other hand, deeper insight will show that the primitive and archaic qualities of the inferior function conceal all sorts of significant relationships and symbolical meanings, and instead of laughing off the Cabiri as ridiculous Tom Thumbs he may begin to suspect that they are a treasure-house of hidden wisdom Carl Jung, CW 11, Para 244

Just as, in Faust, the fourth thinks for them all, so the whereabouts of the eighth should be asked "on Olympus." Goethe showed great insight in not underestimating his inferior function, thinking, although it was in the hands of the Cabiri and was undoubtedly mythological and archaic. He characterizes perfectly in the line: "The fourth would not come." Exactly! It wanted for some reason to stay behind or below Carl Jung, CW 11, Para 244

They [symbols] are the remedy with whose help neurotic dissociations can be repaired, by restoring to the conscious mind a spirit and an attitude which from time immemorial have been felt as solving and healing in their effects. They are "représentations collectives" which facilitate the much-needed union of conscious and unconscious. This union cannot be accomplished either intellectually or in a purely practical sense, because in the former case the instincts rebel and in the latter case reason and morality. Every dissociation that falls within the category of the psychogenic neuroses is due to a conflict of this kind, and the conflict can only be resolved through the symbol Carl Jung, CW 11, Para 285

The synthesis of conscious and unconscious can only be implemented by a conscious confrontation with the latter, and this is not possible unless one understands what the unconscious is saying. During this process we come upon the symbols investigated in the present study, and in coming to terms with them we re-establish the lost connection with ideas and

feelings which make a synthesis of the personality possible Carl Jung, CW 11, Para 285

This “inferior” personality is made up of everything that will not fit in with, and adapt to, the laws and regulations of conscious life. It is compounded of “disobedience” and is therefore rejected not on moral grounds only, but also. Or rather, this function does collaborate, not for the benefit of conscious, purposive intentions, but in the interests of unconscious tendencies pursuing a different goal. It is this fourth, “inferior” function which acts autonomously towards consciousness and cannot be harnessed to the latter’s intentions. It lurks behind every neurotic dissociation and can only be annexed to consciousness if the corresponding unconscious contents are made conscious at the same time. But this integration cannot take place and be put to a useful purpose unless one can admit the tendencies bound up with the shadow and allow them some measure of realization tempered, of course, with the necessary criticism Carl Jung, CW 11, Para 292

This leads to disobedience and self-disgust, but also to self-reliance, without which individuation is unthinkable. The ability to “will otherwise” must, unfortunately, be real if ethics are to make any sense at all. Anyone who submits to the law from the start, or to what is generally expected, acts like the man in the parable who buried his talent in the earth Carl Jung, CW 11, Para 292

Individuation is an exceedingly difficult task: it always involves a conflict of duties; whose solution requires us to understand that our “counter-will” is also an aspect of God’s will. One cannot individuate with mere words and convenient self-deceptions, because there are too many destructive possibilities in the offing. One almost unavoidable danger is that of getting stuck in the conflict and hence in the neurotic dissociation Carl Jung, CW 11, Para 292

Here the therapeutic myth has a helpful and loosening effect, even when the patient shows not a trace of conscious understanding. The felt presence of the archetype is enough; it only fails to work when the possibility of conscious understanding is there, within the patient’s reach. In those circumstances it is positively deleterious for the patient to remain unconscious, though this happens frequently enough in our Christian civilization today. So much of what Christian symbolism taught has gone by the board for large numbers of people, without their ever having understood what they have lost. Civilization does not consist in progress as such and in mindless destruction of the old values, but in developing and refining the good that has been won Carl Jung, CW 11, Para 292

The Host is lifted up towards the cross on the altar, and the priest makes the sign of the cross over it with the paten. The bread is thus brought into relation with Christ and his death on the cross; it is marked as a “sacrifice” and thereby becomes sacred. The elevation exalts it into the realm of the spiritual: it is a preliminary act of spiritualization. Justin makes the interesting remark that the presentation of the cleansed lepers in the temple was an image of the Eucharistic bread. This links up with the later alchemical idea of the imperfect or “leprous” substance which is made perfect by the opus. (Quod natura relinquit imperfectum, arte perficitur. What nature leaves imperfect is perfected by the art”) Carl Jung, CW 11, Para 310

The fact that the Eucharist was also celebrated with water shows that the early Christians were mainly interested in the symbolism of the mysteries and not in the literal observance of the sacrament. (There were several other variants “galactophagy,” for instance which all bear out this view) Carl Jung, CW 11, Para Carl Jung, CW 11, Para 314

Another, very graphic, interpretation of the wine and water is the reference to John 19: 34: “And forthwith came there out blood and water.” Deserving of special emphasis is the remark of St. John Chrysostom (patriarch of Constantinople, d. 407), that in drinking the wine Christ drank his own blood Carl Jung, CW 11, Para 315

The lifting up of the chalice in the air prepares the spiritualization (i.e., volatilization) of the wine. This is confirmed by the invocation to the Holy Ghost which immediately follows (Veni sanctificator), and it is even more evident in the Mozarabic liturgy, which has “Veni spiritus sanctificator.” The invocation serves to infuse the wine with holy spirit, for it is the Holy Ghost who begets, fulfils, and transforms After the elevation, the chalice was, in former times, set down to the right of the Host, to correspond with the blood that flowed from the right side of Christ Carl Jung, CW 11, Para 317

This, in the Roman Mass, is the climax, the transubstantiation of the bread and wine into the body and blood of Christ Carl Jung, CW 11, Para 322

Duns Scotus (d. 1308) remarks that, in the sacrament of the Last Supper, Christ, by an act of will, offers himself as a sacrifice in every Mass, through the agency of the priest. This tells us plainly enough that the sacrificial act is not performed by the priest, but by Christ himself. The agent of transformation is nothing less than the divine will working through Christ. The Council of Trent declared that in the sacrifice of the Mass “the selfsame Christ is contained and bloodlessly sacrificed,” although this is not a repetition of the historical sacrifice but a bloodless renewal of it. As the sacramental words have the power to accomplish the sacrifice, being an expression of God’s will, they can be described metaphorically as the sacrificial knife or sword which, guided by his will, consummates the thysia Carl Jung, CW 11, Para 324

The consecrated substances are lifted up and shown to the congregation. The Host in particular represents a beatific vision of heaven, in fulfilment of Psalm 27: 8: “Thy face, Lord, will I seek,” for in it the Divine Man is present Carl Jung, CW 11, Para 326

Taking up the Host, the priest makes the sign of the cross three times over the chalice, and says: “Through Him, and with Him, and in Him.” Then he makes the sign of the cross twice between himself and the chalice. This establishes the identity of Host, chalice, and priest, thus affirming once more the unity of all parts of the sacrifice. The union of Host and chalice signifies the union of the body and blood, i.e., the quickening of the body with a soul, for blood is equivalent to soul. Then follows the Pater noster Carl Jung, CW 11, Para 330

The prayer “Deliver us, O Lord, we beseech thee, from all evils, past, present, and to come” lays renewed emphasis on the petition made in the preceding Pater noster: “but deliver us from evil.” The connection between this and the sacrificial death of Christ lies in the descent into hell and the breaking of the infernal power. The breaking of the bread that now follows is symbolic of Christ’s death. The Host is broken in two over the chalice. A small piece, the particula, is broken off from the left half and used for the rite of consignatio and commixtio. In the Byzantine rite the bread is divided into four, the four pieces being marked with letters. The peculiar arrangement of the letters obviously represents a quaternity, which as we know always has the character of wholeness. This quaternity, as the letters show, refers to Christ glorified, king of glory and Pantokrator Carl Jung, CW 11, Para 331

This is the mingling of bread and wine, as explained by Theodore of Mopsuestia (d. 428?): “he combines them into one, whereby it is made manifest to everybody that although they are two they are virtually one.” The text at this point says: “May this mixture and consecration [commixtio et consecratio] of the body and blood of our Lord help us,” etc. The word ‘consecration’ may be an allusion to an original consecration by contact, though that would not clear up the contradiction since a consecration of both substances has already taken place. Attention has therefore been drawn to the old custom of holding over the sacrament from one Mass to another, the Host being dipped in wine and then preserved in softened, or mixed, form. There are numerous rites that end with minglings of this kind. Here I would only mention the consecration by water, or the mixed drink of honey and milk which the neophytes were given after communion in the Church Order of Hippolytus Carl Jung, CW 11, Para 334

The Leonine Sacramentary (seventh century) interprets the commixtio as a mingling of the heavenly and earthly nature of Christ. The later view was that it symbolizes the resurrection, since in it the blood (or soul) of our Lord is reunited with the body lying in the sepulchre. There is a significant reversal here of the original rite of baptism. In baptism, the body is immersed in water for the purpose of transformation; in the commixtio, on the other hand, the body, or particula, is steeped in wine, symbolizing spirit, and this amounts to a glorification of the body. Hence the justification for regarding the commixtio as a symbol of the resurrection Carl Jung, CW 11, 335

The mixing of water with the wine originally referred to the ancient custom of not drinking wine unless mixed with water. A drunkard was therefore called akratopotes, an ‘unmixed drinker.’ In modern Greek, wine is still called(mixture). From the custom of the Monophysite Armenians, who did not add any water to the Eucharistic wine (so as to preserve the exclusively divine nature of Christ), it may be inferred that water has a hylical, or physical, significance and represents man’s material nature Carl Jung, CW 11, Para 312

The mixing of water and wine in the Roman rite would accordingly signify that divinity is mingled with humanity as indivisibly as the wine with the water. St. Cyprian (bishop of Carthage, d. 258) says that the wine refers to Christ, and the water to the congregation as the body of Christ. As the water is an imperfect or even leprous substance, it has to be blessed and consecrated before being mixed, so that only a purified body may be joined to the wine of the spirit, just as Christ is to be united only with a pure and sanctified congregation. Thus this part of the rite has the special significance of preparing a perfect body the glorified body of resurrection Carl Jung, CW 11, Para 312

At the time of St. Cyprian the communion was generally celebrated with water. And, still later, St. Ambrose (bishop of Milan, d. 397) says: “In the shadow there was water from the rock, as it were the blood of Christ. “In the Church Order of Hippolytus (d. c. 235) the water chalice is associated with the baptismal font, where the inner man is renewed as well as the body. This interpretation comes very close to the baptismal krater of Poimandres and to the Hermetic basin filled with nousHere the water signifies the pneuma, i.e., the spirit of prophecy, and also the doctrine which a man receives and passes on to others Carl Jung, CW 11, Para 313

The priest makes the sign of the cross three times over the substances with the thurible, twice from right to left and once from left to right. The counterclockwise movement (from right to left) corresponds psychologically to a circumambulation downwards, in the direction of the unconscious, while the clockwise (left-to-right) movement goes in the direction of

consciousness. There is also a complicated censing of the altar Carl Jung, CW 11, Para 318

The censing has the significance of an incense offering and is therefore a relic of the original thysia. At the same time it signifies a transformation of the sacrificial gifts and of the altar, a spiritualization of all the physical substances subserving the rite. Finally, it is an apotropaic ceremony to drive away any demonic forces that may be present, for it fills the air with the fragrance of the pneuma and renders it uninhabitable by evil spirits. The vapour also suggests the sublimated body, the corpus volatile sive spirituale, or wraithlike "subtle body." Rising up as a "spiritual" substance, the incense implements and represents the ascent of prayer hence the Dirigatur, Domine, oratio mea, sicut incensum, in conspectu tuo ["Let my prayer, O Lord, ascend like incense in thy sight"] Carl Jung, CW 11, Para 319

The censing brings the preparatory, spiritualizing rites to an end. The gifts have been sanctified and prepared for the actual transubstantiation. Priest and congregation are likewise purified by the prayers Accendat in nobis Dominus ignem sui amoris ["May the Lord enkindle in us the fire of his love"], and Lavabo inter innocentes ["I will wash my hands among the innocent"], and are made ready to enter into the mystic union of the sacrificial act which now follows Carl Jung, CW 11, Para 320

The Suscipe, sancta Trinitas, like the Orate, fratres, the Sanctus, and the Te igitur, is a propitiatory prayer which seeks to insure the acceptance of the sacrifice. Hence the Preface that comes after the Secret is called Illatio in the Mozarabic riteand in the old Gallican liturgy is known as Immolatio (in the sense of oblatio) with reference to the presentation of the gifts. The words of the Sanctus, "Benedictus qui venit in nomine Domini" ["Blessed is he that cometh in the name of the Lord"], point to the expected appearance of the Lord which has already been prepared, on the ancient principle that a "naming" has the force of a "summons" Carl Jung, CW 11, Para 321

After the Canon there follows the "Commemoration of the Living," together with the prayers Hanc igitur and Quam oblationem. In the Mozarabic Mass these are followed by the Epiclesis (invocation): "Adesto, adesto Jesu, bone Pontifex, in medio nostri: sicut fuisti in medio discipulorum tuorum" ["Be present, be present in our midst, O Jesus, great High Priest: as thou wert in the midst of thy disciples"]. This naming likewise has the original force of a summons. It is an intensification of the Benedictus qui venit, and it may be, and sometimes was, regarded as the actual manifestation of the Lord, and hence as the culminating point of the Mass Carl Jung, CW 11, Para 321

The best examples are to be found in the religion of ancient Mexico. Thus, in order to renew the moon-goddess a young woman was decapitated and skinned, and a youth then put the skin round him to represent the risen goddess. The prototype of this renewal is the snake casting its skin every year, a phenomenon round which primitive fantasy has always played Carl Jung, CW 11, Para 348

In our vision the skinning is restricted to the head, and this can probably be explained by the underlying idea of spiritual transformation. Since olden times shaving the head has been associated with consecration, that is, with spiritual transformation or initiation. The priests of Isis had their heads shaved quite bald, and the tonsure, as we know, is still in use at the present day Carl Jung, CW 11, Para 348

This "symptom" of transformation goes back to the old idea that the transformed one

becomes like a new-born babe (neophyte, quasimodogenitus) with a hairless head. In the myth of the night sea journey, the hero loses all his hair during his incubation in the belly of the monster, because of the terrific heat Carl Jung, CW 11, Para 348

The custom of tonsure, which is derived from these primitive ideas, naturally presupposes the presence of a ritual barber. Curiously enough, we come across the barber in that old alchemical "mystery," the Chymical Wedding of 1616. There the hero, on entering the mysterious castle, is pounced on by invisible barbers, who give him something very like a tonsure. Here again the initiation and transformation process is accompanied by a shaving Carl Jung, CW 11, Para 348

He was clearly a non-Christian Gnostic, and in particular so one gathers from the famous passage about the krateran adherent of the Poimandres sect, and therefore a follower of Hermes. Although alchemical literature abounds in parables, I would hesitate to class these dream-visions among them. Anyone acquainted with the language of the alchemists will recognize that their parables are mere allegories of ideas that were common knowledge. In the allegorical figures and actions, one can usually see at once what substances and what procedures are being referred to under a deliberately theatrical disguise. There is nothing of this kind in the Zosimos visions Carl Jung, CW 11, Para 344

Indeed, it comes almost as a surprise to find the alchemical interpretation, namely that the dream and its impressive machinery are simply an illustration of the means for producing the "divine water." Moreover, a parable is a self-contained whole, whereas our vision varies and amplifies a single theme as a dream does. So far as one can assess the nature of these visions at all, I should say that even in the original text the contents of an imaginative meditation have grouped themselves round the kernel of an actual dream and been woven into it. That there really was such a meditation is evident from the fragments of it that accompany the visions in the form of a commentary. As we know, meditations of this kind are often vividly pictorial, as if the dream were being continued on a level nearer to consciousness Carl Jung, CW 11, Para 344

The later Arabic designation of Zosimos as al-'Ibrî (the Hebrew) does not of course prove that he himself was a Jew, but it is clear from his writings that he was acquainted with Jewish traditions Carl Jung, CW 11, Para 350

The parallel between the Hebrew god and Saturn is of considerable importance as regards the alchemical idea of the transformation of the God of the Old Testament into the God of the New. The alchemists naturally attached great significance to Saturn, for, besides being the outermost planet, the supreme archon (the Harranites named him "Primas"), and the demiurge Ialdabaoth, he was also the spiritus niger who lies captive in the darkness of matter, the deity or that part of the deity which has been swallowed up in his own creation. He is the dark god who reverts to his original luminous state in the mystery of alchemical transmutation. As the Aurora consurgens [Part I] says: "Blessed is he that shall find this science and into whom the prudence of Saturn floweth" Carl Jung, CW 11, Para 350

Throughout the visions it is clear that sacrificer and sacrificed are one and the same. This idea of the unity of the prima and ultima materia of that which redeems and that which is to be redeemed, pervades the whole of alchemy from beginning to end. "Unus est lapis, una medicina, unum vas, unum regimen, unaque dispositio" is the key formula to its enigmatic language. Greek alchemy expresses the same idea. Its symbol is the uroboros, the tail-eating serpent. In our vision it is the priest as sacrificer who devours himself as the sacrifice Carl

Jung, CW 11, Para 353

This recalls the saying of St. John Chrysostom that in the Eucharist Christ drinks his own blood. By the same token, one might add, he eats his own flesh. The grisly repast in the dream of Zosimos reminds us of the orgiastic meals in the Dionysus cult, when sacrificial animals were torn to pieces and eaten. They represent Dionysus Zagreus being torn to pieces by the Titans, from whose mangled remains the(god) arises Carl Jung, CW 11, Para 353

Zosimos tells us that the vision represents or explains the "production of the waters." The visions themselves only show the transformation into pneuma. In the language of the alchemists, however, spirit and water are synonymous, as they are in the language of the early Christians, for whom water meant the spiritus veritatis. In the "Book of Krates" we read: "You make the bodies to liquefy, so that they mingle and become an homogeneous liquid; this is then named the 'divine water"' (Berthelot, La Chimie au moyen áge, III, p. 53). The passage corresponds to the Zosimos text, which says that the priest would "change the bodies into blood." For the alchemists, water and blood are identical. This transformation is the same as the solutio or liquefactio, which is a synonym for the sublimatio, for "water" is also "fire" Carl Jung, CW 11, Para 354

The "philosophical egg" is divided with the sword, and with it the "King" is transfixed and the dragon or "corpus" dismembered, the latter being represented as the body of a man whose head and limbs are cut off. The lion's paws are likewise cut off with the sword Carl Jung, CW 11, Para 357

For the alchemical sword brings about the solutio, or separatio, of the elements, thereby restoring the original condition of chaos, so that a new and more perfect body can be produced by a new impressio formae, or by a "new imagination." The sword is therefore that which "kills and vivifies," and the same is said of the permanent water or mercurial water Carl Jung, CW 11, Para 357

The divisive and separative function of the sword, which is of such importance in alchemy, is prefigured in the flaming sword of the angel that separated our first parents from paradise. Separation by a sword is a theme that can also be found in the Gnosis of the Ophites: the earthly cosmos is surrounded by a ring of fire which at the same time encloses paradise. But paradise and the ring of fire are separated by the "flaming sword." An important interpretation of this flaming sword is given in Simon Magus: there is an incorruptible essence potentially present in every human being, the divine pneuma, "which is stationed above and below in the stream of water." Simon says of this pneuma: "I and thou, thou before me. I, who am after thee." It is a force "that generates itself, that causes itself to grow; it is its own mother, sister, bride, daughter; its own son, mother, father; a unity, a root of the whole." It is the very ground of existence, the procreative urge, which is of fiery origin. Fire is related to blood, which "is fashioned warm and ruddy like fire" Carl Jung, CW 11, Para 359

It is clear from these remarkable statements of Hippolytus concerning the teachings of Simon Magus that the sword is very much more than an instrument which divides; it is itself the force which "turns" from something infinitesimally small into the infinitely great: from water, fire, and blood it becomes the limitless Aeon. What it means is the transformation of the vital spirit in man into the Divine. The natural being becomes the divine pneuma, as in the vision of Zosimos Carl Jung, CW 11, Para 359

Simon's description of the creative pneuma, the true arcane substance, corresponds in every detail to the uroboros or serpens mercurialis of the Latinists. It too is its own father, mother, son, daughter, brother, and sister from the earliest beginnings of alchemy right down to the end. It begets and sacrifices itself and is its own instrument of sacrifice, for it is a symbol of the deadly and life-giving water Carl Jung, CW 11, Para 359

From the human point of view, gifts are offered to God at the altar, signifying at the same time the self-oblation of the priest and the congregation. The ritual act consecrates both the gifts and the givers. It commemorates and represents the Last Supper which our Lord took with his disciples, the whole Incarnation, Passion, death, and resurrection of Christ Carl Jung, CW 11, Para 378

But from the divine point of view this anthropomorphic action is only the outer shell or husk in which what is really happening is not a human action at all but a divine event. For an instant the life of Christ, eternally existent outside time, becomes visible and is unfolded in temporal succession, but in condensed form, in the sacred action: Christ incarnates as a man under the aspect of the offered substances, he suffers, is killed, is laid in the sepulchre, breaks the power of the underworld, and rises again in glory. In the utterance of the words of consecration the Godhead intervenes, Itself acting and truly present, and thus proclaims that the central event in the Mass is Its act of grace, in which the priest has only the significance of a minister Carl Jung, CW 11, Para 378

The same applies to the congregation and the offered substances: they are all ministering causes of the sacred event. The presence of the Godhead binds all parts of the sacrificial act into a mystical unity, so that it is God himself who offers himself as a sacrifice in the substances, in the priest, and in the congregation, and who, in the human form of the Son, offers himself as an atonement to the Father Carl Jung, CW 11, Para 378

Although God the Father is of one nature with God the Son, he appears in time on the one hand as the eternal Father and on the other hand as a man with limited earthly existence. Mankind as a whole is included in God's human nature, which is why man is also included in the sacrificial act. Just as, in the sacrificial act, God is both agens and patiens, so too is man according to his limited capacity. The causa efficiens of the transubstantiation is a spontaneous act of God's grace. Ecclesiastical doctrine insists on this view and even tends to attribute the preparatory action of the priest, indeed the very existence of the rite, to divine prompting, rather than to slothful human nature with its load of original sin Carl Jung, CW 11, Para 379

This view is of the utmost importance for a psychological understanding of the Mass. Wherever the magical aspect of a rite tends to prevail, it brings the rite nearer to satisfying the individual ego's blind greed for power, and thus breaks up the mystical body of the Church into separate units. Where, on the other hand, the rite is conceived as the action of God himself, the human participants have only an instrumental or "ministering" significance. Carl Jung, CW 11, Para 379

Human consciousness (represented by the priest and congregation) is confronted with an autonomous event which, taking place on a "divine" and "timeless" plane transcending consciousness, is in no way dependent on human action, but which impels man to act by seizing upon him as an instrument and making him the exponent of a "divine" happening. In the ritual action man places himself at the disposal of an autonomous and "eternal" agency operating outside the categories of human consciousness parva licet componere magnisin

much the same way that a good actor does not merely represent the drama, but allows himself to be overpowered by the genius of the dramatist Carl Jung, CW 11, Para 379

The dual aspect of the Mass finds expression not only in the contrast between human and divine action, but also in the dual aspect of God and the God-man, who, although they are by nature a unity, nevertheless represent a duality in the ritual drama. Without this "dichotomy of God," if I may use such a term, the whole act of sacrifice would be inconceivable and would lack actuality. According to the Christian view God has never ceased to be God, not even when he appeared in human form in the temporal order. The Christ of the Johannine gospel declares: "I and my Father are one. He that hath seen me hath seen the Father" (John 10: 30, 14: 9). And yet on the Cross Christ cries out: "My God, my God, why hast thou forsaken me?" Carl Jung, CW 11, Para 380

And where would God's wholeness be if he could not be the "wholly other"? Accordingly it is with some psychological justification, so it seems to me, that when the Gnostic Nous fell into the power of Physis he assumed the dark chthonic form of the serpent, and the Manichaean "Original Man" in the same situation actually took on the qualities of the Evil One. In Tibetan Buddhism all gods without exception have a peaceful and a wrathful aspect, for they reign over all the realms of being. The dichotomy of God into divinity and humanity and his return to himself in the sacrificial act hold out the comforting doctrine that in man's own darkness there is hidden a light that shall once again return to its source, and that this light actually wanted to descend into the darkness in order to deliver the Enchained One who languishes there and lead him to light everlasting. All this belongs to the stock of pre-Christian ideas, being none other than the doctrine of the "Man of Light," the Anthropos or Original Man, which the sayings of Christ the gospels assume to be common knowledge Carl Jung, CW 11, Para 380

So in offering bread and wine man is in the first instance offering up the products of his culture, the best, as it were, that human industry produces. But the "best" can be produced only by the best in man, by his conscientiousness and devotion. Cultural products can therefore easily stand for the psychological conditions of their production, that is, for those human virtues which alone make man capable of civilization Carl Jung, CW 11, Para 383

As to the special nature of the substances, bread is undoubtedly a food. There is a popular saying that wine "fortifies," though not in the same sense as food "sustains." It stimulates and "makes glad the heart of man" by virtue of a certain volatile substance which has always been called "spirit." It is thus unlike innocuous water, an "inspiriting" drink, for a spirit or god dwells within it and produces the ecstasy of intoxication. The wine miracle at Cana was the same as the miracle in the temple of Dionysus, and it is profoundly significant that, on the Damascus Chalice, Christ is enthroned among vine tendrils like Dionysus himself. Bread therefore represents the physical means of subsistence, and wine the spiritual. The offering up of bread and wine is the offering of both the physical and the spiritual fruits of civilization Carl Jung, CW 11, Para 384

It was not sensible But, however he was of the care and labour lavished upon them, man could hardly fail to observe that these cultivated plants grew and flourished according to an inner law of their own, and that there was a power at work in them which he compared to his own life breath or vital spirit. Frazer has called this principle, not unjustly, the "corn spirit." Human initiative and toil are certainly necessary, but even more necessary, in the eyes of primitive man, is the correct and careful performance of the ceremonies which sustain, strengthen, and propitiate the vegetation numen Carl Jung, CW 11, Para 385

The value of the gift is enhanced when it is the best or the first fruits. Since bread and wine are the best that agriculture can offer, they are by the same token man's best endeavour. In addition, bread symbolizes the visible manifestation of the divine numen which dies and rises again, and wine the presence of a pneuma which promises intoxication and ecstasy. The classical world thought of this pneuma as Dionysus, particularly the suffering Dionysus Zagreus, whose divine substance is distributed throughout the whole of nature. In short, what is sacrificed under the forms of bread and wine is nature, man, and God, all combined in the unity of the symbolic gift Carl Jung, CW 11, Para 387

The act of making a sacrifice consists in the first place in giving something which belongs to me. Everything which belongs to me bears the stamp of "mineness," that is, it has a subtle identity with my ego Carl Jung, CW 11, Para 389

When, therefore, I give away something that is "mine," what I am giving is essentially a symbol, a thing of many meanings; but, owing to my unconsciousness of its symbolic character, it adheres to my ego, because it is part of my personality. Hence there is, explicitly or implicitly, a personal claim bound up with every gift. There is always an unspoken "give that thou mayest receive." Consequently the gift always carries with it a personal intention, for the mere giving of it is not a sacrifice. It only becomes a sacrifice if I give up the implied intention of receiving something in return. If it is to be a true sacrifice, the gift must be given as if it were being destroyed. Only then is it possible for the egoistic claim to be given up. Were the bread and wine simply given without any consciousness of an egoistic claim, the fact that it was unconscious would be no excuse, but would on the contrary be sure proof of the existence of a secret claim Carl Jung, CW 11, Para 390

Because of its egoistic nature, the offering would then inevitably have the character of a magical act of propitiation, with the unavowed purpose and tacit expectation of purchasing the good will of the Deity. That is an ethically worthless simulacrum of sacrifice, and in order to avoid it the giver must at least make himself sufficiently conscious of his identity with the gift to recognize how far he is giving himself up in giving the gift. But since the gift represents myself, I have in that case destroyed myself, given myself away without expectation of return Carl Jung, CW 11, Para 390

What I sacrifice is my own selfish claim, and by doing this I give up myself. Every sacrifice is therefore, to a greater or lesser degree, a self-sacrifice. The degree to which it is so depends on the significance of the gift. If it is of great value to me and touches my most personal feelings, I can be sure that in giving up my egoistic claim I shall challenge my ego personality to revolt. I can also be sure that the power which suppresses this claim, and thus suppresses me, must be the Self. Hence it is the Self that causes me to make the sacrifice; any more, it compels me to make it. The Self is the sacrificer, and I am the sacrificed gift, the human sacrifice. Let us try for a moment to look into Abraham's soul when he was commanded to sacrifice his only son. Quite apart from the compassion he felt for his child, would not a father in such a position feel himself as the victim, and feel that he was plunging the knife into his own breast? He would be at the same time the sacrificer and the sacrificed Carl Jung, CW 11, Para 397

Now, since the relation of the ego to the Self is like that of the son to the father, we can say that when the Self calls on us to sacrifice ourselves, it is really carrying out the sacrificial act on itself. We know more or less what this act means to us, but what it means

to the Self is not so clear. But what does the Self gain? We see it entering into manifestation, freeing itself from unconscious projection, and, as it grips us, entering into our lives and so passing from unconsciousness into consciousness, from potentiality into actuality. What it is in the diffuse unconscious state we do not know; we only know that in becoming ourself it has become man Carl Jung, CW 11, Para 398

The gross concretism of the vision is so striking that one might easily feel tempted, for aesthetic and other reasons, to drop the comparison with the Mass altogether. If I nevertheless venture to bring out certain analogies, I do so not with the rationalistic intention of devaluing the sacred ceremony by putting it on a level with a piece of pagan nature worship. If I have any aim at all apart from scientific truth, it is to show that the most important mystery of the Catholic Church rests, among other things, on psychic conditions which are deeply rooted in the human soul Carl Jung, CW 11, Para 404

In contrast to this, the vision is archaic and primitive, but its symbolism points directly to the fundamental alchemical idea of the incorruptible substance, namely to the Self, which is beyond change. The vision is a piece of unalloyed naturalism, banal, grotesque, squalid, horrifying and profound as nature herself. Its meaning is not clear, but it allows itself to be divined with the abysmal uncertainty and ambiguity that pertains to all things nonhuman, suprahuman, and subhuman Carl Jung, CW 11, Para 405

What is the reason for the “punishment” of God? Despite the almost blasphemous nature of this question, we must nevertheless ask it in view of the obviously punitive character of the sacrifice. The usual explanation is that Christ was punished for our sins. The dogmatic validity of this answer is not in question here. As I am in no way concerned with the Church’s explanation, but only wish to reconstruct the underlying psychic process, we must logically assume the existence of a guilt proportionate to the punishment Carl Jung, CW 11, Para 408

If mankind is the guilty party, logic surely demands that mankind should be punished. But if God takes the punishment on himself, he exculpates mankind, and we must then conjecture that it is not mankind that is guilty, but God (which would logically explain why he took the guilt on himself). For reasons that can readily be understood, a satisfactory answer is not to be expected from orthodox Christianity. But such an answer may be found in the Old Testament, in Gnosticism, and in late Catholic speculation. From the Old Testament we know that though Yahweh was a guardian of the law he was not just, and that he suffered from fits of rage which he had every occasion to regret Carl Jung, CW 11, Para 408

In these explanations we find the natural logic we missed in the answer of the Church. God’s guilt consisted in the fact that, as creator of the world and king of his creatures, he was inadequate and therefore had to submit to the ritual slaying. For primitive man the concrete king was perfectly suited to this purpose, but not for a higher level of civilization with a more spiritual conception of God. Earlier ages could still dethrone their gods by destroying their images or putting them in chains. At a higher level, however, one god could be dethroned only by another god, and when monotheism developed, God could only transform himself Carl Jung, CW 11, Para 409

The numinous experience of the individuation process is, on the archaic level, the prerogative of shamans and medicine men; later, of the physician, prophet, and priest; and finally, at the civilized stage, of philosophy and religion .... The shaman’s experience of sickness, torture, death, and regeneration implies, at a higher level, the idea of being made

whole through sacrifice, of being changed by transubstantiation and exalted into a pneumatic man in a word, of apotheosis. Carl Jung, CW 11, Para 448.

Because words are substitutes for things, which of course they cannot be in reality, they take on intensified forms, become eccentric, outlandish, stupendous, swell up into what schizophrenic patients call “power words.” A primitive word-magic develops, and one is inordinately impressed by it because anything out of the ordinary is felt to be especially profound and significant Carl Jung, CW 11, Para 442

Naturally, in order to survive, Christianity had to defend itself not only against its enemies but also against the excessive pretensions of some of its adherents, including those of the Gnostics. Increasingly it had to rationalize its doctrines in order to stem the flood of irrationality. This led, over the centuries, to that strange marriage of the originally irrational Christian message with human reason, which is so characteristic of the Western mentality. But to the degree that reason gradually gained the upper hand, the intellect asserted itself and demanded autonomy. And just as the intellect subjugated the psyche, so also it subjugated Nature and begat on her an age of scientific technology that left less and less room for the natural and irrational man. Thus the foundations were laid for an inner opposition which today threatens the world with chaos Carl Jung, CW 11, Para 444

To make the reversal complete, all the powers of the underworld now hide behind reason and intellect, and under the mask of rationalistic ideology a stubborn faith seeks to impose itself by fire and sword, vying with the darkest aspects of a church militant. By a strange enantiodromia, the Christian spirit of the West has become the defender of the irrational, since, in spite of having fathered rationalism and intellectualism, it has not succumbed to them so far as to give up its belief in the rights of man, and especially the freedom of the individual. But this freedom guarantees a recognition of the irrational principle, despite the lurking danger of chaotic individualism Carl Jung, CW 11, Para 444

By appealing to the eternal rights of man, faith binds itself inalienably to a higher order, not only on account of the historical fact that Christ has proved to be an ordering factor for many hundreds of years, but also because the Self effectively compensates chaotic conditions no matter by what name it is known: for the Self is the Anthropos above and beyond this world, and in him is contained the freedom and dignity of the individual man Carl Jung, CW 11, Para 444

Since an archetype always possesses a certain numinosity, the integration of the numen generally produces an inflation of the subject. It is therefore entirely in accord with psychological expectations that Goethe should dub his Faust a Superman. In recent times this type has extended beyond Nietzsche into the field of political psychology, and its incarnation in man has had all the consequences that might have been expected to follow from such a misappropriation of power Carl Jung, CW 11, Para 472

As human beings do not live in airtight compartments, this infectious inflation has spread everywhere and given rise to an extraordinary uncertainty in morals and philosophy. The medical psychologist is bound to take an interest in such matters, if only for professional reasons, and so we witness the memorable spectacle of a psychiatrist introducing a critical study of Milton’s Paradise Lost. Meditating upon this highly incongruous conjunction, I decided that I should best fulfil my obligations if I explained to the well-intentioned reader how and why the devil got into the consulting-room of the psychiatrist. Carl Jung, CW 11, Para 473

Apart from common prayer and Holy Communion, the Protestant has no ritual ceremonies at his disposal, no spiritual exercises, rosaries, pilgrimages, etc., with their expressive symbolism. He is therefore compelled to take his stand on moral ground, which puts the instinctual forces coming up from the unconscious in danger of a new repression. Any sacral action, in whatever form, works like a vessel for receiving the contents of the unconscious Carl Jung, CW 11, Para 543

Puritan simplification has deprived Protestantism of just this means of acting on the unconscious; at any rate it has dispossessed the clergyman of his quality as a priestly mediator, which is so very necessary to the soul. Instead, it has given the individual responsibility for himself and left him alone with his God. Herein lies the advantage and also the danger of Protestantism. From this, too, comes its inner unrest, which in the course of a few centuries has begotten more than four hundred Protestant denominations an indubitable symptom of individualism run riot Carl Jung, CW 11, Para 543

There can be no doubt that the psychoanalytical unveiling of the unconscious has a great effect. Equally, there can be no doubt of the tremendous effect of Catholic confession, especially when it is not just a passive hearing, but an active intervention. In view of this, it is truly astonishing that the Protestant Churches have not long since made an effort to revive the institution of confession as the epitome of the pastoral bond between the shepherd and his flock. For the Protestant, however, there is and rightly so no going back to this primitive Catholic form; it is too sharply opposed to the nature of Protestantism Carl Jung, CW 11, Para 544

The Protestant minister, rightly seeing in the cure of souls the real purpose of his existence, naturally looks round for a new way that will lead to the souls, and not merely to the ears, of his parishioners. Analytical psychology seems to him to provide the key, for the meaning and purpose of his ministry are not fulfilled with the Sunday sermon, which, though it reaches the ears, seldom penetrates to the heart, much less to the soul, the most hidden of all things hidden in man. The cure of souls can only be practised in the stillness of a colloquy, carried on in the healthful atmosphere of unreserved confidence. Soul must work on soul, and many doors be unlocked that bar the way to the innermost sanctuary. Psychoanalysis possesses the means of opening doors otherwise tightly closed Carl Jung, CW 11, Para 544

But we cannot embark upon this ambitious enterprise until we have learned how to deal with our spiritual pride and blasphemous self-assertiveness. The Eastern attitude violates the specifically Christian values, and it is no good blinking this fact. If our new attitude is to be genuine, i.e., grounded in our own history, it must be acquired with full consciousness of the Christian values and of the conflict between them and the introverted attitude of the East Carl Jung, CW 11, Para 773

We must get at the Eastern values from within and not from without, seeking them in ourselves, in the unconscious. We shall then discover how great is our fear of the unconscious and how formidable are our resistances. Because of these resistances we doubt the very thing that seems so obvious to the East, namely, the self-liberating power of the introverted mind Carl Jung, CW 11, Para 773

This aspect of the mind is practically unknown to the West, though it forms the most important component of the unconscious. Many people flatly deny the existence of the

unconscious, or else they say that it consists merely of instincts, or of repressed or forgotten contents that were once part of the conscious mind. It is safe to assume that what the East calls “mind” has more to do with our “unconscious” than with mind as we understand it, which is more or less identical with consciousness. To us, consciousness is inconceivable without an ego; it is equated with the relation of contents to an ego. If there is no ego there is nobody to be conscious of anything. The ego is therefore indispensable to the conscious process Carl Jung, CW 11, Para 774

The Eastern mind, however, has no difficulty in conceiving of a consciousness without an ego. Consciousness is deemed capable of transcending its ego condition; indeed, in its “higher” forms, the ego disappears altogether. Such an ego-less mental condition can only be unconscious to us, for the simple reason that there would be nobody to witness it. I do not doubt the existence of mental states transcending consciousness. But they lose their consciousness to exactly the same degree that they transcend consciousness. I cannot imagine a conscious mental state that does not relate to a subject, that is, to an ego Carl Jung, CW 11, Para 774

The conscious mind is thus confronted with a new aspect of the psyche, which arouses a different problem or modifies an old one in an unexpected way. The procedure is continued until the original conflict is satisfactorily resolved. The whole process is called the “transcendent function.” It is a process and a method at the same time. The production of unconscious compensations is a spontaneous process; the conscious realization is a method. The function is called “transcendent” because it facilitates the transition from one psychic condition to another by means of the mutual confrontation of opposites Carl Jung, CW 11, Para 780

I know that yoga prides itself on being able to control even the unconscious processes, so that nothing can happen in the psyche as a whole that is not ruled by a supreme consciousness. I have not the slightest doubt that such a condition is more or less possible. But it is possible only at the price of becoming identical with the unconscious. Such an identity is the Eastern equivalent of our Western fetish of “complete objectivity,” the machine-like subservience to one goal, to one idea or cause, at the cost of losing every trace of inner life Carl Jung, CW 11, Para 785

From the Eastern point of view this complete objectivity is appalling, for it amounts to complete identity with the samsara; to the West, on the other hand, samadhi is nothing but a meaningless dream-state. In the East, the inner man has always had such a firm hold on the outer man that the world had no chance of tearing him away from his inner roots; in the West, the outer man gained the ascendancy to such an extent that he was alienated from his innermost being. The One Mind, Oneness, indefiniteness, and eternity remained the prerogative of the One God. Man became small, futile, and essentially in the wrong Carl Jung, CW 11, Para 785

The Churches, of course, continued to exist because they were maintained by the strictly religious needs of the public, but they lost their leadership in the cultural sphere. While the Church of Rome, thanks to her unsurpassed organization, remained a unity, Protestantism split into nearly four hundred denominations. This is a proof on the one hand of its incompetence, and, on the other, of a religious vitality which refuses to be stifled. Gradually, in the course of the nineteenth century, this led to syncretistic outgrowths and to the importation on a mass scale of exotic religious systems, such as the religion of Abdul Baha, the Sufi sects, the Ramakrishna Mission, Buddhism, and so on. Many of these systems, for instance anthroposophy,

were syncretized with Christian elements. The resultant picture corresponds roughly to the Hellenistic syncretism of the third and fourth centuries A.D., which likewise showed traces of Indian thought. (Cf. Apollonius of Tyana, the Orphic-Pythagorean secret doctrines, the Gnosis, etc.) Carl Jung, CW 11, Para 861

All these systems moved on the religious plane and recruited the great majority of their adherents from Protestantism. They are thus, fundamentally, Protestant sects. By directing its main attack against the authority of the Roman Church, Protestantism largely destroyed belief in the Church as the indispensable agent of divine salvation. Thus the burden of authority fell to the individual, and with it a religious responsibility that had never existed before. The decline of confession and absolution sharpened the moral conflict of the individual and burdened him with problems which previously the Church had settled for him, since her sacraments, particularly that of the Mass, guaranteed his salvation through the priest's enactment of the sacred rite. The only things the individual had to contribute were confession, repentance, and penance. With the collapse of the rite, which did the work for him, he had to do without God's answer to his plans. This dissatisfaction explains the demand for systems that promise an answer the visible or at least noticeable favour of another (higher, spiritual, or divine) power Carl Jung, CW 11, Para 862

European science paid no attention to these hopes and expectations. It lived its intellectual life unconcerned with religious needs and convictions. This historically inevitable split in the Western mind also affected yoga so far as this had gained a footing in the West and led to its being made an object of scientific study on the one hand, while on the other it was welcomed as a way of salvation. But inside the religious movement there were any number of attempts to combine science with religious belief and practice, as for instance Christian Science, theosophy, and anthroposophy. The last-named, especially, likes to give itself scientific airs and has, therefore, like Christian Science, penetrated into intellectual circles 86 Carl Jung, CW 11, Para 3

Since the way of the Protestant is not laid down for him in advance, he gives welcome, one might say, to practically any system which holds out the promise of successful development. He must now do for himself the very thing which had always been done by the Church as intermediary, and he does not know how to do it. If he is a man who has taken his religious needs seriously, he has also made untold efforts towards faith, because his doctrine sets exclusive store by faith Carl Jung, CW 11, Para 864

But faith is a charisma, a gift of grace, and not a method. The Protestant is so entirely without a method that many of them have seriously interested themselves in the rigorously Catholic exercises of Ignatius Loyola. Yet, do what they will, the thing that disturbs them most is naturally the contradiction between religious and scientific truth, the conflict between faith and knowledge, which reaches far beyond Protestantism into Catholicism itself. This conflict is due solely to the historical split in the European mind. Had it not been for the-psychologically speaking-unnatural compulsion to believe, and an equally unnatural belief in science, this conflict would have no reason to exist. One can easily imagine a state of mind in which one simply knows and in addition believes a thing which seems probable to one for such and such reasons. There are no grounds whatsoever for any conflict between these two things. Both are necessary, for knowledge alone, like faith alone, is always insufficient Carl Jung, CW 11, Para 864

Yoga fulfils this expectation. Quite apart from the charm of the new and the fascination of the half-understood, there is good reason for yoga to have many adherents. It offers

not only the much-sought way, but also a philosophy of unrivalled profundity. It holds out the possibility of controllable experience, and thus satisfies the scientist's need for "facts." Moreover, by reason of its breadth and depth, its venerable age, its teachings and methods which cover every sphere of life, it promises undreamt of possibilities which the missionaries of yoga seldom omit to emphasize Carl Jung, CW 11, Para 865

I will remain silent on the subject of what yoga means for India, because I cannot presume to judge something I do not know from personal experience. I can, however, say something about what it means for the West. Our lack of direction borders on psychic anarchy. Therefore, any religious or philosophical practice amounts to a psychological discipline; in other words, it is a method of psychic hygiene. The numerous purely physical procedures of yoga are a physiological hygiene as well, which is far superior to ordinary gymnastics or breathing exercises in that it is not merely mechanistic and scientific but, at the same time, philosophical Carl Jung, CW 11, Para 866

In its training of the parts of the body, it unites them with the whole of the mind and spirit, as is quite clear, for instance, in the pranayama exercises, where prana is both the breath and the universal dynamics of the cosmos. When the doing of the individual is at the same time a cosmic happening, the elation of the body (innervation) becomes one with the elation of the spirit (the universal idea), and from this there arises a living whole which no technique, however scientific, can hope to produce. Yoga practice is unthinkable, and would also be ineffectual, without the ideas on which it is based. It works the physical and the spiritual into one another in an extraordinarily complete way Carl Jung, CW 11, Para 866

In the East, where these ideas and practices originated, and where an uninterrupted tradition extending over some four thousand years has created the necessary spiritual conditions, yoga is, as I can readily believe, the perfect and appropriate method of fusing body and mind together so that they form a unity that can hardly be doubted. They thus create a psychological disposition which makes possible intuitions that transcend consciousness. The Indian mentality has no difficulty in operating intelligently with a concept like prana. The West, on the contrary, with its bad habit of wanting to believe on the one hand, and its highly developed scientific and philosophical critique on the other, finds itself in a real dilemma. Either it falls into the trap of faith and swallows concepts like prana, atman, chakra, samadhi, etc., without giving them a thought, or its scientific critique repudiates them one and all as "pure mysticism" Carl Jung, CW 11, Para 867

It is said of the yogi that he can remove mountains, though it would be difficult to furnish any real proof of this. The power of the yogi operates within limits acceptable to his environment. The European, on the other hand, can blow up mountains, and the World War has given us a bitter foretaste of what he is capable of when free rein is given to an intellect that has grown estranged from human nature. As a European, I cannot wish the European more "control" and more power over the nature within and around us. Indeed, I must confess to my shame that I owe my best insights (and there are some quite good ones among them) to the circumstance that I have always done just the opposite of what the rules of yoga prescribe Carl Jung, CW 11, Para 868

The rich metaphysic and symbolism of the East express the larger and more important part of the unconscious and in this way reduce its potential. When the yogi says "prana" he means very much more than mere breath. For him the word prana brings with it the full weight of its metaphysical components, and it is as if he really knew what prana meant in this

respect. He does not know it with his understanding, but with his heart, belly, and blood. The European only imitates and learns ideas by rote and is therefore incapable of expressing his subjective facts through Indian concepts. I am more than doubtful whether the European, if he were capable of the corresponding experiences, would choose to express them through intuitive ideas like prana 872.

Yoga was originally a natural process of introversion, with all manner of individual variations. Introversions of this sort lead to peculiar inner processes which change the personality. In the course of several thousand years these introversions became organized as methods, and along widely differing lines. Indian yoga itself recognizes numerous and extremely diverse forms. The reason for this lies in the original diversity of individual experience. This is not to say that any one of these methods is suited to the peculiar historical structure of the European. It is much more likely that the yoga natural to the European proceeds from historical patterns unknown to the East. As a matter of fact, the two cultural achievements which, in the West, have had to concern themselves most with the psyche in the practical sense, namely medicine and the Catholic cure of souls, have both produced methods comparable to yoga. I have already referred to the exercises of Ignatius Loyola. With respect to medicine, it is the modern psychotherapeutic methods which come closest to yoga. Freud's psychoanalysis leads the conscious mind of the patient back to the inner world of childhood reminiscences on one side, and on the other to wishes and drives which have been repressed from consciousness. The latter technique is a logical development of confession. It aims at an artificial introversion for the purpose of making conscious the unconscious components of the subject Carl Jung, CW 11, Para 873

This strange antithesis between East and West is expressed most clearly in religious practice. We speak of religious uplift and exaltation; for us God is the Lord of the universe, we have a religion of brotherly love, and in our heaven-aspiring churches there is a high altar. The Indian, on the other hand, speaks of dhyana, of self-immersion, and of sinking into meditation; God is within all things and especially within man, and one turns away from the outer world to the inner. In the old Indian temples the altar is sunk six to eight feet deep in the earth, and what we hide most shamefacedly is the holiest symbol to the Indian. We believe in doing, the Indian in impassive being. Our religious exercises consist of prayer, worship, and singing hymns. The Indian's most important exercise is yoga, an immersion in what we would call an unconscious state, but which he praises as the highest consciousness. Yoga is the most eloquent expression of the Indian mind and at the same time the instrument continually used to produce this peculiar attitude of mind Carl Jung, CW 11, Para 911

Samadhi is 'withdrawnness,' i.e., a condition in which all connections with the world are absorbed into the inner world. Samadhi is the eighth phase of the Eightfold Path Carl Jung, CW 11, Para 918

Although it appears exceedingly obscure to the European, this yoga text is not a mere literary museum piece. It lives in the psyche of every Indian, in this form and in many others, so that his life and thinking are permeated by it down to the smallest details. It was not Buddhism that nurtured and educated this psyche, but yoga. Buddhism itself was born of the spirit of yoga, which is older and more universal than the historical reformation wrought by the Buddha. Anyone who seeks to understand Indian art, philosophy, and ethics from the inside must of necessity befriend this spirit. Our habitual understanding from the outside breaks down here, because it is hopelessly inadequate to the nature of Indian spirituality Carl Jung, CW 11, Para 933

I wish particularly to warn against the oft-attempted imitation of Indian practices and sentiments. As a rule nothing comes of it except an artificial stultification of our Western intelligence. Of course, if anyone should succeed in giving up Europe from every point of view and could actually be nothing but a yogi and sit in the lotus position with all the practical and ethical consequences that this entails, evaporating on a gazelle-skin under a dusty banyan tree and ending his days in nameless non-being, then I should have to admit that such a person understood yoga in the Indian manner. But anyone who cannot do this should not behave as if he did. He cannot and should not give up his Western understanding; on the contrary, he should apply it honestly, without imitation or sentimentality, to understanding as much of yoga as is possible for the Western mind Carl Jung, CW 11, Para 933

The Eastern text skips over a psychic phenomenon that is a source of endless difficulties for the European. If a European tries to banish all thought of the outer world and to empty his mind of everything outside, he immediately becomes the prey of his own subjective fantasies, which have nothing whatever to do with the images mentioned in our text. Fantasies do not enjoy a good reputation; they are considered cheap and worthless and are therefore rejected as useless and meaningless. They are the kleshas, the disorderly and chaotic instinctual forces which yoga proposes to yoke Carl Jung, CW 11, Para 939

The Exercitia spiritualia pursue the same goal, in fact both methods seek to attain success by providing the meditator with an object to contemplate and showing him the image he has to concentrate on in order to shut out the allegedly worthless fantasies. Both methods, Eastern as well as Western, try to reach the goal by a direct path. I do not wish to question the possibilities of success when the meditation exercise is conducted in some kind of ecclesiastical setting. But, outside of some such setting, the thing does not as a rule work, or it may even lead to deplorable results. By throwing light on the unconscious one gets first of all into the chaotic sphere of the personal unconscious, which contains all that one would like to forget, and all that one does not wish to admit to oneself or to anybody else, and which one prefers to believe is not true anyhow Carl Jung, CW 11, Para 939

One therefore expects to come off best if one looks as little as possible into this dark corner. Naturally anyone who proceeds in that way will never get round this corner and will never obtain even a trace of what yoga promises. Only the man who goes through this darkness can hope to make any further progress. I am therefore in principle against the uncritical appropriation of yoga practices by Europeans, because I know only too well that they hope to avoid their own dark corners. Such a beginning is entirely meaningless and worthless Carl Jung, CW 11, Para 939

This is also the deeper reason why we in the West have never developed anything comparable to yoga, aside from the very limited application of the Jesuit Exercitia. We have an abysmal fear of that lurking horror, our personal unconscious. Hence the European much prefers to tell others “how to do it.” That the improvement of the whole begins with the individual, even with myself, never enters our heads. Besides, many people think it morbid to glance into their own interiors it makes you melancholic, a theologian once assured me Carl Jung, CW 11, Para 940

But a particular psychological condition which predominates for a certain length of time does not exclude the existence of other psychological conditions at other times, and these are equally capable of religious expression. Carl Jung, CW 11, Para 60

The later views seem to cluster round the following central idea: The anima mundi, the demiurge or divine spirit that incubated the chaotic waters of the beginning, remained in matter in a potential state, and the initial chaotic condition persisted with it. Thus the philosophers or the “sons of wisdom” as they called themselves, took their prima materia to be a part of the original chaos pregnant with spirit. By “spirit” they understood a semimaterial pneuma, a sort of “subtle body,” which they also called “volatile” and identified chemically with oxides and other dissoluble compounds. Carl Jung, CW 11, Para 160

In this sense, therefore, we can speak of the Mass as the RITE OF THE INDIVIDUATION PROCESS (in italics in actual text) Carl Jung, CW 11, Paragraph 414

The definition of the cross or center as, the “boundary” of all things, is exceedingly original, for it suggests that the limits of the universe are not to be found in a nonexistent periphery but in its center. There alone lies the possibility of transcending this world. All instability culminates in that which is unchanging and quiescent, and in the Self all disharmonies are resolved in the “harmony of wisdom” Carl Jung, CW 11, Para 434

In Milton’s time these ideas were very much in the air, forming part of the general stock of culture, and there were not a few Masters who realized that their philosophical stone was none other than the “total man.” The Satan-Prometheus parallel shows clearly enough that Milton’s devil stands for the essence of human individuation and thus comes within the scope of psychology. This close proximity, as we know, proved a danger not only to the metaphysical status of Satan, but to that of other numinous figures as well. Carl Jung, CW 11 Para 471

With the coming of the Enlightenment, metaphysics as a whole began to decline, and the rift which then opened out between knowledge and faith could no longer be repaired. The more resplendent figures in the metaphysical pantheon had their autonomy restored to them practically untarnished, which assuredly cannot be said of the devil. In Goethe’s Faust, he has dwindled to a very personal familiaris, the mere “shadow” of the struggling hero. After rational-liberal Protestantism had, as it were, deposed him by order of the day, he retired to the shadier side of the Christian Olympus as the “odd man out,” and thus, in a manner not unwelcome to the Church, the old principle reasserted itself: Omne bonum a Deo, omne malum ab homine. The devil remains as an appendix to psychology. Carl Jung, CW 11 Para 471

It was, indeed, a great problem to the Middle Ages, this problem of the Trinity and the exclusion, or the very qualified recognition, of the feminine element, of the earth, the body, and matter in general, which were yet, in the form of Mary’s womb, the sacred abode of the Deity and the indispensable instrument for the divine work of redemption. Carl Jung, CW 11, Page 72.

Even among professing Christians there are very few who think seriously about the Trinity as a matter of dogma and would consider it a possible subject for reflection—not to mention the educated public. Carl Jung, CW 11, Page 112.

Gods are personifications of unconscious contents, for they reveal themselves to us through the unconscious activity of the psyche. Carl Jung, CW 11, Page 163..

There is no conflict between religion and science in the East, because no science is there based upon the passion for facts, and no religion upon mere faith; there is religious cognition

and cognitive religion. Carl Jung, CW 11, Para 768.

Psychic heredity does exist —that is to say, there is inheritance of psychic characteristics such as predisposition to disease, traits of character, special gifts, and so forth. Carl Jung, CW 11, Para 845

We believe in doing, the Indian is impassive being. Our religious exercises consist of prayer, worship, and singing hymns. Carl Jung, CW 11, Para 911

The Indian's most important exercise is yoga, an immersion in what we would call an unconscious state, but which he praises as the highest consciousness. Carl Jung, CW 11, Para 911.

Yoga is the most eloquent expression of the Indian mind and at the same time the instrument continually used to produce this peculiar attitude of mind. Carl Jung, CW 11, Para 911.

The goal of Eastern religious practice is the same as that of Western mysticism: the shifting of the center of gravity from the ego to the self, from man to God. This means that the ego disappears in the self, and man in God. Carl Jung, CW 11, Para 958

But, fortunately, the man [Wolfgang Pauli] had religio, that is, he "carefully took account of" his experiences and he had enough pistis, or loyalty to his experience, to enable him to hang on to it and continue it. Carl Jung, CW 11, Para 74.

I take his cancer to be a spontaneous growth, which originated in the part of the psyche that is not identical with consciousness. It appears as an autonomous function intruding upon consciousness. Carl Jung, CW 11, Para 21.

If, therefore, in what follows I concern myself with these "metaphysical" objects, I am quite conscious that I am moving in a world of images and that none of my reflections touches the essence of the Unknowable. Carl Jung, CW 11, Para 556

The psyche creates reality every day. The only expression I can use for this activity is fantasy. Fantasy is just as much feeling as thinking, as much intuition as sensation. There is no psychic function that, through fantasy, is not inextricably bound up with the other psychic functions. Sometimes it appears in primordial form, sometimes it is the ultimate and boldest product of all our faculties combined. Empirical psychology loved, until recently, to explain the "unconscious" as mere absence of consciousness—the term itself indicates as much—just as shadow is an absence of light. Today accurate observation of unconscious processes has recognized, with all other ages before us, that the unconscious possesses a creative autonomy such as a mere shadow could never be endowed with. Carl Jung, CW 11, Para 141

It is not denied in medieval ecclesiastical writings that a divine influx may occur in dreams, but this view is not exactly encouraged, and the Church reserves the right to decide whether a revelation is to be considered authentic or not. In spite of the Church's recognition that certain dreams are sent by God, she is disinclined, and even averse, to any serious concern with dreams, while admitting that some might conceivably contain an immediate revelation. Thus the change of mental attitude that has taken place in recent centuries is, from this point of view at least, not wholly unwelcome to the Church, because it effectively discouraged the

earlier introspective attitude which favoured a serious consideration of dreams and inner experiences. Carl Jung, CW 11, Para 32

In our diagram, Christ and the devil appear as equal and opposite, thus conforming to the idea of the “adversary.” This opposition means conflict to the last, and it is the task of humanity to endure this conflict until the time or turning point is reached where good and evil begin to relativize themselves, to doubt themselves, and the cry is raised for a morality “beyond good and evil.” In the age of Christianity and in the domain of trinitarian thinking such an idea is simply out of the question, because the conflict is too violent for evil to be assigned any other logical relation to the Trinity than that of an absolute opposite: In an emotional opposition, i.e., in a conflict situation, thesis and antithesis cannot be viewed together at the same time. This only becomes possible with cooler assessment of the relative value of good and the relative non-value of evil. Then it can no longer be doubted, either, that a common life unites not only the Father and the “light” son, but the Father and his dark emanation. The unspeakable conflict posited by duality resolves itself in a fourth principle, which restores the unity of the first in its full development. The rhythm is built up in three steps, but the resultant symbol is a quaternity Carl Jung, CW 11, Para 258.

We are now reaping the fruit of nineteenth-century education. Throughout that period the Church preached to young people the merit of blind faith, while the universities inculcated an intellectual rationalism, with the result that today we plead in vain whether for faith or reason. Tired of this warfare of opinions, the modern man wishes to find out for himself how things are. And though this desire opens the door to the most dangerous possibilities, we cannot help seeing it as a courageous enterprise and giving it some measure of sympathy. It is no reckless adventure, but an effort inspired by deep spiritual distress to bring meaning once more into life on the basis of fresh and unprejudiced experience. Carl Jung, CW 11, Para 529

Instead of the lost Olympian gods, there was disclosed the inner wealth of the soul which lies in every man’s heart. Carl Jung, CW 11, Para 375

It is true that our religion speaks of an immortal soul; but it has very few kind words to say for the human psyche as such, which would go straight to eternal damnation were it not for a special act of Divine Grace. Carl Jung, CW 11, Para 28

And Gerhard Dorn cries out, "Transform yourselves into living philosophical stones!" There can hardly be any doubt that not a few of those seekers had the dawning knowledge that the secret nature of the stone was man’s own self. This "self" was evidently never thought of as an entity identical with the ego, and for this reason it was described as a "hidden nature" dwelling in inanimate matter, as a spirit, daemon, or fiery spark. By means of the philosophical opus, this entity was freed from darkness and imprisonment, and finally it enjoyed a resurrection. It is clear that these ideas can have nothing to do with the empirical ego but are concerned with a "divine nature" quite distinct from it, and hence, psychologically speaking, with a consciousness-transcending content issuing from the realm of the unconscious. Carl Jung, CW 11, para 154.

The shadow and the opposing will are the necessary conditions for all actualization. An object that has no will of its own, capable, if need be, of opposing its creator, and with no qualities other than its creator’s, such an object has no independent existence and is incapable of ethical decision. At best it is just a piece of clockwork which the Creator has to wind up to

make it function.

The center, as a rule, is emphasized. But what we find there is a symbol with a very different meaning. It is a star, a sun, a flower, a cross with equal arms, a precious stone, a bowl filled with water or wine, a serpent coiled up, or a human being, but never a god Carl Jung, CW 11. Para 136

In his human manifestation he is the hero and God-man, born without sin, more complete and more perfect than the natural man, who is to him what a child is to an adult, or an animal (sheep) to a human being. Carl Jung, CW 11, Para 229

He [A Patient] simply could not "quench the fire" and finally he had to admit the incomprehensibly numinous character of his experience. He had to confess that the unquenchable fire was "holy." This was the sine qua non of his cure. Carl Jung, CW 11, Para 74

One can explain that matter was originally pure, or at least capable of purity, but this does not do away with the fact that matter represents the concreteness of God's thoughts and is, therefore, the very thing that makes individuation possible, with all its consequences. Carl Jung, Psychology and Religion, Paragraph 252

Christianity had at one time to fight for its life against Gnosticism, which corresponded to another psychological condition. Gnosticism was stamped out completely and its remnants are so badly mangled that special study is needed to get any insight at all into its inner meaning. But if the historical roots of our symbols extend beyond the Middle Ages they are certainly to be found in Gnosticism. It would not seem to me illogical if a psychological condition, previously suppressed, should reassert itself when the main ideas of the suppressive condition begin to lose their influence. In spite of the suppression of the Gnostic heresy, it continued to flourish throughout the Middle Ages under the disguise of alchemy. Carl Jung, CW 11, Para 160

It is a well-known fact that alchemy consisted of two parts which complement one another on the one hand chemical research proper and on the other the "theoria" or "philosophia." As is clear from the writings of Pseudo-Democritus in the first century the two aspects already belonged together at the beginning of our era. The same holds true of the Leiden papyri and the writings of Zosimos in the third century. The religious or philosophical views of ancient alchemy were clearly Gnostic. Carl Jung, CW 11, Para 160

They called this spirit Mercurius, which was chemically quicksilver though "Mercurius noster" was no ordinary Hg! and philosophically Hermes, the god of revelation, who, as Hermes Trismegistus, was the arch-authority on alchemy. Their aim was to extract the original divine spirit out of the chaos, and this extract was called the quinta essentia, aqua permanens, or tincture. Carl Jung, CW 11, Para 160

A famous alchemist, Johannes de Rupescissa (d. 1375), calls the quintessence "le ciel humain," the human sky or heaven. For him it was a blue liquid and incorruptible like the sky. He says that the quintessence is of the colour of the sky "and our sun has adorned it, as the sun adorns the sky." The sun is an allegory of gold. He says: "This sun is true gold." He continues: "These two things joined together influence in us the condition of the Heaven of heavens, and of the heavenly Sun." His idea is, obviously, that the quintessence, the blue sky with the golden sun in it, evokes corresponding images of the heaven and the heavenly sun in ourselves. It is a picture of a blue and golden microcosm, and I take it to be a direct parallel

to Guillaume's celestial vision. Carl Jung, CW 11, Para 160

The miraculous liquid, the divine water, called sky or heaven, probably refers to the supra-celestial waters of Genesis 1:7. In its functional aspect it was thought to be a sort of baptismal water which, like the holy water of the Church, possesses a creative and transformative quality. The Catholic Church still performs the rite of the benedictio fontis on Holy Saturday before Easter. The rite consists in a repetition of the descensus spiritus sancti in aquam. The ordinary water thereby acquires the divine quality of transforming and giving spiritual rebirth to man. This is exactly the alchemical idea of the divine water, and there would be no difficulty whatever in deriving the aqua permanens of alchemy from the rite of the benedictio fontis were it not that the former is of pagan origin and certainly the older of the two. Carl Jung, CW 11, Para 161

We find the miraculous water mentioned in the first treatises of Greek alchemy, which belong to the first century. Moreover the descent of the spirit into Physis is a Gnostic legend that greatly influenced Mani. And it was possibly through Manichean influences that it became one of the main ideas of Latin alchemy. Carl Jung, CW 11, Para 161

The aim of the philosophers was to transform imperfect matter chemically into gold, the panacea, or the elixir vitae, but philosophically or mystically into the divine hermaphrodite, the second Adam, the glorified, incorruptible body of resurrection, or the lumen luminum, the illumination of the human mind, or sapientia. As I have shown, together with Richard Wilhelm, Chinese alchemy produced the same idea, that the goal of the opus magnum, the creation of the "diamond body." Carl Jung, CW 11, Para 161

How can anyone see straight when he does not even see himself and the darkness he unconsciously carries with him into all his dealings? Carl Jung, CW 11, Para 140

Study yoga you will learn an infinite amount from it but do not try to apply it, for we Europeans are not so constituted that we apply these methods correctly, just like that. An Indian guru can explain everything and you can imitate everything. But do you know who is applying the yoga? In other words, do you know who you are and how you are constituted? Carl Jung, Psychology and Religion, Page 234

It was only quite late that we realized (or rather, are beginning to realize) that God is Reality itself and therefore last but not least man. Carl Jung, CW 11, Para 631

These intimations and prefigurations of the Incarnation must strike one as either completely incomprehensible or superfluous, since all creation ex nihilo is God's and consists of nothing but God, with the result that man, like the rest of creation, is simply God become concrete. Carl Jung, CW 11, Para 631

In "Answer to Job" Jung makes a crucial observation about the value of human weakness: But what does man possess that God does not have? Because of his littleness, puniness, and defencelessness against the Almighty, he possesses a somewhat keener consciousness based on self-reflection: he must, in order to survive, always be mindful of his impotence. Carl Jung, CW 11, Para 579)

Apart from the more subtle synchronicity, we can also observe in the instincts, for instance in the migratory instinct, a distinct synchronism. And since the parapsychological phenomena associated with the unconscious psyche show a peculiar tendency to relativize

the categories of time and space, the collective unconscious must have a spaceless and timeless quality. Consequently, there is some probability that an archetypal situation will be accompanied by synchronistic phenomena, as in the case of death, in whose vicinity such phenomena are relatively frequent. Carl Jung, CW 11, Para 94

He [the second Adam] is the spiritual man, Adam Kadmon, often identified with Christ. Whereas the original Adam was mortal, because he was made of the corruptible four elements, the second Adam is immortal, because he consists of one pure and incorruptible essence. Thus Pseudo-Thomas says: "The Second Adam from pure elements entered into eternity. Therefore, what is composed of simple and pure essence remaineth forever" The same treatise quotes a Latinized Arabic author called Senior, a famous authority throughout the Middle Ages, as saying: "There is One thing that never dieth, for it continueth by perpetual increase," and interprets this One thing as the second Adam. Carl Jung, CW 11 Para 94

He [the Holy Ghost] will be for the disciples what Christ was for them. He will invest them with the power to do works greater, perhaps, than those of the Son (John 14:12). The Holy Ghost is a figure who deputizes for Christ and who corresponds to what Christ received from the Father. From the Father comes the Son, and common to both is the living activity of the Holy Ghost, who, according to Christian doctrine, is breathed forth ("spirated") by both. Carl Jung, CW 11 Para 204

As he is the third term common to Father and Son, he puts an end to the duality, to the "doubt" in the Son. He is, in fact, the third element that rounds out the Three and restores the One. The point is that the unfolding of the One reaches its climax in the Holy Ghost after polarizing itself as Father and Son. Its descent into a human body is sufficient in itself to make it become another, to set it in opposition to itself. Thenceforward there are two: the "One" and the "Other," which results in a certain tension. This tension works itself out in the suffering and fate of the Son and, finally, in Christ's admission of abandonment by God (Matthew 27:46). Carl Jung, CW 11 Para 204

Although the Holy Ghost is the progenitor of the Son (Matthew 1:18), he is also, as the Paraclete, a legacy from him. He continues the work of redemption in mankind at large, by descending upon those who merit divine election. Consequently, the Paraclete is, at least by implication, the crowning figure in the work of redemption on the one hand and in God's revelation of himself on the other. It could, in fact, be said that the Holy Ghost represents the final, complete stage in the evolution of God and the divine drama. For the Trinity is undoubtedly a higher form of God-concept than mere unity, since it corresponds to a level of reflection on which man has become more conscious Carl Jung, CW 11 Para 205

Third: the Trinity lays claim not only to represent a personification of psychic processes in three roles, but to be the one God in three Persons, who all share the same divine nature. In God there is no advance from the potential to the actual, from the possible to the real, because God is pure reality, the "actus purus" itself. The three Persons differ from one another by reason of the different manner of their origin, or their procession (the Son begotten by the Father and the Holy Ghost proceeding from both procedit a patre filioque). Carl Jung, CW 11 Para 288-289

The homoousia, whose general recognition was the cause of so many controversies, is absolutely necessary from a psychological standpoint, because, regarded as a psychological symbol, the Trinity represents the progressive transformation of one and the same substance, namely the psyche as a whole. The homoousia together with the filioque assert that Christ

and the Holy Ghost are both of the same substance as the Father. But since, psychologically, Christ must be understood as a symbol of the Self, and the descent of the Holy Ghost as the Self's actualization in man, it follows that the Self must represent something that is of the substance of the Father too. This formulation is in agreement with the psychological statement that the symbols of the Self cannot be distinguished empirically from a God-image. Psychology, certainly, can do no more than establish the fact that they are indistinguishable. This makes it all the more remarkable that the "metaphysical" statement should go so much further than the psychological one. Indistinguishability is a negative constatation merely; it does not rule out the possibility that a distinction may exist. It may be that the distinction is simply not perceived. Carl Jung, CW 11 Para 289

The dogmatic assertion, on the other hand, speaks of the Holy Ghost making us "children of God," and this filial relationship is indistinguishable in meaning from the(sonship) or filiatio of Christ. We can see from this how important it was that the homoousia should triumph over the homoiousia (similarity of substance); for, through the descent of the Holy Ghost, the Self of man enters into a relationship of unity with the substance of God. As ecclesiastical history shows, this conclusion is of immense danger to the Church it was, indeed, the main reason why the Church did not insist on any further elaboration of the doctrine of the Holy Ghost. Its continued development would lead, on a negative estimate, to explosive schisms, and on a positive estimate straight into psychology. Carl Jung, CW 11 Para 289

Moreover, the gifts of the Holy Ghost are somewhat mixed: not all of them are unreservedly welcome, as St. Paul has already pointed out. Also, St. Thomas Aquinas observes that revelation is a gift of the spirit that does not stand in any clearly definable relationship to moral endowment. The Church must reserve the right to decide what is a working of the Holy Ghost and what is not, thereby taking an exceedingly important and possibly disagreeable decision right out of the layman's hands. That the spirit, like the wind, "bloweth where it listeth" is something that alarmed even the Reformers. The third as well as the first Person of the Trinity can wear the aspect of a deus absconditus, and its action, like that of fire, may be no less destructive than beneficial when regarded from a purely human standpoint. Carl Jung, CW 11 Para 289

In the sacrifice of the Mass two distinct ideas are blended together: the ideas of deipnon and thysia. Thysia comes from the verb' "to sacrifice" or

```
to slaughter'; but it also has the meaning of
```

blazing' or 'flaring up.' This refers to the leaping sacrificial fire by which the gift offered to the gods was consumed. Originally the food-offering was intended for the nourishment of the gods; the smoke of the burnt sacrifice carried the food up to their heavenly abode. At a later stage the smoke was conceived as a spiritualized form of food-offering; indeed, all through the Christian era up to the Middle Ages, spirit (or pneuma) continued to be thought of as a fine, vaporous substance Carl Jung, CW 11 Para 302

Deipnon means

```
meal.' In the first place it is a meal shared by those taking part in the
sacrifice, at which the god was believed to be present. It is also a ``sacred''
meal at which ``consecrated'' food is eaten, and hence a sacrifice (from
sacrificare,
```

to make sacred,' 'to consecrate') Carl Jung, CW 11 Para 303

The dual meaning of deipnon and thysia is implicitly contained in the words of the sacrament: "the body which (was given) for you." This may mean either "which was given to you to eat" or, indirectly, "which was given for you to God." The idea of a meal immediately invests the word 'body' with the meaning of 'flesh' (as an edible substance) Carl Jung, CW 11 Para 304

The idea of an eternal priesthood and of a sacrifice offered to God "continually" brings us to the true mysterium fidei, the transformation of the substances, which is the third aspect of the Mass. The ideas of deipnon and thysia do not in themselves imply or contain a mystery, although, in the burnt offering which is reduced to smoke and ashes by the fire, there is a primitive allusion to a transformation of substance in the sense of its spiritualization. But this aspect is of no practical importance in the Mass, where it only appears in subsidiary form in the censing, as an incense-offering. Carl Jung, CW 11 Para 307

The mysterium, on the other hand, manifests itself clearly enough in the eternal priest "after the order of Melchisedec" and in the sacrifice which he offers to God "continually." The manifestation of an order outside time involves the idea of a miracle, which takes place "vere, realiter, substantialiter" at the moment of transubstantiation, for the substances offered are no different from natural objects and must in fact be definite commodities whose nature is known to everybody, namely pure wheaten bread and wine. Carl Jung, CW 11 Para 307

Furthermore, the officiating priest is an ordinary human being who, although he bears the indelible mark of the priesthood upon him and is thus empowered to offer sacrifice, is nevertheless not yet in a position to be the instrument of the divine self-sacrifice enacted in the Mass. Nor is the congregation standing behind him yet purged from sin, consecrated, and itself transformed into a sacrificial gift. Carl Jung, CW 11 Para 307

The ritual of the Mass takes this situation and transforms it step by step until the climax is reached the Consecration, when Christ himself, as sacrificer and sacrificed, speaks the decisive words through the mouth of the priest. At that moment Christ is present in time and space. Yet his presence is not a reappearance, and therefore the inner meaning of the consecration is not a repetition of an event which occurred once in history, but the revelation of something existing in eternity, a rending of the veil of temporal and spatial limitations which separates the human spirit from the sight of the eternal. Carl Jung, CW 11 Para 307

This event is necessarily a mystery, because it is beyond the power of man to conceive or describe. In other words, the rite is necessarily and in every one of its parts a symbol. Now a symbol is not an arbitrary or intentional sign standing for a known and conceivable fact, but an admittedly anthropomorphic hence limited and only partly valid expression for something supra-human and only partly conceivable. It may be the best expression possible, yet it ranks below the level of the mystery it seeks to describe. The Mass is a symbol in this sense. Here I would like to quote the words of Father Kramp: "It is generally admitted that the sacrifice is a symbolic act, by which I mean that the offering of a material gift to God has no purpose in itself, but merely serves as a means to express an idea. And the choice of this means of expression brings a wide range of anthropomorphism into play: man confronts God as he confronts his own kind, almost as if God were a human being. We offer a gift to God as we offer it to a good friend or to an earthly ruler" Carl Jung, CW 11 Para 307

It [the cross] is, in fact, one of the prime symbols of order, as I have shown elsewhere. In the domain of psychological processes it functions as an organizing center, and in states

of psychic disorder caused by an invasion of unconscious contents it appears as a mandala divided into four. No doubt this was a frequent phenomenon in early Christian times, and not only in Gnostic circles. Gnostic introspection could hardly fail, therefore, to perceive the numinosity of this archetype and be duly impressed by it. For the Gnostics the cross had exactly the same function that the atman or Self has always had for the East. This realization is one of the central experiences of Gnosticism. Carl Jung, CW 11, Para 433

As the center symbolizes the idea of totality and finality, it is quite appropriate that the text should suddenly start speaking of the dichotomy of the universe, polarized into right and left, brightness and darkness, heaven and the "nether root," the omnium genetrix. This is a clear reminder that everything is contained in the center and that, as a result, the Lord (i.e., the cross) unites and composes all things and is therefore "nirdvandva," free from the opposites, in conformity with Eastern ideas and also with the psychology of this archetypal symbol. The Gnostic Christ-figure and the cross are counterparts of the typical mandalas spontaneously produced by the unconscious. They are natural symbols and they differ fundamentally from the dogmatic figure of Christ, in whom all trace of darkness is expressly lacking. Carl Jung, CW 11, Para 435

He achieved notoriety as the personification of the adversary or principle of evil, though by no means for the first time, as we meet him centuries earlier in the ancient Egyptian Set and the Persian Ahriman. Persian influences have been conjectured as mainly responsible for the Christian devil. But the real reason for the differentiation of this figure lies in the conception of God as the summum bonum, which stands in sharp contrast to the Old Testament view and which, for reasons of psychic balance, inevitably requires the existence of an infimum malum. No logical reasons are needed for this, only the natural and unconscious striving for balance and symmetry. Carl Jung CW 11 Para 470

In this way the archetype of the imperfect demiurge, who had enjoyed official recognition in Gnosticism, reappeared in altered guise. (The corresponding archetype is probably to be found in the cosmogonic jester of primitive peoples.) With the extermination of the heretics that dragged on into the fourteenth and fifteenth centuries, an uneasy calm ensued, but the Reformation thrust the figure of Satan once more into the foreground. I would only mention Jakob Böhme, who sketched a picture of evil which leaves the privatio boni pale by comparison. The same can be said of Milton. He inhabits the same mental climate. As for Böhme, although he was not a direct descendant of alchemical philosophy, whose importance is still grossly underrated today, he certainly took over a number of its leading ideas, among them the specific recognition of Satan, who was exalted to a cosmic figure of first rank in Milton, even emancipating himself from his subordinate role as the left hand of God (the role assigned to him by Clement). Milton goes even further than Böhme and apostrophizes the devil as the true principium individuationis, a concept which had been anticipated by the alchemists some time before. Carl Jung, CW 11 Para 470

The permanent water (the ὕδωρ θεῖον of the Greeks) also signifies "spiritualis sanguis," and is identified with the blood and water that flowed from Christ's side. Heinrich Khunrath says of this water: "So there will open for thee an healing flood which issues from the heart of the son of the great world." Carl Jung, CW 11, Para 355

It was, indeed, a great problem to the Middle Ages, this problem of the Trinity and the exclusion, or the very qualified recognition, of the feminine element, of the earth, the body, and matter in general, which were yet, in the form of Mary's womb, the sacred abode of the

Deity and the indispensable instrument for the divine work of redemption. Carl Jung, CW 11, Page 72.

Even among professing Christians there are very few who think seriously about the Trinity as a matter of dogma and would consider it a possible subject for reflection—not to mention the educated public. Carl Jung, CW 11, Page 112.

Arrangement in triads is an archetype in the history of religion, which in all probability formed the basis of the Christian Trinity. Carl Jung, CW 11, Page 113.

The medieval representations of the circle are based on the idea of the microcosm, a concept that was also applied to the stone. Carl Jung, CW 11, Page 95.

The stone was a "little world" like man himself, a sort of inner image of the cosmos, reaching not into immeasurable distances but into an equally immeasurable depth-dimension, i.e., from the small to the unimaginably smallest. Carl Jung, CW 11, Page 95.

Just as the alchemists knew that the production of their stone was a miracle that could only happen "Deo concedente," so the modern psychologist is aware that he can produce no more than a description, couched in scientific symbols, of a psychic process whose real nature transcends consciousness just as much as does the mystery of life or of matter. Carl Jung, CW 11, Page 296.

The statement that "the various names given to it [the Mind] are innumerable" proves that the Mind must be something as vague and indefinite as the philosophers' stone. Carl Jung, CW 11, Page 302.

Gods are personifications of unconscious contents, for they reveal themselves to us through the unconscious activity of the psyche. Carl Jung, CW 11, Page 163.

That the imitation of Christ creates a corresponding shadow in the unconscious hardly needs demonstrating. The fact that John had visions at all is evidence of an unusual tension between conscious and unconscious. Carl Jung, CW 11, Par 717.

Looked at theologically, my concept of the anima, for instance, is pure Gnosticism; hence I am often classed among the Gnostics. Carl Jung, CW 11, Para 460.

It is certainly remarkable that my critics, with few exceptions, ignore the fact that, as a doctor and scientist, I proceed from facts which everyone is at liberty to verify. Instead, they criticize me as if I were a philosopher, or a Gnostic with pretensions to supernatural knowledge. Carl Jung, CW 11, Para 461.

What, then, is yoga? The word means literally "yoking," i.e., the disciplining of the instinctual forces of the psyche, which in Sanskrit are called kleshas. The yoking aims at controlling these forces that fetter human beings to the world. The kleshas would correspond, in the language of St. Augustine, to superhia and concupiscentia. Carl Jung, CW 11, Para 912.

I have just said that we have developed nothing that could be compared with yoga. This is not entirely correct. True to our European bias, we have evolved a medical psychology dealing specifically with the kleshas. We call it the "psychology of the unconscious." Carl Jung, CW

11, Para 941.

It is no easy matter to live a life that is modelled on Christ's, but it is unspeakably harder to live one's own life as truly as Christ lived his. Carl Jung, CW 11, Par 522.

Only through the most extreme and menacing conflict does the Christian experience deliverance into divinity, always provided he doesn't break, but accepts the burden of being marked by God. In this way alone can the imago Dei realize itself in him and God become man. Carl Jung, CW 11, Page 417.

The ego stands to the Self as the moved to the mover, or as object to subject, because the determining factors which radiate out from the Self surround the ego on all sides and are therefore supraordinate to it. The Self, like the unconscious, is an a priori existent out of which the ego evolves. Carl Jung, CW 11, Para 391.

Just as a man still is what he always was, so he already is what he will become. Carl Jung, CW 11, Para 390.

What is meant [by the child archetype] is the boy who is born from the maturity of the adult man, and not the unconscious child we would like to remain. Carl Jung, CW 11, Para 742.

Whatever man's wholeness, or the self, may mean per se, empirically it is an image of the goal of life spontaneously produced by the unconscious, irrespective of the wishes and fears of the conscious mind. Carl Jung, CW 11, Para 745.

If we go further and consider the fact that man is also what neither he himself nor other people know of him—an unknown something which can yet be proved to exist —the problem of identity becomes more difficult still. Carl Jung, CW 11, Para 140

Indeed, it is quite impossible to define the extent and the ultimate character of psychic existence. Carl Jung, CW 11, Para 140

Freud has made a courageous attempt to elucidate the intricacies of dream psychology with the help of views which he gathered in the field of psychopathology. Carl Jung, CW 11, Para 41

My method, like Freud's, is built up on the practice of confession. Like him, I pay close attention to dreams, but when it comes to the unconscious our views part company. Carl Jung, CW 11, Para 875

For me the unconscious is a collective psychic disposition, creative in character. Carl Jung, CW 11, Para 875

Freud's procedure is, in the main, analytical and reductive. To this I add a synthesis which emphasizes the purposiveness of unconscious tendencies with respect to personality development. Carl Jung, CW 11, Para 875

When Nietzsche said, "God is dead," he uttered a truth which is valid for the greater part of Europe. People were influenced by it not because he said so, but because it stated a widespread psychological fact. Carl Jung, CW 11, Para 145.

All opposites are of God; therefore man must bend to this burden; and in so doing he finds that God in his “oppositeness” has taken possession of him, incarnated himself in him. Carl Jung, CW 11, Para 664.

It is quite right, therefore, that fear of God should be considered the beginning of all wisdom. Carl Jung, CW 11, Para 664.

Both are justified, the fear of God as well as the love of God. Carl Jung, CW 11, Para 664.

The East bases itself upon psychic reality, that is, upon the psyche as the main and unique condition of existence. Carl Jung, CW 11, Para 770.

The West is always seeking uplift, but the East seeks a sinking or deepening. Carl Jung, CW 11, Para 396.

The fact that the East can dispose so easily of the ego seems to point to a mind that is not to be identified with our “mind.” Carl Jung, CW 11, Para 775.

In the East, mind is a cosmic factor, the very essence of existence; while in the West we have just begun to understand that it is the essential condition of cognition, and hence of the cognitive existence of the world. Carl Jung, CW 11, Para 768.

There is no conflict between religion and science in the East, because no science is there based upon the passion for facts, and no religion upon mere faith; there is religious cognition and cognitive religion. Carl Jung, CW 11, Para 768.

With us, man is incommensurably small, and the grace of God is everything; but in the East, man is God and he redeems himself. Carl Jung, CW 11, Para 768.

While the Western mind carefully sifts, weighs, selects, classifies, isolates, the Chinese picture of the moment encompasses everything down to the minutest nonsensical detail, because all of the ingredients make up the observed moment. Carl Jung, CW 11, Para 969

The philosophy of the East, although so vastly different from ours, could be an inestimable treasure for us too; but, in order to process it, we must first earn it. Carl Jung, CW 11, Para 96

We believe in doing, the Indian in impassive being. Our religious exercises consist of prayer, worship, and singing hymns. Carl Jung, CW 11, Para 911.

Holiness is also revelatory: it is the illuminative power emanating from an archetypal figure. Carl Jung, CW 11, Para 225.

I am not, however, addressing myself to the happy possessors of faith, but to those many people for whom the light has gone out, the mystery has faded, and God is dead. Carl Jung, CW 11, Para 148.

It is also a fact that under the influence of a so-called scientific enlightenment great masses of educated people have either left the Church or become profoundly indifferent to it.

Carl Jung, CW 11, Para 34.

Myth is not fiction: it consists of facts that are continually repeated and can be observed over and over again. Carl Jung, CW 11, Para 648.

It [myth] is something that happens to man, and men have mythical fates just as much as the Greek heroes do. Carl Jung, CW 11, Para 648.

What is ordinarily called "religion" is a substitute to such an amazing degree that I ask myself seriously whether this kind of "religion," which I prefer to call a creed, may not after all have an important function in human society. Carl Jung, CW 11, Para 648

In my profession I have encountered many people who have had immediate experience and who would not and could not submit to the authority of ecclesiastical decision. Carl Jung, CW 11, Para 76

Although the Catholic Church has often been accused of particular rigidity, she nevertheless admits that dogma is a living thing and that its formulation is therefore capable of change and development. Carl Jung, CW 11, Para 10

That is the eternal, as distinct from the temporal, gospel: one can love God but must fear him. Carl Jung, CW 11, § 733.

The paradoxical nature of God has a like effect on man: it tears him asunder into opposites and delivers him over to a seemingly insoluble conflict. Carl Jung, CW 11, Para 738

What does man possess that God does not have? Because of his littleness, puniness, and defenselessness against the Almighty, he possesses, as we have already suggested, a somewhat keener consciousness based on self-reflection; he must, in order to survive, always be mindful of his impotence. Carl Jung, CW 11, Para 579

God has no need of this circumspection, for nowhere does he come up against an insuperable obstacle that would force him to hesitate and hence make him reflect on himself. Carl Jung, CW 11, Para 579

Yahweh's decision to become man is a symbol of the development that had to supervene when man becomes conscious of the sort of God-image he is confronted with. Carl Jung, CW 11, Para 740

In his striving for unity, therefore, man may always count on the help of a metaphysical advocate, as Job clearly recognized. Carl Jung, CW 11, Para 740

The unconscious wants to flow into consciousness in order to reach the light, but at the same time it continually thwarts itself, because it would rather remain unconscious. That is to say, God wants to become man, but not quite. Carl Jung, CW 11, Para 740

The conflict in his [God's] nature is so great that the incarnation can only be bought by an expiatory self-sacrifice offered up to the wrath of God's dark side. Carl Jung, CW 11, Para 740

But God, who also does not hear our prayers, wants to become man, and for that purpose he has chosen, through the Holy Ghost, the creaturely man filled with darkness—the natural man who is tainted with original sin and who learnt the divine arts and sciences from the fallen angels. Carl Jung, CW 11, Para 746.

He [God] fills us with evil as well as with good, otherwise he would not need to be feared; and because he wants to become man, the uniting of his antinomy must take place in man. Carl Jung, CW 11, Para 747.

One should make clear to oneself what it means when God becomes man. It means more or less what Creation meant in the beginning, namely an objectivation of God. Carl Jung, CW 11, Para 747.

At the time of the Creation he [God] revealed himself in Nature; now he wants to be more specific and become man. Carl Jung, CW 11, Para 631

But in omniscience there had existed from all eternity a knowledge of the human nature of God or of the divine nature of man. That is why, long before Genesis was written, we find corresponding testimonies in the ancient Egyptian records. Carl Jung, CW 11, Para 631

It was only quite late that we realized (or rather, that we are beginning to realize) that God is Reality itself and therefore—last but not least —man. This realization is a millennial process. Carl Jung, CW 11, Para 631

Even the enlightened person remains what he is and is never more than his own limited ego before the One who dwells within him, whose form has no knowable boundaries, who encompasses him on all sides, fathomless as the abysms of the earth and vast as the sky. Carl Jung, CW 11, Para 758

No one can know what the ultimate things are. We must therefore take them as we experience them. Carl Jung, CW 11, Para 167.

If, therefore, in what follows I concern myself with these "metaphysical" objects, I am quite conscious that I am moving in a world of images and that none of my reflections touches the essence of the Unknowable. Carl Jung, CW 11, Para 556

Not nature but the "genius of mankind" has knotted the hangman’s noose with which it can execute itself at any moment. Carl Jung, CW 11, Para 734

There is indeed reason enough for man to be afraid of the impersonal forces lurking in his unconscious. We are blissfully unconscious of these forces because they never, or almost never, appear in our personal relations or under ordinary circumstances. But if people crowd together and form a mob, then the dynamisms of the collective man are let loose—beasts or demons that lie dormant in every person until he is part of a mob. Man in the mass sinks unconsciously to an inferior moral and intellectual level, to that level, which is always there, below the threshold of consciousness, ready to break forth as soon as it is activated by the formation of a mass. Carl Jung, CW 11, Para 23

Religion appears to me to be a peculiar attitude of mind which could be formulated in accordance with the original use of the word religio, which means a careful consideration

and observation of certain dynamic factors that are conceived as “powers”: spirits, daemons, gods, laws, ideas, ideals, or whatever name man has given to such factors in his world as he has found powerful, dangerous, or helpful enough to be taken into careful consideration, or grand, beautiful, and meaningful enough to be devoutly worshipped and loved. Carl Jung, CW 11, Para 8.

The encounter between conscious and unconscious has to ensure that the light which shines in the darkness is not only comprehended by the darkness but comprehends it. Carl Jung, CW 11, Para 756

Only in the course of the nineteenth century, when spirit began to degenerate into intellect, did a reaction set in against the unbearable dominance of intellectualism, and this led to the unpardonable mistake of confusing intellect with spirit and blaming the latter for the misdeeds of the former. Carl Jung, CW 11, Para 7

God wanted to become man and still wants to Carl Jung, CW 11, Answer to Job, Page 455.

Here we no longer have a problem deriving from the scholarly specialty of theologians. This is a universally human, religious nightmare. Though I am uninitiated in theology, I can bring a contribution to the treatment of this question; indeed, perhaps even I must. Carl Jung, Answer to Job, Page 144

If we say "God"? we give an expression to an image or verbal concept which has undergone many changes in the course of time. Carl Jung, CW 11, Page 360.

Christianity itself would never have spread through the pagan world with such astonishing rapidity, had its ideas not found an analogous psychic readiness to receive them. Carl Jung, CW 11, Page 441.

Something which existed before the ego and is in fact its father or creator. Carl Jung, CW 11, Page 263.

The Catholic Church is liberal enough to look upon the Osiris-Horus-Isis myth, or at any rate suitable portions of it, as a prefiguration of the Christian legend of salvation. Carl Jung, CW 11, Paragraph 178.

Since the relation of the ego to the self is like that of the son to the father, we can say that when the Self calls on us to sacrifice ourselves, it is really carrying out the sacrificial act on itself. Carl Jung, CW 11, Par 398.

Yahweh [God] must become man precisely because he has done man a wrong. He, the guardian of justice, knows that every wrong must be expiated, and Wisdom knows that moral law is above even him. Because his creature has surpassed him he must regenerate himself. Carl Jung; CW 11, Para. 640.

So long as the self is unconscious, it corresponds to Freud’s superego and is a source of perpetual moral conflict. If, however, it is withdrawn from projection and is no longer identical with public opinion, then one is truly one’s own yea and nay. The self then functions as a union of opposites and thus constitutes the most immediate experience of the Divine that it is

psychologically possible to imagine. Carl Jung, CW 11, para 396.

Every sacrifice is to a greater or lesser extent a self-sacrifice. The degree to which it is so depends on the significance of the gift. If it is of great value to me and touches my most personal feelings, I can be sure that in giving up my egoistic claim I shall challenge my ego personality to revolt. I can also be sure that the power that suppresses this claim, and thus suppresses me, must be the self. Hence it is the self that causes me to make the sacrifice; nay more, it compels me to make it. The self is the sacrificer, and I am the sacrificed gift, the human sacrifice. Carl Jung, CW 11, para 397.

[From an early treatise]: "Thus it [the stone] comes from man, and you are its mineral (raw material); in you it is found and from you it is extracted, and it remains inseparably in you" Carl Jung, CW 11, para-53.

One might almost say that man himself, or his innermost soul, is the prisoner or the protected inhabitant of the mandala Carl Jung, CW 11, para 157.

Natural philosophers said that the miraculous substance, whose essential nature they symbolized by a circle divided into four parts, was man himself. Carl Jung, CW 11, para 153.

[The alchemist Gerhard] Dorn says, "In the body of man there is hidden a certain substance of heavenly nature known to very few Carl Jung, CW 11, page 93, note 47.

Good does not become better by being exaggerated, but worse, and a small evil becomes a big one through being disregarded and repressed. The Shadow is very much a part of human nature, and it is only at night that no shadows exist. Carl Jung, CW 11, Page 286.

There is only one condition under which you might legitimately call the voice your own, and that is when you assume your conscious personality to be a part of a whole or to be a smaller circle contained in a bigger one. Carl Jung, CW 11, Page 47.

Every psychic advance of man arises from the suffering of the soul. Carl Jung, CW 11, Page 497

The world of gods and spirits is truly ’nothing but’ the collective unconscious inside me. Carl Jung, CW 11; Page 857.

Before the bar of nature and fate, unconsciousness is never accepted as an excuse; on the contrary there are very severe penalties for it. Carl Jung, CW 11, Page 608.

The unconscious is the unwritten history of mankind from time unrecorded. Carl Jung, CW 11, Page 280.

What most overlook or seem unable to understand is the fact that I regard the psyche as real. Carl Jung, CW 11; Paragraph 751.

This spirit is an autonomous psychic happening, a hush that follows the storm, a reconciling light in the darkness of man’s mind, secretly bringing order into the chaos of his soul. Carl Jung; CW 11; Para 260.

Gods are personifications of unconscious contents, for they reveal themselves to us through the unconscious activity of the psyche. Carl Jung, CW 11, Page 163.

It is a privilege born of human freedom in contradistinction to the compulsion of natural law. Carl Jung, CW 11, Page 158.

Through reflection, "life" and its "soul" are abstracted from Nature and endowed with a separate existence. Carl Jung, CW 11, Page 158.

The attainment of wholeness requires one to stake one's whole being. Nothing less will do; there can be no easier conditions, no substitutes, no compromises. Carl Jung, CW 11, Page 556.

Yoga in Mayfair or Fifth Avenue, or in any other place which is on the telephone, is a spiritual fake. Carl Jung; CW 11, Para 802.

Whoever knows God has an effect on him. Carl Jung, CW 11, para. 617.

Existence is only real when it is conscious to somebody. That is why the Creator needs conscious man even though, from sheer unconsciousness, he would like to prevent him from becoming conscious. Carl Jung, CW 11, Par. 575.

The future indwelling of the Holy Spirit amounts to a continuing incarnation of God. Christ, as the begotten son of God and pre-existing mediator, is a first-born and a divine paradigm which will be followed by further incarnations of the Holy Ghost in the empirical man. Carl Jung, CW 11, Para. 693.

It does not seem to fit God's purpose to exempt man from conflict and hence from evil. Carl Jung, CW 11, Para 659.

The inner instability of Yahweh is the prime cause not only of the creation of the world, but also of the pleromatic drama for which mankind serves as a tragic chorus. The two main climaxes are formed first by the Job tragedy and secondly by Ezekiel's revelation. Carl Jung, CW 11, Para 686.

The only thing that really matters now is whether man can climb up to a higher moral level, to a higher plane of consciousness, in order to be equal to the superhuman powers which the fallen angels have played into his hands. Carl Jung, CW 11, Para 746.

When Freud coined the phrase that the ego was "the true seat of anxiety," he was giving voice to a very true and profound intuition. Carl Jung, CW 11, Page 849.

The true history of the Spirit is not preserved in learned volumes but in the living psychic organism of every individual. Carl Jung, CW 11, Page 56

The educated man tries to repress the inferior man in himself, not realizing that by so doing he forces the latter into revolt. Carl Jung, CW 11, Para 136.

Ultimately, every individual life is at the same time the eternal life of the species. Carl Jung, CW 11, Para. 146.

Gnosticism was stamped out completely and its remnants are so badly mangled that special study is needed to get any insight at all into its inner meaning. Carl Jung, CW 11, Page 97.

The quaternity is the sine qua non of divine birth and consequently of the inner life of the trinity. Carl Jung, CW 11, para 125.

In the initiation of the living, however, this "Beyond" is not a world beyond death, but a reversal of the mind's intentions and outlook, a psychological "Beyond" or, in Christian terms, a "redemption" from the trammels of the world and of sin. Carl Jung, CW 11, Paragraph 813.

One can never know in what form a man will experience God. Carl Jung, CW 11, Para 482.

One might almost say that man himself, or his innermost soul, is the prisoner or the protected inhabitant of the mandala Carl Jung, CW 11, par. 157.

Any theological treatment of the devil that is not related to God's trinitarian consciousness is a falsification of the actual position. Carl Jung, Psychology and Religion, Para 103.

It is the goal of our psychological development and in metaphysical terms amounts to God's incarnation. Carl Jung, Psychology and Religion, Page 294.

The beauty of the ritual action is one of its essential properties, for man has not served God rightly unless he has also served him in beauty. Carl Jung, Psychology and Religion, Paragraph 379.

As a totality, the self is by definition always a complexio oppositorum [union of opposites], and the more consciousness insists on its own luminous nature and lays claim to moral authority, the more the self will appear as something dark and menacing. Carl Jung, CW 11, para 716.

Empirical psychology loved, until recently, to explain the "unconscious" as mere absence of consciousness-the term itself indicates as much-just as shadow is an absence of light. Today accurate observation of unconscious processes has recognized, with all other ages before us, that the unconscious possesses a creative autonomy such as a mere shadow could never be endowed with. Carl Jung, CW 11, Page 14.

The fact of God's "unconsciousness" throws a peculiar light on the doctrine of salvation. Man is not so much delivered from his sins, even if he is baptized in the prescribed manner and thus washed clean, as delivered from fear of the consequences of sin, that is, from the wrath of God. Consequently, the work of salvation is intended to save man from the fear of God. Carl Jung, CW 11, Para 659.

Good does not become better by being exaggerated, but worse, and a small evil becomes a big one through being disregarded and repressed. The shadow is very much a part of human nature, and it is only at night that no shadows exist. Carl Jung, CW 11, Para 286

Unfortunately there can be no doubt that man is, on the whole, less good than he imagines himself or wants to be. Everyone carries a shadow, and the less it is embodied in the

individual’s conscious life, the blacker and denser it is. If an inferiority is conscious, one always has a chance to correct it. Furthermore, it is constantly in contact with other interests, so that it is continually subjected to modifications. But if it is repressed and isolated from consciousness, it never gets corrected. Carl Jung, CW 11, Para 131

We carry our past with us, to wit, the primitive and inferior man with his desires and emotions, and it is only with an enormous effort that we can detach ourselves from this burden. If it comes to a neurosis, we invariably have to deal with a considerably intensified shadow. And if such a person wants to be cured it is necessary to find a way in which his conscious personality and his shadow can live together. Carl Jung, CW 11, Para 132

As a rule those tendencies that represent the antisocial elements in man’s psychic structure—what I call the "statistical criminal" in everybody—are suppressed, that is, they are consciously and deliberately disposed of. But tendencies that are merely repressed are usually of a somewhat doubtful character. They are not so much antisocial as unconventional and socially awkward. The reason why we repress them is equally doubtful. Some people repress them from sheer cowardice, others from conventional morality, and others again for reasons of respectability. Repression is a sort of half-conscious and half-hearted letting go of things, a dropping of hot cakes or a reviling of grapes which hang too high, or a looking the other way in order not to become conscious of one’s desires. Carl Jung, CW 11, Para 129

If the repressed tendencies, the shadow as I call them, were obviously evil, there would be no problem whatever. But the shadow is merely somewhat inferior, primitive, unadapted, and awkward; not wholly bad. It even contains childish or primitive qualities which would in a way vitalize and embellish human existence, but—convention forbids. Carl Jung, CW 11, Para 134

In reality, the acceptance of the shadow-side of human nature verges on the impossible. Consider for a moment what it means to grant the right of existence to what is unreasonable, senseless, and evil! Yet it is just this that the modern man insists upon. He wants to live with every side of himself—to know what he is. That is why he casts history aside. He wants to break with tradition so that he can experiment with his life and determine what value and meaning things have in themselves, apart from traditional presuppositions. Carl Jung, CW 11, Para 528

Mere suppression of the shadow is as little of a remedy as beheading would be for headache. To destroy a man’s morality does not help either, because it would kill his better self, without which even the shadow makes no sense. The reconciliation of these opposites is a major problem, and even in antiquity it bothered certain minds. Carl Jung, CW 11, Para 133

If you imagine someone who is brave enough to withdraw all his projections, then you get an individual who is conscious of a pretty thick shadow. Such a man has saddled himself with new problems and conflicts. He has become a serious problem to himself, as he is now unable to say that they do this or that, they are wrong, and they must be fought against. He lives in the "House of the Gathering." Such a man knows that whatever is wrong in the world is in himself, and if he only learns to deal with his own shadow he has done something real for the world. He has succeeded in shouldering at least an infinitesimal part of the gigantic, unsolved social problems of our day. Carl Jung, CW 11, Para 140

Our knowledge of good and evil has dwindled with our mounting knowledge and experi-

ence, and will dwindle still more in the future, without our being able to escape the demands of ethics. In this utmost uncertainty we need the illumination of a holy and whole-making spirit—a spirit that can be anything rather than our reason. Carl Jung, CW 11, Para 267

It may not be quite clear why I call certain dogmas "immediate experiences," since in itself a dogma is the very thing that precludes immediate experience. Yet the Christian images I have mentioned are not peculiar to Christianity alone (although in Christianity they have undergone a development and intensification of meaning not to be found in any other religion). Carl Jung, CW 11, Page 46.

My view comes very close to Koepgen's lapidary formula, which moreover bears the ecclesiastical imprimatur: "The Trinity is a revelation not only of God but at the same time of man." Carl Jung, CW 11, Page 74.

Consciousness does not create itself-it wells up from unknown depths. In childhood it awakens gradually, and all through life it wakes each morning out of the depths of sleep from an unconscious condition. Carl Jung, CW 11, par. 935.

The suffering God-Man may be at least five thousand years old and the Trinity is probably even older. Carl Jung, CW 11, Page 46.

Individuation is a philosophical, spiritual and mystical experience Carl Jung, CW 11, Page 294.

The psyche is therefore all-important; it is the all-pervading Breath, the Buddha-essence; it is the Buddha-Mind, the One, the Dharrjiakdya. All existence emanates from it, and all separate forms dissolve back into it. Carl Jung, CW 11, Page 482.

I refrain from describing what would happen to Eastern man should he forget his ideal of Buddhahood, for I do not want to give such an unfair advantage to my Western prejudices. But I cannot help raising the question of whether it is possible, or indeed advisable, for either to imitate the other's standpoint. Carl Jung, CW 11, Page 483.

Just as a causality describes the sequence of events, so synchronicity to the Chinese mind, deals with the coincidence of events. Carl Jung, CW 11, Page 593.

The irrational fullness of life has taught me, never to discard anything, even if it goes against all our theories. Carl Jung, CW 11, Page 602.

The archetype is an irrepresentable factor, a "disposition" which starts functioning at a given moment in the development of the human mind and arranges the material of consciousness in definite patterns. Carl Jung, CW 11, Page 148.

Psychologically the God concept includes every idea of the ultimate, of the first or the last, of the highest or lowest. The name makes no difference. Carl Jung, CW 11, Page 455.

The Christian Church has hitherto [recognized] Christ as the one and only God-man. But the indwelling of the Holy Ghost, the third Divine Person, in man, brings about a Christification of many, and the question then arises whether these many are all complete God-men. Carl Jung, CW 11, Page 470.

The Bardo Thodol began by being a "closed" book, and so it has remained, no matter what kind of commentaries may be written upon it. For it is a book that will only open itself to spiritual understanding, and this is a capacity which no man is born with, but which he can only acquire through special training and special experience. It is good that such to all intents and purposes "useless" books exist. They are meant for those "queer folk" who no longer set much store by the uses, aims, and meaning of present-day "civilization." Carl Jung, CW 11, Para 858.

Everything now depends on man; immense power of destruction is given into his hands, and the question is whether he can resist the will to use it and can temper his will with the spirit of love and wisdom. He will hardly be able to do so on his own resources. He needs the help of an "advocate" in heaven. Carl Jung, CW 11, Page 459.

If the historical process of world despiritualization continues as hitherto, then everything of a divine or daemonic character outside us must return to the psyche, to the inside of the unknown man, whence it apparently originated. Carl Jung, CW 11, Para 111

The original structural components of the psyche are of no less surprising a uniformity than are those of the visible body. Carl Jung, CW 11, Para 845

Matter is an hypothesis. When you say “matter,” you are really creating a symbol for something unknown, which may just as well be “spirit” or anything else; it may even be God. Religious faith, on the other hand, refuses to give up its pre-Weltanschauung, in contradiction to the saying of Christ, the faithful try to remain children instead of becoming as children. Carl Jung, CW 11, Para 762.

It is the psyche which, by the divine creative power inherent in it, makes the metaphysical assertion; it posits the distinctions between metaphysical entities. Not only is it the condition of all metaphysical reality, but it is also that reality. Carl Jung, CW 11, Para 856.

The archetypes are, so to speak, organs of the pre-rational psyche. They are eternally inherited forms and ideas which have at first no specific content. Their specific content only appears in the course of the individual’s life, when personal experience is taken up in precisely these forms. Carl Jung, CW 11, Page 518.

The spiritual climax is reached at the moment when life ends. Human life, therefore, is the vehicle of the highest perfection it is possible to attain; it alone generates the karma that makes it possible for the dead man to abide in the perpetual light of the Voidness without clinging to any object, and thus to rest on the hub of the wheel of rebirth, freed from all illusion of genesis and decay. Carl Jung, CW 11, Para 856.

The existence of ego consciousness has meaning only if it is free and autonomous. Carl Jung, CW 11, Para 391

Often it is just as well that we do not know the danger we escape when we rush in where angels fear to tread. Carl Jung, CW 11, Para 247

But all creativeness in the realm of the spirit as well as every psychic advance of man arises from the suffering of the soul, and the cause of the suffering is spiritual stagnation, or psychic sterility. Carl Jung, CW 11, Para 497

He lives in the "House of the Gathering." Such a man knows that whatever is wrong in the world is in himself, and if he only learns to deal with his own shadow he has done something real for the world. Carl Jung, CW 11, Para 140

Besides, where would the fear of God be if only good—i.e., what seems good to us—were to be expected from him. Carl Jung, CW 11, Para 291

The view that good and evil are spiritual principles outside us, and that man is caught in the conflict between them is more bearable by far than the insight that the opposites are the ineradicable and indispensable preconditions of all psychic life, so much so that life itself is guilt. Carl Jung, CW 11, Para 530

What sort of philosophy would Plato have produced had he been his own house-slave? What would the Rabbi Jesus have taught if he had had to support a wife and children? Carl Jung, CW 11, Para 264

It is normal for a man to resist his anima, because she represents the unconscious and all those tendencies and contents hitherto excluded from conscious life. Carl Jung, CW 11, Page 75.

I want to make clear, that by the term "religion" I do not mean creed. Carl Jung, CW 11, Page 30.

Neurosis is always a substitute for legitimate suffering. Carl Jung, CW 11, Para 129

A psychoneurosis must be understood, ultimately, as the suffering of a soul which has not discovered its meaning. But all creativeness in the realm of the spirit as well as every psychic advance of man arises from the suffering of the soul, and the cause of the suffering is spiritual stagnation, or psychic sterility. Carl Jung, CW 11, Para 497

In the unconscious is everything that has been rejected by consciousness, and the more Christian one’s consciousness is, the more heathenishly does the unconscious behave, if in the rejected heathenism there are values which are important for life. Carl Jung, CW 11, Para 713

Anyone who penetrates into the unconscious with purely biological assumptions will become stuck in the instinctual sphere and be unable to advance beyond it, for he will be pulled back again and again into physical existence. Carl Jung, CW 11 Para 843

The original structural components of the psyche are of no less surprising a uniformity than are those of the visible body. The archetypes are, so to speak, organs of the prerational psyche. They are eternally inherited forms and ideas which have at first no specific content. Their specific content only appears in the course of the individual’s life, when personal experience is taken up in precisely these forms. Carl Jung, CW 11, Para 845

The usual mistake of Western man when faced with this problem of grasping the ideas of the East is like that of the student in Faust. Misled by the devil, he contemptuously turns his back on science and, carried away by Eastern occultism, takes over yoga practices word for word and becomes a pitiable imitator. (Theosophy is our best example of this.) Carl Jung,

CW 11, Para 3

Great as is the value of Zen Buddhism for understanding the religious transformation process, its use among Western people is very problematical. The mental education necessary for Zen is lacking in the West. Carl Jung, CW 11, Paras 901-902
